PREFACE.

IN presenting the first volume of the HISTORY OF CHICAGO to the public, the Publisher desires to define the plan upon which the work has been arranged.

Much care has been taken with the compilation of the opening division of the work, and the subjects of original occupation and early exploration have received thoughtful attention. Wherever allusion to the indefinite region of "Chicagou" has been made in the reports of those venturesome and self-sacrificing men who formed the little bands of exploration, their words have been intelligently weighed, the trustworthiness of their records considered, and the local value of their labors regarded. In concise form, so much of the accepted history of their adventures as serves to give to the Chicago of to-day a location and a name, has been preserved within this volume.

When the period of tradition and speculative possibilities is past, the reader will discover that the primary quality of our plan is *detail*; and the further advanced the work becomes the more apparent does this fact grow. One of the most serious obstacles encountered by the historian in the pursuit of his vocation is scarcity of reliable data. Whenever the patient searcher for historic truth is rewarded by the discovery of some forgotten script or volume, the world of letters hails the treasure with delight; and it needs no argument to convince the intelligent that had not men failed to realize that the trifles of to-day become the vital elements of the historic works of the future, this deficiency would not exist. It is the purpose of this History to combine the scattered items of fact into convenient form, and, at the hazard of too great redundancy, preserve all that can be found descriptive of the past of Chicago.

Much more material was obtained than could be placed between the covers of a single volume. It therefore followed that the History must be made in several books. How this could be accomplished was one of the most serious problems requiring solution; for the history of a city differs widely from that of a nation in its scheme of treatment. While that portion which may be termed the narrative history was susceptible of epochal division, the succeeding years being taken up after each closed volume without detriment to interest, those more detailed chapters, which we speak of as topical history, could not be left unnoticed until the later volumes. The narrative of events must of necessity be cursory. It would suffice to say that, from such a year to such a year, the commercial, the religious, the educational, and the political affairs were thus and so; but when the reader, whose taste directed him toward one particular factor in the city's measure of prosperity, sought for the detailed history of his favorite theme, he would look in vain for that explicit recital of events needed for his enlightenment. A general history might tell of the condition of Chicago from year to year; but the elements which produced that condition demand a more exhaustive treatment. The contemporaneousness of events had also to be borne in mind. It was, therefore, determined to exercise arbitrary powers, and select some period which marked an epoch in the general history at which to end the first volume, bringing both narrative and topical subjects to an end there.

The year 1857 was made memorable in the calendar of the city's history by the most serious financial crisis experienced since its founding, twenty years before. Not only were commercial circles gravely involved; the pecuniary stress exerted controlling force upon the social world as well, checking growth in every direction. Municipal operations were impeded, religious undertakings stopped by the failure of pledges, educational plans thwarted by the curtailment of necessary funds, and in all directions was felt the enforced economy which pervaded the social fabric. No more appropriate period could be found than this to bring the thread of history to a temporary end. With few exceptions—and

PREFACE.

those so minor as to be easily explained in the proper places—the topical sections of the work are closed at 1857, to be resumed in subsequent volumes.

The advantages of this plan are obvious. Each volume is made thereby complete in itself, as a work of reference, while the only serious disadvantage is temporary in its character; since the incompleteness of the several topics will be amended by the issuance of the succeeding volumes.

This History is the product of many hands. The assertion is often made that none save those who have participated in early events are capable of writing intelligibly or correctly of them, but experience has convinced the Publisher that it is better to entrust the labor of compilation to men who are wholly unbiased, and who have acquired practical methods in the work of arranging and stating facts. It is a curious fact in psychology that the faculty of memory is as eccentric as it is treacherous, and history based solely upon human recollection is scarcely worth the reading. When one individual, who was a witness of scenes which afterward became historic, attempts to give his version of the events, his statement is generally brought into dispute by another witness of the scenes, whose recollection is materially different. Members of the legal profession will agree with us in saying that were it not for this freak of the mind—involving men of equal honesty in questions of positive veracity—the practice of the law would be much less remunerative than it is. To illustrate this point, we cite two cases out of many similar ones that claimed the attention of our writers. One was the upsetting of an old resident's statement as to the day of his arrival in Chicago—our investigation proving that he had always erroneously given the date until we convinced him of his mistake; and the other, that of a prominent banker, who declared, that his early bank was organized a year subsequent to the actual date of its establishment. In both instances these intelligent and reliable men, whose memories were proverbially good, sought to convince us, by contemporaneous happenings, of our "error," and in both instances we were able to demonstrate that, although the attendant circumstances were right in point of sequence, the dates were wrong. This allusion is made for the sole purpose of showing that the best of memories may be, and often are, at fault. Unless sustained by written confirmation, arbitrary assertion is generally not worthy of credence in a historic sense.

To the end that as full a measure of accuracy as is attainable might be reached, every available source of information has been sought out, and yet the result will doubtless prove inadequate to the desire of the Publisher, for absolute correctness can never be achieved by human agencies. As one evidence of the good intention of those engaged upon the work, it is stated that no less than eight thousand newspapers issued in Chicago between 1833 and 1857 have been carefully examined by them. Considering the fact that the fire of 1871 destroyed nearly all the records, printed and documentary, relating to the early days of Chicago, there remained no better authority for the establishment of dates than these newspaper files; and while the fragmentary character of the information therein is conceded, it must be admitted that the journals of the past afford about the only available means of settling disputed points during the period of their publication. In this connection it may with propriety be remarked that the reader is indebted to Mrs. John C. Calhoun, Hon. John Wentworth, Hon. William Bross, Hon. Andrew Shuman, Hon. E. M. Haines, of Waukegan, Dr. Lots Pennington, of Sterling, and to the proprietors of the several newspapers of this city, as well as to the Chicago Historical Society, the Chicago Public Library, and the Calumet Club, for the acts of courtesy which enabled our writers to gain access to these valuable files. There are not known to be in existence now more than two or three numbers of all the issues of the two or three journals published here between June, 1837, and April 9, 1839. The hiatus has been filled as well as it could be from the volumes of the Milwaukee Sentinel, and from the numerous collections of letters possessed by the Chicago Historical Society. A complete file of the leading journals between April, 1843, and August, 1844, has never been found. With these two exceptions it is believed by us that the writers on this work have read the newspaper record of events happening in Chicago from the issuance of John C. Calhoun's Democrat, November 26, 1833, to the close of 1857; the period from March, 1837, to the close of 1857 representing a daily issue.

The amount of labor expended upon this volume is much greater than a casual reading would

PREFACE.

indicate. The almost total destruction of official records, of private diaries, of the innumerable quantity of memoranda, which generally furnish the historian with easy and satisfactory means of accomplishing his work, in this instance proved a well-nigh insuperable barrier to progress. The few documents and books that survived the great calamity of 1871 were of so desultory a character as to afford little practical aid. Because of the lack referred to, and which we have attempted to compensate for by calling upon individual memory to serve instead thereof, errors have undoubtedly found lodgment here; deficiencies in all probability will be noted; and personal opinions may be apparently treated with indifference. But we assure the reader that prejudice has not biased even so much as one statement herein made, nor have the writers willfully neglected to give what seemed due credit to every assertion that bore the die of truth. As many a base metal may be stamped with the coinage of honesty and bear the similitude of worth, so may many an ancient legend become, because of seeming probability, an accepted tenet in the historic creed of men. The writer who detects the inaccuracy of such current fictions must expect to encounter disapproval; for of nothing is one so fondly tenacious as of the delusions of memory and the folklore in which some thread of association with one's own life can be traced.

The task of searching for, arranging, weighing and preparing all that could be construed to have interest or value in an historic sense was begun in October, 1882, and after January following the corps of writers numbered from ten to twelve, until the completion of the work in February, 1884; while, were we to count the number of friendly and voluntary co-laborers who have given transient assistance, the force would be increased to many hundreds. It is believed that the assignment of subjects was made with a view to congeniality of topic on the part of the several writers, most of whom have had years of experience in this line of work.

It has been found impracticable, under the plan, to follow the usual custom of enumerating topics by chapter captions. This change, however, is one which violates no more serious a matter than precedent.

Biographical sketches of those men who were identified with early Chicago are given as a necessary part of history; the interest attaching to their public work exciting a commendable desire to know somewhat more fully their personal records. We maintain that the biographical sketches form one of the most valuable features of the work, and in the forthcoming volumes will appear individual mention of many who, although residents of Chicago prior to 1858, did not attain their greatest prominence until a later date. Their sketches will be given in connection with the topics with which they were identified.

It is impossible to reconcile all traditions and legends that have, from that dignity which a venerable age often imparts to non-deserving things, grown to be a part of the accepted history of Chicago. It is safe to assert that fully as much money has been expended in the pursuit of lights which ultimately proved to be *ignes fatui*, as in the establishment of those truths which are worthy of preservation.

The writers of this volume have adopted the rule of ignoring even favorite stories whenever their origin was shown to be indeterminate, their importance minor, and their character apocryphal. We can see no good excuse for perpetuating errors merely because they are clothed in the form of a neatly-told story; or because they have gone uncontradicted for years. In fact, few have escaped contradiction, in one form or another; for the argus-eyed early settler is always on the lookout for some alleged historic event to dispute, and it is equally true that no version is permitted to go unchallenged by some one. We have endeavored to state as fact only those points which are susceptible of substantiation.

The mechanical work upon the volume was performed in Chicago; even the greater portion of the illustrations were designed or executed here. It may be properly termed a Chicago product, and an evidence of the advancement of the mechanic arts in the West. The types from which the book is printed were made and purchased expressly for it. The form of the volume was determined on with a view to the subsequent volumes, which will of necessity contain much more letter-press and many more illustrations than this. In order to obviate the difficulty which attends the handling of a large volume, the page is made to contain nearly three times as much reading-matter as is commonly given in historical works. The wisdom of this decision will be recognized hereafter.

PREFACE

The succeeding volume will commence with a chapter containing a résumé of what is herein published, with such emendations as later information or further historic research may demand to render the history complete.

Among the numerous authorities consulted during the preparation of the history of early French explorations of the region were: Prof. C. W. Butterfield's monograph on Jean Nicolet; the historical works of Francis Parkman; Shea's "Discovery and Exploration of the Mississippi Valley;" "*Proces Verbal* of Taking Possession of Louisiana, by La Salle, 9th April, 1682," (French's Hist. Coll. La., Part I); Tonty's Memoir, (French's Hist. Coll. La., Part I); Shea's "Charlevoix;" Du Pratz's "History of Louisiana;" Coxe's "Louisiana;" "Historical Magazine" (Shea); the Wisconsin Historical Society's Collections; "Early Voyages Up and Down the Mississippi" (letters and reports of French Catholic Missionaries), 1699-1700, reprints by Munsell and Shea; "Account of the Proceedings of the Illinois and Ouabache Land Companies," Philadelphia, 1796; etc.

Relating to Indian occupation of this section there were consulted, among the many volumes, the books and papers of Isaac McCoy; the letters of Dr. Lykins, Rev. Robert L. Simmerwell, Rev. Jotham Meeker, and numerous other men who spent their lives among the Pottawatomies, Miamis, and tribes formerly identified with the history of the Chicago Region, and whose letters are now in the possession of the Kansas Historical Society.

Important letters from Ramsey Crooks pertaining to the history of early Indian traders and United States Factors at this point, were furnished by Mr. Gurdon S. Hubbard, and access to the posthumous papers of Hon. Ninian Edwards, and many other valuable manuscripts, was obtained through the courtesy of the Chicago Historical Society.

Invaluable aid on the latter portions of this volume has been received from the publications of Mr. Henry H. Hurlbut ("Chicago Antiquities"), Rufus Blanchard ("Discovery and Conquests of the Northwest, with the History of Chicago"), Robert Fergus, consisting of historic addresses, letters, biographies, etc., furnished by leading citizens of unquestioned ability, and possessing personal knowledge of the topics on which they have written; a most valuable series of sketches published in the Chicago Times in 1875-76, entitled "Bye - Gone Days;" the writings of Mrs. Juliette A. Kinzie; the historical works of Hon. William Bross, Mr. Elias Colbert and Mr. James Sheehan. The Publisher is under obligation to Mr. Albert D. Hager, Secretary of the Chicago Historical Society, for assistance rendered during the prosecution of this work.

It is not claimed that, from this profusion of historic matters, a complete compilation has been made; but it has been the endeavor of those entrusted with the work to so set in order the material as to give the reader a more comprehensive, connected and accurate account of events as they transpired, than has been undertaken by any single writer of the many to whom the publishers are indebted, and to whom they hereby make unqualified acknowledgments for the merit of their work, and the aid they have rendered in this latest attempt to write Chicago's history.

The topical history has been carefully compiled from every special source accessible, which it was believed could render the treatment of the subject elaborate and accurate; and the copy of this department of the History has been invariably submitted for criticism, correction and final approval, to citizens who from their personal knowledge were recognized authority, and whose approval should be a guarantee of the correctness of the work.

A. T. A.

CHICAGO'S HISTORIC TREE.

(SEE OPPOSITE PAGE.)

THE LOCATION OF THE MASSACRE OF 1812.

CHICAGO'S HISTORIC TREE.

There is now standing in Eighteenth Street, between Prairie Avenue and the lake, a large cottonwood tree which marks the site of the massacre of 1812, and which, there is reason to believe, possesses even a greater historic value; as it is believed by many old settlers to have been standing at the time of the disaster. In order that the appearance of this landmark might be preserved, and that the memories clustering about it might not pass from mind, we have caused the tree to be photographed and engraved, and have also obtained documentary evidence that the Kinzie family regarded both the site referred to and this particular tree as historic.

On the morning of August 15, 1812, the troops and settlers left the fort, proceeded southward "about a mile and a half," and were attacked by the Indians. A fearful tragedy was there enacted, as is described in the history of Fort Dearborn elsewhere in this volume.

Having ascertained that Mrs. Juliette A. Kinzie had, during her lifetime, informed her friend, Mrs. Henry W. King, of the belief concerning this tree, we addressed Mrs. King a letter of inquiry and received the following reply:

"151 RUSH STREET, CHICAGO, }
"January 25, 1884. }

"A. T. ANDREAS, *Dear Sir*: I am very happy to tell you what I know about the tree in question, for I am anxious that its value as a relic should be appreciated by Chicago people; especially since the fire has obliterated nearly every other object connected with our early history. Shortly before the death of my friend, Mrs. John H. Kinzie, I called upon her and asked her to drive with me through the city and point out the various locations and points of interest that she knew were connected with the 'early day' of Chicago. She said there were very few objects remaining, but localities she would be happy to show me. She appointed a day, but was not well enough to keep her appointment; went East soon afterward for her health, and died within a few weeks. However, at the interview I mention, she said that to her the most interesting object in our city was the old cottonwood tree that stands on Eighteenth Street, between Prairie Avenue and the lake. She remarked that it, with its fellow, were saplings at the time of the Indian massacre, and that they marked the spot of that fearful occurrence; though she was not sure but the smaller one had either died or been cut down. I expressed surprise at the location, imagining that the massacre occurred further south, among the small sandhills which we early settlers remember, in the vicinity of Hyde Park. I remember that her answer to this was:

"My child, you must understand that in 1812 there was no Chicago, and the distance between the old fort and Eighteenth Street was enormous." Said she: "My husband and his family always bore in mind the location of that massacre, and marked it by the cottonwood trees, which, strange to say, have stood unharmed in the middle of the street until this day."

"The above facts I communicated to the Chicago Historical Society, soon after Mrs. Kinzie's death, and believe, through them, was the means of preventing the cutting down of the old tree, which the citizens of the South Side had voted to be a nuisance. I sincerely hope something may be done to fence in and preserve so valuable a relic and reminder of one of the most sad and interesting events in the life of Chicago. Trusting the above information may be of some use to you, and that you may be able to present the matter in a more entertaining form than I have done, Believe me, sir,
Yours most respectfully,
"MRS. HENRY W. KING"

Hon. Isaac N. Arnold, whose residence in Chicago since 1836 enabled him to enjoy the friendship of the Kinzie family, was asked to state what he knew regarding the subject. His response reads thus:

"CHICAGO, January 25, 1884.

"CAPTAIN A. T. ANDREAS, *Dear Sir*: I have your note of this morning asking me to state what I know relating to the massacre at Chicago in 1812. I came to Chicago in October, 1836; the Fort Dearborn Reservation then and for several years thereafter belonged to the Government, and there were but a few scattering houses from Fort Dearborn south to the University and between Michigan Avenue and the beach of Lake Michigan. The sand hills near the shore were still standing. The family of John H. Kinzie was then the most prominent in Chicago, and the best acquainted with its early history. From this family and other old settlers, and by Mr. and Mrs. Kinzie, I was told where the attack upon the soldiers by the Indians was made. There were then growing some cottonwood trees near which I was told the massacre occurred. One of those trees is still standing in the street leading from Michigan Avenue to the lake and not very far from the track of the Illinois Central Railroad. This tree was pointed out to me by both Mr. and Mrs. Kinzie, as near the place where the attack began. As the fight continued the combatants moved south and west over considerable space. Mrs. John H. Kinzie was a person of clear and retentive memory and of great intelligence. She wrote a full and graphic history of the massacre, obtaining her facts, in part, from eye-witnesses, and I have no doubts of her accuracy.

"Very respectfully yours,
ISAAC N. ARNOLD."

A. J. Galloway, Esq., who has resided in the vicinity for many years, says:

CHICAGO, February 8, 1884.

CAPTAIN A. T. ANDREAS—*My Dear Sir*: At your request I will state my recollections concerning the cottonwood tree in the east end of Eighteenth Street. When I removed from Eldridge Court, to the present No. 1808 Prairie Avenue, in 1858, the tree was in apparent good condition, though showing all the marks of advanced age. The large lower branches (since cut off,) after mounting upward for a time, curved gracefully downward, so that a man riding under them could have readily touched their extremities, with his whip, at a distance of twenty or twenty-five feet from the body of the tree. From an intimate knowledge of the growth of trees, I have no doubt but its sapling life long antedated the time of the massacre of the Fort Dearborn garrison. I will venture the opinion, that if it were cut down and the stump subjected to a careful examination, it would be found that the last two inches of its growth covers a period of fifty years, at least.

Yours truly,

A. J. GALLOWAY.

Charles Harpell, an old citizen, now living on the North Side, says that so far back as he can remember, this locality was known as the "Indian battle-ground;" that years ago, when a boy, he, with others, used to play there (the place from its very associations having the strongest attractions), and hunt in the sand for beads and other little trinkets, which they were wont to find in abundance. Mr. Harpell relates also that he, while playing there one day, found an old single-barreled brass pistol, which he kept for many years before it was finally lost.

Mrs. Mary Clark Williams, whose father, H. B. Clark, purchased in 1833 the land on which the tree now stands, says that nearly fifty years ago she played under the old cottonwood, and that it was then a large and thrifty tree. In 1840 an old Indian told her father that the massacre occurred on that spot.

Although there is no way of positively determining that the tree pictured on the opposite page is the identical one that stood, a mere sapling, on the spot during the massacre, there is strong, almost conclusive, cause for declaring it the same. At all events, the proof of the site is satisfactory, and the view herewith presented is an interesting one, as showing how the scene of barbaric treachery appears after a lapse of nearly seventy-two years.

ERRATA.

Page 47. In description of Thevenot's map it should be stated that Kaskaskia village *is* represented, although with a different spelling of the name.

Page 54. eighteenth line from bottom, right hand column. "Northwestern shore of Lake Michigan" should read *northeastern*.

Page 73. seventy-third line from top, left hand column. John R. should read John A. (Clark).

Page 76. The sketch of the Kinzie House ends with the words, "numbered with the things that were." What follows should have borne the caption, "POTTAWATOMIES IN THE WAR OF 1812." The caption was in the original copy, but dropped out, either in the type-writing or composition.

Pages 81, 82 and wherever name occurs, read Ensign *Ronan*, for Ensign Ronau.

Page 82. For *Dr* Isaac Van Voorhis, read *Dr.* Isaac Van Voorhis.

Page 84. For George Bendu, read George Bender.

The date of the arrival of the "Sheldon Thompson," with General Scott and the cholera, was, according to the testimony of Captain Augustus Walker (see his letter p. 121) July 10, 1832. On page 84 and page 270 the date is given as July 8. Depending on the testimony of Captain Walker, and on contemporaneous letters of General Scott, the date of his arrival is believed to be July 10, 1832.

HISTORY OF EARLY CHICAGO.

EXPLORATIONS AND SETTLEMENT.

ORIGINAL PROPRIETORS OF THE SOIL.

THE first definite and reliable information regarding the original proprietors of the soil of Chicago, is gained from the account given by LaSalle, of his expedition from the mouth of the St. Joseph, in Michigan, by land, to the Illinois River, in the winter of 1681-82. He says he proceeded on his journey from St. Joseph, toward the Illinois, by the southern shore of the lake, and was in the country of the Miamis until he reached what was then the Checaugau, but is now the Desplaines River. The portage which he was obliged to cross in order to reach that river, he calls the Checaugau Portage. The neighbors of the Miamis, on the west, were the Mascoutins.

The Miamis, whose language, manners and customs were almost identical with those of the Illinois, are supposed to be the parent race, or an important branch of that nation. They originally lived beyond the Mississippi, some writers claiming that their home was on the shore of the Pacific. They had villages, one in common with the Mascoutins—in Wisconsin, before 1671, and as late as 1697; but the greater portion of the tribe, before this time, had found their way to the southern shore of Lake Michigan, and east to the neighborhood of the St. Joseph River, in the present State of Michigan. They were of sufficient importance in Wisconsin, even as late as 1690, to warrant the English in sending an ambassador to their villages to purchase their friendship with gifts. They were partial to the French, however, and the overtures of the English met with little success. In 1670 the village of United Miamis and Mascoutins on Fox River of Green Bay, was visited by Father Allouez, and the following year by Fathers Allouez and Dablon in company. One object of the visit of the fathers in 1671 was to quiet a disturbance between the Indians and some French fur traders who had offended them.

"We found them," says Father Dablon, "in a pretty bad posture, and the minds of the savages much soured against the French, who were there trading; ill-treating them in deeds and words, pillaging and carrying away their merchandise in spite of them, and conducting themselves toward them with insupportable insolence and indignities."

The Indians, although insolent to the traders, it seems were desirous of pleasing the missionaries, and Father Dablon, who had a keen sense of the ludicrous, found it hard to preserve his gravity, when a band of savage warriors, anxious to do them honor, marched to their tent, and slowly paced back and forth before it, aping the movements of the soldiers on guard before the Governor's tent at Montreal. "We could hardly

keep from laughing," writes the good priest, "though we were discoursing on very important subjects, namely: the mysteries of our religion, and the things necessary to escaping eternal fire."

The Miami confederacy, composed of the Miamis, Illinois and Kickapoos, and which Bancroft says was the most powerful in the West, exceeding even the Six Nations, or Iroquois, included the Miamis proper, Weas and Piankeshaws.

In 1683 a large number of the nation settled at LaSalle's fort on the Illinois River. LaSalle wrote that year from the "Portage de Chicagau," to LaBarre, then Governor of Canada, "The Iroquois are again invading the country. Last year the Miamis were so alarmed by them, that they abandoned their town and fled, but at my return they came back, and have been induced to settle with the Illinois at my fort of St. Louis. The Iroquois have lately murdered some families of their nation." The Miamis, at Fort St. Louis, numbered 1,300, the Weas 500, and the Piankeshaws 150.

Charlevoix, writing in 1721, says: "Fifty years ago the Miamis were settled on the southern extremity of Lake Michigan, in a place called Chicago, from the name of a small river which runs into the lake, the source of which is not far distant from that of the river of the Illinois."

St. Cosme and his companions found Miamis at Chicago, in 1699-1700, and a mission established among them, in charge of two Jesuit Fathers—Pinet and Bireteau. It is said by an early writer, that in 1718, "the Weas had a village at Chicago, but being afraid of the canoe people* left it, and passed around the head of Lake Michigan, to be nearer their brethren farther to the east. Prior to this time—in 1702—DeCourtemanche, an agent of France, had visited the Miamis, both at St. Joseph River and Chicago, to induce them to cease their wars with the Iroquois, which prevented communication between Canada and Louisiana by way of the Illinois River. A council of the Algonquin tribes was appointed at Montreal, which was attended by Chichikatalo, then principal chief of the Miami nation, who made a speech in which he affirmed his friendship for the French, and desired to be guided by their wishes. The Foxes, from the vicinity of Green Bay, succeeded the Iroquois in their attacks upon the Illinois and Miamis, and during the first quarter of the eighteenth century had probably driven the latter from the vicinity of Chicago. From that time until the termination of Pontiac's War and the final defeat and extermination of the

* Pottawatomies and Chippewas, who came from the north in canoes.

Illinois at Starved Rock, when the Pottawatomies gained possession of the country, the region now Chicago was inhabited, if inhabited at all, by roving bands of northern Indians.

Major Thomas Forsyth, who lived a large portion of his life among the Indians of Illinois and Iowa, says* that in the first quarter of the eighteenth century, all the different bands of the Illinois Indians spoke the language of the Miamis, and the whole considered themselves as one people; but from their local situation the language was broken up into different dialects. "These Indians were attacked by a general confederacy of other nations, such as the Sauks and Foxes, who resided at Green Bay, and on the Ouisconsin; the Sioux, whose frontiers extended south to the River Des Moines; the Chippewas and Pottawatomies from the lakes; and also the Cherokees and Choctaws from the south. The war continued many years, and until that great nation, the Minneways (Miamis or Illinois) was destroyed, except a few Miamis and Weas on the Wabash, and a few who were scattered among strangers."

That portion of the Miamis who were driven from Chicago, found a home with the rest of the tribe, on the St. Joseph, the Maumee and the Wabash. During the war of the Revolution, the tribe was hostile to the colonies, and even after the treaty of peace, consummated in the year 1783, their depredations upon the settlers on the Ohio and Maumee were continued until the final surrender of the northwestern lake posts in 1796. In 1790, peace negotiations were opened with the Miamis and other tribes, which proved unsuccessful, and General Harmer was sent with an army by General Washington to bring the tribes to submission. Battles were fought near Chillicothe, Ohio, and near Fort Wayne, Indiana, neither of which was very successful on the part of the Americans.

In 1791 two other expeditions were directed against the hostile Miamis, Shawanoes and others on the Miami and Wabash—one under command of General Charles Scott, and the other under General Wilkinson. In 1791 Governor Arthur St. Clair, of the Northwest Territory, marched with an army of fourteen hundred men to within fifteen miles of the Miami villages on the Great Miami, where on the 4th of November a sanguinary battle was fought. The Indians, led by Little Turtle, fought bravely, and finally defeated the Americans, who were compelled to retreat, abandoning their camp and artillery. In the precipitate flight the men threw down arms and accoutrements, and never halted until they reached Fort Jefferson, twenty-one miles distant. This success encouraged the Indians, and their depredations were only stopped by the decisive victory gained by General Anthony Wayne over the Western Confederacy of Indians, in August, 1794, which was followed by the treaty of Greenville, August 3, 1795—the first treaty with the United States, to which the Miamis were a party. It was at this treaty that Little Turtle, the principal chief of the nation, made his celebrated speech, defining the limits of his country. He said to General Wayne, "You have pointed out to us the boundary line between the Indian and the United States. I now take the liberty to inform you that the line cuts off from the Indian a large portion of country which has been enjoyed by my forefathers from time immemorial, without question or dispute. The prints of my ancestors' houses are everywhere to be seen in this region. It is well known by all my brothers present, that my forefathers kindled the first fire at Detroit; from thence

extended their line to the head waters of the Scioto; from thence to its mouth; thence to Chicago, on Lake Michigan. These are the boundaries within which the prints of my ancestors' houses are everywhere to be seen."

In 1840 what few Miamis remained in the East were removed from the Wabash to a tract of land now comprised in Miami County, Kansas. They had increased in numbers during the preceding years of peace, and numbered about eleven hundred when they went to the Indian Territory. Homesickness soon reduced their ranks, and after remaining in the West a year, a large part of those surviving returned to Indiana. In 1854 the tribe ceded their land in Kansas to the United States, excepting a reservation for their own use and occupancy; which, also, they ceded in 1867. Quite a number became citizens of Kansas, and the remainder were removed to the present Indian Territory, where they became confederated with the Peorias. The last of the Miamis in Kansas, numbering about one hundred and thirty, removed to the Indian Territory in 1871.

THE POTTAWATOMIES.—The Pottawatomies, Ottawas and Chippewas, whose language, manners and customs are similar, are supposed to be the original people who lived at the "villages of the falls," at St. Mary's Strait, and on the northern bank of Lake Huron. These tribes belong to the great Algonquin family, and speak one of its rudest dialects. They were hunters and fishers, and by the Illinois Indians, who never made voyages on the water, were called the "canoe people," and held in dread, as they were warlike, and frequently in collision with neighboring tribes. The first mention of the Pottawatomies by the French Jesuits, is in the Relation of 1639, where it is said that John Nicolet had visited them at their islands of Green Bay, where they had been driven by the Iroquois. These islands were known as the Pottawatomie Islands, and were the residence of the tribe for many years. Before the expiration of the first quarter of the eighteenth century a large portion of the Pottawatomies had emigrated toward the south, one band making a home on the St. Joseph River, of Michigan, and another in the vicinity of Detroit. They were always intimately associated with other tribes—usually with the Ottawas or Chippewas, but sometimes with Miamis, Foxes or Winnebagoes. They were faithful allies of the French until after the death of Pontiac, and took part with that chieftain in his attack on Fort St. Joseph, in May, 1763, and the subsequent siege of Detroit.

A treaty was concluded between the English and the Western Confederacy in August, 1764, and of the nineteen hundred and thirty warriors assembled at Niagara, as representatives of the various tribes, four hundred and fifty were Pottawatomies. Pontiac, disappointed at the result of his efforts to keep the hated English from the region of Detroit, came, it is said, to Illinois, and settled with a band of Ottawas, on the banks of the Kankakee. In 1769 he was assassinated, and it was believed by the united tribes (Ottawas and Pottawatomies) that the Illinois Indians were accessory to the crime. In revenge for the death of their idolized leader, war was waged by the Pottawatomies and other Northwestern tribes against the Illinois, until the latter was exterminated, and the victors had possession of all northern Illinois. "Starved Rock," in LaSalle County (the "Rock of St. Louis," of LaSalle and Tonty), was the scene of the final disaster which completely annihilated the once powerful nation which gave the State of Illinois its name. Driven from one place of refuge

* Drake's "Life of Black Hawk," 1826.

to another, the last surviving remnant of the Illinois Indians gathered on the summit of Starved Rock, where they were besieged by their enemies on every side; and when, at last, compelled by the pangs of hunger and thirst, in desperation they attempted to force a path through the ranks of the enemy, nearly every one was slain. Scarcely enough escaped to tell the tale.

The Pottawatomies were now the dominant tribe in upper Illinois, although in many cases their villages were composed of United Pottawatomies, Ottawas and Chippewas.* Through the Revolution they were hostile to the Americans, but after the victory gained by General Wayne over the Western Confederates in the summer of 1794, at Presque Isle, on the Maumee River, the Pottawatomies joined the other tribes in suing for peace.

The nations, who with the Pottawatomies, formed the confederated Indian force led by Little Turtle and Blue Jacket, Ottawa and Shawnee chiefs, against General Wayne at this decisive battle, which eventuated in the treaty of Greenville, were the Miamis, Shawanoes, Delawares, Chippewas and Ottawas.

On the 3d of August, 1795, the treaty of Greenville was concluded at the fortified camp of General Wayne, called by that name. By this treaty the Indians ceded an immense tract of country, south of the lakes and west of the Ohio, together with certain specific tracts, including the sites of all the Northwestern posts.

The Pottawatomies were represented by the chiefs of the St. Joseph, Wabash and Huron-river bands (Pottawatomies of the Woods) and by the leading chiefs of the "Pottawatomies of the Prairie"—the latter being those living in Illinois. The stipulations of this treaty remained unbroken until 1811, when the machinations of Tecumseh and the Prophet sent General Harrison to the Wabash, and the battle of Tippecanoe followed.

By this treaty of Greenville the Indians ceded to the United States, "one piece of land six miles square, at the mouth of Chicago River, emptying into the southwest end of Lake Michigan, where a fort formerly stood." There was also a stipulation that the Indians should allow a free passage to the people of the United States "from the mouth of the Chicago to the commencement of the portage between that river and the Illinois, and down the Illinois River to the Mississippi."

The Pottawatomies joined in the treaty negotiated at Fort Wayne by General Harrison in 1803, and before 1809 had ceded considerable of their land to Government. In the War of 1812 a portion of the tribe joined the English, influenced by Tecumseh, and his brother the Prophet, and under the leadership of Suna-we-wo-nee, war-chief of the Prairie bands, made war upon the Americans, and participated in the massacre of the

Fort Dearborn garrison. A treaty of peace was made with this band at Portage des Sioux in July, 1815, which was signed by Suna-we-wo-nee, and it is said the band never broke the pledge of friendship then made. In the following September, a general treaty with the Pottawatomies and other tribes was made at Detroit.

Portions of the country claimed by the "Pottawatomies of the Woods," Chippewas and Ottawas, in what is now the State of Michigan, were ceded to the United States prior to 1820, by treaties at Spring Wells, St. Mary's and Saginaw. In 1821 it was proposed by Government to extinguish the Indian title to that portion of the country lying between the northern boundary line of Indiana and the Grand River of Michigan. It was believed that the Pottawatomies and kindred tribes—the United Tribes—numbered at this time in Michigan about four thousand.

A council to effect this object was appointed, to be held at Chicago, in August, 1821. Governor Lewis Cass, of Michigan Territory, and Solomon Sibley, were appointed United States Commissioners, and Henry R. Schoolcraft was named as their Secretary. Mr. Schoolcraft, in his work entitled "Travels in the Central Portions of the Mississippi Valley," which was published in 1825, gives a full account of the proceedings of this council, and of the appearance of the country at that time. He says:

"On crossing the Desplaines, we found the opposite shore thronged with Indians, whose loud and obtrusive salutations caused us to make a few minutes' halt. From this point we were scarcely ever out of sight of straggling parties, all proceeding to the same place.

Most commonly they were mounted on horses, and apparelled in their best manner, and decorated with medals, silver bands and feathers. The gaudy and showy dresses of these troops of Indians, with the jingling caused by the striking of their ornaments, and their spirited manner of riding, created a scene as novel as it was interesting. Proceeding from all parts of a very extensive circle of country, like rays converging to a focus, the nearer we approached, the more compact and concentrated the body became, and we found our cavalcade rapidly augmented, and consequently, the dust, confusion and noise increased at every by-path which intersected our way. After crossing the south fork of the Chicago, and emerging from the forest that skirts it, nearly the whole number of those who had preceded us appeared on the extensive and level plain that stretches along the shores of the lake, while the refreshing and noble appearance of the lake itself, with 'vast and sullen swell,' appeared beyond. We found, on reaching the post, that between two and three thousand Indians were assembled—chiefly Pottawatomies, Ottawas and Chippewas. Many arrived on the two following days. Provisions were daily issued by the Indian Department, during the treaty, to about three thousand."

The Council opened on the 17th and continued over a week. It was held on the north bank of the Chicago River, probably between the present North State and Pine streets—the space included between the house of John Kinzie and that of Dr. Wolcott, the Indian Agent. In the course of the proceedings Governor Cass defined the limits of the country then owned by the Pottawatomies, as extending along both banks of the

STARVED ROCK.

* See "Pottawatomies in the War of 1812," further on in this history.

Illinois and all its tributaries. On the north it reached along the western shore of Lake Michigan to the Winnebagoes of Green Bay. On the east they claimed all the country beyond the St. Joseph to the head waters of the Maumee and Wabash, and on the west, to the territory of the Sacs and Foxes on the Mississippi. The principal speakers on the part of the Pottawatomes were Topinebee,* chief the St. Joseph band, and Metea, of the Wabash band. The Ottawas and Chippewas also had their spokesman, and by each it was affirmed that the Pottawatomes, Ottawas and Chippewas were originally one nation, and still considered themselves as one people.†

A treaty was concluded after a long delay on the part of the Pottawatomes, and five million acres passed to the possession of the United States Government, the latter to pay to the Pottawatomes five thousand dollars annually for twenty years, and to appropriate one thousand annually for the support of a blacksmith and a teacher among them. The Ottawas and Chippewas received a smaller amount.

In 1827 the Pottawatomes refused to join the Winnebagoes in their hostile demonstrations against the Americans, and again in 1832, although many of the younger warriors were in favor of joining Black Hawk, the councils of Shawbonee,‡ Robinson and the Sauganash prevailed, and the Pottawatome chiefs not only prevented the tribe from taking part in the war, but did their utmost to serve and protect the whites.

The last treaty between these Indians and the United States, prior to their removal to the Indian Territory, was made at Chicago—being concluded September 26, 1833. George B. Porter, Thomas F. V. Owen, and William Weatherford were Commissioners on the part of the Government. A preliminary council was held with the principal chiefs more than a week before the formal council, which was on the 21st of September.

Charles Joseph Latrobe, an English author, traveling in the United States, was present at this treaty. Speaking of the scene at the time of his visit, he says :

“When within five miles of Chicago, we came to the first Indian encampment. Five thousand Indians were said to be collected around this little upstart village for the prosecution of the treaty, by which they were to cede their lands in Michigan and Illinois. We found the village, on our arrival, crowded to excess; we procured, with great difficulty, a small apartment, comfortable and noisy from its close proximity to others, but quite as good as we could have hoped for. The Pottawatomes were encamped on all sides on the wide, level prairie beyond the scattered village, beneath the low woods which chequered them, on the sides of the small river, or to the leaward of the sand hills near the beach of the lake.”

At the informal council the Indians had informed the commissioners that they did not wish to sell their lands; they wished, on the contrary, to keep them; but, as the council was appointed, they were urged to take the matter into consideration, which they did. Nearly a week elapsed before they could be again induced to meet the commissioners, and in the meantime—

* The same chief who showed himself friendly to the inhabitants of Chicago in 1812.

† Mr. Schoolcraft, in a note regarding the common origin of these tribes, says: “This testimony of a common origin derives additional weight from the general resemblance of these tribes in person, manners, customs and dress, but above all, by their having but one council fire, and speaking one language. Still, there are obvious characteristics which will induce an observer, after a general acquaintance, to pronounce the Pottawatomes tall, fierce, haughty; the Ottawas, short, thick-set, good natured, industrious; the Chippewas, war-like daring, etc. But the generic lineaments, or to borrow a phrase from natural history, the suite features are identical.”

‡ The spelling—Shaw-bo-nec—is purely arbitrary, and is adopted, in the absence of any generally accepted standard, as giving phonetically the sound of the name as commonly pronounced. Hurlbut and Wentworth spell it Shabonee. In the treaty signed at Prairie du Chien in 1825, it is signed Chaboner; in the treaty of Prairie du Chien in 1829, Shab-eh-nay; and in the Chicago treaty of 1833, it is twice spelled differently—Shab-eh-nah, and Sha-be-uai.

“Companies of old warriors might be seen sitting smoking under every bush, arguing, palavering, or powwowing with great earnestness; but there seemed no possibility of bringing them to another council in a hurry. * * * The little village of Chicago was in an uproar from morning to night, and from night to morning; for during the hours of darkness, when the housed portion of the inhabitants of Chicago sought to obtain repose in the crowded plank edifices of the village, the Indians howled, sang, wept, yelled and whooped in their various encampments. * * * The large body of Indians collected in the vicinity consisted not merely of chiefs and warriors, but in fact the greater part of the whole tribe were present; for where the warrior was invited to feast at the expense of the Government, the squaw took care to accompany him; and where the squaw went the children or papooses, the ponies, and the innumerable dogs followed, and here they were living merrily at the cost of the Government. Not far from the river lay many groups of tents constructed of coarse canvas, blankets and mats, and surmounted by poles supporting meat, moccasins and rags. Their vicinity was always enlivened by various painted Indian figures, dressed in the most gaudy attire. * * * Far and wide the grassy prairie teemed with figures—warriors mounted or on foot, squaws and horses. Here a race between three or four Indian ponies, each carrying a double rider, who were whooping and yelling like fiends; here a solitary horseman, with a long spear, turbaned like an Arab, scouring along at full speed; groups of hobbled horses; Indian dogs and children; or a grave conclave of grey chiefs seated on the grass in consultation.”

For the residences of the United States Commissioners, and other notables present at the treaty, a number of plank huts or cabins were erected on the north bank of the Chicago River. In the vicinity of these the council fire of the United Tribes was lighted under a spacious open shed standing on the green prairie, and on the afternoon of the 21st of September some twenty or thirty chiefs assembled around it to commence proceedings. The Indians were seated at the western end of the council room and the commissioners were opposite them. On the 26th the treaty was concluded; on the 27th certain supplementary articles added; and, to the shame of the whites be it said, the Indians sold their lands, not because they did not love it and wish to remain upon it, but because they loved whisky better than everything else besides, and were allowed to drink until they cared for nothing else, but passively “put their hands to the quill” and signed away the land which they had conquered, and had claimed for three quarters of a century. The land ceded by this treaty contained about five million acres, and was, with the exception of some small reservations, all then claimed by the United Tribes in Illinois and Michigan.

They were granted a reservation which was then a part of the Indian Territory, but which by the “Platte Purchase” of 1836 became the northwestern portion or Missouri. In the summer of 1835, the Pottawatomes came for the last time to Chicago to receive their annuities, and to start thence for their Western reservation. The total number that assembled was about five thousand. While in the town of Chicago, at that time, the Indians performed their war-dance, as a sort of farewell to their old home and their remaining friends among the whites. They were removed by Government, under charge of the late Captain J. B. F. Russell, to the reservation assigned them, now in northwestern Missouri, and about two years later again removed to the present site of Council Bluffs, Iowa. In 1837, the Pottawatomes of Indiana were removed to a tract on the Osage River, now in Miami Co., Kans. In 1848, the several bands disposed of their lands in Iowa and on the Osage for the sum of \$850,000 and removed to another reservation on the Kansas River, where they were joined in 1850 by the remnant still remaining in Michigan. In their Western home, as here, they were divided into the Pottawatomes of the Woods, the Mission band (who were generally Catholics, docile, and easily civilized),

and the wild Prairie band. At the treaty made with the tribe in Kansas, November 15, 1862, the latter could not be induced to break up their tribal relations, and were allotted a portion of the reservation which they were to hold in common. The Band of the Woods and the Mission band elected to become citizens of the United States, and now hold their land in Kansas in severalty. The Prairie band numbered seven hundred and eighty at the time of the treaty, and was allotted a tract of about twelve miles square in what is now Jackson Co., Kans., upon which they still live. There are now (1883) on the reservation about four hundred and fifty; two hundred and eighty are in Wisconsin, thirty in Iowa and twenty-four in the Indian Territory. Dr. H. C. Linn is the present agent of the Prairie Indians, and their present chief is Sough-nes-see. On the reservation the Indians have one hundred and five houses, some of which are very comfortable, and as many well cultivated fields, enclosed with good fences. The Indian boarding-school was opened in 1875, which with its school building, boarding house, laundry, barn, etc., cost \$12,000. A writer who visited them in 1882 says:*

"This prairie band of Indians are many of them resolutely cultivating the arts of peace. They are just and honest with the whites and themselves; they are developing the holy love of a personal, permanent home; they are comprehending subjects of business presented to them; they are substituting, for the sixteen English letters they have heretofore used in their Indian language, all of the English alphabet found necessary to express vocal sounds; they are learning to acquire property; in fine they are making gradual progress, and their permanent location in Jackson County may bring mutual compensation to themselves and the 'superior race.'"

ORIGIN OF THE WORD CHICAGO.

The first mention of the word Che-cau-gou, the Chicago of modern times, is in Hennepin's account of LaSalle's expedition to the Illinois River by way of the St. Joseph and Kankakee, in 1680. The title of one of his chapters has been translated, "An account of the building of a new fort on the river of the Illinois, named by the savages Che-cau-gou, and by us Fort Creveceur." This is a very blind translation, and it is difficult to determine from it, exactly what Hennepin meant; but, judging from other descriptions of the same expedition, given by Membre and LaSalle, he probably intended that the title of his chapter should read, "An account of the building of a new fort, named by us Creveceur, on the river of the Illinois, named by the savages Che-cau-gou," which there is reason to believe was their name for the Illinois River. Marquette speaks of the river only as "the river of the Illinois," while Joliet calls it the "river of St. Louis," and also "The Divine River, or Outralaise."†

Franquelin has evidently mistaken the locality of the St. Louis River of Joliet, as, on his large map of 1684, he has applied to the Ohio the name "River St. Louis or Chucagoa." The name, however, shows that the river called St. Louis was also called Checaugou or Chucagoa. The name Chicagou is given to the Illinois by Coxe, also, in his "Louisiana." There is a map in the Historical Society Library at Madison, Wis., said to have been designed by Samson, geographer to the French King in 1673, before the results of the expedition of Joliet and Marquette were made known. On this map is laid down a river, with its outlet in the Gulf of Mexico, and which is intended to represent the Mississippi. It is called the "Chucagua River."

One of the meanings of the word "Chicaugou," or

*"History of Kansas," published in 1883.

†In compliment to Madame Outralaise; a friend of the wife of the Count DeFrontenac.

Chicago, is said to be "great" or "strong," from ka-go, something, and chi, from gitchei, great. It is not unreasonable to believe that this was the generic term applied by the Illinois Indians, not only to their own "great river," but also to the Mississippi. Much information regarding the latter river had been gained by the French from the Illinois Indians, but it was always called by them the "Great River," which its name also signifies in the dialect of the Northwestern tribes—*mecha* or *meche*, large or great; and *sepua*, *sepi*, river. The Illinois River is called the "Divine River" ("Riviere LaDivine") by Joliet, who applies this name to the river, from the source of the Desplaines branch to its mouth. LaSalle calls the Illinois the Divine River, in 1680, and Membre says, speaking of the expedition on which he accompanied LaSalle in 1681-82, that they "went toward the Divine River, called by the Indians Checaugou," to make their way to the Mississippi; Membre, however, applying the name only to the northern branch of the Illinois (Desplaines), which branch was called by that name or Chicago, until as late as 1812. LaSalle, writing of his expedition to the Illinois in the winter of 1681-82, says he arrived in January, 1682, at "the division line called Checaugau, from the river of the same name, which lies in the country of the Mascoutins." The Mascoutins, at that time, had villages between the Fox and Desplaines, in common with the Kickapoos, whose language, manners and customs were identical. It is believed that they were bands of the same tribe, known by the different names, and that the Kickaphos are now the only survivors of the tribe.

St. Cosme, visiting this locality in 1699 and again in 1700, spells the name variously; as Chikagu, Chikagu, Chicagu, Chicago, and Chicaqu. The latter spelling is equivalent to Chicaque, or Checaqua, which was the name borne by a long line of Illinois chiefs—and as applied to them, would mean the great, or powerful, chiefs.

Dr. William Barry,* first secretary of the Chicago Historical Society, who has given much attention to this question, makes the following statement:

"Whatever may have been the etymological meaning of the word Chicago, in its practical use it probably denotes strong or great. The Indians applied this term to the Mississippi River, to thunder, or to the voice of the Great Manitou. Edwin Hubbard, the genealogist, adopts a similar view, and says the word Chicago, in its applications, signified strong, mighty, powerful."

It must be remembered that when LaSalle came with his party of followers to this region in the winter of 1681-82, not only the river now the Desplaines, but the portage leading to it, was "called by the savages" (the Miami and Illinois, whose dialect was the same) Checaugou. The name, "as the appellation of a chief or brave," or whatever it might mean, could not have been "transferred by the French to the river, and passed from the river to the locality when the French settled there," as Dr. J. Hammond Trumbull, of Hartford, Conn., suggests, because both river and locality were "called by the savages Checaugou" when the French first visited them. If the meaning of this word, in the dialect of the Illinois and Miami, was great, or powerful, and was the generic term by them applied to the Mississippi, the Illinois, their great chiefs, etc., and as the French gave other and specific names to their rivers and localities, this was at last only given to the Desplaines, the portage, and later to the little stream leading from the portage to the lake, of course, the name so applied lost all its significance.

A similar word or compound word which applies

*"Chicago Antiquities"—p. 121.

locally to the present Chicago River is found in another dialect (Chippewa) of the same Algonquin tongue—the words, shegahg, meaning skunk, or she-gau-ga-winzhe, skunk-weed or wild onion; which it is believed was given to the present Chicago River by the natives, from the circumstance of its banks producing plentifully the wild leek or onion. The early French writers—Membre, and Tonty in his “Memoir”—speak of the abundance of this bulbous plant throughout the country; the latter mentioning the fact of subsisting on the wild onions which he and his companions grubbed from the ground, on their journey from the Illinois to Green Bay in the winter of 1680-81.

E. M. Haines, of Waukegan, in Blanchard's “History of Illinois,” says, in regard to this meaning of the word, so applied:

“The word Chicago is understood to be an Indian word; at least it is derived from that source. What its precise meaning is, or whether it has any particular meaning at all in its present form as now applied, is a matter of considerable dispute among those who have given the subject attention. The word comes to us through the early French explorers of the West as an Indian word from the language of the Algonquin group. Whilst this group of the North American tribes had one general or generic language by which they were distinguished, each tribe had its dialect differing more or less from that of the other tribes of the same group. The standard or parent language, however, since this people became known to the whites, was that spoken by the Ojibways (Chippewas,) the most powerful and numerous of the various tribes of this group. Those who pretend to make any positive assertion as to the correct meaning of this word, as an Indian word, seem to have confined their investigations on the subject to the Indian language, as spoken by the Ojibways, without reference to other dialects, seeming to ignore the fact that it could come from any other source, whereupon they reach the conclusion, and so assert, that it means onion, garlic, leek or skunk. So far as appears at this day, there seems to have been no special inquiry into the origin or meaning of this word until about the time of the rebuilding of Fort Dearborn, in 1816. The year following that event, Colonel Samuel A. Starron visited this place, and in a letter to General Jacob Brown of the United States Army, refers to the river here as ‘the River Chicago (or in the English—Wild Onion River).’ * * * The definition of the onion by Rev. Edward F. Welson, in his dictionary of the Ojibway language, is keche-she-gaug-vh-wunzh. He defines skunk as zhe-gang. John Tanner, for thirty years a captive among the Ojibways, and many years United States Indian interpreter, in a ‘Catalogue of Plants and Animals, found in the country of the Ojibways, with English names,’ appended to the narrative of his captivity, defines skunk as she-gang. He defines onion as she-gau-ga-winzhe (skunk-weed). In a note thereto, by Dr. James, editor of Tanner's narrative, it is added: ‘From shih-gau-ga-winche, this word in the singular number, some derive the name Chicago.’ * * * It is noticed that all who contend that the word Chicago, as applied to the river and city of that name, means skunk, onion or the like, derive their convictions on the subject from one or more of the authorities which are before cited, or from some one familiar with the Ojibway language, who forms his convictions to the same effect, from the mere coincidence of sounds. History is so unsatisfactory and varied in regard to this word, that we are left to this day to determine its meaning solely upon the basis of similarity of sounds. For there seems to be no fact or incident narrated or mentioned in history that leads with any degree of certainty either to the original meaning of this word as intended, or to the dialect from which it is derived. And it is to be confessed that upon the theory aforesaid, conceding that the word comes from the Ojibway language or dialect, no one is prepared to dispute the assertion so generally made that the word is derived from skunk. The word skunk being in the Indian tongue simply she-kang, in order to make Chicago, the theory adopted is that ong, an Ojibway local termination is added which makes Chi-cag-ong, meaning at the skunk, the sound ng being dropped in common speech, leaving the word in the form now used. Whilst this is not inconsistent in practice in dealing with Indian names, there is another theory, it is suggested, which may be adopted in this connection, that would seem to be equally consistent. The word Chi-ca-go, without adding ng, would be a fair Ojibway expression. The sound o added, would denote the genitive, and might be rendered thus, ‘him of the skunk,’ in which case it would probably be the name of an individual, and it is stated that this word is the name not only of some one Indian chief, but the name also of a line of chiefs during several generations. * * * The most that can be said of the word with any

degree of certainty is, that it is of Indian origin and comes from some dialect of the Algonquin group, so called. It must be noted, however, that in the Ojibway dialect this word, or that which is essentially the same, is not confined in its meaning to that contended for as before mentioned. The word may mean, also, in that language, to forbear, or avoid, from kah-go, forbear, and che, a prefix answering to our preposition to; or, it may mean something great, from kago, something, and chi, from git-che, great. Besides several other words or expressions which may be found in this dialect, of the same sound, yet of different meanings, Che-ca-gua was the name of a noted Sac chief, and means in that dialect, ‘he that stands by the tree.’ In the Pottawatomic dialect, the word choc-ca-go, without addition or abridgment, means destitute.”

There have been various other theories in regard to the meaning of the word, but the weight of authority seems to denote that when the French first mentioned the river, “called by the savages Checagou,” they referred to the Illinois, and its northern branch, and that it was simply at that time the “great river” of the Illinois. When these Indians and the kindred tribe, the Miamis, were driven from the region, and the “canoe people”—all branches of the original Ojibways—gained possession of the country, the name was transferred to the present Chicago River, although it was still applied also to the Desplaines. The name, as applied by these Indians to the little river had, doubtless, a local signification, and from the time of their advent, Chicago River, in all probability, meant skunk-weed, garlic, or wild-onion river. It was certainly known as such as early as 1773, when the Indians deeded to William Murray a tract of land, extending “up the Illinois to Chicagou or Garlick Creek,” although it may never be fully known whether the simple word she-kang, the more complex she-gan-ga-winzhe, the Pottawatomic choc-ca-go, or some other similar word had the honor of giving a name to the present river and city of Chicago.

EARLY EXPLORATIONS.

JOHN NICOLET.—A history of Canada, written in Latin, by M. DuCreux, and entitled *Historia Canadensis*, was published in Paris in the year 1664. In this work was the following passage:

“In the last months of 1642, New France mourned for two men of no common character who were snatched away from her; one of these (Raymbault), who died first, of disease, was a member of the Society of the Jesuits, and the other, although a layman, was distinguished by singularly meritorious acts toward the Indian tribes of Canada.”

This “layman,” whose services in the interest of France and humanity well merited the above notice, was John Nicolet, the first civilized man who trod the soil or floated upon the waters of the great Northwest—the dauntless pioneer who penetrated to the hitherto unknown “fresh water sea,” beyond the “Lake of the Hurons,” and visited the Indian tribes dwelling upon its western shore; not resting until he reached the villages of the Illinois (Eriniouaz) and, it is believed the beautiful prairies of the State which now bears their name. In the *Historia Canadensis*, and in the Jesuit Relations of 1639-43 (Vimont), is found the narrative of the life and achievements of the man who occupied so important a place in the history of French explorations.

In 1603 Samuel Champlain first came to the banks of the St. Lawrence to make a survey of the country preliminary to founding a colony and permanently securing to France a monopoly of the fur trade with the surrounding Indians. His visit was brief, but from the natives he learned enough to satisfy him that the failures of De La Roche, Pontgrave and Chauvin need not be repeated on the St. Lawrence. He returned to France, to sail again in 1608, with men, arms and stores

for a colony, and in the summer of that year he commenced the settlement of Quebec. During his previous visits he had heard from the savages of regions farther to the west—of great lakes, cataracts and rivers—and had become convinced that from the head of the St. Lawrence, by means of these inland lakes and streams, it would be possible to reach the so-called Western Sea and China; as, by the Ottawa of the North, he believed he could reach the Polar Sea. He came, therefore, to New France the second time, more as an explorer than as a merchant. The interests of the fur trade were placed in the hands of another, and after the settlement at Quebec acquired some degree of permanency, he commenced his exploration of the country farther to the south and west. Attaching to his interests the Algonquins of the Ottawa, and the Hurons of Georgian Bay, who came annually to the St. Lawrence to trade, and who, like the French, were fearful of the encroachments of the Iroquois, Champlain penetrated the country to the lake which bears his name, drove the Iroquois from its waters, and by his powers so attached the allied tribes to himself, that before they left him to return to their homes the Hurons had invited him to visit them at their villages and ally himself with them in their war with the Iroquois.

After revisiting France in 1609 and 1610, he again returned in 1611 to the St. Lawrence, and selected as a trading-post the present site of Montreal. The continuous and cruel wars of the Iroquois had compelled him to abandon his scheme of penetrating the western country, and he now devoted all his energy to the advancement of the interests of his superiors in France, by attempting to secure a monopoly of the fur trade of the surrounding region. With the design of extending this trade to more distant tribes, he commenced, about the year 1615, to train young men for the especial purpose of dealing with the Indians, by placing them in the charge of some friendly tribe to learn its language, manners and habits, and to become hardened and inured to the deprivations and loneliness of a life spent in the wilderness and among savages. While training others, he did not fail to cultivate the friendship of the Indians, and attach them to his interest by every means in his power. In 1615 he consented to lead the Hurons and Algonquins of the Ottawa against the Iroquois. With two Frenchmen and ten Indians he left Montreal in July of that year, traveled up the Ottawa to the Algonquin villages, passed the Allumette lakes, and thence by Lake Nipissing, French River and Georgian Bay, reached the home of the Hurons, which lay in the little peninsula formed by the head of the Georgian Bay, the River Severn and Lake Simcoe. Here he joined the warriors of the two nations who had gathered at the Huron village. With them he moved south to the shore of Lake Ontario, crossed the lake and attacked the Iroquois in their fortified villages in the present State of New York. The attack was not a success, and, with his allies, Champlain returned to the Huron village, where he passed the winter, and returned to Quebec in the summer of 1616, arriving just one year from the time of his departure. He had learned enough of the lake of the Hurons and of the country farther west, with its treasures of copper and peltry, to be more than ever anxious to secure it for France.

Quebec, at this time, consisted of a small fort, of which Champlain was nominal commander, and a population of some fifty fur-traders, adventurers and Recollet friars. In 1618 there arrived at this post, from France, a young man named John Nicolet. He was a native of Cherbourg, in Normandy, and son of Thomas Nicolet, a mail-carrier from Cherbourg to Paris. His mother was

Marguerita de la Mer. In accordance with the plan of Champlain to educate young Frenchmen for explorers and traders by actual trial of Indian life, Nicolet was selected for that purpose, as giving extraordinary promise of future usefulness, and sent to an Algonquin tribe, whose home was the Isle des Allumette, on the Ottawa River, that he might prepare himself for the career marked out for him.*

With the "Algonquins of the Island" he spent two years, accompanying them in their wanderings and partaking of all their dangers and privations—sometimes almost perishing with hunger, and subsisting for weeks upon barks and lichens. During this time he never saw the face of a white man, or heard a human voice, save the guttural tones of the savages, which soon, however, became intelligible; his memory, according to the record, being wonderfully good. At the end of two years he had become familiar with the Algonquin language, and was then sent, with four hundred natives, on a peace mission to the Iroquois. It would appear from the narrative, that Nicolet was authorized to negotiate with the hostile tribe, as it is stated that "he performed his mission successfully." At this time he must have visited the Hurons, the allies of the Algonquin tribe, who would be equally benefited by the renewal of peace, and whose villages lay directly in his route.

After his return from this peace mission, Nicolet took up his residence with the Indians who dwelt on the shores of Lake Nipissing, further to the northwest than the Isle des Allumette. Here he lived eight or nine years, becoming practically one of the tribe. He had his cabin and trading-house among them, entered into their councils, and doubtless was looked upon as one of the "head men" of the nation. About the year 1633,† when Canada passed from the brief dominion of England back to its former owner, Nicolet was recalled to Quebec by Government, and made Commissary and Indian Interpreter in that city for the "Company of the Hundred Associates."

During the years of Nicolet's absence among the Indians, New France had passed through various changes. The Recollets had been superseded by the Jesuits, who had commenced the work of establishing missions among the Indian tribes in Canada. The companies of French merchants who, for a time, enjoyed a monopoly of the fur trade, had given place to the Company of New France, commonly called the "Company of the Hundred Associates," which, with Cardinal Richelieu as its brain and motive force, now held almost sovereign sway over both the secular and religious interests of the French colonists. Interrupted in its designs for a brief period, by the successes of England in Canada, its jurisdiction was restored after the treaty of peace, and in May, 1633, Champlain, who had been carried prisoner to England, was again restored to his former office, and assumed command at Quebec, with the understanding that the affairs of New France were now to be conducted in the interests of the Hundred Associates, and the Society of Loyola. The French population on the St. Lawrence was even now only about one hundred and fifty, and the only trading posts were Quebec, Three Rivers, the Rapids of St. Louis, and Tadoussac, at the mouth of the Saguenay.

It was at this time that Nicolet was recalled from Nipissing, and entered the employ of the powerful company which ruled New France. The narrative says, "During this period (while Nicolet was commissary and

* The narrative of DuCreux calls the period spent here a "preliminary training."

† The occupation of Canada by the English from 1629 to 1632 accounts for his long residence among the Indians.

interpreter for the Company), at the command of the same rulers, he had to make an excursion to certain maritime tribes for the purpose of securing peace between them and the Hurons." The Hurons had always been friendly to the French; they were the most distant tribe with whom any commercial intercourse was maintained, and their country lay in the path to the far West. Should this threatened war be declared against their allies, explorers would hardly dare venture far from the banks of the St. Lawrence, and the proselyting designs of the Jesuits would also be effectually checked. Champlain was eager, too, to gain knowledge of the "maritime tribes," called "Men of the Sea" by the Algonquins, who sometimes made the long journey of five or six weeks to their country, and returned with wonderful tales of the nation which had wandered thither from the borders of a distant sea, and was still visited by a "strange people without hair or beards, who came from the west in large canoes, upon a great water, to trade." With his preconceived idea of the probability of reaching the sea which washed the shore of Asia, by means of the western lakes and rivers, Champlain believed the "great water," of which the Indians spoke, might be this distant Western Sea, over which the beardless Chinese had passed to trade with the people who once lived on its borders. Therefore, to the rulers of New France, it was an object to secure peace between the Hurons and the "Men of the Sea," in order to advance the interests of both commerce and religion. Knowing the superior ability of Nicolet, and having been instrumental in placing him where he could acquire the special training necessary to fit him for the task of penetrating the wilderness to these strange and unknown tribes, and also of dealing with them in a prudent and successful manner, Champlain selected him for the mission. He was to visit "La Nation des Puants;"* if possible, "secure a peace," between them and the Hurons, and their friendship for France; and he was also to explore the country of the Puants in search of the passage to the Western Sea. In July, 1634, Fathers Brebeuf and Daniel started from Quebec to found the Huron mission. Nicolet accompanied them from Three Rivers, where he had been assisting in the building of a fort—as far as the Isle des Allumette, his old Indian home. Father Brebeuf says he "endured every hardship" during the journey, "with the courage of the strongest savage." Here the fathers apparently left him to go to their mission. From the time that Nicolet left Three Rivers with the missionaries there is no record of his being on the St. Lawrence until December, 1635—nearly a year and a half—the time of his absence on his mission to the West, when he visited the northern and western shore of Lake Michigan. This visit, therefore, was between July, 1634, and December, 1635. He was not again absent from his post in Canada long enough for such a journey during his after life.

Some time after the fathers left him at the Isle des Allumette, Nicolet followed them to the village of the Hurons, and thence set out on his pacific expedition, accompanied by "seven ambassadors of the Huron nation," and provided with gifts to conciliate any hostile tribe in his path. Launching their canoes, the party paddled up the Georgian Bay; passed "the river"† which flows from Lake Nipissing; then the "Nation of Beavers," on the northern shore of Lake Huron; and still north of Sault Sainte Marie and the "People of the Falls," whose village was on the south side of the strait at the foot of the rapids, in what is now the State of

Michigan. Here lived the ancestors of the modern Ojibwas and Chippewas—Algonquins, whose language was familiar to Nicolet, and here his party stopped for a brief rest. It may be that words here dropped by Nicolet, in regard to the new mission among the Hurons, were remembered. Not many years after, the inhabitants of this village asked that a missionary might be sent among them, and still later there was founded here the successful mission of Dablon and Marquette.

Leaving the "Village of the Falls," Nicolet returned down the strait of St. Mary, turned to the west, passed Mackinac, and his little canoe floated upon the clear waters of the "second great fresh water sea." The pioneer white man had found his way to the great Northwest. With that little boat came the beginning of the end which is not yet,—the dawning of the wonderful to-day of the West. Coasting along the northern shore of Lake Michigan, he stopped occasionally upon the shore of what is now the Upper Peninsula of Michigan, reached Green Bay and the mouth of the Menomonee River, which he entered, and visited the Indians living in its valley. At the head of Green Bay, near the point where it receives the waters of Fox River, lived the Winnebagoes* to whom he had come with his message of peace. The narrative‡ continues thus:

"When he was two days distant (from the Winnebagoes), he sent forward one of his own company to make known to the nation to which they were going that a European ambassador was approaching with gifts, who, in behalf of the Hurons, desired to secure their friendship. The embassy was received with applause, and young men were immediately sent to meet him, who were to carry the baggage and the equipment of the Manitourinion (wonderful man), and escort him with honor. Nicolet was clad in a Chinese robe of silk, skillfully ornamented with birds and flowers of many colors; he carried in each hand a small pistol. When he had discharged these, the more timid persons, boys and women, betook themselves to flight, to escape as quickly as possible from a man who, they said, carried the thunder in both his hands. But the rumor of his coming having spread far and wide, the chiefs, with their followers, assembled directly, to the number of four or five thousand persons; and the matter having been discussed and considered in a general council, a treaty was made in due form. Afterward each of the chiefs gave a banquet after their fashion; and at one of these, strange to say, a hundred and twenty beavers were eaten."

After negotiating a treaty with the Winnebagoes, Nicolet sailed up the Fox River, of Green Bay, a six days' journey, as the first step toward the discovery of the "great water" he desired to reach. Near the "portage" between the Fox and Wisconsin Rivers, he found a village of the Mascoutins.

Allouez found the Mascoutin village, which he visited in 1670, at the western extremity of the portage on the Wisconsin, and says it was six days' sail down the Wisconsin to the "Messisipi," from the village. He also speaks of the lake or marsh near the portage as being the source of the Wisconsin River.‡

Nicolet evidently thought the same. The narrative reads:

"The Sieur Nicolet, who had penetrated farthest into those distant countries, avers that had he sailed three days more on a great river which flows from the lake he would have found the sea."

After sailing down the Wisconsin,§ and when within three days' journey of this "sea," Nicolet seems to

*This tribe, called Oninipegon in Vimont's Relation (1640), and Puants by the French, was identified with the Winnebagoes of Green Bay by J. G. Shea. †Du Creux.

‡Rel. 1670-71. "To reach them, the Mascoutins, we traversed the lake or marsh, at the head of the Wisconsin, which was a beautiful river running southwest."

§It is the opinion of John G. Shea and Francis Parkman that Nicolet reached and sailed down the Wisconsin, as stated above. Prof. C. W. Butterfield, of Wisconsin, who has given much time and study to the subject of Nicolet's explorations, is convinced—and gives good reasons for his belief—that Nicolet terminated his journey toward the West at the portage, and that it would have required a "three days' journey" on the Fox River to reach the Wisconsin—an affluent of the Mississippi, and the "sea" of Nicolet.

*Winnebagoes of Green Bay, Wis.
†French River.

have found that it was still a long journey to the sea which washed the shores of Asia, and turned his course toward the south. He then visited the Illinois, whom he called Erinouay. Vimont, from information derived from Nicolet, describes them as living south of the Winnebagoes, and as numbering about sixty villages. He also speaks of them as the Liniouek. After his visit to the Illinois villages, Nicolet returned to the region now Green Bay, visited the Pottawatomes, who lived on the islands at the mouth of the bay, and on the peninsula forming its western shore. His mission ended, he returned to the Huron village and thence to Three Rivers, where he is mentioned, in the parish records, as standing godfather to Marie, little daughter of Capitanel, (chief of the Montagnais Indians), on the 27th of December, 1635. On his return to Canada, he was assigned to the post at Three Rivers, by Champlain, as commissary and interpreter. On the 7th of October, 1637, he was married at Quebec to Marguerite Couillard, a godchild of Champlain. Their only child was a daughter. His history, from the time of his return until his death, is thus simply told by DuCreux:

'Nicolet returned to the Hurons, and presently, to Three Rivers, and resumed both of his former functions, viz., as commissary and interpreter; being singularly beloved by both the French and the natives; specially intent upon this, that uniting his industry and the very great influence which he possessed over the savages, with the efforts of the fathers of the society (Jesuits), he might bring as many as he could to the Church; until, upon the recall to France of Oliver,* who was the chief commissary of Quebec, Nicolet, on account of his merits, was appointed in his place. But he was not long allowed to enjoy the Christian comfort he had so greatly desired, viz., that at Quebec he might frequently attend upon the sacraments, as his pious soul desired, and that he might enjoy the society of those with whom he could converse upon divine things. On the last day of October (1642), having embarked upon a pinnacle at the seventh hour of the afternoon (as we French reckon the hours), i. e., just as the shades of evening were falling, hastening, as I have said, to Three Rivers, upon so pious an errand, † scarcely had he arrived in sight of Sillery, ‡ when, the north wind blowing more fiercely, and increasing the violence of the storm which had commenced before Nicolet started, the pinnacle was whirled around two or three times, filled with water from all directions, and finally was swallowed up by the waves. Some of those on board escaped, among them Savigny, the owner of the pinnacle; and Nicolet, in that hour of peril, addressing him calmly, said: 'Savigny, since you know how to swim, by all means consult your own safety; I, who have no such skill, am going to God; I recommend my wife and daughter to your kindness.' In the midst of this conversation, a wave separated them; Nicolet was drowned; Savigny, who from horror and the darkness of the night, did not know where he was, was torn by the violence of the waves from the boat, to which he had clung for some time; then he struggled for awhile in swimming, with the hostile force of the changing waves, until at last, his strength failing, and his courage almost forsaking him, he made a vow to God (but what, is not related). Then striking the bottom of the stream with his foot, he reached the sloping land under the water, and forcing his way with difficulty through the edge of the stream, already frozen, he crept, half dead, to the humble abode of the fathers. The prisoner, for whose sake Nicolet had exposed himself to this deadly peril, twelve days afterward reached Sillery, and soon after Quebec—having been rescued from the cruelty of the Algonquins by Rupaeus, who was in command at Three Rivers, in pursuance of letters from Montmagny, on payment, no doubt, of a ransom. This, moreover, was not the first occasion on which Nicolet had encountered peril of his life for the safety of savages. He had frequently done the very same thing before, says the French§ writer; and to those with whom he associated he left proofs of his virtues by such deeds as could hardly be expected of a man entangled in the bonds of marriage; they were, indeed, eminent, and rose to the height of apostolic perfection; and, therefore, was the loss of so great a man the more grievous. Certain it is that the savages, themselves, as soon as

*Champlain died on Christmas, 1636. He was succeeded by de Chastefort, and he in turn, by de Montmagny. The General Commissary of the Hundred Partners, at Quebec, was M. Olivier le Tardif, who sailed for France in October, 1642.

†His labors in behalf of the Indians were ceasing. At this time he was on his way from Quebec to Three Rivers to release an Indian prisoner who was being tortured by a hostile band.

‡An Algonquin mission four miles above Quebec.

§Vimont.

they heard what had befallen him, surrounded the bank of the great river in crowds, to see whether they could render any aid. When all hope of that was gone, they did what alone remained in their power, by incredible manifestations of grief and lamentation at the sad fate of the man who had deserved so well of them."

Thus perished John Nicolet, the brave yet gentle young pioneer who first found the path to the Northwest, and the first white man who saw its magnificent lakes, forests and prairies. Along his path followed, after many years, a long procession of devoted priests, brave explorers and hardy voyageurs; but among them all, not one whose record is more noble than that of this unpretending "layman," who carried peace to the nations which he visited, and lived and died in unselfish devotion to the call of the suffering and oppressed.

THE JESUITS AND THEIR EXPLORATIONS.—In the sketch of John Nicolet, it was mentioned that he started on his long western journey at the same time that Fathers Brebeuf, Daniel and Davost set out to found the Huron mission, accompanying them a part of the way. After leaving Nicolet at the Isles des Allumette, the fathers pursued their journey to the southern extremity of the Georgian Bay, and on the eastern shore of Lake Huron, at Itonatiria, the principal Indian village, established the mission of St. Joseph. The country of the Hurons, although small in area, was rich and populous, and the inhabitants were more gentle and ready to listen to the missionaries than the other tribes they had visited. By 1636 three more fathers had been sent among them, and their work was wonderfully prosperous. In the autumn of 1641, the mission of St. Joseph was visited by a deputation of Indians occupying "the country around a rapid in the midst of the channel by which Lake Superior empties into Lake Huron,"* inviting them to visit their tribe. The fathers "were not displeased with the opportunity thus presented of knowing the countries lying beyond Lake Huron, which no one of them had yet traversed;" so Isaac Jogues and Charles Raymbault, † two of the later comers, were detached to accompany the Chippewas to their home. After seventeen days from their departure they reached the village at the "Sault," which Nicolet had visited in 1634, where the savages had assembled in great numbers to hear their words. They did not find a mission; their visit being merely a preliminary one, to view the field. The following year the Iroquois war broke out afresh, and missions and Huron villages alike disappeared. Fathers Jogues and Raymbault attempted to return to the St. Lawrence. The former was taken prisoner by the Iroquois and cruelly scourged and mutilated; the latter died soon after his return. It was not until 1656 that the Jesuits dared again attempt the extension of their missions. In that year Father Garreau was ordered to Lake Superior, which now seemed a more promising field, but he was killed before leaving the St. Lawrence. DeGroselles and another Frenchman wintered on the shore of Lake Superior in 1658. They visited the Sioux, and from the fugitive Hurons who had sought refuge among them, heard of the Mississippi and the Illinois Indians, whom they had found on its banks. In 1660, René Menard, formerly a missionary among the Hurons, founded an Ottawa mission on the southern shore of Lake Superior, at Keweenaw Bay, but after a brief stay among the Indians died in the woods, of famine, or through violence. Five years later, Father Claude Allouez was sent to Lake Superior to take up the work of Menard. He arrived October 1, 1665, at "Chegoimogon," now Chequamegon, or Ashland Bay, in Wis-

* From the village visited by Nicolet in 1634.

† Whose death is mentioned with that of Nicolet in "Historia Canadensis."

consin, "at the bottom of which," wrote the missionary, "are situated the great villages of the savages, who there plant their fields of Indian corn, and lead a stationary life." Near by he erected a small chapel of bark—the first structure erected by civilized man in Wisconsin, and at LaPointe, a little north of the Indian villages, he established the mission of the "Holy Ghost," which in 1669, fell to the charge of Father Jacques Marquette.

JACQUES MARQUETTE, whose name is now identified with the early history of Chicago, was a native of Laon, in Picardy—a devoted priest, and a learned and talented man. He had been employed on the St. Lawrence, and was preparing for a projected mission to the Montagnais Indians, at the mouth of the Saguenay, in Canada, when he received orders to prepare for the Ottawa mission on Lake Superior, then in charge of Father Allouez. He left Quebec on the 21st of April, 1668, and journeyed with the Ottawa flotilla of that year, to Sault Ste. Marie. When he reached Lake Superior, he found that new missions were required on the lakes, as the Hurons and other tribes driven west by the Iroquois were now returning toward their old homes. Two places were selected by the Jesuit superior, wherein to found these missions—the Chippewa village at the "Sault," and Green Bay. The former station was assigned to Marquette. A year later Allouez left the Ottawa mission at La Pointe, to found the mission at St. Francis Xavier, at Green Bay, and Marquette was transferred from the "Sault" (where, with the help of Father Dablon, his superior, he had built a church and established the mission of St. Mary), to the western shore of Lake Superior, the former station of Father Allouez. Marquette arrived at La Pointe in the autumn of 1669, then the extreme point to which the French had penetrated, and lived a year and a half among the savage tribes who had congregated there (the Hurons, and Ottawas driven from the east, the Christian Kiskadons, and the scoffing Ontaonks), "busily employed from morning till night" in instructing and admonishing them, both in chapel and cabin. In the spring of 1670, he was appointed to the Illinois mission, and earnestly hopes that it will "please God to send some father to take his place," that he may set out in the fall to commence the work among the Illinois. Several of this nation had been at La Pointe during the winter, and these "lost sheep" had called upon him "so piteously," that he could not resist their entreaties to visit them. The young Illinois hunters accordingly left La Pointe in the spring, with a promise to send some of their "old men" to guide Marquette to their prairies in the coming fall. Marquette had learned much of these "hunters" during the winter. They told him of the great river, "almost a league wide," which they passed in coming to La Pointe, which he says he desired to visit, to teach the natives along its banks, and "in order to open the way to so many of the fathers who have long awaited this happiness." As a minor consideration, he desired "to gain a knowledge of the southern or western sea." Of the Illinois he says:

"The Illinois are thirty days' journey by land from La Pointe, by a difficult road; they lie south-west* from it. On the way you pass the nation of the Ketchigamins† who lived in more than twenty large cabins. They are inland and seek to have intercourse with the French, from whom they hope to get axes, knives and ironware. * * * You pass then to the Miamiwek,‡ and by great deserts reach the Illinois, who are assembled chiefly in two towns, containing more than eight or nine thousand souls. When the Illinois come to La Pointe they pass a large river almost a

* Evidently alluding to that portion of the Illinois west of the Mississippi.

† This tribe of Mascoutins had a village in common with the Kickapoos, on the Wisconsin River, twelve miles lower than the Mascoutin village, near the portage.

‡ Miami.

league wide. It runs north and south, and so far that the Illinois, who do not know what canoes are, have never yet heard of its mouth. The Illinois are warriors, they make many slaves, whom they sell to the Ottawas for guns, powder, kettles, axes and knives. They were formerly at war with the Nadouessi, but having made peace some years since, I confirmed it, to facilitate their coming to La Pointe, where I am going to await them in order to accompany them to their country."

Marquette did not found a mission among the Illinois, as he desired, in the fall of 1670. The Sioux—the Nadouessi, whose treaty with the Illinois he had confirmed, and whose country he believed he could safely pass—declared war on the Ottawas and Hurons, and, with what remained of his terrified flock, he passed another winter at the mission of the Holy Ghost. In the spring he left the dangerous neighborhood of the Sioux, with the Hurons, his last remaining Indians; the Ottawa, for whom the mission was established, having previously fled toward the east.

Marquette embarked with his Hurons on Lake Superior, and crossing to its eastern extremity in frail canoes, passed down the strait of St. Mary, and thence to Michilimackinac. Entering the latter strait, they resolved to land and make a home there, and on the northern side of the trait (now Point St. Ignace, of the Michigan Peninsula), Marquette erected a rude chapel, and founded among the Hurons the mission of St. Ignatius. The Indians soon built near the chapel a palisade fort, enclosing their cabins, and Marquette remained among them, until the spring of 1673.

In 1671 France took formal possession of the whole country of the upper lakes, determined to extend her power to the extreme limit, vague as it was, of Canada. The Mississippi and some of its principal tributaries were well known to exist, and the importance of its exploration—it could hardly be termed discovery—was well understood. The rulers of New France, however, did not regard this great river merely as another avenue to be opened whereby the cross might be carried to unknown tribes; and the ambitious Frontenac and sagacious Talon, well knew that Marquette was not the man to be entrusted with the purely secular interests of the expedition which they had determined upon. Therefore Louis Joliet, whom they rightly "deemed competent for so great a design," was selected as the leader, and Marquette was "chosen to accompany him;" the former to seek by the Mississippi the mythical kingdom of Quivira, which with its gold and precious stones was believed to lie in the path to the California sea; and the latter "to seek new nations toward the South Sea, to teach them of the great God whom they have hitherto unknown."

LOUIS JOLIET was born in Quebec, in 1645, and was the son of a wheelwright in the employ of the Company of the One Hundred Associates. He was educated at the college of Quebec, and, evincing a desire to enter the priesthood, took the preliminary steps and entered the theological seminary in the same city. As he grew older, mathematical and geographical studies seemed to have a greater charm for him than theological, and he finally decided to embark in business life. He first came to the West as a fur-trader, and was afterward—about 1667—sent by Talon to explore the copper mines of Lake Superior. On his return from this expedition, in 1669, he met LaSalle near the head of Lake Ontario, and in 1671, he is mentioned as being present at St. Luson's grand convention of Indian tribes at Sault Ste. Marie. Having received the necessary instructions, Joliet left Quebec on the 8th of December, 1672; arrived at Michilimackinac, and on the 17th of May, 1673, the two explorers, with one other Frenchman, and four In-

latter part of September. Here the two companions remained together through the winter. As early as possible in the summer of 1674, Joliet hastened to Quebec to report to the authorities, visiting LaSalle at Fort Frontenac, on his journey. In a letter to Frontenac, written October 10, 1674, he says:

"It is not long since I returned from my South Sea voyage, I was fortunate during all that time, but on my way back, just as I was about to land at Montreal, my canoe capsized and I lost two men, with my chest, containing all my papers and my journal, with some curiosities from those remote countries. I greatly regret a little slave ten years old who had been presented to me. He was endowed with a good disposition, full of talent, diligent and obedient; he made himself understood in French, and began to read and write. I was saved after being four hours in the water, having lost sight and consciousness, by some fishermen, who never went in that place, and would not have been there, had not the Blessed Virgin obtained this grace for me from God, who arrested the course of nature to rescue me from death. But for this accident, your lordship would have received quite a curious relation; but nothing is left me except my life."

He then briefly describes the result of his voyage. On the 14th of the following month Count DeFrontenac announced to Colbert the successful issue of the expedition.

Marquette was detained at Green Bay through the whole summer of 1674 by sickness. As soon as he was sufficiently recovered, he drew up and sent to his superior (Father Dablon) copies of his journal of the voyage down the Mississippi, and doubtless also the map known as "Marquette's map," a copy of which is here given *

With the return of the flotilla from Quebec, he received orders to set out for his Illinois mission. He started from the mission at Green Bay on the 25th of October, 1674, and with two Frenchmen, Jacques and Pierre, went north as far as Sturgeon Bay, where now a canal connects its waters with Lake Michigan. At the portage he joined a party of Pottawatomies and Illinois, who also had started for the Kaskaskia village. With them he crossed the difficult portage from the head of Sturgeon Bay to Lake Michigan, on which they embarked on the 31st of October. The little fleet proceeded up the western shore of the lake, and after many detentions arrived at Portage River† early in December. Marquette mentions the fact of passing "eight or ten pretty fine rivers" on his journey up the lake from one portage to the other. On the 19th of November he arrived at "the bluffs," where he was detained two days and a half. While thus detained, Pierre left him, and passed through the woods to a prairie twenty leagues from the portage. Starting from "the bluffs" about noon on the 21st, Marquette says: "We had hard enough work to reach a river." He entered the river, however, and found there Mascoutins, "to the number of eight or nine cabins." The Illinois Indians left him here and "passed on the prairies."

If "the bluffs," where Marquette was detained by the weather, were at the present site of Milwaukee,

* Marquette evidently sent two copies of his journal. One of these was transmitted to France but not officially published, the Jesuit Relations being suspended about that time by the French Government. In 1681, an imperfect copy of this, or the original journal somewhat mutilated, fell into the hands of Thevenot, a French compiler and publisher, and it appeared in a volume of travels and discoveries, which he issued that year under the title of "Receuill de Voyage." The other copy, having been prepared for publication by Father Dablon, was deposited, together with an unfinished letter of Marquette, giving an account of his second visit to the Illinois, in the archives of the Jesuit College at Quebec. It lay there unnoticed until about 1800, when Father Cazot, the last survivor of the Jesuits of that institution, when the college was closed, selected some of the papers, including Marquette's journal and map, and presented them to the nuns who had charge of the Hotel Dieu, a hospital at Quebec. In 1844 they passed into the hands of Rev. F. Martin, a Jesuit, and were by him given to John Gilmary Shea, who published them in 1852.

† Marquette includes both the present Chicago and the Desplaines Rivers, in what he terms "Portage River." (See his map.) A few years later the Desplaines alone was called the "Checagou River," Gurdon S. Hubbard states (see Blanchard's History of Chicago, p. 757.) that the South Branch of the present Chicago River was called "Portage River" until about 1800.

where they were more abrupt and lofty, perhaps, than at any other point, Pierre must have passed "through the woods" to the present site of Racine, "twenty leagues from the portage," and Marquette must have reached the place by entering Root River. It was the 27th of November before Marquette again embarked, being detained by the wind. Nine miles farther, and he was again detained "by a wind from the shore, immense waves that came from the lake, and the cold." On the 4th of December they again "started" to reach "Portage River." He does not say what day they arrived there, but they remained at the mouth of the river a few days, during which time his men killed considerable game. On the 12th they began to draw their luggage up the river, and on the 14th were settled in a cabin some five miles from the mouth of the river, "near the portage," and in the route to an Illinois village, six leagues further on. Here Marquette was obliged to remain all winter on account of a severe illness. This cabin, it would seem, belonged to two French traders, Pierre Moreau (La Toupine), and his companion who was not only a trader but a surgeon as well, and who were then at their winter hunting-ground, about fifty miles from the portage, and not very far distant from a village of Illinois Indians. These traders were expecting a visit from Marquette and his companions at their cabin at the hunting-ground, and had made due preparation to receive them by laying in an extra store of provisions. Marquette says that "some (person) informed La Toupine and the surgeon that we were here (at the portage), and unable to leave their cabin," and that as soon as the two Frenchmen knew that illness prevented his "going to them," the surgeon visited him, brought him provisions, and stopped with him for a time "to attend to his duties." In fact, Marquette says "they did and said everything that could be expected of them." They "gave the Indians to understand" that the cabin belonged to Marquette, and he remained in it through the winter unmolested. When the surgeon had finished his visit, Jacques accompanied him to his wintering ground, and returned with more provisions, sent by the Frenchmen to the sick priest. Marquette, in turn, repaid their kindness by doing all in his power to influence the Indians to deal fairly with the traders, who, he says, "do not rob them (the Indians), in getting furs in the country, so great is the hardship they experience in getting them." It is not probable that these were the only traders in the country of the Illinois at this time, or that they were the only ones who had crossed the portage to the interior and returned, bringing their furs to Lake Michigan in the spring, when ready to embark for their trip to the St. Lawrence. When Marquette went, in the spring, to the Kaskaskia village, he met the "surgeon," on the way, coming up the Desplaines with his furs, "but," he says, "the cold being too severe for men who have to drag their canoe through the water, he made a cache for his beaver," and turned back with Marquette toward the Kaskaskia village.

Marquette continued sick in his cabin through the winter of 1674-75. Toward spring, through the special interposition of the Blessed Virgin, as he believed, his sickness abated, and before March he was able to leave his cabin and observe the peculiarities of the country. In the latter part of March the Desplaines River broke up and flooded the prairie which formed the portage. He describes the situation thus:

"The north wind having prevented the thaw till the 25th of March, it began with a southerly wind. The next day game began to appear; we killed thirty wild pigeons, which I found better than

those below (Quebec), but smaller, both young and old. On the 28th the ice broke, and choked above us. On the 29th, the water was so high that we had barely time to uncabin in haste, put our things on trees, and try to find a place to sleep on some hillock, the water gaining on us all night; but having frozen a little, and having fallen, as we were near our luggage, the dyke burst, and ice went down; and as the waters are again ascending already, we are going to embark to continue our route."

The "portage," where Marquette passed the winter of 1674-75, and which he says, in his letter to Dablon, is the same he crossed with Joliet, eighteen months before, is described in a letter written by LaSalle to Frontenac, which was published by Margry, in one of his volumes, and republished in the Magazine of American History. Joliet visited LaSalle at Fort Frontenac, on his return to Canada from his Mississippi voyage, in the spring of 1674, and at that time, it is presumed, told LaSalle of the Checagou portage. LaSalle visited the same place in January, 1682, and was detained there several days by the snow. Joliet had affirmed, in a communication to the authorities in Canada, that it would be possible to go from Lake Erie to the Mississippi "in boats," and, "by a very good navigation," saying that "there would be but one canal to make, by cutting half a league of prairie to pass from the Lake of the Illinois into St. Louis River,* which empties into the Mississippi." LaSalle, on examining the place in 1682, did not believe the scheme practicable. He speaks disdainfully of Joliet's "proposed ditch," and says he "should not have made any mention of this communication" (the canal spoken of), "if Joliet had not proposed it without regard to its difficulties." He thus describes the portage mentioned by Joliet, which he calls the "Portage of Checagou":

"This is an isthmus of land at 41 degrees, 50 minutes north latitude, at the west of the Illinois Lake,† which is reached by a channel‡ formed by the junction of several rivulets or meadow ditches. It is navigable for about two leagues to the edge of the prairie, a quarter of a mile westward. There is a little lake, divided by a causeway, made by the beavers, about a league and a half long, from which runs a stream, which, after winding about a half league through the rushes, empties into the river Checagou,§ and thence into that of the Illinois. This lake|| is filled by heavy summer rains, or spring freshets, and discharges also into the channel which leads to the lake of the Illinois, the level of which is seven feet lower than the prairie on which the lake is. The river of Checagou does the same thing in the spring when its channel is full. It empties a part of its waters by this little lake into that of the Illinois (Lake Michigan), and at this season, Joliet says, forms in the summer time a little channel for a quarter of a league from this lake to the basin which leads to that of the Illinois, by which vessels can enter the Checagou and descend to the sea."

Marquette remained at the portage described above until the 30th of March, when, as he relates, in the passage quoted from his journal, the south wind had caused a thaw, the breaking up of the ice in the Desplaines, and the flooding of the prairie portage. On the 30th, taking advantage of the high water, he had embarked (probably on Mud Lake) and had proceeded nine miles on his journey by the 31st, and arrived at about the place where he and Joliet were obliged to leave their canoes and commence the portage in the fall of 1673, when the water was low. St. Cosme, who passed to the Mississippi by the portage of Checagou in October, 1699, gives a similar account of the comparative length of the portage in spring and fall—nine miles in the fall and less than a mile in the spring. He says:

* The Illinois, including the Desplaines.

† Lake Michigan.

‡ Our Chicago River. The Desplaines or north branch of the Illinois, was the Checagou River of the early writers, and is so laid down on their maps. Later, both the Desplaines and Chicago were called the "Checagou."

§ Desplaines.

|| Mud Lake. It is mentioned by nearly all the early writers who visited the locality simply as the "little lake."

"We started from Chicago on the 29th, and put up for the night about two leagues off, in the little river which is then lost in the prairies. The next day we began the portage, which is about three leagues long when the water is low, and only a quarter of a league in the spring, for you embark on a little lake that empties into a branch* of the river of the Illinois; but when the waters are low you have to make a portage to that branch."

Marquette, as the waters were certainly high when he started, must have embarked on this little lake "going up" to the Desplaines, "without finding any portage," as the waters of that river through the lake spoken of, were now rushing down to the Lake of Michigan.† The distance of "half an arpent"‡ which they were obliged to drag their canoes, might have been from the high ground where they slept on the night of the 29th to the place where they embarked on Mud Lake.

After having passed nine miles from the point where he embarked, being then in the Desplaines, he says: "Here we (Joliet and himself) began our portage more than eighteen months ago." He was now in what he justly called an "outlet" of the Illinois, for the Desplaines was such in the spring until much later than Marquette's time. He evidently knew also of the other branch of the Illinois—the Teakiki§ of the Jesuits—by which he could reach the St. Joseph and the lake—and by which "outlet," as he calls it, he probably returned to Mackinac.

Marquette was eleven days on his way to Kaskaskia village, arriving on the 8th of April. He was received by the Indians "like an angel from heaven." After preparing the minds of the chiefs for what he wished to accomplish, he called a grand council of the nation in the beautiful prairie near the town.¶ Five hundred chiefs and old men, and fifteen hundred youths assembled, besides a great crowd of women and children. He explained the object of his visit, preached to them and said mass. Three days later, on Easter Sunday, the Indians again assembled on the prairie, when Marquette again said mass before them, "took possession of that land in the name of Jesus Christ, and gave this mission the name of the Immaculate Conception of the Blessed Virgin."

His illness not permitting him to remain among the Illinois, he soon left them to return to Michilimackinac, promising to come again to the Illinois, or send another to take his place. So much had he attached these simple Indians to himself, that a large number of the tribe escorted him nearly a hundred miles on his return journey, or nearly to the point at which he wished to strike Lake Michigan on his return to his mission, down the eastern shore of the lake. Sick and weary when he embarked, his strength rapidly failed as his journey was continued, and on the 19th of May he felt that death was near. As he reached the mouth of a small river, he requested his companions to land, and there in a hut of bark, which they built for him, the good missionary died that night. They dug a grave on the bank of the river, and leaving him resting there, made their way to the Mission of St. Ignace. In the winter of 1676, the bones of Marquette were taken from the grave, by a party of Kiskakin Indians, carefully placed in a box of birch bark, and carried to St. Ignace, where they were buried, with solemn ceremonies, beneath the floor of the mission.

Doubtless the site of Chicago had been visited by

* The Desplaines.

† In the spring flood of 1849 the waters of the Desplaines were turned into Mud Lake, and thence into the Chicago River, causing a terrific flood.

‡ A "woodland arpent," in France, contained an area of 6,108 square yards—a little more than an English acre. The expression means that they dragged over a small patch of ground, half an arpent; equivalent to about an English half-acre of ground.

§ Kankakee.

¶ The town was near Utica, in LaSalle County.

Canadian voyageurs, and it may be that the more lawless courier, De Bois, had also passed to the interior by this route before Marquette and Joliet returned from their expedition to the Mississippi, in the fall of 1673, and for the first time gave to the world a written account of the route from the Illinois River to Lake Michigan by way of the Chicago portage.*

It has been related,† too, that Nicholas Perrot, in the year 1671, left Sault Ste. Marie and visited "at Chicago," "Tetchoua," the principal chief of the Miamis,

* Prof. A. D. Hager, after long and careful study, has arrived at a conclusion in regard to the return route of Joliet and Marquette and the locality where Marquette subsequently spent the winter of 1674-75, essentially different from that commonly received. His views on the subject are given at length, in succeeding pages of this work. The writers of this History have followed the accepted theory of Shea, Parkman and other acknowledged authorities on early Northwestern American history. They, however, acknowledge, by the insertion of Mr. Hager's article, both the merits of his argument, and their appreciation of the value of his new theory concerning the early settlement of the Northwest.

† Charlevoix.

who "never moved without a guard of forty warriors, who kept watch, night and day, about his cabin." The object of this visit of Perrot was to induce this powerful chief to enter into an alliance with the French. Fathers Allouez and Dablon met this same "Tetchoua," with three thousand braves, at a Mascoutin village in Wisconsin, in 1674—the Miamis and the Mascoutins having joined against their common enemy, the Sioux.

On the death of Marquette, Father Claude Allouez was appointed to the Illinois mission, to which he made several visits; the first in the spring of 1677, when he was met by an Illinois chief and eighty Indians at the mouth of the Chicago River, and conducted by them to the Illinois village. The second was made in 1678, when he remained until 1680. He again visited Chicago in 1684, with Durantaye, and it was probably at this time that the fort was built at Chicago by the latter.

EARLY CHICAGO, AND THE NORTHWEST.

BY ALBERT D. HAGER.

In the interest of historical truth, the writer prepared a paper which he read before the Chicago Historical Society, in June, 1880.

In that paper he attempted to show, among other things, that Father Marquette was not the first white man who visited the present site of Chicago, and that the Miami Indians never made this site their home, as has been usually asserted by those who have written concerning early Chicago.

Additional testimony from the early explorers of the Northwest, in connection with early maps, corroborated by official documents, will be here presented to confirm the foregoing propositions and also to controvert what the writer believes to be other erroneous statements concerning Marquette and Joliet and the history of the Northwest.

Nearly every writer, who alludes to early Chicago, intimates that Marquette was the first white man who navigated the Chicago River, and some assert that he built a log cabin and was its "first civilized settler."

In none of Marquette's writings, nor on either of his maps, does he use the word Chicago. Charlevoix, a Jesuit priest, who visited the Northwest in 1721, was the first writer to couple the names of Marquette and Chicago. He says:* "On arriving at Chicagou, on Lake Michigan, they separated. Father Marquette remained among the Miamis, and Joliet went to Quebec. The missionary was well received by the great chief of the Miamis. He took up his abode in the chief town of these Indians, and spent the last years of his life in announcing Jesus Christ to them.

These statements were made from hearsay testimony. He had not seen the manuscript journals of Marquette. They were at that time in the Jesuit College at Quebec.† The very modest and apparently truthful records made in those journals by Marquette, disprove every statement quoted from the writings of Charlevoix, as will appear farther on. Joliet's journal and map, made for the Government of France, were lost, by the upsetting of his canoe in the rapids of the St. Lawrence, just before reaching Montreal. Marquette had died at the age of thirty-eight. His journal,

or a copy of it, and a map of the trip he made with Joliet, were sent to France, but the Government took no official action in relation to them. New explorations were made not long after Marquette's death. Those belonging to the order of Recollet missionaries were "chosen almost always as chaplains to the troops and forts, and were to be found at every French post.* They were "the fashionable confessors, and were stationed at trading points. In this way they became involved in disputes, and, favored by and favoring Frontenac, found themselves arrayed, in a manner, against the rest of the clergy. A general charge, made about that time, seems to have been, that the Jesuits had really made no discoveries, and no progress in converting the natives."† The Recollets were more "liberal" than the Jesuits. A jealousy, and at times, it would seem, an animosity, existed between them and the Jesuits. What purported to be a published narrative of Marquette, by M. Thevenot, in Paris, 1681, was "derided, called a fable, or narrative of a pretended voyage," etc.‡

In most, if not all the narratives made during the forty years subsequent to Marquette's death, his name is not mentioned except by Jesuits. Joliet is but occasionally alluded to. Father Douay, a Recollet missionary who accompanied LaSalle in 1687, says:

"It was at this place (Cape St. Anthony) only, and not further, that the Sieur Joliet descended in 1673. They were taken, with their whole party, in the Mansopela. These Indians having told them that they would be killed if they went any farther, they turned back, not having descended lower than thirty or forty leagues below the mouth of the Illinois River. I had brought with me the printed book of this pretended discovery, and I remarked all along my route that there was not a word of truth in it."§

A copy of this "printed book" is in the library of the Chicago Historical Society. It is entitled, "Receuil de Voyages" in which there is a map of the Mississippi Valley. The map is wonderfully accurate, considering the circumstances under which it was made. It has been suggested by some well informed historians, that the map was not made by Marquette, but was the one which Joliet drew from memory, and sent to the French Government after he lost his originals. This seemed

THEVENOT'S MAP, 1673,

Thévenot's map (1673), as originally drawn, bore the title "Map of the New Discovery that the Jesuit Fathers made in the year 1672, and continued by Father Jacques Marquette, of the same Society, accompanied by several Frenchmen in the year 1673," etc. It was first published in 1681, by Thévenot, in his *Recueil de voyages*, in connection with Marquette's *Découvertes dans l'Amérique Septentrionale*. The names of the Illinois and other Indian villages west of the Mississippi generally correspond with those laid down on Marquette's map, but the Kaskaskia village on the Illinois River, which Marquette mentions, is not represented here. The frequent mention of mines—iron, copper, coal, etc.—with the names Lac de Michigami, Puans, Pewarea, and notably the word Blood Stones, which also appears on Joliet's map of 1674, indicate that the above was made from his descriptions, or by himself, although errors in the map seem to refute such a supposition.

quite plausible. It is quite unlike the map found with Marquette's manuscript, a fac-simile of which was first published by Mr. Shea, in 1852. The workmanship and skill in drawing, exhibited in the former, is much superior to that of the latter. The circumstances under which they were drawn were probably very different. Marquette was at the mission of St. Francis, near Green Bay, thirteen months after making the first trip before he commenced the second. He had ample time to make a finished map. The one copied by Mr. Shea, evidently was, like his journal, unfinished, and made during his journey.

The recent discovery of the original map of Joliet, which Frontenac sent to the French Government, a fac-simile of which may be seen in this book, settles the long vexed question, and reflects upon Marquette the honor of being the author of the first published map of the upper Mississippi Valley—the one here re-produced. Mr. Jared Sparks regarded the map in Thevenot's book as genuine, whether it were made by Joliet or Marquette, and says: "It is valuable as confirming the genuineness of the narrative. It was impossible to construct it without having seen the principal objects delineated."*

It was not till about fifty years ago that the genuineness of the narrative of Marquette, published by Thevenot, was established, except as above suggested. In the Hotel Dieu, at Quebec, thirty-seven pages of manuscript were found, essentially the same as the published narrative. By comparing these with the parish records made by Marquette, at Boucherville, in 1668, their authorship was established. With these manuscripts there were twenty-three pages more of manuscript and a map in the same hand-writing, that gave an unfinished account of Marquette's last trip to the Illinois. Mr. Shea published the latter in 1852. They will again be referred to.

Father Marquette was a good, unselfish, truthful, modest man. "He relates what occurs and describes what he sees, without embellishment or display. He writes as a scholar, and as a man of careful observation and practical sense. There is no tendency to exaggerate nor to magnify the difficulties he had to encounter, or the importance of this discovery."† He had what might seem a morbid desire to suffer privations and endure hardships, and says he "esteemed no happiness greater than that of losing his life for the glory of Him who made all."‡ He wished "to die in a wretched cabin amid the forests, destitute of all human aid."§ He was born in France, and came to this country in 1668. The Most Rev. Alexander Tache, the Archbishop of Manitoba, and a great-grandson of Joliet, the discoverer, kindly sent the writer a photographic copy of the first entry made by Marquette in this country, in the Boucherville, Canada, Parish Records, May 20, 1668. It is now in the library of the Chicago Historical Society.

From Boucherville, or Quebec, Marquette was sent to the mission on the south shore of Lake Superior. He soon returned from thence to Sault Ste. Marie, where a mission was established. This he soon left for La Pointe, on Lake Superior, and from thence back to Michilimackinac. In none of these missions did he seem contented, nor were his labors attended with marked success. During his seven years' residence in this country, unfavorable circumstances and ill health seemed to wither his hopes and defeat his good intentions. The last entry he made in his journal after finishing his journey with Joliet, is more despondent than assuring. He says:

"Had all this voyage caused but the salvation of a single soul, I should deem all my fatigue well repaid. And this I have reason to think, for, when I was returning, I passed by the Indians of Peoria; I was three days announcing the faith in all their cabins, after which, as we were embarking, they brought me, on the water's edge, a dying child, which I baptized a little before it expired, by an admirable Providence for the salvation of that innocent soul."*

The journals of Marquette have internal evidence of being more truthful and reliable than the writings of most of the other missionaries and explorers of the Northwest. The latter abound in self-praise, exaggeration and evident misstatements. Some of the writers, as has been well said, "seem to tell the truth by accident, and fiction by inclination,"†

Marquette's journals and official documents, when obtainable, will therefore be used to corroborate doubtful statements or establish historical facts for this paper.

It would be a difficult task, if not impossible, to determine who was the first civilized explorer of the Northwest and the discoverer of the Mississippi Valley. In 1541, De Soto crossed the Mississippi above the mouth of the Arkansas, and in 1543, his successor, Moscoso, sailed down the great river to the opening gulf.‡

In 1639, Sieur Nicolet, after having spent ten years of his life with the Indians, visited the Winnebagoes, who then resided on and near Winnebago Lake and Fox River, Wisconsin, and "reached the waters of the Mississippi."§

On a map in Jeffery's "Natural and Civil History of the French Dominions in North and South America," published in London, 1761, it is said: "The Ohio country was known early to the English, and thoroughly discovered beyond the Mississippi by Colonel Wood, from 1654 to 1664, as also by Captain Bott, in 1670." The writer has found no contemporaneous evidence that corroborates these statements.

In the year 1670, Father Allouez visited the Winnebagoes and Mascoutins, and says the Mascoutins saw upon the Mississippi River "men like the French, who were splitting trees with long knives (whip saws?) some of whom had their house (vessel?) on the water."||

The first official action towards discovery and the establishment of the French Government over the Northwest, of which there is a record, known to the writer, was in 1670. M. Talon, the Intendant of New France, in his report to the King, dated at Quebec, September 10, 1670, says: "I have dispatched persons of reputation, who promise to penetrate farther than ever has been done: the one to the west and the northwest of Canada, and the others to the southwest and south. These adventurers are to keep journals, take possession, display the King's arms, and draw up *proces verbaux* to serve as title."¶

Under date of November 2, 1671, he reports to the King as follows: "Sieur de la Salle has not returned from his journey to the southward of this country. But Sieur de Lusson is returned, after having advanced as far as five hundred leagues** from here, and planted the cross and set up the King's arms in presence of seventeen Indian nations, assembled, on this occasion, from all parts; all of whom voluntarily submitted them-

First published a fac simile of the original map in the French Geographical Review of February, 1880, believes this to be Joliet's first Governor of New France, and the names, *Bunde*, given to the Mississippi, *Outrelaise*, to the Illinois, and *La Frontenac*, to the first presented to Frontenac. Joliet's later maps are dedicated to Colbert, and in them the Mississippi is named in his honor. The work of Raudin, Count Frontenac's engineer.

selves to the dominion of his Majesty, whom alone they regard as their sovereign protector."*

The principal speaker at this convention, held June 4, 1671, was Father Allouez, a Jesuit missionary, who had a knowledge of the Algonquin language. He was not exempt from exaggeration, as will be seen in his speech, which, in part, was as follows :†

"It is a good work, my brothers, an important work, a great work that brings us together in council to-day. Look up at the cross which rises so high above our heads. It was there that Jesus Christ, the Son of God, after making himself a man for the love of men, was nailed, and died to satisfy his eternal Father for our sins. He is the master of our lives; the ruler of heaven, earth and hell. It is he of whom I am continually speaking to you, and whose name and words I have borne through all your country. But look at this post to which are fixed the arms of the great chief of France, whom we call King—he lives across the sea. He is the chief of the greatest chiefs; and has no equal on earth. All the chiefs whom you have ever seen are but children beside him. He is like a great tree, and they are but the little herbs that one walks over and tramples under foot. You know Onontio, that famous chief (governor) at Quebec. You know, and you have seen, that he is the terror of the Iroquois, and that his very name makes them tremble since he has laid their country waste and burned their towns with fire. Across the sea there are ten thousand Onontios like him, who are but the warriors of our great King, of whom I have told you. When he says 'I am going to war,' everybody obeys his orders, and each of these ten thousand chiefs raises a troop of a hundred warriors, some on sea and some on land. Some embark in great ships, such as you have seen at Quebec. Your canoes carry only four or five men, or, at the most, ten or twelve; but our ships carry four or five hundred, and sometimes a thousand. Others go to war by land and in such numbers that if they stood in a double file they would reach from here to Mississaugen, which is more than twenty leagues off. When our King attacks his enemies he is more terrible than the thunder; the earth trembles; the air and the sea are all on fire with the blaze of his cannon; he is seen in the midst of his warriors, covered over with the blood of his enemies, whom he kills in such numbers that he does not reckon them by the scalps, but by the streams of blood which he causes to flow. He takes so many prisoners that he holds them in no account, but lets them go where they will, to show that he is not afraid of them. But now nobody dares make war on him. All the nations beyond the sea have submitted to him, and begged humbly for peace. Men come from every quarter of the earth to listen to him and admire him. All that is done in the world is decided by him alone."

In this same strain much more was said by the missionary, and no wonder the confiding and uncivilized Indians "voluntarily submitted themselves" to such a powerful sovereign who, they hoped, would protect them from the Iroquois, whom they so much feared. Nicholas Perrot was the person who invited the various tribes to the convention. He was well known to the Indians. He was a fur-trader, interpreter for the government, and the discoverer of the lead mines at Galena.

Charlevoix, corroborated by others, says: "In 1671, after having visited all the northern nations" and "invited them to meet in the following spring at Sault Ste. Marie * * * he (Perrot) turned south and went to Chicago at the lower end of Lake Michigan where the Miamis then were." The Miamis were invited to attend, but the great age of their chief, Tetenhoua, and the fear that a fatal accident might befall him, in case he left his home, and who "never marched except with a guard of forty soldiers," the invitation was declined. The Pottawatomies, were, however, empowered to act in behalf of the Miamis. Particular allusion is made to this trip of Perrot "to Chicago at the lower end of Lake Michigan where the Miamis are," in order to announce the proposition that the Chicago there spoken of and the one subsequently alluded to by early writers, as the home of the Miamis, did not embrace the present site of Chicago. Chicago was a name applied to a tract of country at the south end of Lake Michigan. It nowhere has been found by the writer located by the early writers

upon the west side. In these investigations it will be shown that at least three streams bore the name of Chicago in some of its varied spellings, viz: the St. Joseph, the Grand Calumet and the Desplaines. Coxe, in his History of Louisiana, calls the Illinois the river Checagou.

The early writers often speak of the Miamis at Chicago. Many old maps have been examined by the writer, but not one indicates that the Miamis ever resided where Chicago now is. On the contrary, the Mascoutins are shown to have been there, and the Miamis were invariably located on the Fox River, in Wisconsin, or at the southeast of Lake Michigan, on the St. Joseph, Wabash and Maumee rivers. The latter name, a synonym of Miami, was formerly called the Miami River of Lake Erie, and the St. Joseph was frequently called the river of the Miamis. Le Clercq says: "The Miamis (in 1680) are situated south by east of the bottom of Lake Dauphin (Michigan), on the borders of a pretty fine river, about fifteen leagues inland, at 41° north latitude."

On an old French map, now in the archives at Paris, and lately produced by M. Margry, bearing date of 1679-82* the Miamis are located southeast of Lac de Illinois (Michigan) on the R. des Miamis (St. Joseph).

And while referring to this map it will be seen that a stream occupying the geographical position of the Grand Calumet, and emptying into the extreme south end of Lake Michigan, bears the name of R. Chekagou. This is probably the earliest map upon which a river is named Chekagou, and this stream was doubtless the western boundary of the lands of the Miamis,† and was the Chicago alluded to by Little Turtle in his speech of July 22, 1795.‡ It will be seen by further examination of this map, made a short time after Marquette's death, that seven streams enter the lake from the west, but none have the north and south branches peculiar to the Chicago River, and only one of them bears a name, the Melico (Milwaukee).

If further proof were necessary to show that the Miamis were located at the south and southeast of the lake, and not at the present site of Chicago, the following maps might be cited: La Hontan, Paris, 1703; J. B. Hofmann, Paris, 1702; G. Del Isle, Paris, 1700 and 1703-18-22; Senex, 1710; Nicholas de Fer, Paris, 1718-26; I. F. Bernard, Paris, 1726; Sir D'Anville, Paris, 1746; Sieur Robert de Vaugondy, Paris, 1753; Jeffery's from D'Anville, London, 1755; Bellin, Paris, 1755; Sieur LeRouge, Paris, 1755; Sanson, 1764; Faden's Atlas, London, 1767; Sayer & Bennet, London, 1790; Samuel Lewis, Philadelphia, 1776.

By referring to the Marquette map published by Thevenot, it will be seen that dotted lines indicate the route taken by Joliet and Marquette. It is thought by some that these are not properly laid down, especially the one leading from the villages of the Illinois to the Mississippi. Some think the Illinois Indians were on the Des Moines River near Des Moines, Iowa, and not on the Illinois River in the south part of Bureau and LaSalle counties, Ill. It is said the latter points are too far from the Mississippi River for men to go and return again in five days. From Keokuk, the nearest point on the Mississippi, to Des Moines is one hundred and sixty-two miles. From Davenport to Des Moines, in a nearly due west course it is one hundred and seventy-

* See map elsewhere in this volume, from Margry's vol. 3.

† Sir William Johnson, in his reports to the Lords of Trade, under date of November 13, 1763, in describing the western boundary of the Iroquois, including the territory of the Miamis, says: " * * * To the Ohio above the Rifts, thence northerly to the south end of Lake Michigan, then along the eastern shore of said lake," etc. London documents N. Y. Col. vol. 71, 573.

† Parkman's Dis. Northwest, p. 44.

five miles. By railroad from Port Byron on the Mississippi River, to Bureau Junction on the Illinois, is sixty-one miles, and to Utica it is eighty-one miles. In Marquette's journal, on the 25th of June, he speaks of leaving the Mississippi River and going to the villages of "the Illinois," who at once recognized them, and exclaimed, "How beautiful is the sun, oh Frenchman, when thou comest to visit us."*

They were invited to visit "the great Sachem of the Illinois." He "went with a good retinue," the Indians following "without noise, and with marks of great respect" entertained for the two men. They arrived at the town, where they were cordially received, and sumptuously treated. When night came he "slept in the Sachem's cabin," and the next day took leave of him, "promising to pass back through his town in four moons."† They were escorted back to the Mississippi by the Sachem and "nearly six hundred persons," to where they had left their canoes with the boatmen, with strict instructions to keep careful watch of them until their return. This return route is marked by a dotted line, "*Chemin du retour*" from the "Cachouach8ia, Illinois" to the river. Marquette says, "The short stay I made them did not permit me to acquire all the information I would have desired.‡ They were divided into several villages, some of which are quite distant from that of which I speak, and which is called Peouare.§ This village is on the west of the Mississippi River, and is "distant a hundred leagues from the Cascasquias."||

From the foregoing, it would seem that Marquette visited "the Illinois Indians" upon the river which received its name from them. He did not make a false promise to them to "return to their town again in four moons," After having descended the Mississippi to the mouth of the Arkansas, and "having gathered all the information that could be desired from the expedition"—that is, "to ascertain where the river emptied," they started on their return, July 17, 1673. In pursuance of the promise to the Illinois, they entered the river of the Illinois, upon the banks of which they lived. They found there the town of Kaskaskia,¶ composed of seventy four cabins. After Marquette had again promised to "return and instruct them," he says, "One of the chiefs of this tribe, with his young men, escorted us to the Illinois Lake, whence we at last returned in the close of September to the bay of the Fetid (Green Bay.)

A dotted line from the Illinois town to the lake, shows that they entered the latter between 40° and 41° north latitude, which would be at or near the south end of the lake. The court house in Chicago, three blocks south of Chicago River, is in latitude 41° 26'. It will be seen by referring to the map, that an inland bay or lake is shown upon it just north of the route they took. This is probably Calumet Lake. Reasons for this conclusion will be given further on.

Marquette returned to the Mission near Green Bay, having in about four months and a half traveled, as estimated two thousand seven hundred and sixty-seven miles.** It was a hard journey. From his second journal it appears that ill health detained him at that mission

‡ They were absent from the boats from the 25th to the 30th inclusive. (Ibid, p. 38; Hist. Col. La., vol. 2, p. 201; Thevenot, p. 21.)

§ In Thevenot's publication, Marquette says, (p. 29, Hist. Col. La. 288.) "They (the Illinois) are divided into several villages, some of which I have not seen. They live so remote from other nations that their language is entirely different. They call themselves Peouarca. Their language is a dialect of the Algonquin." On the west of the Mississippi is the word Pe8anea. On his last map, near the same place, it is written Pe8area.

|| Hist. Col. La., p. 32.

¶ Written Cachouach8ia on his first map in Thevenot, and Kachkaskia on his second map. This Indian town is not the Kaskaskia of later date, situated on the Mississippi River.

** Sparks's Life of Marquette.

thirteen months. On the 25th of October, 1674, he started with two boatmen to return to the Illinois Indians, with the hope of establishing a mission there. His journal will be often referred to in order to determine the route which he took. From the 25th to the 30th of October, they were going from the mission to Lake Michigan *via* Sturgeon Bay. They overtook five canoes of Pottawatomies and four of Illinois Indians, who were on their way to Kaskaskia, the place to which Marquette was going. They agreed to make the journey together.

Marquette had traveled the route but once. The Indians were probably well acquainted with it and knew all the good stopping-places along the west shore of the lake.

We will carefully review the route Marquette took and, if possible, determine where his stopping-places were. He had reached Lake Michigan at a point opposite Sturgeon Bay—where there is now a ship canal. He says, in his journal: "You meet eight or ten pretty fine rivers." We will name those that enter the lake from the west, commencing at the north, and give the distances between each as follows: From starting point to Kewanee River, twenty-four miles; Twin River, twenty-one; Manitowoc, five; Sheboygan, twenty-five; Black Creek, four; Sauk Creek (Port Washington), twenty; Milwaukee, twenty-four; Oak Creek, ten; Root River, (Racine), thirteen; Pike River, ten; Pike Creek (Kenosha), one, and a very small creek at Waukegan fifteen miles. From Waukegan to Chicago, a distance of thirty-six miles, no river enters the lake. Lake Bluff—probably "the bluffs" spoken of in Marquette's journal—is thirty miles north of Chicago. The entire distance between the points named is two hundred and eight miles. From Marquette's journal, it appears that he was traveling on the lake about nine days. This would make an average of twenty-three and one-ninth miles per day.

He started on the lake, October 31, 1674, and says: "We started with pretty fair weather and stopped for the night at a little river." We assume that little river to be the Kewanee, twenty-four miles south of where they started.

November 1, he says: "We halted at night at a river from which a fine road leads to the Pottawatomies." Marquette locates the Pottawatomies southeast of the head of Green Bay. The west branch of Twin River rises in Brown County, Wisconsin, less than three miles from the head of the bay, and hence it is assumed that the river at the mouth of which he encamped was Twin River, which is twenty-one miles from the mouth of Kewanee River. Thus in two days, they traveled forty-five miles.

November 2, he says: "We traveled all day with fair weather." He does not speak of encamping at a river and probably, did not.

November 3, he says: "As I was on land walking, coming to a river which I could not cross, our people put in to take me on board, but we could not get out again on account of the swell. All the other canoes went on except the one that came with us."

We will assume that this was the Sheboygan River—too deep to ford, and thirty miles from Twin River. He was detained here till the 5th. On that day he says: "We had hard work to get out of the river. At noon we found the Indians in a river." We are not sure what this river was; whether Black Creek, a small stream in Sheboygan County, or Sauk Creek, in Ozaukee County; the latter being twenty-four miles, and Black Creek not to exceed five miles from the mouth of the Sheboygan. If the Indians stopped at the first

stream they reached after Marquette's boat left them, and waited for Marquette to overtake them, it would have been Black Creek. This seems probable, as they had agreed to go on together.

On the 6th, he says: "We made a good day's travel," but probably did not encamp at the mouth of a river. They found "foot-prints of men, which obliged us to stop next day"—probably for two days, as no entry is made on the 8th.

On the 9th, he says: "We landed at two o'clock, on account of the fine cabinage. We were detained here five days." This is assumed to be at Milwaukee, which is twenty-four miles from the mouth of Sauk Creek, and about forty-four miles from Black Creek—reached in about one and a half days' travel.

On the 15th, he says: "After traveling sufficiently, we cabined in a beautiful spot, where we were detained three days." This may have been at Root River (Racine), twenty-three miles, or at Pike River, thirty-three miles south of Milwaukee—probably the former place.

On the 20th, he says: "We slept at the bluffs, cabined poorly enough." It is assumed that this was at what is now "Lake Bluff," thirty miles north of Chicago, thirty miles from Racine, and twenty miles from the mouth of Pike River. These are the only noticeable bluffs on the west side of the lake, except those above Milwaukee. He says: "We are detained two days and a half. Pierre going into the woods, finds the prairie twenty leagues from the portage. He also passed by a beautiful canal, vaulted, as it were, about as high as a man. There was a foot of water in it." By going west from the shore at Lake Bluff, some five or six miles, the great prairie, that extends south to Calumet River and the Desplaines, is reached. No prairie is found on the west of the bluffs above Milwaukee, or at any bluffs on the west shore of the lake, except those mentioned. The succeeding entry in Marquette's journal suggests that the Milwaukee bluffs were not alluded to, when he says: "Having started about noon, we had hard enough work to make a river." Had it been those above Milwaukee, it would not have

been a hard task to reach Milwaukee River, within five miles of them, or even Oak Creek, ten miles further south. On the other hand, it would have been a hard afternoon's work to row the canoe thirty miles. Not a creek enters the lake, between the bluffs and Chicago. Such a half day's journey deserved a notice in his journal. On the 21st of November, 1674, he says: "We are detained here [at the mouth of Chicago River, probably,] three days. An Indian having discovered some cabins, came to tell us. Jacques went with him there the next day. Two hunters also came to see me. They were Mascoutins, to the numbers of eight or nine cabins." On many of the old maps, the Mascoutins are located west of where Chicago now is. Marquette says: "Having been detained by the wind, we remarked that there were large sand-banks off the shore, on which the waves broke continually." By reference to early maps of Chicago, it will be seen that Chicago River took a short turn just before reaching the lake, and its mouth was about one-fourth mile further south, at, or near, what is now the foot of Madison Street. No entries are made between the 21st and 27th.

On the 27th, he says: "We had hard enough work to get out of the river." It is well known that the river had a wide mouth, and a sand-bar crossed it, so that it was oftentimes difficult to "cross the bar."*

He continues by saying: "Having made about three leagues" (seven and one-fourth miles), "we found the Indians" (of their party,) and also met "three Indians, who had come from the village." They were detained there by the wind the remainder of the month. He does not speak of being at the mouth of a river. There is none after leaving Chicago, for the distance of twelve miles, when the Little Calumet River is reached.

On the 1st of December the only entry made is, "We went ahead of the Indians so as to be able to say mass." No entry is made on the 2d. On the 3d he writes: "Having said mass and embarked, we were compelled to make a point and land, on account of the fog." He seems to be making very slow progress.

On the 4th, he says: "We started well to reach Portage [Little Calumet] River, which was frozen half a foot thick." No entry is made in his journal from the 4th to the 12th. On the latter day he writes: "As they be-

SECTION OF CAREY'S MAP.
(1801.)

gan to draw [their boats on the ice] to get to the portage, the Illinois having left, the Pottawatomies arrived [at the portage] with much difficulty." On the 4th, he says: "Being cabined near the portage† two leagues up the river we resolved to winter there, on my inability to go further." This would take him up the Little Calumet to "Indian Ridge" and near Calumet Lake.

"Being cabined near the portage" "two leagues up Portage River" and subsequently, after making a portage and going up another river three leagues "without finding any portage," suggests that there were two portages, and therefore there must have been three distinct streams or bodies of water on which he traveled. Now it is assumed that these were the Little Calumet, the Grand Calumet and the Desplaines rivers. From the Little to the Grand Calumet there was a portage of about one mile, and from the Grand Calumet, in those days, the route was up the Grand Calumet to Stony

* Major S. H. Long, who visited Chicago in 1823, says: "The extent of the sand-banks which are found on the eastern and southern shore by prevailing north and northwesterly winds, will prevent any important works from being undertaken to improve the post at Chicago." (Long's Exped. to St. Peter's River, vol. 1, p. 165.)

† From the Little to the Grand Calumet, as will be shown presently.

Brook near Blue Island, then up Stony Brook to the Desplaines River, and probably by way of the "Sag"—an old river bed or slough that extends nearly the entire distance from Stony Brook to the Desplaines, and through which the "Feeder" now runs from the Calumet to supply water for the Illinois and Michigan Canal.

On the old maps prior to 1800 there were represented two distinct rivers, the Grand and Little Killimick. The Grand Calumet (Killimick) took its rise near La Porte, Indiana, and ran a westerly course to near Blue Island, about forty-two miles, then turning north and receiving from the west a tributary, Stony Brook, it turned nearly east and running nearly parallel with itself, in an opposite direction, and about three

what was the Grand Calumet there is a heavy growth of wood and underbrush on each side from where the "canal" leads from it. The "canal," which is about one mile in length, and much narrower than either stream, has abrupt banks, which appear to be washed wider each year. The boatman who took the writer over these streams was a hunter and fisherman, and had fished in them for over twenty-five years. He said the "canal" was much wider than when he first saw it. On the bottom of it there is neither lily, lotus nor water-grass visible its entire length. There are no trees or underbrush on its banks. It has all the appearance of being a new stream. All the water from the Grand Calumet now runs through this new stream, or "canal," into the Little Calumet, reach-

ing the latter stream not far from the outlet of Calumet Lake. The slough, or old river bed, of what was once the Grand Calumet, east of this "canal," in times of high water, has a current from the east that finds an outlet through the "canal" and the Little Calumet. It is not definitely known who made this "canal." It may have been cut through by the water, without the aid of man. It is the nearest point between these streams, and may have been the portage, over which loads of furs and boats were dragged. This travel may have killed the grass, and thus in high water afforded it a chance to cut a channel in this road between the high grass on either side. The banks of what was the Grand Calumet are several feet higher than those of the Little Calumet where the "canal" enters it. About the year

MORSE'S MAP

miles distant (see Morse's and Carey's maps) it entered Lake Michigan at its extreme southern limit—near what is now the northeastern corner of Lake County, Indiana. At the mouth of this stream "Indiana City" was "founded." To-day the mouth is closed by drifting sands. The Grand Calumet has no outlet there except in high water. "Indiana City" is a thing of the past. There was also a Little Calumet. It was simply an outlet of Calumet and Wolf lakes, only about six miles in length. There is now but one Calumet river.

Among the old papers of General Hull, who was stationed at Detroit from 1805 to 1812, his grandson, the late William H. Clark, of this city, found a manuscript map—a fac-simile of which is published here—on which the Grand and Little Killamick are delineated with a straight line uniting them, on which the word "Canal" is written; as though the two rivers were thus united. The writer has visited the two streams and the "canal," and carefully examined them. The former are wide, and as a rule, very shallow near the banks, and in them is an abundance of aquatic vegetation, such as pond lilies, lotuses, water-grass, moss, etc. On the banks of

1800 many canals were projected in the United States, and some were made. Possibly this was the one referred to by Major Long in his report to the Secretary of War, wherein he says: "The Chicago and Desplaines rivers are connected by means of a kind of canal, which has been made partly by the current of the water and partly by the French and Indians, for the purpose of getting their boats across in that direction in time of high water." There does not appear to have been any such canal made at the place named, and possibly it may refer to the "canal" under consideration. The influx of a body of water like the Grand Calumet into the Little Calumet and at nearly right angles with the stream, would be likely to produce changes in the latter stream. It has done so. The northern bank has been encroached upon, and the river-bed is moving north. Again, there is a much greater volume of water than before. The outlet from Wolf Lake was formerly into the Little Calumet. The bed is still visible. Gurdon S. Hubbard, now living, subsequently to 1819 was having boats loaded with furs and merchandise, drawn up by men along the lake shore, when they were surprised to find that a "new

river" had been made to enter the lake, which was so deep and the sides so steep that they could not cross it. It was an outlet from Wolf Lake. Colonel Hubbard speaks positively on this point, and says he knows there was no river there before the spring of that year, as he had previously passed over the ground. Major Long, in speaking of his journey on the lake shore, from the "Big Calamick" to the "Little Calamick," says: "There are near to this place two streams, one of which, named Pine River, was opened last year (1822); the other was formed a short time before."*

The excess of the water in the Little Calumet had

Schoolcraft's map a portage is marked from Chicago to the Desplaines River, also from Milwaukee to Rock River. But up to the time of the cutting through of the canal, portages marked on the old maps are at the south or extreme southwest end of Lake Michigan. For evidence of this see Le Hontan's, Du Pratz's and other maps.

The last map of Marquette's suggests that the route was from the southwest corner of the lake, and from the fact that his line is continuous and nearly straight from the lake to the Illinois, it suggests that the "sag" was then filled with water and there was a nearly con-

evidently stopped the outflow, and raised the volume in Wolf Lake. The "new rivers" were the results. By the abrupt turning of the Grand Calumet, about sixteen miles from its mouth, so that its waters reached the lake nearer than they would have done by following its original channel, the country above the outlet would, in a measure, become drained, and the mean height of the water in the stream be less than it was before such diversion was made. Stony Brook would be affected by the change, and the part of the stream that once filled the "sag" would be drained off. The length of the portage would be increased. This was probably the case, for since about the time of the opening of the "canal" — probably about 1800 — the line of travel was changed, and the Chicago River was the route usually taken after that date. Major Long, Mr. Schoolcraft and others of their time went by way of the South Branch of the Chicago River; and thence to the Desplaines. On

tinuous water communication after he had "dragged half an arpent" and entered the Grand Calumet. He represents several streams on the west side of the lake, but not one of them has the peculiar north and south "branches" of Chicago River. Nor does the one from the southwest end of the lake have any branches. Chicago River is peculiar in this respect. It does not exceed a mile in length. The two branches extend for miles north and south of the forks.

By referring to the first map of Marquette, it will be seen that the "portage" there marked is between two streams, both of which run in a southerly direction—the Desplaines and Stony Brook. In some old maps the portage between the Desplaines and the forked Chicago River is from the North Branch of the latter.* It would seem from this that the portage was not from the Chicago River of a later date, for that was made from the

* See Sir Robert D. Vagondy, Map of 1753 where the "B. & P. de Chicago" are shown at the southwest part of the lake; Mitchell's of 1755; also Bellin's map of 1725.

* Major Long's Second Expedition, vol. 1, p. 159.

South Branch. It would seem more probable that the forked river was the Calumet and Stony Brook. The portage from the South Branch of the Chicago River to the Desplaines, which some claim was the route of Marquette, would be between that stream, which runs north-

SECTION OF LA HONTAN'S MAP OF 1703.

erly, and the Desplaines, which runs in an opposite direction.

We will now return again to Marquette where we left him in his little cabin on the Little Calumet, near the portage. During his sojourn he saw many Indians passing his cabin. On the 30th of December, 1674, he says: "Jacques arrived from the Illinois village, which is only six leagues from here, where they are starving."

The next entry is made January 16, 1675. It appears that about eighteen leagues distant some Frenchmen resided, and one of them was a surgeon, who visited Marquette. "An Indian came and brought whortleberries and bread, for the men to eat. Jacques returned with the surgeon, and went on to the village of the Illinois which was about five miles beyond that of the French." On the 24th he says: "Jacques returned with a bag of corn and other refreshments that the French had given him for me. "26th. Three Illinois brought us from the head men [of the Illinois] two bags of corn, some dried meat, squashes and twelve beavers. * * * They had come twenty leagues." On the 20th of February he writes: "We had time to observe the tide which comes from the lake, rising and falling, although there appears no shelter on the lake. We saw the ice go against the wind." These phenomena must have been witnessed by him from his cabin, as he looked to the west upon the Calumet lake. It was not upon Lake Michigan, for he was two leagues up the river and confined by sickness. He had previously spoken of tides in other inland bodies of water he had visited. He was of opinion that there were tides in the lakes.

"On the 28th [March] the ice broke and choked above us. On the 29th the water was so high that we had barely time to uncabin in haste, put our things on trees and try to find a place to sleep on some hillock, the water gaining on us all night; but having frozen a little, and having fallen a little, * * * we are going to embark to continue our route."

"31. Having started yesterday we made three leagues on the river, going up [on Grand Calumet and Stony Brook] without finding any portage. We dragged for half an arpent" [from the Little to reach the Grand Calumet]. "Besides this outlet" [to Lake Michigan the route they went] "the river has another [outlet] by which we must descend." The Grand Calumet then emptied into the extreme south end of Lake Michigan. He probably did descend that stream, and finding himself so far east he chose to go back to Michilimackinac by an unknown route along the east shore of the lake, rather than turn and go up the west side over a portion of the way he had previously traveled. Had this trip been by way of what is now known as Chicago River, it is not probable that he would have turned to the south upon entering the lake and gone by an unknown route, when his point of destination was to the north, over a route, which he had previously traveled. And that he and Joliet took the same route from the Desplaines by way of what is now called "the Sag" and down Stony Brook to the Calumet, is evidenced by the following entry in his journal: "Here [on the east side of the Desplaines] we began our portage, more than eighteen months ago." April 1, he is detained at the same place "by a strong south wind." "We hope to-morrow to reach the spot where the French are, fifteen leagues from here." The strong south wind would impede his progress down the Desplaines River.

"6. The high winds and cold prevent us from proceeding. The two lakes [Michigan and Calumet] by which we have passed are full of bustards, geese, ducks, cranes and other birds that we do not know. We have just met the surgeon, with an Indian, going up with a canoe load of furs; but the cold being too severe for men who have to drag their canoes through the water, he has just made a cache of his beaver, and goes to the village [the French village where the surgeon lived] with us to-morrow." It was on this day, the 6th of April, 1675, that Marquette made his last entry in his journal. It is said by some writers, that he reached the town of Kaskaskia on the 8th of April, and after having several times assembled the chiefs of the nation, he took possession of that land in the name of Jesus Christ, and gave the name of the Immaculate Conception of the Blessed Virgin, to a mission, which he established there. Now this may all be true, but it looks as though a fancy sketch had found its way into sober history. Marquette made no mention of any such event. If he had been able to collect the different tribes and found a mission, it is likely he would have made mention of it. In just forty-two days after he made his last entry, he died, at the mouth of the Marquette River, upon the northwestern shore of Lake Michigan. In that time, he had traveled from the Desplaines River to the Illinois town, and from thence, back to and down to the mouth of the Grand Calumet, and thence up the east side of the lake to the place of his death—where Ludington now is—a journey of at least four hundred and forty-five miles. Allouez went to "Kachkachkia" in 1676, and again 1677. In his journal he says:*

"In spite of our efforts to hasten on, it was the 27th of April before I reached Kachkachkia, a large Illinois town. I immediately entered the cabin where Father Marquette had lodged, and the Sachems, with all the people, being assembled, I told them the object of my coming among them, namely, to preach to them the true, living and immortal God, and his Son Jesus Christ. They listened very attentively to my whole discourse, and thanked me for the trouble I took for their salvation. I found this village much increased since last year. They lodged in three hundred and fifty-one cabins."

* Disc. Miss. Riv., p. 74.

After giving a history of the people, their manner of living, etc., he proceeds :

"As I had but little time to remain, having come only to acquire the necessary information for the perfect establishment of a mission, I immediately set to work to give all the instruction I could to these eight different nations, to whom, by the help of God I made myself sufficiently understood. I would go to the cabin of the chief of a particular tribe that I wished to instruct, and there, preparing a little altar with my chapel ornaments, I exposed a crucifix, before which I explained the mysteries of our faith. I laid the foundation of this mission by the baptism of thirty-five children and a sick adult, who soon after died, with one of the infants, to go and take possession of heaven in the name of the whole nation. And we, too, to take possession of these tribes in the name of Jesus Christ, on the 3d of May, the Feast of the Holy Cross, erected in the midst of the town, a cross twenty-five feet high, chanting the *Vexilla Regis* in the presence of a great number of Illinois of all tribes, of whom I can say in truth, that they did not take Jesus Christ crucified for a folly nor for a scandal; on the contrary, they witnessed the ceremony with great respect, and heard all I had to say on the mystery, with admiration. The children even went to kiss the cross, through admiration, and the old earnestly commended me to place it well so that it could not fall. The time of my departure having come, I took leave of all these tribes, and left them in a great desire of seeing me as soon as possible, which I more willingly induced them to expect."

In a letter from Father Marest, dated November 9, 1712, he says :

"This mission owes its establishment to the late Father Gravier. Father Marquette was, in truth, the first who discovered the Mississippi, about thirty-nine years ago; but not being acquainted with the language of the country, he did not remain. Some time afterward he made a second journey, with the intention of fixing there his residence, and laboring for the conversion of these people; but death, which arrested him on the way, left to another the care of accomplishing this enterprise. This was Father Allouez, who charged himself with it. He was acquainted with the language of the Oumiamis, which approaches very nearly to that of the Illinois. He, however, made but a short sojourn, having the idea while there, that he should be able to accomplish more in a different country, where indeed, he ended his apostolic life. Thus Father Gravier is the one who should properly be regarded as the founder of the mission of the Illinois."*

Having now given the reason for believing that Father Marquette did not establish the mission of Kaskaskia, and that he did not preach to the Miami at the site of Chicago, additional evidence will now be advanced to show that the Chicagou and the Chicagou River of the early writers, did not refer to the location of the Chicago and its river of the present time. In the early part of the eighteenth century, the English as well as the French, were endeavoring to acquire a knowledge of the Northwest, and secure a foothold there. English commissioners were appointed to examine, and report upon it. In their report made to the King, September 8, 1721,† they allude to the communication between Montreal and the Mississippi River, and say: "From this lake [Erie] to the Mississippi, they [the French] have

three different routes; the shortest by water is up the river Miamis, or Ouamis [Maumee] on the southwest of Lake Erie," etc., by way of a portage on the Wabash, and thence down to the Mississippi River. "There are likewise two other passages much longer than this, which are particularly pricked down in Hennepin's map, and may be described in the following manner." These routes were round by way of the lakes. "From the Lake Huron they pass by the Strait Michillimackinack four leagues, being two in breadth and of a great depth, to the Lake Illinois [Michigan]; thence one hundred and fifty leagues on the lake to Fort Miamis, situated on the mouth of the river Chicagou [St. Joseph]. From hence came those Indians of the same name, viz: Miamis, who are settled on the forementioned river that runs into Lake Erie [Maumee]. Up the river Chicagou, they sail but three leagues to a passage of one-fourth of a league; then enter a small lake of about a mile, and have another very small portage, and again, another of two miles to the River Illinois (Kankakee), thence down the stream one hundred and thirty leagues to the Mississippi."* This evidently means the St. Joseph River, and not the Chicago of to-day. By referring to Hennepin's map, a reduced copy of which is here given, it will be seen that the portage (*draag-plaats*) was between the St. Joseph and Kankakee rivers of the present time. The other route alluded to by the commissioners, was by way of Green Bay, Fox and Wisconsin rivers, and down the latter stream to the Mississippi. By reference to Hennepin's map, it will be seen that the portage (*draag-plaats*) is marked between the Fox and Wisconsin rivers. Charlevoix also alludes to Chicago in 1721, as follows :

"Fifty years ago the Miami were settled at the south end of Lake Michigan, in a place called Chicagou, from the name of a small river which runs into the lake, and which has its source not far from the river of the Illinois. They are divided into three villages, one on the River St. Joseph; the second on another river

HENNEPIN'S MAP OF 1683.

* Mr. A. Coquillard, the founder of South Bend, Ind., about the year 1837, at an expense of about \$45,000, had a canal or mill race dug, from the head waters of the Kankakee to the St. Joseph, a distance of about four miles, through the little lake alluded to in this description of that portage. What was then a series of ponds and swamps is now comparatively dry land, and under cultivation.

* Disc. Miss. Riv., p. 29-30.

† N. Y. Col., vol. 5, p. 621-2.

which bears their name and runs into Lake Erie, and the third upon the Ouabache (Wabash), which runs into the Mississippi."*

That this place was at the south end of the lake, and not upon its west side, appears evident. The map of 1679-82, recently found in Paris and reproduced by Margry, has the name of Chikagoue applied to the Grand Calumet. That and the St. Joseph River were evidently known as Chicagou River at times, prior to 1700. The name was also frequently applied to the Desplaines River, which was also called Divine River. It is named Chicago on the maps of DeLisle, Paris, 1719; Sieur D'Anville in 1746; Jeffreys, London, 1761; Franquelin, Paris, 1684; Sieur De Rouge, Paris, 1755.

The map of the United States, published by W. Winterbotham, in London, 1795, to accompany his history of the United States, suggests that the Chicago of that date was not on the river now known by that name. "Little Fort" on that map marks the site of Waukegan—so named from "Little Fort." South of Waukegan to the Little Calumet, only one stream enters the lake—the Chicago River. This is shown upon the map as a stream with no name, while Chicago, upon no stream, is still further south. The same is to be seen on Cary's map of a later date. Both these maps show the outline of the Grand Calumet very correctly.

Many references are made by early writers to Chicago, but except those of recent date it is spoken of as being the home of the Miamis, or at the south end of the lake, or at a place where there is a fort. Neither of these descriptions would apply to Chicago.

In a translation in Magazine of American History † LaSalle, in one of his letters, says: "I sent M. de Tonty in advance, with all my people, who, after marching three days along the lake and reaching the division line called Checagou," etc. * * * This was the 2d and 3d of January, 1682. "I remained behind to direct the making of some caches in the earth," etc. The Checagou here spoken of is, by some, thought to refer to the Chicago of to-day.

If that is so, LaSalle's people must have traveled in those three days, in January, 1682, one hundred and fifteen miles—the distance from St. Joseph to Chicago. It seems more probable that they traveled sixty miles to the mouth of the Grand Calumet, which as can be seen upon the map reproduced by Margry, was, in 1679-82, called the Checagou. But farther on, in this letter, LaSalle speaks of the Checagou River in a manner that places beyond a doubt that he means the Desplaines. In speaking of the Teatiki (Kankakee), he says, "It is found to receive on the left, in its descent, another river, nearly as large, which is called the river of the Iroquois and thence continuing * * * it receives on the right bank that of Checagou. This river flows from the Bay of Puans, and is a torrent rather than a river, although it has a course of more than sixty leagues," etc.

So it appears that he referred to two Chicago rivers. Of the one emptying into the lake he, in speaking of opening the mouth of the river by the removal of the sand bar, says: "I doubt, even if it be a complete success, whether a vessel could resist the great freshets caused by the currents in the Checagou in the spring, which are much heavier than those of the Rhone. Moreover, it would only be serviceable for a short time, and at most, for fifteen or twenty days each year, after which there would be no more waters," etc. †

This would hardly suffice for a description of the sluggish stream, in which there is at all times a plentiful supply of stagnant water, now called Chicago River.

* N. Y. Col., vol. 9, p. 178; Jour. Historique, Lettre IX.

† Vol. 2, p. 152 from vol. 2 of Margry.

‡ Ibid., p. 153.

He speaks of a "Portage of Chicago," and says "This is an isthmus of land at 41° and 50' north latitude, at the west of Illinois Lake, which is reached by a channel formed by the junction of several rivulets, or meadow ditches." The latitude given would make the portage and isthmus north of west of the court-house in Chicago, which is in latitude 41° 26'—too far north for the South Branch portage. There may have been a portage from the North Branch over an isthmus to the Desplaines, but as far as is known to the writer, no one has ever thought there was one. It may be that there is a mistake in this latitude by typographical error or otherwise.

LaSalle did not like the Chicagou route to the Illinois. His first trip was by the St. Joseph and Kankakee. He did not wish to experiment with a new route. On the map, made in his day, and probably from data furnished by him or his men, the Grand Calumet was named Chekagoue. He would be obliged to go by boat sixty miles from the mouth of the St. Joseph to Grand Calumet, instead of going up the St. Joseph as he had done on his first journey. In some other early maps the name Checagou may have been applied to the forked river on the west side of the lake—the Chicago River of to-day. But no Miamis appear to have been there. The map-makers in the old world were doubtless as much perplexed to locate the Chicago of one hundred and fifty years ago, as an American map-maker would be to accurately locate some of the towns and rivers of unpronounceable names in Central Africa reported by Stanley and other explorers of that region. It seems very doubtful whether the parties at the treaty of Greenville, in 1795, fully understood the location and history of Chicago. They described the thirty-six miles of land that were ceded at "the mouth of a river where a fort formerly stood." There is no record, nor even tradition, that a fort ever stood at the mouth of Chicago River, prior to 1803. Tradition says one was built by a French trader named Garay, upon the North Branch, and that the branch was called Garay Creek. It is probable that forts, or more probably stockades, as places for the storage of furs, were erected at the mouths of many rivers and near portages. The earthworks around the remains of one of these are said to exist on the north side of the "sag," before alluded to, in the town of Palos, Cook County, and its ruins are thus described by Dr. V. A. Boyer, of Chicago:

"I have many times visited, when on hunting excursions, the remains of an old fort, located in the town of Palos, Cook County, Ill., at the crossing of the old sag trail, which crossed the AUSAUNASHKEE swamp, and was the only crossing east of the Desplaines River, prior to the building of the Archer bridge* in 1836. The remains of the fort, situated north of the sag and near the crossing, were on the elevated timber land, commanding a view of the surrounding country, and as a military post would well command and guard the crossing. * * * I have never been able to find any account of the building of this fort in any historical works. I first saw it in 1833, and since then have visited it often in company with other persons, some of whom are still living. I feel sure that it was not built during the Sac War, from its appearance. * * * It seems probable that it was the work of French fur-traders or explorers, as there were trees a century old growing in its environs. It was evidently the work of an enlightened people, skilled in the science of warfare. * * * As a strategical point it most completely commanded the surrounding country and the crossing of the swamp or sag."

The manuscript from which the above is taken, is in the library of the Chicago Historical Society, and with it is a map showing the location of the "fort" in the western part of Section 15 of the town of Palos. It is reported that near that place, and near the point where the sag enters the Desplaines, many relics of

Indians and those evidently made by a more civilized people have been found. If the sag was the thoroughfare of the early French explorers and traders, it is reasonable to suppose that many relics of theirs will be found when that part of the country is settled and the land plowed.* It was a habit of the traders to *cache* their furs and other articles which they wished to hide from the view of strangers who might pass that way.

One other point and this paper will be brought to a close. It is frequently asserted that Marquette was the discoverer of the Mississippi River. Joliet's name in connection with the discovery is often ignored. By referring to the report of Count Frontenac to M. Colbert, Minister at Paris, under date of November 2, 1672, it will be seen that Louis Joliet was commissioned to go "to the country of the Mascoutins to discover the South Sea and the great river they call the Mississippi, which is supposed to discharge itself into the sea of California. He is a man of great experience in these sorts of discoveries; and has already been almost at that Great River, the mouth of which he promises to see."

In another communication, dated November 14, 1674, the Count writes to Minister Colbert, as follows :

"Sieur Joliet * * * has returned three months ago, and discovered some very fine countries, and a navigation so easy through the beautiful rivers he has found, that a person can go from Lake Ontario and Fort Frontenac in a bark to the Gulf of Mexico, there being only one carrying-place, half a league in length, where Lake Ontario communicates with Lake Erie. * * * He has been within ten days' journey of the Gulf of Mexico. * * * I send you by my secretary the map he has made of it† and the observations he has been able to recollect, as he has lost all his minutes and journals in the shipwreck suffered within sight of Montreal, where after having completed a voyage of twelve hundred leagues, he was near being drowned, and lost all his papers and a little Indian whom he brought from those countries. These accidents have caused me great regret. He left with the Fathers of Sault Ste. Marie in Lake Superior, copies of his journals; these we can not get before next year. You will glean from them additional particulars of this discovery, in which he has very well acquitted himself."‡

In consideration of the great services Joliet had rendered the French Government he obtained a grant of

* Since the foregoing was written the writer has received a letter from Alexander Reid, of Sag Bridge P. O., who says that, about thirty-seven years ago when plowing a piece of land on the south side of the sag, at the depth of ten or twelve inches, he found, as he expresses it, "about a bushel-basket full of arrow flints, and I think about sixty or seventy-five stone axes, of all sizes * * * about three or four rods from the margin of the sag."

† See fac-simile of Joliet's map in this work.

‡ Paris Docs., N. Y. Col., vol. 9, p. 121; also p. 793.

the island Anticosti, in the Gulf of St. Lawrence, "as a reward for having discovered the country of the Illinois, whereof he has transmitted a map to my Lord Colbert, and for a voyage he made to Hudson's Bay in the public interests."* Thus it appears that Joliet was the person employed and the one paid for having made the discovery so often ascribed to Marquette. That the latter accompanied Joliet and saw what he saw, and that he remained in the country and took a second trip to the Illinois, is true. He evidently bore the same relation to Joliet that the army chaplain does to his superior officers. Many a chaplain, upon his return from the war, has written an account of the campaign better than the colonel, under whom he served, could have done. It may have been that Marquette was a closer observer and better writer than Joliet. But this has not been proved. The original journals of Joliet were lost. The copies which he left with the Fathers at Sault Ste. Marie, as reported by Count Frontenac, have not been made public. No data are at hand to enable one to determine the character and merits of Joliet's journals. If they still exist, it is to be hoped that some person, with the enthusiasm and industry of a Margry, will search the French archives and the depositories of the Jesuits and other missionaries, and do for the memory of Joliet what has been so well done for LaSalle.

That Joliet was the head of the expedition is clearly proven. Soon after his return to his native city, Quebec, he married Miss Claire F. Bissot, of that city, October 7, 1675. He led a very active life in attending to his own private business, in addition to faithfully and efficiently discharging governmental duties that were entrusted to him. He died at about fifty-six years of age, leaving a wife and seven children, viz.: Louis, Marie Charlotte, François, Jean Baptiste, Claire, Anne, and Marie Geneveive.

In closing, it may be said that the expedition of Joliet and Marquette was particularly disastrous. Joliet lost his records and maps, and Marquette lost his life. It was just two years and one day after Marquette started from Mackinac that he died. He was sick at the Mission of St. Francis, and in his cabin, "near the portage," nearly seventeen months—leaving him less than eight months in which to do all his work of discovery and missionary labors in the Mississippi Valley.

* N. Y. Col., vol. 9, p. 668.

EARLY EXPLORATIONS (CONTINUED).

LA SALLE.—It is believed by many students of northwestern history, that before Joliet and Marquette had visited this region, another great explorer had passed up the Chicago River to the Illinois, if not even to the Mississippi. This was the famous Robert Cavalier, Sieur de la Salle. LaSalle was the son of a wealthy and aristocratic merchant of Rouen. He was born in 1643, and received a thorough education in his native country. Born a Catholic, he became early connected with the Jesuits. This connection, although severed in his early manhood, debarred him from any portion of the inheritance of his father, and at the age of twenty-three he sailed for Canada to seek his fortune. The little settlement of Montreal, which he had selected as his destination, was then governed by the Seminary of St. Sulpice, a corporation of priests, who held it and the surrounding country by seignorial rights. This post, being the most advanced settlement on the St. Lawrence, was in constant danger from the attacks of the neighboring Iroquois, and its proprietors were willing and glad to grant their lands, on easy terms, to any person brave enough to venture still farther up the St. Lawrence, and advance the line of settlement toward the enemy. LaSalle was both fearless and ambitious, and accepted a grant of land at the La Chine Rapids, equally dangerous as a place of residence, and convenient as a place of trade. The divided waters of the St. Lawrence unite below the island on which Montreal is built, and form the Bay of St. Louis. On the southern shore of the bay was the seigniory of LaSalle. He at once commenced the improvement of his domain, which gave him an opportunity of frequent intercourse with the Seneca Iroquois. From them he heard of the Ohio, and also of another great river in the west, which he conceived must flow into the California Sea. After a residence of seven or eight years in Canada he had become thoroughly familiar with several Indian dialects, and with the manners and characteristics of the surrounding tribes. He was restless and adventurous, and desired to penetrate farther into the magnificent country he had adopted as his home, and conceived the design of himself exploring the Ohio, and perhaps the "sea" into which the Indians said it flowed. Proceeding to Quebec, he gained the consent of Courcilles and Talon to his proposed plan, but no aid toward carrying it out. He accordingly sold his grant to raise the necessary sum, and the proprietors of Montreal desiring also to explore these regions, the two contemplated expeditions were merged in one. The combined party consisted of twenty-four men and seven canoes, with two priests of St. Sulpice as the leaders of the Montreal party. There were two additional canoes for the Senecas, who acted as guides as far as their village on the southern shore of Lake Ontario. These Seneca guides here left the party, and with one Indian whom they found at the head of the lake and induced to act in that capacity, they proceeded on their journey. On reaching the Indian village at Niagara they found Joliet, who had reached that point on his return from the copper mines of Lake Superior. He had made a map of the region he had traversed; and his description of the country, of the spiritual needs of the Indians, and, possibly, of the influence the Jesuits were gaining over them, induced the two priests of St. Sulpice to change the direction of their voyage to the north. The party separated at Niagara, the priests to go to Lake Superior, and LaSalle to continue his journey toward the south. This was in the last of September, 1669. His movements during the following year are not clearly traced.

From an unpublished memoir entitled "Histoire de Monsieur de la Salle," which is said to be a narrative of his explorations, as related by himself to the Abbe Renaudot, at the time of his visit to Paris in 1678 to lay his plans for proposed discovery before King Louis XIV., and Colbert, Prime Minister, it is inferred that he reached the Ohio, and descended it to the falls below Louisville, when his voyageurs deserted him, and he was compelled to retrace his route alone, returning during 1669. The narrative continues:

"Some time thereafter he made a second expedition to the same river, which he quitted below Lake Erie—made a portage of six or seven leagues to embark on that lake, traversed it toward the north, ascended the river out of which it flows, passed the Lake of Dirty Water, entered the fresh water sea, doubled the point of land that cuts this sea in two (Lakes Huron and Michigan); and descended from north to south, leaving on the west the Bay of the Puans (Green Bay), discovered a bay infinitely larger, at the bottom of which, toward the west, he found a very beautiful harbor, and at the bottom of this he found a river, which runs from the east to the west, which he followed; and having arrived at about the 280°* of longitude, and the 39th of latitude, he came to another river which uniting with the first, flowed from the northwest to the southeast. This he followed as far as the 36th° of latitude, where he found it advisable to stop, contenting himself with the almost certain hope of some day passing by way of this river even to the Gulf of Mexico. Having but a handful of followers, he dared not risk a further expedition in the course of which he was likely to meet with obstacles too great for his strength."

From the passage quoted above, Pierre Margry, a noted French savant, has formed the opinion that LaSalle, in 1670, before the voyage of Joliet, entered the Chicago, and passed thence to the Illinois and Mississippi rivers, and that he therefore must be regarded as the first white man who saw the prairie and stream forming the site of the wonderful city of 1883. Whether LaSalle passed what he calls "the division line called Checagou," as early as 1670, is problematical, but his later visits to the locality, during the years of his weary journeys between the St. Joseph and the Illinois rivers, and his detailed and accurate description of the old "portage" as it was in 1682, have almost as thoroughly identified his name with the history of "Checagou" as with the "Rock of St. Louis" or "Crevecœur."

In 1673, Frontenac, the Governor of Canada, resolved to establish a frontier post at Quinte Bay, on Lake Ontario, which should not only hold in check the Iroquois, but also secure to its holders a monopoly of the fur trade of the upper lakes, which the English and Dutch of New York were making strong efforts to secure. The career of LaSalle is clearly traced from this period. Frontenac recognized in him the qualities he desired in his agents—determination, unresting energy and persistency. LaSalle found in Frontenac a man who was equally ambitious with himself, and equally daring in the accomplishment of his designs. The fort on Lake Ontario would be not only a source of immediate profit, but a step toward the Mississippi, the wealth of Quivira and the lands of the Cibola of the Spaniards. LaSalle was deputed by Frontenac to visit Onondaga, the principal town of the Iroquois, and invite the chiefs to meet the Governor at the Bay of Quinte, where a council should be held in regard to the proposed fort. LaSalle, believing the mouth of the Cataraugua (the present Kingston) the better site, Frontenac changed the place of the council to that locality. Frontenac, escorted by one hundred and twenty canoes and four hundred men, proceeded from Quebec to the appointed place, arriving July 12, 1673. The council was held, and resulted according to the desires and plans of the Governor. A palisaded fort was constructed by his men, which was called Fort Cataraugua;

* 280° east of the Island of Ferro, which was reckoned 20° west of Paris,

and Frontenac, leaving there a sufficient garrison, returned to Quebec.

In the autumn of 1674, LaSalle went to France with letters of recommendation from Frontenac, both to the King and his powerful minister, Colbert. LaSalle petitioned the court of France for a patent of nobility, in consideration of his services as an explorer, and also for a grant of seignior, of the fort on lake Ontario, which was now called Fort Frontenac. Both his petitions were granted, and he returned to Canada a noble, and proprietor of one of the most valuable grants in the colony. He took immediate possession of his domain, replaced the hastily constructed fort of palisades by a substantial stone building, well fortified and garrisoned. Around this grew up quite a village, composed of the cabins of the French laborers and Indian employés of the proprietor, who was only strengthening and fortifying this post as a base for further operations, the exploration of the Mississippi and the countries to the west of it, being now the object of his desire. Again he sailed to France for aid, and again returned successful, reaching Canada early in the fall of 1678, with permission from the Government to pursue his proposed discoveries in new countries, to build forts and take possession of such countries in the name of France; and he was also granted, for his private benefit, a monopoly of the trade in buffalo skins. He brought with him, from France, supplies, laborers and personal followers; chief among whom was Henri de Tonty, his ever-after faithful friend and supporter. A fort at the mouth of the Niagara River which would command the upper lakes, and a vessel with which to navigate their waters, were the next steps to be accomplished. After many vexatious delays, and much and serious loss, the fort, or a depot of supplies, was completed. The equipment and stores for the vessel were carried from the foot of the rapids in the Niagara River, around the falls to the quiet water above—a portage of about twelve miles. This work was accomplished by the 22nd of January, and the carpenters set to work to build the first vessel that entered the great lakes of the Northwest. It is believed that the "Griffin" was built at the mouth of Cayuga Creek, and for the immediate design of carrying materials to the Illinois River, wherewith to construct another vessel for the navigation of the Mississippi to its mouth. The vessel was launched in the spring of 1679, Tonty having the superintendence of the work during the absence of LaSalle, who had been obliged to return to Fort Frontenac for fresh supplies, and who returned in August, bringing with him three Flemish friars; two of whom—Fathers Membré and Ribourde—were, after Marquette and Allouez, the earliest missionaries in Illinois. By the 7th of August the "Griffin" had been towed up the Niagara River to the shore of Lake Erie, and on that day the voyage was fairly commenced which brought LaSalle and Tonty to Crevecœur and the Rock of St. Louis. The entire party on board the vessel consisted of thirty-four, including the sailors and laborers. The capacity of the "Griffin" was forty-five tons. Early in September they arrived at one of the islands at the entrance of Green Bay, where LaSalle disembarked his cargo, consisting principally of materials wherewith to build another vessel on the Illinois River; and, reloading the "Griffin" with furs, wherewith to pay his creditors in Canada, sent her back to the Niagara in charge of the pilot, with orders to bring her to the head of Lake Michigan, as soon as her cargo was discharged. LaSalle, with fourteen men, among whom were the Fathers Membré, Ribourde and Hennepin, embarked in four

heavily laden canoes, and proceeded south along the Wisconsin shore of Lake Michigan. They passed the mouth of the Chicago River, and, coasting the southern shore of the lake, reached the mouth of the St. Joseph, which LaSalle calls "the river of the Miamis," on the 1st day of November, 1679. Here they expected to meet Tonty, whom they had left at Michilimackinac to arrange some affairs of LaSalle's, and who was to make his way to St. Joseph by the eastern shore of the lake. LaSalle remained at the mouth of the river twenty days before Tonty arrived, and during that time his men nearly completed a fort, which was called the "Fort of Miamis." After the arrival of Tonty, LaSalle still lingered at the St. Joseph, hoping and waiting for the appearance of the "Griffin." Finally, yielding to the importunities of his men, he started for the Illinois River, sending two of his followers back to Michilimackinac to gain tidings of the vessel, and leaving four in charge of the fort. On the 3d of December, 1679, the party (thirty-three in all) embarked on the St. Joseph in eight canoes, and ascended the river to where now is the village of South Bend, Indiana. After a long search for the portage leading to the Kankakee, then called Theakiki, and which was about four miles in length, they finally reached the place. Shouldering their canoes and luggage, they traversed this frozen plain and embarked on the southern branch of the Illinois. Descending the gradually widening river, they passed the Indian village where Marquette and Allouez had already preached to the inhabitants, but which was now deserted, the savages having departed to their hunting-grounds. On the 4th of January, 1680, they reached the Indian camp, a short distance below Peoria Lake, then called Pimitouai. This encampment of Illinois consisted of about eighty wigwams. LaSalle first terrified the Indians, and then succeeded in establishing the most friendly relations with them. The Frenchmen were invited to partake of the usual feasts and festivities. On explaining to them his purpose to build a boat to descend the Mississippi to the sea their jealousy awoke, and was fanned by the representations of a Mascoutin chief who visited the camp. The tales told by the Indians of the horrors and perils to be encountered on the Mississippi, finally so wrought on the fears of LaSalle's followers that six deserted him utterly, and dissatisfaction and even mutiny were rife among those who remained. Tonty and a few others continued faithful, but it was dangerous to remain at the Indian camp, and LaSalle resolved to fortify himself in a position where he could resist successfully an attack of hostile Indians, if such should be made. About the middle of January he selected a spot for a fort on the southern bank of the Illinois River, about a mile and a half below the Indian encampment. The fort was completed and christened Crevecœur.* It was enclosed by a palisade twenty-five feet high, within which were the huts of the men, and the cabins of LaSalle, Tonty and the friars. LaSalle had ere this almost given up hope of the return of the "Griffin," which was to bring to him, at the head of Lake Michigan, many articles needed for the construction of another vessel on the Illinois River. Determined not to fail in his design, LaSalle concluded to return on foot to Fort Frontenac for the needed supplies. The vessel was commenced at Fort Crevecœur, and the work so hurried on by LaSalle and Tonty that in the course of six weeks the hull was nearly finished, and LaSalle started, on the 2d of March, 1680, with five attendants, for Fort Frontenac, leaving Tonty in command of the fort, with a garrison of four-

*Broken Heart.

teen or fifteen men. LaSalle and his men embarked in two canoes, but made slow progress. They were obliged to drag the canoes over the half-frozen ice and snow through the woods and marshes—the river being frozen sufficiently to stop their progress, but not strong enough to bear their weight. They passed the deserted village of Kaskaskia, now the site of Utica, and about a mile and a half above the village LaSalle's attention was arrested by the high cliff of yellow sandstone on the south bank of the river, now called Starved Rock. Knowing by this time the precarious tenure of his footing in the country, and the remarkable advantages of the cliff as a fortress, he sent word to Tonty to retreat to it if necessary and there fortify himself. On the 18th of March the party reached a point some miles below the site of Joliet, and there secreting their canoes, struck across the country for the fort at St. Joseph. Wading through marshes, and staggering over the half-frozen, half-thawed ground of the prairie, fording streams when they could, and constructing rafts when they were forced to do so, they at last reached Lake Michigan, and following its shores arrived, on the night of the 24th, at the fort, which had been built the autumn before at the mouth of the St. Joseph. Here LaSalle found two of his men whom he had sent to Michilimackinac to learn tidings of the "Griffin," and who had returned without gaining the slightest clue to her fate. Sending these two men to reinforce Tonty, he pushed on through the wilderness and reached Fort Frontenac on the 6th of May, 1680; enduring the hardships and exposure of this journey of sixty-five days, through an utterly wild and savage country, with undaunted courage and resolution. He wasted no time at Fort Frontenac, but hastened on to Montreal to procure the needed supplies for his post on the Illinois River. While LaSalle was thus braving and daring every danger for the accomplishment of his purpose, and looking to his return to the Illinois as the final step to be taken before he should be fairly embarked on his long delayed voyage, the hardest blow he had yet received fell upon him. Fort Crevecoeur was destroyed. During a brief absence of Tonty, its faithful commander, nearly all the garrison deserted; having first plundered and then destroyed the fort. The faithless men, not satisfied with their work of evil at Crevecoeur, returned to Canada by way of the St. Joseph River, and also destroyed Fort Miamis, whence they proceeded toward Fort Frontenac with the intention of murdering LaSalle, but were captured by the latter before they reached their destination, and carried prisoners to the fort. Anxious for the fate of Tonty and his few remaining men, LaSalle hastened his preparations, and on the 10th of August embarked at Fort Frontenac, with a new command of twenty-five men, for the Illinois. He reached Michilimackinac by way of Lake Simcoe and the Georgian Bay, and leaving there La Forest, his lieutenant, with a small command and instructions to follow him speedily, hastened forward with twelve men to the St. Joseph River, where he found, as he anticipated, only the ruins of his fort. At St. Joseph he again divided his force. Leaving five men to rebuild Fort Miamis, and await the arrival of La Forest and the remainder of his party, he set out with seven followers for the Illinois, arriving at his destination by the same route he had traversed on his first visit to the river. As he approached the site of the old Kaskaskia village, he looked with hope to the high cliff on the south bank of the river, which he had named the "Rock of St. Louis,"* half expecting that Tonty had taken refuge there, according to the instructions he had sent him. No sign of fortifica-

* Starved Rock, in LaSalle County.

tion was visible,—no sign of human life. A little farther, and the site of the Indian village of the Kaskaskias was reached. No village greeted the eyes of the horrified voyagers; but the torn and mangled corpses which strewed the prairie, and the horrible skulls which grinned from the charred poles of the burned cabins, bore silent evidence that the Iroquois had done their evil work, and that the friendly tribe on which he relied for protection and assistance was scattered, if not totally destroyed. Finding nothing among the mutilated remains that caused him to believe that Tonty or any white man was among the slain, LaSalle resolved to push on and rescue his faithful followers if they were still alive. He left three of his men secreted on an island near the site of the ruined village, and with the remaining four descended the river to the Mississippi, finding no trace of Tonty, but, all along, signs of the fearful havoc committed by the invaders. The disappointed and almost disheartened commander rejoined his followers at the desolated village, and the united party retraced their path to the junction of the Kankakee with the Desplaines. He entered the latter river, and had proceeded but a short distance, when he found, in a bark cabin on its bank, a bit of sawed wood, and from this slight token of the presence of civilized man, believed that Tonty must have passed up the stream to safety. This was true. Tonty, with the two friars Membré and Ribourde, the young officer Boisrondet, and two men of the Crevecoeur garrison, escaped the Iroquois massacre, and ascended the Illinois to the junction of the two branches. Father Ribourde, wandering from the rest of the party, was slain by a band of Kickapoos. Tonty and his companions continued their journey up the Desplaines until the canoe could be used no longer, and then crossing the "Checagou portage" to Lake Michigan, traversed its western shore to Green Bay, where they arrived the last of November, and spent a part of the winter at the village of a friendly Pottawatomie chief, and the remainder at the mission of St. Francis Xavier.

In the meantime, LaSalle, after finding a trace of the presence of Tonty on the Desplaines, struck across the northern part of Illinois, and arrived at his fort on the St. Joseph about midwinter, where he remained until spring, and during that time learned of the safety of Tonty and where he was, from a band of wandering Outagamies, or Foxes. Before spring he had formed a plan, and taken measures to carry it out, for uniting the western tribes in a common league, and of colonizing them around a French fort in the valley of the Illinois, which should be a center of trade and a safe point from which to extend his explorations to the south and west. In May, 1681, he went to Mackinac, where he met Tonty and Father Membré, who had already arrived there from Green Bay. Together they proceeded to Fort Frontenac, and once more made arrangements for the exploration of the Mississippi. It was autumn when LaSalle again reached the mouth of the St. Joseph, and not until the latter part of December was he ready to leave Fort Miamis. The party which he gathered for this expedition consisted of twenty-three Frenchmen and eighteen Mohegans and Abnakis, ten of whom took along their squaws, "to cook for them, as their custom is." There were also three children. Among the Frenchmen were Tonty, Membré, Dautrey, and Prudhomme. LaSalle sent a portion of his party from the St. Joseph, on the 21st of December, remaining himself to attend to the supplies necessarily left behind at the fort. Father Membré, of the advance party, says:

"On the 21st of December (1681), I embarked with the Sieur de Tonty and a part of our people on Lake Dauphin (Michigan),

to go toward the Divine River, called by the Indians, Checagou,* in order to make necessary arrangements for our voyage. The Sieur de la Salle joined us there with the rest of his troops, on the 4th of January, 1682, and found that Tonty had had sleighs made to put all on and carry it over the Checagou, which was frozen; for though the winter in these parts is only two months long, it is, notwithstanding, very severe."

LaSalle tells the story of the journey by way of the Checagou to the Illinois, but does not quite agree with Membre on dates. He says, in a communication to Frontenac:

"I sent M. de Tonty (from the St. Joseph) in advance with all my people, who, after marching three days along the lake, and reaching the division line called Checagou, were stopped, after a day's march along the river of the same name, which falls into the Illinois, by the ice, which entirely prevented further navigation. This was the 2d and 3d of January, 1682. I remained behind to direct the making of some caches in the earth, of the things I left behind. Having finished my caches, I left, the 28th of December, and went on foot to join the Sieur de Tonty, which I did the 7th of January, the snow having detained me some days at the portage of Checagou."

LaSalle then gives a long description of the portage from what he calls the "channel which leads to the lake of the Illinois" (this channel being our Chicago River), to the Desplaines ("Checagou"), and combats the statement of Joliet, that "by cutting only one canal half a league through the prairie, one may pass from the lake of the Illinois into the St. Louis River,"† saying that this "may very well happen in the spring"—when the swollen waters of the "Checagou," through the "little lake on the prairie," found their way even to Lake Michigan—"but not in the summer," because at that season, he says, even the Illinois River is navigable only as far as Fort St. Louis.‡ There was another difficulty in the way of successful navigation, which LaSalle believed Joliet's "proposed ditch" would not remedy, and that was the "sand bar at the mouth of the channel which leads to the lake of the Illinois." Even the force of the current of the Checagou, when in the great freshets of the spring it poured its waters into this channel, was not powerful enough to remove that obstacle; and for these and various other reasons, LaSalle believed "it would be easier to effect the transportation from Fort St. Louis to the lakes by using horses, which it is easy to have, there being numbers among the savages."

LaSalle states, in a paper written in 1682, that he "joined M. de Tonty who had preceded him, with his followers and all his equipage forty leagues into the Miamis' country, at the River Checagou § in the country of the Mascoutins, where the ice on the river had arrested his progress; and where, when the ice became stronger, they used sledges to drag the baggage, the canoes and a wounded Frenchman through the whole length of this river and on the Illinois, a distance of seventy leagues." It would seem from the above quotations, that the name "Checagou," or "Chekagou," was applied to a certain locality which, in 1681-82, formed the division line between the Miamis and Mascoutins; the river of that name being within the limits of, or the eastern boundary line of the Mascoutin country, which extended west to the Fox River.

It is not within the province of this history to relate, in detail, the adventures of LaSalle and his followers on their Mississippi voyage. It is sufficient to say that the party descended the Illinois River, on the sledges made at the Desplaines, to Peoria Lake, where open water was reached. Embarking thence in the canoes, which

* Meaning the Desplaines. LaSalle speaks of crossing the portage of Checagou and joining Tonty on the river of the same name "which falls into the Illinois."

† Illinois.

‡ Starved Rock.

§ LaSalle had changed the spelling of the name of the river since he wrote before.

formed a part of their baggage, they reached the Mississippi on the 6th of February, 1682, and on the 9th of April arrived at its mouth. Then, with solemn and impressive ceremonies, LaSalle took possession of the valley of the Mississippi in the name of France, called the new acquisition Louisiana, in honor of the king, and realized the great and all-absorbing desire of his life. On his return toward the Illinois, he was seized with a dangerous illness, and detained in consequence, at the Chickasaw Bluffs, where a fort had been estab-

SECTION OF FRANQUELIN'S LARGE MAP, 1684.

Franquelin was a young engineer, who, at the time he made the map of which the above is a *fac simile* section, was hydrographer to the King, at Quebec. The original map is six feet long, four and a half wide, and very elaborately executed. Upon it is exhibited all the regions then claimed by France, under the names of New France and Louisiana. The map was reproduced by Franquelin in 1688, for presentation to the king, and in this the branch of the Illinois, marked *A. Checagou* in the above section, was removed—no such branch really existing. On Franquelin's large map, the Illinois is called the "Rivière des Illinois, on Macopins," the Mississippi, "Mississippi, on Rivière Colbert," and the name applied by Joliet to the Illinois, is transferred to the Ohio, which appears the "St. Louis, on Chucagou." LaSalle's Fort St. Louis, with the Indian villages around it are represented on the section given above, also Fort Crevecoeur, and, as will be seen, the limit of the Mascoutin country.

lished on the downward passage. Tonty was directed to hasten forward to Mackinac, and dispatch the news of the successful termination of the expedition to Canada. He left the bluffs on the 6th of May, arrived about the end of June at Chicago, and by the middle of July at Mackinac, where he was joined in September by LaSalle. Returning to the Illinois the same fall, LaSalle and Tonty, during the winter of 1682-83, strengthened and fortified the cliff known as Starved Rock, encircling its summit with a palisade, and building storehouses and dwellings within the enclosure. The fort was called St. Louis, and about it, at the base of the cliff, LaSalle gathered the surrounding Indians, until their log and bark cabins formed a village, containing some twenty thousand souls. At Fort St. Louis, French colonists also settled, who were obliged to go to Montreal for supplies, and that by way of the well-known Chicago route. Frontenac, the friend and patron of LaSalle, was no longer in power, and LaBarre, his successor, was hostile to both LaSalle and his enterprise. LaSalle writes to LaBarre, from the "Chicago Portage," June 4, 1683, entreating him not to detain his colonists at Montreal, as *coureurs de bois*, when they came there to make their necessary purchases, some of which are indispensable to the safety of the fort where he has now "but twenty men, and scarcely a hundred

pounds of powder." To such lengths did LaBarre finally carry his enmity, that LaSalle's position at Fort St. Louis became unbearable, and in the autumn of 1683, leaving Tonty in possession, he repaired to Quebec, and thence sailed for France, to triumph over his foes, and reinstate Tonty in peaceful possession of the fort on the Illinois; but never again to return to Fort Miamis, or the Rock of St. Louis, or visit with his motley retinue of devoted priests, brave young Frenchmen and solemn savages, "Checagou," the site of the great city where now a crowded thoroughfare perpetuates his name, and where multitudes of people cherish his memory, and "delight to do him honor."

LaSalle again sailed from France, August 1, 1684, with vessels containing supplies for founding a colony at the mouth of the Mississippi; entered the Gulf of Mexico, and discovered land on the 28th of December. This proved to be the coast of Texas, the captain having ignorantly passed the mouth of the Mississippi. They landed near Matagorda Bay, and erected there a fort, where the colony remained together about a year. Afterward, LaSalle made several excursions into the surrounding country, hoping to discover the Mississippi and, finally, discouraged and desperate, resolved to find his way to Canada. One attempt was made, in 1686, which resulted in defeat, and the party, after wandering six months, found their way back to the fort at Matagorda. On the 7th of January, 1687, LaSalle again made an attempt to reach the north, and get supplies for his almost starving men, and, after two months' wandering, was assassinated by some of his discontented and faithless followers, on the 19th of March, 1687. After the murder, the party separated, and, finally, but five reached Fort St. Louis, on the Illinois River, where the faithful Tonty still commanded. One of these was Henri Joutel, who with his companions, was detained at the fort until spring. They made one trip to Chicago, in the fall of 1687, and another in the spring of 1688. Joutel describes their experiences thus in his journal:

"On Sunday, the 14th of September, 1687, about two in the afternoon, we came into the neighborhood of Fort St. Louis. At length we entered the fort, where we found and surprised several persons who did not expect us. All the French were under arms, and made several discharges to welcome us. M. de la Belle Fontaine, lieutenant to M. Tonty, was at the head of them, and complimented us. Sieur Boisrondet, clerk to the late M. de la Salle, having told us he had a canoe, in which he desired to go down to Canada, we prepared to make use of that opportunity. Care was taken to gather provision for our voyage; to get furs to barter as we passed Micilimaquinay. M. Cavalier* wrote a letter for M. Tonty, which he left there to be delivered to him, and we repaired to the lake [Michigan] to embark. It would be needless to relate all the troubles and hardships we met with in that journey; it was painful and fruitless, for, having gone to the bank of the lake in very foul weather, after waiting there five days for that foul weather to cease, and after we had embarked—notwithstanding the storm—we were obliged to put ashore again, to return to the place where we had embarked, and there to dig a hole in the earth to bury our baggage and provisions, to save the trouble of carrying them back to Fort Louis, whither we returned, and arrived there the 7th of October, where they were surprised to see us come back. Thus we were obliged to continue in that fort all the rest of the autumn, and part of the winter. On the 27th of October, of the same year, M. Tonty returned from the war with the Iroquois. We continued after this manner till the month of December, when two men arrived from Montreal. They came to give notice to M. Tonty, that three canoes, laden with merchandise—powder, ball and other things—were arrived at Chicagou; that there being too little water in the river, and what there was being frozen, they could come no lower; so that, it being requisite to send men to fetch those things, M. Tonty desired the chief of the Chahouanous† to furnish him with people. That chief accordingly furnished forty, men as well

as women, who set out with some Frenchmen. The nonesty of the Chahouanous was the reason of preferring them before the Illinois, who are, naturally, knaves. That ammunition and merchandise were soon brought, and very seasonably, the fort being then in want. At length we set out, the 21st of March, from Fort Louis. The Sieur Boisrondet, who was desirous to return to France, joined us. We embarked on the river, which was then become navigable, and before we had advanced five leagues, met with a rapid stream, which obliged us to go ashore, and then again into the water, to draw along our canoe. I had the misfortune to hurt one of my feet against a rock which lay under the water, which troubled me very much for a long time. We arrived at Chicagou on the 29th of March, and our first care was to seek what we had concealed at our former voyage, having, as was there said, buried our luggage and provisions. We found it had been opened, and some furs and linen taken away, almost all of which belonged to me. This had been done by a Frenchman, whom M. Tonty had sent from the fort during the winter season to know whether there were any canoes at Chicagou, and whom he had directed to see whether anybody had meddled with what he had concealed; and he made use of that advice to rob us. The bad weather obliged us to stay in that place until April. This time of rest was advantageous for the healing of my foot; and there being but very little game in that place, we had nothing but our meal, or Indian wheat, to feed on; yet we discovered a kind of manna, which was a great help to us. It was a sort of tree, resembling our maple, in which we made incisions, whence flowed a sweet liquor, and in it we boiled our Indian wheat, which made it delicious, sweet, and of a very agreeable relish. There being no sugar canes in that country, those trees supplied that liquor, which being boiled up and evaporated, turned into a kind of sugar, somewhat brownish, but very good. In the woods we found a sort of garlic, not so strong as ours, and small onions very like ours in taste, and some charvel of the same relish as that we have, but different in leaf. The weather being somewhat mended, we embarked again, and entered upon the lake on the 5th of April, keeping to the north side, to shun the Iroquois."

Tonty evidently knew Chicagou well. In his journeys to Canada, and, during the Iroquois war, to Detroit and Mackinac, he must have often passed the portage, and descended the little river to embark on Lake Michigan. Durantaye, DuLhut (Duluth), and Tonty were conspicuous among the young Frenchmen engaged in the long struggle between the French and the Iroquois, the latter being friendly to the English and ready to assist them in extending their jurisdiction to the upper lakes. During these years French forts were erected at various important points on Lake Michigan, commanding the fur trade of the interior and rendering the French more secure against the attacks of the Iroquois or their western allies, the Foxes. Besides the fort of the Miamis at St. Joseph, there was one at Mackinac, where De La Durantaye, commanded, and one at Detroit, commanded by "Sieur DuLhut" (Duluth).

In the spring of 1684, Tonty was informed that the Iroquois were gathering to attack him at Fort St. Louis. He sent to Mackinac for assistance, and M. de la Durantaye came with sixty Frenchmen to his relief. Father Allouez also accompanied the party. The following year Tonty went to Mackinac to obtain news, if possible, of LaSalle. Hearing that he was at the mouth of the Mississippi he resolved to go in search of him, and says:*

"I embarked, therefore, for the Illinois, on St. Andrew's Day (30th of October, 1685); but being stopped by the ice, I was obliged to leave my canoe, and to proceed on by land. After going one hundred and twenty leagues, I arrived at the fort of Chicagou, where M. de la Durantaye, commanded; and from thence I came to Fort St. Louis, where I arrived the middle of January (1686)."

This fort at "Chicagou," where Tonty found Durantaye in the early winter of 1685, had probably been erected by the latter since the spring of the preceding year, when he came to the relief of the beleaguered Fort St. Louis. Tonty had repulsed the Iroquois before help arrived, but Durantaye would not remain in a country constantly exposed to their attacks, without erecting

* One of the party of five who reached the fort. Cavalier was a brother of LaSalle, and a priest.

† The Shawanoes; who had their village just south of the fort.

** Memoir of the Sieur de Tonty."

some kind of a fort for the protection of his little band of sixty men, and to keep their return path to Mackinac safe. Durantaye did not long remain at Chicago. A year later he was fighting the savages, with Tonty and LaForest, in the vicinity of Detroit, and at the end of the campaign he returned to Mackinac, where he was stationed for several years after.

In a reprint, by Munsell, of a book entitled "Early Voyages up and down the Mississippi," it being letters and reports of French Catholic missionaries, may be found a letter from Rev. John Francis Buisson de St. Cosme, addressed to the Bishop of Quebec, giving an account of the journey of himself and companions from Mackinac to the Illinois, in 1699, which shows that there was at that time a flourishing Jesuit mission at Chicago, and also a large village of the Miamis. The party left Mackinac in "light canoes," September 14, 1699. De Tonty, with the missionaries St. Cosme, DeMontigny, Davion and De La Source, were on their way to the lower Mississippi, by way of the Illinois, and De Vincennes, a French officer, with several companions, was to visit St. Joseph and the country of the Miamis. It was the original intention of St. Cosme and party to have gone to the Mississippi by way of the Fox and Wisconsin rivers, but hostile Indians prevented, and they were obliged to take the "Chicagou road." On the 7th day of October they arrived at "Melwarik" (Milwaukee), where they found a village "which has been considerable," and where they remained two days on account of the fine "duck and teal shooting." On the 10th they arrived at Kipikawi (Racine), intending to go up the Kipikawi River and crossing the portage to the Fox, descend that river to the Illinois; but, "as there was no water in it," they were "again obliged to take the route to Chicagou." They left the river at Racine on the 17th, but were so long delayed by the roughness of the lake that on the 20th, they were still fifteen miles distant. On the 21st, when within half a league of the place, a sudden storm sprung up and they were compelled to land, and walk the remaining distance. St. Cosme says:

"We had considerable difficulty in getting ashore and saving our canoes. We had to throw everything into the water. This is a thing which you must take good care of along the lakes, and especially on Missigan (the shores of which are very flat), to land soon when the water swells from the lake, for the breakers get so large in a short time that the canoes are in risk of going to pieces and losing all on board, several travelers having been wrecked there. We went by land, M. DeMontigny, Davion and myself, to the house of the Rev. Jesuit Fathers, our people staying with the baggage. We found there Rev. Father Pinet and Rev. Father Bine-teau,* who had recently come in from the Illinois, and were slightly sick. I cannot explain to you, Monseigneur, with what cordiality and marks of esteem these Rev. Jesuit Fathers received and caressed us during the time that we had the consolation of staying with them. The house is built on the banks of the small lake,† having the lake on one side, and a fine large prairie on the other. The Indian village is of over one hundred and fifty cabins, and one league on the river there is another village almost as large. They are both of the Miamis. Rev. Father Pinet makes it his ordinary residence; except in winter, when the Indians all go hunting, and which he goes and spends at the Illinois. We saw no Indians there; they had already started for their hunt. * * * On the 24th of October, the wind having fallen, we made our canoes come with all our baggage; and, perceiving that the waters were extremely low, we made a cache on the shore, and took only what was necessary for our voyage, reserving till spring to send for the rest; and we left in charge of it Brother Alexander, who consented to remain there with Father Pinet's man; and we started from Chi-

*The Illinois Mission at Starved Rock was in charge of Father James Gravier from 1693 until he was recalled to Michilimackinac, early in 1699. He left Gabriel Marist in especial charge of the parent house and Fathers Bineteau and Pinet in charge of the branches.

† Evidently on the east side of Mud Lake, which St. Cosme describes in his account of the Chicagou portage; saying that by embarking on it in the spring when it "empties" into a branch of the Illinois (the Desplaines), the length of the portage is reduced from three leagues to a quarter of a league.

cagou on the 29th, and put up for the night about two leagues off, in the little river which is then lost in the prairies. The next day we began the portage, which is about three leagues long when the water is low, and only a quarter of a league in the spring, for you (then) embark on a little lake which empties into a branch of the river of the Illinois; but, when the waters are low, you have to make a portage to that branch. We made half our portage that day, and we should have made some progress further, when we perceived that a little boy whom we had received from M. DeMuys, having started on alone—although he had been told to wait—had got lost without any one paying attention to it, all hands being engaged. We were obliged to stop and look for him. All set out. We fired several guns, but could not find him. It was a very unfortunate mishap; we were pressed by the season, and the waters being very low, we saw well that being obliged to carry our effects and our canoe, it would take us a great while to reach the Illinois. This made us part company. M. DeMontigny, DeTonty and Davion continued the portage next day; and I, with four other men, returned to look for this little boy; and on my way back I met Fathers Pinet and Bineteau, who were going with two Frenchmen and one Indian to the Illinois. We looked for him again all that day without being able to find him. As the next day was the feast of All Saints, this obliged me to go and pass the night at Chicagou with our people, who having said mass and performed their devotions early, we spent all that day, too, in looking for that little boy, without being able to get the least trace. It was very difficult to find him in the tall grass, for the whole country is prairies—you meet only some clumps of woods. As the grass was high, we durst not set fire to it for fear of burning him. M. DeMontigny had told me not to stay over a day, because the cold was getting severe. This obliged me to start, after giving Brother Alexander directions to look for him and to take some of the French who were at Chicagou, I set out the 2d of November, in the afternoon; made the portage, and slept at the river of the Illinois."

SECTION OF CHARLEVOIX'S MAP (1774).

Pierre Francois Charlevoix, the noted French historian and traveler, passed down the east shore of Lake Michigan, and to the Mississippi, by way of the Kankakee and Illinois rivers, in 1721. In 1744 he published his *Histoire de la Nouvelle France*, and with it his journal written while in America. The journal was translated into English soon after; the history remained untranslated until an edition was published in English by J. G. Shea at New York (1865-72). A map from which the above section is taken accompanied Charlevoix's History of New France.

From a letter of De La Source, one of the missionaries who accompanied St. Cosme to the Mississippi, it is learned that the boy who was lost in the tall grass of the prairie, after an absence of about two weeks, finally "made his way back to Chicagou, where Brother Alexander was." He was insane and utterly exhausted. The party returned to Chicago from the lower Mississippi early in 1700, and remained there until Easter, the letter of De La Source being written at "Chicagou." From the allusions made by St. Cosme to "our people"

before whom he said mass on All Saints' Day, and with whom he "passed the night at Chicagou," and also from his direction to "Brother Alexander," who remained behind in charge of the cache on the shore of Lake Michigan, to "take some of the French who were at Chicagou," to aid him in his search for the lost boy, it must be inferred that the place had become of considerable importance, as the point of disembarkation from the lake, on the route from Canada to Louisiana; that it had become the residence of several French traders, and, during a portion of the year, of the Jesuit fathers connected with the Miami mission.

Soon after the opening of the eighteenth century, this route to the Mississippi became so dangerous that it was gradually abandoned, and finally almost forgotten. The long war between the Illinois and the Iroquois had made the Kaskaskias fearful and timid. They were directly in the path of the enemy from the location of their village, which, lying far up the river, was first struck by their war parties on their raids into the country of the Illinois.

D'Iberville had landed, and a French settlement at the mouth of the Mississippi was to be established. The Kaskaskias were eager to leave the dangerous locality in which they lived, and still be able to enjoy the friendship and protection of their friends, the French. Father Gravier, who for several years had been in charge of the mission of the Immaculate Conception, at the Kaskaskia village on the Illinois, went to Michilimackinac early in 1669, leaving the parent house in the care of Father Marest, and its branches (one of which was at Chicago, among the Miamis) in charge of Fathers Bineteau and Pinet. He returned in the fall of 1700, leaving Chicago for the Illinois on the 8th of September. When he arrived at the old village of the Kaskaskias, near the present site of Utica, in LaSalle County, he found that all that tribe, accompanied by Father Marest, had deserted their village and the neighboring Peorias on the Illinois, and departed for the lower Mississippi. Gravier followed his flock, promising the Peorias to return to them at their village at Peoria Lake. Marest was taken violently ill on his arrival at the present site of Kaskaskia, and with his Indians halted there, where he was joined by Gravier, and the new Kaskaskia mission was founded and named also the mission of the Immaculate Conception, in honor of Marquette and his old mission on the Illinois River.

SECTION OF THE SENEX MAP OF 1710.

In 1700, DeCourtemanche and two Jesuit priests were dispatched by the Governor-General of Canada, to

visit the various tribes in what is now Michigan and Illinois, and invite them to send deputies from their tribes to Montreal in order to arrange terms of peace with the Iroquois. DeCourtemanche reached the St. Joseph River December 21, 1700, and found the Miamis preparing to send war-parties against the Iroquois, as were also all the Illinois tribes, except the Kaskaskias. After visiting the latter tribe, he "returned to Chicago; there he found some Weas (Ouyatanous), a Miami tribe, who had sung the war song against the Sioux and Iroquois." He induced them to lay down their arms and send deputies to the council at Montreal, the deputies to

SECTION OF DE L'ISLE'S MAP OF 1703.

meet him at Michilimackinac. The chief of the Miamis at this time was Chickikatalo, "a noble looking and good old man," who made a speech at Montreal, in which he assured the French of his friendship for them, and desire to promote their interests by every means in his power. Before the council, the Kaskaskias had departed for the Mississippi, and great dissatisfaction was expressed by the other tribes at their taking this step.

Two years later, in 1702, Fort St. Louis was abandoned as a military post. Then followed long and bloody wars between the French of Louisiana and their Illinois allies, with various tribes of the Northwest, commencing with the Foxes of Wisconsin. Charlevoix says of the latter, during the early part of the eighteenth century. "The Outagamies (Foxes) infested with their robberies and murders, not only the neighborhood of the bay (Green Bay), but almost all the routes communicating with the remote colonial posts, as well as those leading from Canada to Louisiana." After the Foxes, came the Pottawatomies, who finally almost exterminated the old allies of the French, and the Chicagou route, formerly so often traversed by French missionaries and traders on their way to the Illinois and Mississippi, was, as before stated, forsaken, if not forgotten.

Father Julian Bineteau, who preached to the Miamis at Chicago, died not long after the visit of St. Cosme, from sickness contracted while following the Indians on their summer hunt over the parched and burning prairies. Father Francis Pinet, his companion, went to the great village of the Peorias, after the removal of the Kaskaskias, and there founded the Cahokia mission—where he died soon after. Father Gravier, according to his promise, returned to the village of the Peorias, where he was dangerously wounded, and descending the Mis-

issippi in search of medical treatment, died on the voyage in 1706. The labors of the French missionaries, and the attempts at founding French colonies in Louisiana were no longer extended to the region north of the Illinois, and with the exception of a struggling

SECTION OF DE L'ISLE'S MAP OF 1718.

Guillaume de L'Isle was a noted French geographer, born in Paris, February 28, 1675, died January 25, 1726. In 1700 he reconstructed the current European system of geography by the publication of new and correct maps, comprising representations of all the known world. In 1702 he was admitted to the Royal Academy of Sciences, and was afterward appointed tutor in geography to Louis XV., with title of "First Geographer to the King." He is said to have made 134 maps, many of which were of rare value. Three of these maps are in the library of the Chicago Historical Society—those of 1700, 1703, 1718. The maps of 1703 and 1718, sections of which are given herewith, are entitled "Carte Du Canada on de la France," and "Carte de la Louisiane et du Cours du Mississippi," respectively.

village at Starved Rock, even the once powerful Illinois had been driven by 1720, from all their villages above Peoria Lake. In that year Fort Chartres was built on the banks of the Mississippi, near the two French settlements of Kaskaskia and Cahokia—a protection to both. About the year 1718, the Miamis were driven from the vicinity of Chicago, and in 1722, the Illinois villages at Starved Rock and at Peoria Lake were besieged by the Foxes. Boisbriant, the commander at Fort Chartres, sent a force to their relief, which arrived after the contest had ended, leaving the Illinois victorious. So greatly had they suffered for years, however, from these constant attacks, that they returned with the French to the shelter of Fort Chartres, and with their abandonment of the river, the only protection to the route from Canada by way of the Illinois to the French settlements was taken away. Charlevoix says of their victory and subsequent removal to southern Illinois:

"This success did not, however, prevent the Illinois, although they had only twenty men, with some children, from leaving the rock and Pimitory (Peoria Lake) where they were kept in constant alarm, and proceeding to unite with those of their brethren (the Kaskaskias) who had settled upon the Mississippi. This was a stroke of grace for most of them, the small number of missionaries preventing their supplying so many towns scattered so far apart; but, on the other side, as there was nothing to check the raids of the Foxes along the Illinois River, communication between Louisiana and New France became much less practicable."

In 1725 Boisbriant, the commandant at Fort Chartres, was made acting governor of Louisiana, and M. DeSiette, a captain in the royal army, took his place at the fort. Difficulties with the Foxes and their allies had been continually growing worse since the removal of the Illinois—the French being now more exposed to their attacks. The colonists were murdered almost under the guns of the fort, and the whole country of the upper Illinois was a battle-ground. DeLignerie was the French commandant at Green Bay, and labored assiduously to bring about a peace between the northern tribes and the Illinois. On the 7th of June, 1726, he assembled the Sauks, Winnebagoes and Foxes at his post, and "told them from the king, that they must not raise the war club against the Illinois, or they would have reason to repent it." He was fairly well satisfied with the answer of the chiefs, and hoped the peace would be stable; but DeSiette, at Fort Chartres, had less confidence in the Foxes, or their word, and suggested to DeLignerie that the best method would be to exterminate them at one. DeLignerie, while believing with DeSiette that this would be the very best possible method, if it could be carried out, feared the plan would not be a success, and that the Foxes would "array all the upper nations against us," and "the French of either colony be unable to pass from post to post, but at the risk of robbery and murder." This had been the case too long, and the commandant at Green Bay advised the impatient DeSiette to "cause his people (the Illinois) if they have made any prisoners, to send them back to the Foxes," as he has "told the latter to do with theirs, if their young men bring in any from the country." He continues:

"If all goes well here for a year, I think it will be necessary to have an interview at "Chicagou," or at the Rock (Starved Rock) with you and your Illinois, and the nations of the bay. We will indicate to them the time of the meeting, where it will probably be necessary to make a fort, and to fix the number of the French and Indians who are to be at the spot. These are my thoughts. Do me the honor to give me yours. If my health will allow I shall go there with pleasure, and if it shall thus happen, it will give me great joy to see you,"

SECTION OF MOLL'S MAP OF 1720.

This interview at "Chikagou" was not destined "to thus happen," as things did not "go well" between the French and the Foxes during the coming year, and in August, 1727, M. DeBeauharnais, then commanding in Canada, informed M. DeSiette by letter at Fort Chartres, that he was determined to make war upon the Foxes the coming spring, and that the information was given "in order that he (Siette) might make preparations, and give assistance by disposing the Illinois and the French of the Mississippi to join the Canadians," finishing his letter by saying, "It is reasonable to suppose that the people of Louisiana will come to this war with more ardor than the Canadians, as they are much more exposed to

tion was concluded in July, 1773, "to the entire satisfaction of the Indians," of whom the land was bought "in consideration of the sum of five shillings to them in hand paid," and certain goods and merchandise. The boundary, or rather the mention of certain points in this northern tract, was as follows :

"Beginning at a place or point in a direct line opposite to the mouth of the Mississippi River; thence up the Mississippi by the several courses thereof to the mouth of the Illinois River, about six leagues, be the same more or less; and then up the Illinois River, by the several courses thereof, to Chicagou or Garlick Creek, about ninety leagues or thereabouts, be the same more or less; then nearly a northerly course, in a direct line to a certain place remarkable, being the ground on which an engagement or battle was fought about forty or fifty years ago between the Pewaria and Kenard Indians, about fifty leagues, be the same more or less; thence by the same course in a direct line to two remarkable hills close together in the middle of a large prairie or plain, about fourteen leagues, be the same more or less; thence a north of east course, in a direct line to a remarkable spring known by the Indians by the name of Foggy Spring, about fourteen leagues, be the same more or less; thence the same course, in a direct line to a great mountain to the northward of the White Buffalo plain, about fifteen leagues, be the same more or less; thence nearly a southwest course in a direct line to the place of beginning, about forty leagues, be the same more or less.

Before the consummation of this purchase, Murray had associated several other Englishmen with himself, and formed the "Illinois Land Company," which was re-organized as an American company, at Philadelphia, on the 29th of April, 1780, when a constitution for the

SECTION OF D'ANVILLE'S MAP OF 1755.

the incursions of the Foxes, who alarm and even kill them continually."

DeSiette joined the Canadian forces at Green Bay the following spring, and a battle ensued at Butte des Morts, Wis., in which the French and their allies, the Illinois, were successful; but hostilities did not cease, and communication between Canada and the Mississippi by way of the Illinois River was as dangerous as before. For nearly half a century the name of Chicago is not mentioned, and there is no record of any visit of a white man to the locality. DuPratz, an old French writer, and a resident of Louisiana from 1718 until 1734, says of the "Chicagou" and Illinois route in 1757: "Such as come from Canada, and have business only on the Illinois, pass that way yet; but such as want to go directly to the sea, go down the river of the Wabache to the Ohio, and from thence into the Mississippi." He predicts, also, that unless "some curious person shall go to the north of the Illinois River in search of mines," where they are said to be in great numbers and very rich, that region "will not soon come to the knowledge of the French."

In June, 1773, William Murray, a subject of Great Britain, residing in Kaskaskia, held a council, in the presence of the British officers and authorities stationed at the place, with the chiefs of the several tribes of Illinois Indians, in which he proposed to them, that for a certain consideration, they should deed to him two tracts of land east of the Mississippi; one of which was north of the Illinois River, and extended beyond the present site of Chicago. Mr. Murray states* that the negotia-

SECTION OF MITCHELL'S MAP OF 1755

regulation of its affairs was drawn up, and a plan of settlement agreed upon. America was then at war with England, and although Mr. Murray asserts* that at the time settlers and purchasers were ready to contract with the company "and a large settlement could have been promoted, and possession taken of the lands, with the consent of the natives," still it was deemed advisable to suspend all operations until the establishment of peace, and, in the meantime, submit their claims to the consideration of Congress. For this purpose a meeting was held at Philadelphia, February 1, 1781, at which a memorial was agreed upon, and presented at the session of that year, setting forth the claims of the com-

* "An account of the Proceedings of the Illinois and Oubache Companies," published in Philadelphia in 1796.

* "Account of Proceedings of Illinois and Oubache Land Companies."

pany, and concluding with a proposal to cede all the land included in the purchase of the Indians to the United States, on condition that one-fourth should be re-conveyed to the company. The report of the committee of the House, of which Samuel Livermore was chairman, was favorable to the petitioners. The Senate committee reported adversely: "In the opinion of the committee, deeds obtained by private persons from the Indians, without any antecedent authority, or subsequent information from the Government, could not rest in the grantees mentioned in such deed a title to the lands therein described." The report of the Senate committee was finally adopted and the petition dismissed.

One of the objections of the Committee of 1781 to granting the petition of the Illinois Land Company was that "one of the deeds, beginning on the north side of the Illinois River, contains only a number of lines, without comprehending any land whatever." This refers to the tract, extending up the Illinois to Chicago or Garlick Creek, thence some two hundred and seventy-nine miles in a northeasterly course, and from that point by a southwesterly course of one hundred and twenty miles, reaching by some means a "point opposite the mouth of the Missouri River"—the place of beginning. Mr. Murray says:

"Some doubts have been entertained concerning the accuracy of the courses of some of the lines mentioned in this parcel of land, north of the Illinois River, yet there are so many terminations of these lines, by well-known marks and stations, that on every equitable construction the deed will be found to close itself, and to comprehend a well-described tract of country. * * * It has a well-known place of beginning, and remarkable well-known corners described, proceeding round to the said beginning; and the rectification of an error in a course or two as to the points of the compass closes the survey, maintaining all the corners."

He explains further that the Indians are only bound to regard "natural boundaries" and "natural corners," and do not regard points of the compass or estimates of distances, etc.

The claims of the company were again brought before Congress in 1792, and yet again in 1797, but with no more favorable results than in 1781.

On the 3d of August, 1795, by the terms of the

SECTION OF CAREY'S MAP OF 1818.

treaty of Greenville, a "piece of land six miles square, at the mouth of the Chicago River, emptying into the southwest end of Lake Michigan, where a fort formerly

stood," was ceded by the Indians to the United States, in anticipation of its being made a military post.

MODERN CHICAGO AND ITS SETTLEMENT.

"Baptiste Point DeSaible, a handsome negro, well educated and settled at Eschikagou; but much in the French interest."

This apparently unimportant fact, recorded July 4, 1779, by Colonel Arent Schuyler DePeyster, then Brit-

SECTION OF POPPLE'S MAP, 1733.

A section of a map from Henry Popple's atlas, "America Septentrionalis," published in London in 1733. Mr. C. C. Baldwin, in a tract on early maps, says (see Chicago Antiquities, p. 265) these maps "were undertaken with the approbation of the Lords of Trade, using all the maps, charts and observations that could be found, and especially the authentic records and actual surveys transmitted by the governors of the British plantations. * * * The engraver has bestowed much labor upon them, but the progress is backwards."

ish commander at Michilimackinac, is the initial point from which may be traced the growth of Chicago, from a single rude cabin on the sand-point at the mouth of the river, to the magnificent city which stands to-day, the type of modern progressive civilization.

What was Eschikagou in 1779, and why did this handsome and well educated pioneer settle here?

Colonel DePeyster says elsewhere in the volume of Miscellanies, from which the above statement is quoted: "Eschikagou is a river and fort at the head of Lake Michigan."

Possibly the fort "where Durantaye commanded," was alluded to, or the French under Siette might have built a fort at Chicago, as they desired to do, when on their way to join the Canadian force at Green Bay, and make war on the Foxes of Fox River, in the spring of 1729. When DePeyster wrote of Chicago and its first settler, the French lilies had been lowered from Fort Chartres, and Louisiana was in the hands of the English. It had been British soil fourteen years before there is any record of a person "curious" enough to penetrate the country north of the Illinois and make a home on the shore of Lake Michigan. The biography of Jean Baptiste Point DeSaible, the pioneer settler of Chicago, is very brief. He was a native of Santo Domingo, "well

educated and handsome." Before settling on the banks of the Chicago River he had lived among the Peorias, with a friend named Glamorgan—also a Domingoan—who was reputed to be possessor of large Spanish land grants near St. Louis; and to the home of this friend he returned to die, in 1796.

By the treaty of Ryswick, September, 20, 1697, the western portion of the island of Hayti was ceded to France,—the French colony thereafter taking the name of the island, while the Spanish colony, founded in 1496,

tested English had possession of the home of the Peorias, and the equally detested Spaniards ruled the country across the Mississippi, the French colonists and all who remained faithful to them, would have few favors and little inducement to remain. Of the two Domingoan friends, settled at Peoria, Glamorgan was worldly wise, and with many others who sought favor with the Spanish Government, received his reward in lands near St. Louis. Baptiste Point DeSaible remained faithful to the French, and finally left his home to make another

SECTION OF DU PRATZ'S MAP OF LOUISIANA, 1757.

on the eastern shore, retained its old name of Santo Domingo. From the time of this treaty the Spanish colony made little progress for half a century, while the Haytian colony rapidly grew rich and prosperous, soon becoming one of the most valuable possessions of France. Among its population were a large number of free colored people, mostly mulattoes, many of whom had received a liberal education in France and possessed large estates, although they were excluded from political privileges. Under this state of affairs it would be natural for an ambitious mulatto to leave the old Spanish colony and seek a fortune among the French in Louisiana. Many San Domingoans had been brought as slaves to Fort Chartres by Renault, in 1722, and were employed in the mines and otherwise, and the wonderful stories told by French adventurers of the riches of the country, constantly attracted others, equally adventurous, to its shores. The French were beloved by the natives and by all who settled among them and lived their easy, cheerful life. It may easily be believed that when the de-

among the Pottawatomies of Chicago. He built his cabin on the north bank of the Chicago River, where it turned to the south, near its mouth, and at the head of the point of sand which extended thence between the river and the lake. Here he lived until 1796—seventeen years. All that is known of his life during that long period is gathered from the "Recollections" of Augustin Grignon,* of Butte des Morts, near Oshkosh, Wis., and published in the third volume of the Wisconsin Historical Society's Collections. Mr. Grignon says:

"At a very early period there was a negro lived there (Chicago) named Baptiste Point DeSaible. My brother, Perish Grignon, visited Chicago about 1794, and told me that Point DeSaible was a large man; that he had a commission for some office, but for what particular office or from what Government, I cannot now recollect. He was a trader, pretty wealthy, and drank freely. I know not what became of him."

About all that can be added to the few particulars

* Augustus Grignon was a grandchild of Sieur Charles DeLanglade, the first permanent white settler of Wisconsin. DeLanglade served through the old French and Indian War, and became a resident of Wisconsin about 1735.

related above is that in 1796 he sold his cabin to one LeMai, a French trader, and returned to Peoria, where he died at the home of his old friend, Glamorgan. It may be true, as is related, that he sought to place himself at the head of the Pottawatomies as their chief. If true, his desire was ungratified, and Jean Baptiste Point DeSaible, handsome, rich and faithful though he was, left his home washed by the waters of Lake Michigan and the Checagou River, not only the first landed proprietor, but also the first disappointed man of Chicago.

LeMai, the second dweller in the cabin on the sandpoint, made some improvements, and occupied it as his home and trading-house until 1804.

During the years of DeSaible's residence in Chicago the place had become well known to the Indian traders of Mackinac and Detroit.

William Burnett,* a trader at St. Joseph, Michigan, writes, under date of May 14, 1786, to George Meldrum, a merchant of Mackinac, that "if a vessel which is to be sent from that port is to come to Chicago, he wished that he may stop at the mouth of the St. Joseph River, that he may ship his corn, as he has not canoe nor bateau." In various letters covering the period from 1786 to 1803, he alludes to Chicago,† and mentions names familiar to the early settlers of the place. May 6, 1790, he writes: "I received a letter yesterday from Chicago, wherein it is said that nothing is made in the Mississippi this year." August 24, 1798, he writes from St. Joseph to Messrs. Parker, Girard & Ogiloy, merchants of Montreal:

In the course of last winter I wrote you that it is expected that there will be a garrison at Chicago this summer, and from late accounts, I have reason to expect that they will be over there this fall; and should it be the case, and as I have a house there already, and a promise of assistance from headquarters, I will have occasion for a good deal of liquors, and some other articles for that post. Wherefore, should there be a garrison at Chicago this fall, I will write for an addition of articles to my order."

Mr. Burnett's connection with the Indian trade in this region lasted many years. It is stated in "Waubun" that at the time of the massacre of the Fort Dearborn garrison in 1812, an angry savage came to the boat in which were the family of John Kinzie, in search of "Mr. Burnett, a trader from St. Joseph, with whom he had an account to settle,"—probably the same William Burnett.

In the summer of 1803, Captain John Whistler, U. S. A., then stationed at Detroit, was ordered, with his company, to Chicago,‡ to occupy the post and build a fort. The soldiers were conducted by land to their destination by Lieutenant James S. Swearingen. In the U. S. Schooner "Tracy," came from Detroit to the mouth of the St. Joseph River, Captain Whistler, wife and

* William Burnett, whose letters show that he was a St. Joseph trader as early as 1785, is said to have settled in the wilderness of Michigan in 1769. He married Kaw-kee-me, sister of Topenebe, principal chief of the St. Joseph's band of Pottawatomies, and to the children of this marriage—John, James, Abraham, Rebecca and Nancy Burnett—certain sections of land on the St. Joseph River were granted by the terms of the treaty made at Chicago in 1821. John and James, the elder sons of William Burnett, remained in Michigan; the latter dying near Niles in 1831 or '32. Abraham, the youngest, went with the tribe to the West, and became chief of one of the bands. His village was at the foot of a high hill about four miles west of Topeka, on the south side of the Kansas River. This hill which is the highest elevation in eastern Kansas, is called "Burnett's Mound," in honor of the portly old chief, whose form was as familiar to the early residents of Topeka as were those of Caldwell and Shaw-hoonee to the first settlers of Chicago.

† See "Chicago Antiquities" pp. 50-74.

‡ See "History of Fort Dearborn."

young son, George; also his eldest son, Lieutenant William Whistler, with his young bride. This party left the schooner at St. Joseph River, and came thence to Chicago in a row boat. Mrs. William Whistler, who visited Chicago in the fall of 1875, states that on her arrival, in 1803, there were here but four cabins, or

traders' huts. These were occupied by Canadian French, with their Indian wives.* She mentions the names of three: LeMai, Ouilmette and Pettell. Possibly the other was the "house," mentioned by William Burnett. In the spring of 1804, John Kinzie, then residing at Bertrand, or Parc aux Vaches, near Niles, Mich., purchased the property of LeMai, and, with his wife and infant son, John H. Kinzie, came to live at Chicago. On his arrival, he immediately moved into the old cabin of Le Mai, which he gradually enlarged and improved, until, as years rolled by, it was transformed into a comfortable, hospitable home—the only home of a white settler in Chicago for many years. In this house, which stood on the north side of the Chicago River, where it bent to the south, so that from its piazza "the Indian canoes could be seen going down and into the lake" at the foot of what is now Madison Street, Mr. Kinzie lived until late in 1827, except during the four years, from the summer of 1812 to the summer or fall of 1816—the time intervening between the destruction and rebuilding of Fort Dearborn.

JOHN KINZIE, justly called the "Father of Chicago," was born in Quebec, about the year 1763. His father was John McKenzie, or McKinzie, a Scotchman, who married Mrs. Haliburton, a widow with one daughter, and died while John, their only child, was an infant. Mrs. McKinzie subsequently married William Forsyth, a merchant, of a Scotch Presbyterian family, who settled in Blackwater, Ireland, emigrated from that place to New York, in 1750, served under Wolfe, in 1759, and afterward became a resident of Quebec. Soon after this marriage, the Forsyth family, including the children of Mrs. Forsyth by her former marriages, removed to New York City, where they resided many years, and removed thence to Detroit. While residing in New York, John Kinzie was placed in a school at Williamsburgh, Long Island, with two of his Forsyth half-brothers; a negro servant being sent from New York to take the children home each Saturday night. At the end of a certain Saturday night, the servant went, as usual, for the boys, but found no "Johnny Kinzie." Evidently, an adventurous life was attractive, even to the lad of "ten or eleven years," for he had left books and studies, and taken passage on a sloop bound for Albany, resolved to find his way to his old home in Quebec, and there seek something to do, by which he might earn his own living. Fortunately, he found a friendly fellow passenger, by whose assistance he arrived safely at his destination. Still more fortunately, in wandering around the streets of Quebec, in search of work, he entered the shop of a silversmith, and found an occupation that he fancied, and a chance to become apprentice to a kind master. He entered the service of the silversmith, and remained with him three years, at the expiration of which time he returned to his parents, who had removed in the mean-

* Interview with Henry H. Hurlbut, "Chicago Antiquities," p. 25.

† Near the intersection of Pine and North Water streets.

time to Detroit.* Young Kinzie early became an Indian trader, and also acquired a reputation as silversmith in Detroit. His early trade with the Indians was with the Shawnees and Ottawas, his houses being established at Sandusky, and on the Maumee. During these years he formed a marriage relation with Margaret McKenzie, a young girl of American parentage, who had been for many years a captive among the Indians in Ohio, and who, doubtless, was ransomed by Kinzie, and taken to Detroit as his wife.

From the year 1775 until the surrender of Cornwallis at Yorktown, October 19, 1781, open war prevailed between the Virginia colonists and the British forces under Lord Dunmore, the newly appointed Governor of the Colony. The Virginia convention, which met at Richmond, March 20, 1775, to appoint delegates to the new Continental Congress, took measures for enrolling companies of volunteers in each county. Lord Dunmore proclaimed martial law November 7 of the same year, took possession of Norfolk, and continued a predatory warfare along the coast until the fall of 1776. During the progress of this so-called "Dunmore War," when the western portion of Virginia was at the mercy of any foe friendly to the British, Isaac McKenzie and his family were living in Giles County, Virginia, near the Kenewha River. A band of Shawnees from Ohio, in one of their hostile incursions, attacked his cabin, which they destroyed, and murdered all his family, except two daughters—Margaret, a little girl of ten years, and Elizabeth, two years younger. Mr. McKenzie escaped, but the girls were carried captive to the great village of the tribe, at Chillicothe, where they were kept in charge of the chief. After about ten years' captivity, they were taken, or found their way, to Detroit. Margaret became the wife of John Kinzie and the mother of his three elder children—William, James and Elizabeth. The younger sister became the wife of a Mr. Clark, a Scotch trader, and the mother of his two children—John R. and Elizabeth. After a separation of many years, Mr. McKenzie, the father of the lost girls, also came to Detroit, and there found his daughters. He remained with them for a time; then returned to Virginia, accompanied by both his daughters, with their children, from whence Margaret never returned. Whatever might have been the cause of the separation, it was a final one. John Kinzie and his wife, Margaret, never met again.

The county records at Detroit show, in May, 1795, a conveyance of land on the Maumee to John Kinzie and Thomas Forsyth of Detroit, by the Ottawa Indians; also by the same Indians, November, 1797, a conveyance of land by the same Indians to "John Kinzie, silversmith, of Detroit." About the year 1800, Mr. Kinzie removed to the St. Joseph River, Michigan, and during that year was married to Mrs. Eleanor (Lytle) McKillip, whose former husband, a British officer, was accidentally killed at Fort Defiance in 1794, leaving her a widow with a young daughter, Margaret. The trading house of Mr. Kinzie was on the St. Joseph River. His son, John Harris Kinzie, was born at Sandwich, opposite De-

troit, July 7, 1803. The young boy was soon taken to the St. Joseph River, and there the family remained until Mr. Kinzie bought the trading house of LeMai, and settled at Chicago in the Spring of 1804.

John Kinzie came to this new location in the prime of his life—strong, active and intelligent—his life sobered by experience, but his heart kindly and generous. He was beloved by the Indians, and his influence over them was very great. He acquired the reputation of being, *par excellence*, "the Indians' friend," and through the most fearful scenes of danger, Shawnee-aw-kee, the Silverman, and his family, moved unscathed.

The eight years following his location at Chicago, passed quietly. He attended to the business of his trading-house, which rapidly increased. Before 1805 he had visited Milwaukee, established a trading-post, and made many friends among the Indians there.** He also had a branch of the parent house at Rock River, others on the Illinois and Kankakee, and one in the region afterward Sangamon County. This extended Indian trade made the employment of a large number of men at headquarters a necessity, and the Canadian voyageurs in the service of Mr. Kinzie were about the only white men who had occasion to visit Chicago during those early years. Mr. Kinzie was sutler for the garrison at the fort in addition to his Indian trade, and also kept up his manufacture of the ornaments in which the Indians delighted. During the first residence of Mr. and Mrs. John Kinzie in Chicago three children were born to them—Ellen Marion, in December, 1805; Maria Indiana,† in 1807; and Robert Allen, February 8, 1810; Margaret McKillip, Mr. Kinzie's step-daughter, who married Lieutenant Linai Helm of Fort Dearborn, and also Robert Forsyth, nephew of Mr. Kinzie, were at times members of his family, the latter being the first teacher of John H. Kinzie. From the county records at Detroit,‡ it appears that Mr. Kinzie and John Whistler, Jr., were partners in business in September, 1810, and that Thomas Forsyth was also connected in business with Mr. Kinzie in Chicago, during the same year.

In the spring of 1812, Mr. Kinzie had an encounter with John Lalime, Indian interpreter at Fort Dearborn, which proved fatal to the latter. The facts of this unfortunate occurrence as related to the writer by an eye-witness§ of the deed, were to the effect that an animosity had long existed between Lalime and Mr. Kinzie, but no acts of violence had ever occurred. That on the day in question, Mr. Kinzie left his house unarmed and went across the river to the fort, on an errand. Having completed his business, he started to return and was followed by Lalime. Just as he passed the enclosure, and the gate was being shut for the night, Lieutenant Helm, who was officer of the day, called out to him to beware of Lalime, who was then close behind him. He turned, grappled with Lalime, and wrested his pistol from him, which was discharged in the struggle, but without harm. Lalime had a dirk also in his belt, and while the two men were on the ground, this was thrust into his side, inflicting a fatal wound. During the excitement Mr. Kinzie was also wounded, and reached his home holding a bloody handkerchief to his side. He was concealed in the woods until night and then taken to Milwaukee by some of the Indians, where he was kept in the house of Mr. Mirandeau, the father of Mrs. Porthier, until the facts

§ Mrs. Joseph Porthier, who was living at the time in the family of Antoine Ouilmette.

* William Forsyth kept a hotel in Detroit many years, and died there in 1790. Robert, one of his sons, was in the service of the American Government during the War of 1812. Thomas, who became Major Thomas Forsyth, U.S.A., was born in Detroit, December 5, 1771. Before the War of 1812, he was Indian Agent among the Pottawatomies at Peoria Lake. He was taken prisoner with his family, at the destruction of Peoria by Captain Craig, in the latter part of the same year, and sent with the French inhabitants of the place to St. Louis, under the supposition that the French had made an alliance with the Indians, and that he was in the league. The cruel mistake caused much and terrible suffering, and excited the deepest indignation of Major Forsyth. After the War of 1812, he was sent as U.S. Indian Agent among the Sauks and Foxes, with whom he remained many years. He died at St. Louis, October 29, 1833. Colonel Robert Forsyth, an early resident of Chicago, was the son of Major Thomas Forsyth. George, another son of William Forsyth, was lost in the woods near Detroit, August 6, 1778.

of the case were known, and it was safe for him to return. Mr. Lalime had warm friends at the fort, and until it was known that the killing was accidental and the struggle, on Mr. Kinzie's part, in self-defense, great anger was excited, and many threats were made against him. The verdict rendered by the officers at the fort, on the examination of the circumstances, was "justifiable homicide," and Mr. Kinzie returned to Chicago as soon as his wound was healed.

Save this affair, time passed peacefully away for eight years. Then came the fright of April, 1812, when the dwellers at "Lee's Place" were murdered by the Indians, followed, on August 15, by the massacre of the garrison of Fort Dearborn.*

Mr. Kinzie removed his family to the fort for protection, at the time of the Indian outrage of April 7, and they were yet living there when it was evacuated on the 15th of August. Having determined to accompany the troops himself, believing he could afford them some protection, he entrusted his family—now consisting of wife and four children (John H., nine years of age, and Ellen, Maria and Robert, younger) to the care of his clerk, John Baptiste Chandonnait, and two friendly Indians upon whose fidelity he could rely, who were to convey them in a boat to his former home at Bertrand on the St. Joseph River, Mr. Kinzie left the fort with the garrison. The boat, leaving a little later, had been taken only to the mouth of the river, where now is the foot of Madison Street, when a message was received from Mr. Kinzie, ordering it to proceed no further. The family accordingly remained at that point under the protection of the friendly Indians, until, after the loss of about two-thirds the number of the garrison, the massacre was stayed by the surrender of the survivors, with the stipulation that their lives should be spared, and they should be delivered at some British post. It being then considered safer for the Kinzie family to return, they were taken to their home, where they remained three days; saved from the fury of the Indians who had come from a distance to participate in the massacre, and to whom the family were unknown, by the strong personal friendship and tireless vigilance of the neighboring chiefs, Black Partridge, Waubensee and Caldwell the Sauganash, who proved in this emergency that an Indian can be a faithful friend. On the 18th of August, the whole family, including Mrs. Helm,† the daughter-in-law of Mr. Kinzie, were safely conducted by boat to St. Joseph River, and remained at Bertrand until the following November, under the protection of the Chief Topenebe (brother of the wife of William Burnett, the Chicago trader). All except Mr. Kinzie (who followed in December) were then taken to Detroit, and delivered to Colonel McGee, the British Indian agent, as prisoners of war. On Mr. Kinzie's arrival he was paroled by General Proctor, and the family took possession of the old family residence. After a short time the British commander became suspicious that Mr. Kinzie was in correspondence with General Harrison, and ordered his arrest. After two fruitless attempts, both of which were thwarted by the vigilance and energy of the Indian friends of Shaw-nee-aw-kee, General Proctor succeeded in procuring his arrest, and sent him to Fort Malden, at the mouth of the Detroit River, where he was imprisoned. He remained in confinement until the result of the battle of Lake Erie, September 10, 1813, showed General Proctor that some safer place must be found for

American prisoners. Mr. Kinzie was then taken to Quebec to be sent thence to England. The vessel upon which he was placed, when a few days out, was chased by an American frigate and driven to Halifax, and, on a second attempt to make the passage, sprung a-leak, and was obliged to return to port. Mr. Kinzie was once more confined in Quebec, but soon released and allowed to return to his family in Detroit, then the headquarters of General Harrison.

While residing in Detroit, Mr. Kinzie was a witness to the treaty made with the Indians at Spring Wells, near that post, on September 8, 1815. He is on record, October, 1815, as a partner of Thomas Forsyth. In 1816, John and Eleanor Kinzie conveyed several pieces of land, one of which, described as "where I now live, and have built and made improvements," is dated June 24, 1816. In the same year—probably in the autumn—Mr. Kinzie returned with his family to Chicago, and the "Kinzie House" again became his home. He engaged in trade with the Indians, and also resumed his occupation of silversmith. After the reorganization of the American Fur Company, in 1817, although not appointed agent of the company, he was on intimate and confidential terms with the agents at Mackinac, and continued to do a large business as an independent trader.* Writing to Mr. Kinzie, from Mackinac, June 22, 1817, one week after his arrival there, as agent of the American Fur Company, Ramsey Crooks says, "I am happy to learn your success in the late campaign, and sincerely hope it may continue. I look for a visit from you soon, but should that be inconvenient yet, for some time, any commands you may in the interim favor us with shall be duly attended to." In a letter written to Governor Cass, a day later, he speaks of the success of Mr. Kinzie in his ventures during the past year. By letters published elsewhere in this volume, it will be seen that Mr. Kinzie was actively engaged in the fur trade, after his return to Chicago, in 1816. In September, 1818, he signed as a witness, with title of sub-agent, the treaty of St. Mary's, Ohio. In the summer of 1818, he sent his son John to Mackinac, to be indentured to the American Fur Company. Mr. Crooks writes to Mr. Kinzie, August 15, 1818, that John reached the place "in good health, which has continued ever since." It would seem that he sent his son in company with Mr. Chandonnait,† his former clerk, as Mr. Crooks alludes to the fact of buying skins brought by him—the price of which does not meet his (Kinzie's) "expectations."

On the 5th of June, 1821, Mr. Kinzie was recommended as Justice of the Peace for Pike County—apparently the first for that district, but it does not appear that he was commissioned.

In all the letters written by Mr. Crooks to Mr. Kinzie he speaks in terms of commendation of John, and the following letter of Mr. Kinzie—the only one from his pen now accessible, shows his appreciation of the value of meriting the confidence of the agents of the Company, and enables the reader to form a just estimate of the man. The letter is to his son, at Mackinac, and is dated August 19, 1821:

"Dear Son:—I received your letter by the schooner. Nothing gives me more satisfaction than to hear from you and of you. It does give both myself and your mother a pleasure to hear how your conduct is talked of by every one that hopes you every advantage. Rather let this stimulate you to continue the worthy man, for a good name is better than wealth, and we cannot be too circumspect in our line of conduct. Mr. Crooks speaks highly of you, and try to continue the favorite of such worthy men as Mr. Crooks, Mr. Stewart and the other gentlemen of the concern. Your mother and

† Spelled Chandonnait, Chandonnais, Chandonnet; pronounced alike.

all of the family are well, and send their love to you. James is here, and I am pleased that his returns are such as to satisfy the firm.

"I have been reduced in wages, owing to the economy of the Government. My interpreter's salary is no more, and I have but \$100 to subsist on. It does work me hard sometimes to provide for your sisters and brothers on this, and maintain my family in a decent manner. I will have to take new measures. I hate to change houses, but I have been requested to wait Conant's arrival. We are all mighty busy, as the treaty commences to-morrow, and

The U. S. Indian Agency was established at Chicago in 1804, and re-established in 1816, when Mr. Kinzie was appointed sub-agent, under Charles Jouett. He served in the same capacity under Dr. Alexander Wolcott, and also as Indian interpreter for a short time. December 2, 1823, he was recommended as a Justice of the Peace for Fulton County, and July 28, 1825, was appointed Justice of the Peace for Peoria County. After the death

THE OLD KINZIE MANSION AS IT APPEARED IN 1832.

we have hordes of Indians around us already. My best respects to Mr. Crooks and Stewart, and all the gentlemen of your house.

"Adieu. I am your loving Father."

Mr. Kinzie's name appears as sub-agent and witness to the treaty of Chicago, August 29, 1821, which was signed in the immediate neighborhood of his residence—probably between his house and the agency-house, a little west. The accepted spelling is Kinzie, not as above.

Mr. Kinzie, appealed to by Governor Cass, spoke to the Indians, who were discontented with the annuities granted them, in the following words: "You must recollect that when I first spoke to you about the annuity at St. Mary's, I told you I could offer only two thousand dollars. You said it was too little. I took this answer to your father, who said that the annuity was small, because you had sold but a small tract of country; but he authorized me to give a little more, and when I returned, I offered you five hundred dollars more, which you agreed to, and upon this the treaty was signed. Mr. Bertrand was also present, and can speak to this point."

of John Crafts, in the latter part of 1825, Mr. Kinzie was appointed agent of the American Fur Company, and as early as the fall of 1827, with his family, he took his final leave of the old house as a home. One of his daughters, the wife of Dr. Wolcott, lived in a building within the walls of Fort Dearborn, then without a garrison. The residence of Colonel Beaubien was close beside the south wall of the fort, and there Mr. Kinzie was living at the time of his death. On Monday, January 6, 1828, while visiting his daughter, Mrs. Wolcott, he was suddenly stricken with apoplexy—his second attack—and died after a very brief struggle. The funeral services were conducted within the fort, and all that was mortal of the pioneer of Chicago, was buried on the shore of Lake Michigan near by. Subsequently his remains were removed to the north side of the river, and interred just west of the present site of the water works. They were again removed to the cemetery, formerly on that portion of Lincoln Park near North Avenue and Clark Street, and once more to a final resting place at Graceland.

The esteem in which Mr. Kinzie was held by the Indians, is shown by the treaty made with the Pottawatomies, September 20, 1828, the year of his death, by one provision of which they give "to Eleanor Kinzie and her four children by the late John Kinzie, \$3,500.00, in consideration of the attachment of the Indians to her

deceased husband, who was long an Indian trader, and who lost a large sum in the trade, by the credits given them, and also by the destruction of his property. "The money is in lieu of a tract of land, which the Indians gave the late John Kinzie long since, and upon which he lived."

THE KINZIE HOUSE.—For several years of its early existence, Chicago was simply Fort Dearborn, and the trading establishment and house of John Kinzie. "Only this, and nothing more," save, perhaps, a few huts inhabited by half-breeds, and the wigwams of the Pottawatomies.

The cabin of LeMai was gradually enlarged and improved by Mr. Kinzie, until what was once a mere habitation became a comfortable home for his own family, and a hospitable shelter for every stranger that found its doors. The old home as remembered by John H. Kinzie, and described by his wife in "Waubun," was a "long, low building with a piazza extending along its front, a range of four or five rooms. A broad green space was enclosed between it and the river, and shaded by a row of Lombardy poplars. Two immense cottonwood trees stood in the rear of the building. A fine, well-cultivated garden extended to the north of the dwelling, and surrounding it were various buildings appertaining to the establishment—dairy, bake-house, lodging-house for the Frenchmen, and stables."

A vast range of sand-hills, covered with stunted cedars, pines, and dwarf-willow trees, intervened between the house and the lake, which was, at this time, not more than thirty rods distant. Between the house and Fort Dearborn was kept up a foot ferry—a little boat swinging in the river, for the use of any passenger. Directly in front of its door the river bent to the south, around the fort, and could be seen at the point where it emptied into the lake. A beautiful picture of this early Chicago home, as described by John H. Kinzie, long years after it ceased to exist, is drawn in the old Chicago Magazine of 1857. The editor* says, speaking of Mr. Kinzie:

"Every feature of the old home is distinct in his recollection. The Lombardy poplars, which perished long ago, and the cottonwoods which once were but saplings planted by his own hand, and which have stood until the more recent days as mementoes of the past; the rough-hewn logs which formed the wall of his home, the garden and the shrubbery, the fence paling that surrounded it, and the green lawn at the front of the house, gently descending to the water of the river; the tiny boat floating idly at the foot of the walk; and, as the crowning mark of the picture, standing upon the opposite shore, upon the highest part of the elevation, the old fort, the whitewashed walls of the block-houses, the barracks and the palisades, glistening in the bright sun, while a gentle slope of green grass extended from the enclosure to the very water's edge. It was a beautiful sight. Over all this rose the few pulsations of human progress, as seen in an occasional stray Indian, with his canoe or pony or pack of furs; a French Canadian loitering here and there; a soldier pacing his rounds about the fort, or idly strolling over the prairies, or hunting in the woods."

In this house, the first white child of Chicago—Ellen Marion Kinzie—was born in December, 1804. The little maiden played around her home, until danger came too near, escaped it all, and returned with her parents to Chicago and her birthplace, to live in the old home, until on the 20th of July, 1823, she was married under its roof to Dr. Alexander Wolcott,† then Indian Agent, became the first Chicago bride, and the Kinzie house the scene of the first Chicago wedding. Maria I. Kinzie, afterward the wife of General David Hunter, was born here in 1807, and Robert Allen, youngest son of John and Eleanor, on February 8, 1810.

* The late Zebina Eastman.

† Dr. Wolcott died at Chicago in 1830, and in 1836 his widow married in Detroit, Mich., Hon. Geo. C. Bates. Mrs. Bates died in Detroit, August 1, 1860.

The Kinzie house was no gloomy home. Up to the very time of their enforced removal, the children "danced to the sound of their father's violin," and the long hours of frontier life were made merry with sport and play. Later, the primitive court of Justice Kinzie must have been held in its "spare room," if spare room there was. In 1829, after the old master who lived there so long, had gone to his rest, it was used for a time as a store, by Anson H. Taylor, and later, in March, 1831, was the residence* and probably the office of Mr. Bailey, the first Postmaster of Chicago. Its best days were past when the family of Mr. Kinzie left it, and after 1831 and 1832, when Mark Noble occupied it with his family, there is no record of its being inhabited. Its decaying logs were used by the Indians and emigrants for fuel, and the drifting sand of Lake Michigan was fast piled over its remains. No one knows when it finally disappeared, but with the growth of the new town, this relic of the early day of Chicago passed from sight to be numbered among the things that were.

In 1808 Tecumseh and his brother Laulewasikan (Open Door), who was related on the paternal side to the Kickapoos, removed from the old home of the Shawnees in Ohio to a tract of land on the Wabash River given them by the Pottawatomies and Kickapoos. Tecumseh had long objected to the grants of lands made by the Indians to the whites, and, with his brother, now engaged in a systematic effort to unite the North-western tribes in a confederacy, by which each tribe should be pledged to make treaties or cede lands only with the consent of the league. During the year 1809, Tecumseh and the Prophet were actively engaged in this work, and they were exasperated almost to madness, when by the treaty made at Fort Wayne in September of that year, certain Western tribes, including the Pottawatomies and Kickapoos, ceded to the United States, through its commissioner, General Harrison, lands on the Wabash and White rivers, which Tecumseh claimed belonged to the Shawnees, of whom he was the principal chief. Tecumseh was no party to the treaty, and maintained that the cession of land was illegal and unjust, and that he was in no wise bound by its terms. A council was appointed and held at Vincennes, August 12, 1810, to settle the difficulty if possible. It ended in a bitter and angry dispute between General Harrison and Tecumseh. The former maintained the legality of the treaty of 1809, and his determination to hold and defend the ceded lands; the latter, in an impassioned and fiery speech, denounced the whites and their aggressions, and declared that by the terms of the great Indian league all lands were held in common—that all the tribes constituted one nation, and that without the consent of all no treaty of purchase and cession was valid. He left the council more than ever determined to unite the Indians against the American intruders; a purpose more readily accomplished by reason of ill feeling existing between Great Britain and the United States, now steadily strengthening through the intrigues of English agents and traders in the Northwest. Soon after the council at Vincennes, Tecumseh and the Prophet visited the various Pottawatomie bands on the Illinois and its waters, including those of Shawbonee, Billy Caldwell, Senachwine, Gomo, Main Poc, Black Partridge, Letourneau or the Blackbird, and others, to induce them to join the confederacy and pledge themselves to sell no more land to the Americans. He received from the most of them little encouragement, but the visit evidently had its effect, as attacks on the white settlers of Illinois soon followed.

* See "Waubun."

In July, 1810, the Pottawatomies of the Illinois made a raid upon a settlement in Missouri, opposite the mouth of the Gasconade, stealing property and murdering several settlers, among whom was Captain Cole. The Governor of Missouri (General William Clark) made a requisition upon Governor Ninian Edwards of Illinois, for the murderers. They had taken refuge with Main Poc,* the war chief of the tribe, then residing near Peoria Lake, but whose village was on the Kankakee, just above the forks. They were never recovered. The following letter from General Harrison in relation to this affair, which has been deposited, with other papers belonging to Governor Edwards, with the Chicago Historical Society, is of interest to Chicago, as showing the dangerous proximity of hostile Indians, at the time the inhabitants believed themselves secure in the friendship of the neighboring Pottawatomies, at least. The letter is addressed to "General William Clark, Indian Agent, St. Louis:"

"VINCENNES, 19th June, 1811.

"Dear Sir:—I have been exerting myself to find out where the Pottawatomies who murdered Captain Cole and his party were to be found and the best means of apprehending them, for some months past. I will now give you the result of my inquiries on the subject. The chiefs of the Pottawatomies all acknowledge that the murderers belong to their tribe. Several of the principal ones were at Fort Wayne early this spring, and informed Captain Wells that they had put themselves under the protection of Main Poc, the great war chief of the tribe, who resides upon the Illinois River. One of these, however, spent the last winter with the Prophet. I sent Wells† up to the town of the latter in April last, to ascertain whether they were there and what would be the most likely means of getting hold of them, and four others of the same tribe, who had in the beginning of that month stolen fourteen horses from this neighborhood. In his report Wells informed me that the murderers were not there; that they lived on the Illinois River and were only occasionally on the Wabash. I would immediately have communicated this information to you, but as I still had a man at the Prophet's village, I waited his return to know whether he would bring any further intelligence. A few days ago he arrived, and with him a young Indian, who formerly lived with me, and who is the son-in-law of Onoxa or Five Medals, a principal Pottawatomie chief. Onoxa desired the young man to inform me that there was no probability of the murderers being delivered up, and that there was no way of getting them but by sending a party of men and taking them wherever they would be found. Brouillette, the young man above mentioned, says that a Pottawatomie was at the Prophet's town when he left it, with one of the horses taken from Cole, but he does not know whether he was one of the party that took him. I have on the 23d April written to the Secretary of War for particular instruction on the subject of them fellows, but have not yet received an answer. I think, however, that a formal demand had better be made of Main Poc by Governor Edwards, as they are certainly within his jurisdiction, and I will cause the same thing to be done of the chiefs who attend at Post Wayne to receive their annuity. There is not, however, the smallest probability of their being surrendered. I have no doubt of the good disposition of Tupennebe,‡ the principal chief of the tribe, Onoxa and many others, but the tribe is so large and scattered that they have no control over the distant parts, indeed very little over the young men that are about them. I am therefore certain that there is no other mode of bringing the culprits to justice but by seizing them ourselves. All the information that I receive from the Indian country confirms the rooted enmity of the Prophet to the U. S. and his determination to commence hostilities as soon as he thinks himself sufficiently strong. From the uncommon insolence which he and his party have lately manifested, I am inclined to believe that a crisis is fast approaching. A Frenchman descending the Wabash about ten days ago was robbed of his pirogue and some small quantity of goods; but the most daring piece of insolence that they have yet ventured upon is that of seizing the salt destined for the tribes above them. The pirogue which I sent up with it returned last evening and the man who had charge

* This chief, who gave the whites a great deal of trouble, is mentioned by the daughter of Charles Jonett, the first Indian Agent at Chicago, as visiting the place after the fort was rebuilt in 1816. She says her father had an encounter with him, in which the savage brandished his scalping-knife with furious menaces betokening bloody violence; but, confronting him sternly, Mr. Jonett ordered him to give up the knife, and he finally complied.

† Captain William Wells, massacred at Chicago, August, 1812.

‡ Tupennebe, chief of the St. Joseph band, spoken of in "Waubun," as "Tapeeneebec." He proved a faithful friend to the whites of Chicago. In all the treaties spelled Tupennebe.

of her reports that he stopped at the Prophet's village and offered him three barrels of salt intended for him, and that he was ordered to stop until a council was held, and the whole was then taken from him. If our government will submit to this insolence, it will be the means of making all the tribes treat us with contempt.

"I do not recollect anything of the claim of Briam which you mention in your last. I may perhaps have received the papers and sent them to Fort Wayne but I have forgotten it. I will thank you to state the particulars.

"I am yours sincerely,

"WM. H. HARRISON."

Prior to the time the above letter was written, Matthew Irwin, U. S. Factor at Chicago, had given notice to the Secretary of War of the machinations of the Prophet to incite the Indians on the Illinois to hostilities against the whites. The following letter was written by John Lalime*, Indian interpreter at Fort Dearborn, to General William Clark, at St. Louis, giving information of the thefts to which General Harrison alludes in his communication to General Clark.

"CHICAGO, 26th May, 1811.

"Sir:—An Indian from the Peorias passed here yesterday, and has given me information that the Indians about that place have been about the settlements of Kaskaskia and Vincennes, and have stolen from fifteen to twenty horses. It appears by the information given me that the principal actors are two brothers of the wife of Main Poc. He is residing at the Peorias, or a little above it, at a place they call Prairie du Corbeau. By the express going to Fort Wayne, I will communicate this to the agent. I presume, Sir, that you will communicate this to the Governor of Kaskaskia and to General Harrison. I am, Sir, with respect,

Ible. Servt,

"GEN. WM. CLARK, St. Louis.

Ind. Interpreter."

Lalime again wrote on the 7th of July, 1811, to John Johnson, U. S. Factor at Fort Wayne, giving information of the murder of young Cox and the capture of his sister. The letter reads:

"Sir:—Since my last to you we have news of other depredations and murders committed about the settlement of Cahokia. The first news we received was that the brothers-in-law of Main Poc went down and stole a number of horses. Second, another party went down, stole some horses, killed a man, and took off a young woman, but they being pursued, were obliged to leave her to save themselves. Third, they have been there, and killed and destroyed a whole family. The cause of it, or in part, is from the Little Chief that came last fall to see Governor Harrison, under the feigned name of Wapewa. He told the Indians that he had told the Governor that the Americans were settling on their lands, and asked him what should be done with them. He told the Indians that the Governor had told them they were bad people, that they must drive them off, kill their cattle and steal their horses, etc. Being the quarter ending with the 30th of June, I am busy with the factory, and have a number of Indians here paying their visit to Captain Heald. From those circumstances, I hope, Sir, you will excuse my hurry. Please give my respects to Mrs. Johnson.

"I am with respect, Sir,

"Your obedient servant,

"J. LALIME."

The murders alluded to in the letter of Mr. Lalime, had recently been committed. On the 2d of June, 1811, the Indians surrounded the house of Mr. Cox on Shoal Creek, and finding only a young son and a daughter at home, killed the former and carried off the daughter a prisoner—and also stole horses and other property. On

* John Lalime was of English and Indian birth. He was called an Englishman. In an angry encounter with John Kinzie, he was accidentally killed in the spring or early summer of 1812. (See Biography of John Kinzie.)

the return of Mr. Cox, he assembled the settlers to the number of some eight or ten, and gave pursuit. The Indians were overtaken about fifty miles north of the present city of Springfield, and the girl was recovered. Mr. Price and Mr. Ellis, two settlers who lived where now is the city of Alton, were murdered the same month of the Cox outrage, while at work in their cornfields. In order to induce the Indians to give up these murderers, and restore the stolen property, as well as in the hope of preventing such depredations in the future, a council was appointed by Governor Ninian Edwards, to be held at Peoria on the 16th of August, 1811. Captain Samuel Levering, as representative of the Governor, started from Cahokia for Peoria July 25, 1811. He was accompanied by Captain Herbert Henry Swearingen and eight boatmen, who were to act as soldiers in case of emergency. On the 3d of August they arrived at Peoria, where they met Thomas Forsyth, the Indian Agent, who had long resided among the Indians, and thoroughly understood their language. He acted as interpreter. Gomo or Masseno, the principal chief of the Pottawatomies at Peoria, sent out his runners to summon the various chiefs on the river and in the surrounding country to the council, which was held on the 16th of August. Among the chiefs present were the Blackbird (known by the French as Letourneau, and by the surrounding Indians as Mucketepennese), Waubensee, Little Chief or Main Poc, Black Partridge, Senachwine and others. The message of Governor Edwards was read to them, in which he made a formal and positive demand that the murderers of the Illinois settlers should be handed over to justice, and the stolen horses be restored to their owners; otherwise, "Storms and hurricanes, and the thunder and lightning of heaven cannot be more terrible, than would be the resentment of their Great Father."

The chiefs were divided as to the policy of giving up the murderers, as they averred that they were under the protection of the Prophet, or tribes hostile to the Americans. Gomo, whose village was at the head of Peoria Lake, near that of Black Partridge, thought it was possible to recover and give them up; but Main Poc, the war chief of the tribe, who lived on the Kankakee, and who was alluded to as "Little Chief," by Mr. Lalime, in his letter to the "Agent at Fort Wayne," declared "they were with the Shawanoe Prophet and he might as well kill himself as try to get them." In his speech, Main Poc said:

"You astonish me with your talk. Whenever you do wrong there is nothing said or done, but when we do anything, you immediately take us and tie us by the neck with a rope. You see our situation to-day, we the Pottawatomies, Chippewas and Ottawas. The Shawanoe Prophet blames us to-day for not listening to him; you do the same, and we are now on a balance which side to take. If our young men behave amiss, blame the Shawanoe Prophet for it. These young men upbraid us, for they say, 'You give the Americans your hand, and some day they will knock you in the head.' This is the occasion of the late depredations among the Pottawatomies. Observe what you said yesterday: you said that you would kill our wives and children for these murders. Them men did not go from among us, but from the Shawanoe Prophet. From here they went and done the mischief and returned back again. Perhaps you never heard of the Prophet before. So now I tell it to you; since he has been on the Wabash he has told the young men that they will see the day that they will be ill-treated, and more than that, the Americans will be traitors to them. If you wish to make war it is altogether of yourselves. You say, what will become of our women and children in case of war? on the other hand, what will become of your women and children? It is better to avoid war. There is one horse in my village. There were three—two died. I will take that horse to Chicago as it is nearer my town. The greater part of the horses stolen, were taken by the Indians who stole them, to Detroit, who intend never to return. Last summer the Agent at Chicago told them not to pur-

chase any stolen horses, but this summer the commanding officer has demanded the horses, and I intend taking that one and delivering it to him at Chicago."

Gomo also made a speech which, though friendly, showed the increasing dissatisfaction of the Indians with the encroachments of the whites, and particularly with their building forts, from which they inferred that the Americans intended to make war upon them and dispossess them of their country. At the final adjournment of the council two horses only were delivered up,—the murderers were not found, and the council ended with still more bitter feelings on both sides.

In the fall succeeding this council on the Illinois River, Harrison took up his march for the Wabash. He had previously sent an agent to the village of the Prophet on the Tippecanoe River, to make one more effort to conciliate Tecumseh, who was there, but the interview ended in making the haughty warrior more determined than before, and on its termination he immediately set out for the South to secure the alliance of the Chickasaws, Creeks and Choctaws in the coming conflict which he anticipated.

During his absence, General Harrison marched with a small army to the Wabash, ascended that river to Tippecanoe, or Prophetstown, and encamped near. He was attacked in November, by the Prophet and his followers, who were completely routed, and their village broken up and destroyed. When Tecumseh returned from the South, he joined the British at Malden, and thenceforth used all his influence and power to secure the alliance of the Illinois tribes for his new friends, sending messengers with bribes to buy their friendship if not their active co-operation.

The growing animosity of the Indians toward the Americans, and their friendliness toward the British, induced Governor Edwards to call another council in the spring of 1812. This was held at Cahokia, and was attended by all the prominent chiefs of the Pottawatomies, Kickapoos, Chippewas and Ottawas on the Illinois. The Indians were disappointed at the failure of the Prophet to fulfill his promises, and his defeat at Tippecanoe had lessened their faith in his pretensions. Their professions of loyalty to the American cause were profuse. Chiefs, who participated in the massacre at Chicago, a few months later, by their spokesman, Gomo, asserted, in the strongest terms, their determination never to join the British. They told Captain Hebert, the commissioner sent by the Governor, of the attempts of the English to induce the warriors of Main Poc's band to go to war against the Americans, and their resolution to remain in peace; of their desire to have a U. S. Factor at Peoria, only that "on account of the Winnebagoes, who are now raging about, he might be killed, and they should be blamed;" and declared that "whatever the English may do," the Americans might "rest assured that the four nations here, will never join them." At the time of this council, a description of the Illinois River, and the tribes residing on it and its branches, was prepared for Governor Edwards, from which the following extract, giving the tribes at and above Peoria Lake, is taken:

"The Pottawatomies were divided at that time (May, 1812), into several bands on the Illinois River; that of Gomo, consisting of about one hundred and fifty men, at the north end of Peoria Lake; Pepper's band at Sand River (River au Sable), about two leagues below the Quin-qui-quee (Kankakee), consisting of about two hundred men, and of different nations, Pottawatomies, Chippewas and Ottawas. Letourneau (the Blackbird),* and Mittitasse are of this band. Main Poc's band lies seven leagues up the Quin-qui-quee, consisting of about fifty men. The other Pottawatomies

* The Blackbird, it will be remembered, was the chief to whom the troops remaining after the massacre at Chicago, in the same summer, surrendered.

belong to the River St. Joseph, in which river there are three or four villages. In the Fox River, which empties itself into the Illinois River at the Charboniere (or Coalpit) about thirty-five leagues above Peoria, is another band of Pottawatomies, Chippewas and Ottawas, mixed together. Wabeesause (Waubunsee) is their leader. This is a small band, about thirty. The Kee-kaa-pooos are divided in three bands: Pamawatam's band, consisting of about one hundred men, exclusive of those at the Prophet's. He has left the old village, and is now making his village on Peoria Lake. The Little Deer has also abandoned their great village, and is now forming his village opposite Gomo's (on Peoria Lake). His band may consist of about seventy men, exclusive of those with the Prophet. There is, at least, fifty of this band with the Prophet, and as many of the Pottawatomies. At Little Makina (below Peoria Lake), the south side of the Illinois, is a band headed by no particular chief, but led generally by warriors. LeBouw, or Sulky, is generally

Chicago situated, with regard to the surrounding Indians, when Captain Heald received, on the 7th of August, the order to evacuate Fort Dearborn.

FORT DEARBORN.

In the month of August, 1795, General Anthony Wayne, called by the Indians "The Tempest," terminated the war that had raged in the Northwest for a number of years, by a treaty of peace signed at Greenville, Ohio. By this treaty, the Indians ceded to the United States a number of tracts of lands, and among others "one piece of land, six miles square, at the

OLD FORT DEARBORN, ERECTED IN 1803.

looked upon as the main chief. At the camping place of Chicago, three leagues from the Lake Michigan, or Chicago Fort, is a village of Pottawatomies, Chippewas and Ottawas, of about thirty men. Co-wa-bee-mai is their chief. [On the rude map, accompanying this description, Co-wa-bee-mai's village is placed at the point marked 'Portage, three leagues from the Chicago Fort.' From the junction of the Kankakee and Desplaines, is written 'From here (the forks), to the lake twenty leagues, and is called Chicago.'] Leaving Chicago to go to Makina, on the south side of (Lake) Michigan, is a river called the 'Little Calumick,' about five leagues from Chicago. Here is a village consisting of about one hundred men. Old Campignan is their chief. He has a burnt hand and nose broken, but it was reported this spring that he was killed in going to Niagara from Detroit. Mau-non-gai,* who was his second, probably now will be their chief. At the forks on the Quin-qui-quee the Illinois River loses its name, and is called from here Chicago River to the lake, a distance of about twenty leagues. On the north (west) side of Lake Michigan, leaving Chicago Fort, and thirty leagues from Chicago is River Mill-waa-kee. There are, generally, several villages of Pottawatomies here."

The village of Black Partridge Muck-otey-pokee was on the south side of the Illinois River, opposite the head of Peoria Lake. Topenebe and Winnemeg were on the St. Joseph River. Thus were the settlers at

* Called Nau non-gee in "Waubun," pp. 162-194.

mouth of the Chicago River, emptying into the southwest end of Lake Michigan, where a fort formerly stood." What this fort was or by whom erected, is now chiefly matter of conjecture. In 1718, James Logan, an agent of Governor Keith, of Pennsylvania, was sent to explore some of the routes to the Mississippi. Among others, he reports as to the route by way of the River Chicagou, as follows:

"From Lake Huron they pass by the Strait of Michilimackina four leagues, being two in breadth, and of a great depth, to the Lake Illinois; thence one hundred and fifty leagues to Fort Miamis, situated at the mouth of the River Chicagou. This fort is not regularly garrisoned."

About this time, or shortly after, the fort was probably entirely abandoned. At all events, at the time of the treaty of Greenville, the oldest Indians then living had no recollection of a fort ever having been at that place.*

Rumors that a garrison would be stationed at Chicago were in circulation as early as 1798, but it was not until 1803 that the fort was established. In July, 1803,

* American State Papers, vol. 5, p. 562.

a company of United States soldiers, under the command of Captain John Whistler, arrived at the Chicago River, and during that summer and autumn built what has since been known as the first Fort Dearborn, named after General Henry Dearborn, at that time Secretary of War.

Nearly all the histories which give any account of Fort Dearborn say that it was established in the year 1804, but in volume 12, p. 175, American State Papers, there appears the following return :

"A return of the Army of the United States for the year 1803 designating every post and point of occupancy. Dated December 31, 1803.

Fort Dearborn Ind. Ter.
 1 Captain.
 1 Second Lieutenant.
 1 Ensign.
 4 Sergeants.
 3 Corporals.
 4 Musicians.
 54 Privates.
 1 Surgeon's mate."

This report conclusively shows that the fort was named Dearborn from the beginning, and that it was garrisoned in 1803.

The fort stood on the south side of the Chicago River, at the bend where the river turned to enter the lake. It had two block-houses, one on the southeast corner, the other at the northwest. On the north side a subterranean passage, leading from the parade ground to the river, designed as a place of escape in an emergency, or for supplying the garrison with water in time of a siege. The whole was enclosed by a strong palisade of wooden pickets. At the west of the fort and fronting north on the river was a two-story log building, covered with split oak siding, which was the United States agency-house. On the shores of the river, between the fort and the agency, were the root-houses or cellars of the garrison. The ground on the south side was enclosed and cultivated as a garden. Three pieces of light artillery comprised the armament of the fort.

Captain John Whistler, the builder and first commandant of Fort Dearborn, was a native of Ireland. He was a British soldier in Burgoyne's army, and was taken prisoner at the time of the surrender of that army at Saratoga. After the war he married and settled in Hagerstown, Md., where his son William was born. He enlisted in the American Army and took part in the Northwestern Indian war. He served under St. Clair, and afterwards under General Wayne. He was speedily promoted, rising through the lower grades to a lieutenantcy in 1792, and became captain July 1, 1797. In 1814 he was a senior captain and brevet-major, having command at Fort Wayne. He rebuilt the fort in 1815, and removed to St. Charles, Mo., in 1817. In 1818 he was military storekeeper at St. Louis, and died in 1827 at Bellefontaine, Mo. He was a brave and efficient officer, and became the progenitor of a line of brave and efficient soldiers. His son, William Whistler, will be noticed later as one of the commandants of the fort. Another son, George W. Whistler, graduated at West Point in 1814, and served in the army until 1833, when he resigned. He became a distinguished engineer, and in 1842 was appointed by the Russian Government to superintend the construction of railroads in Russia. General J. N. G. Whistler, a son of William Whistler, is now serving in the army.

Life at the fort was dull enough during the early years, and little occurred to disturb the monotony of garrison life. An occasional band to carry away the furs accumulated by the traders; hunting and fishing;

the assembling of the Indians to receive their payments; the trading in peltries; the occasional birth of a baby—these were the events that interested the few people gathered together on this far Western border. In 1810 Captain Nathan Heald succeeded Captain Whistler as commandant of the garrison. He was a native of New Hampshire, where he was born in 1775. He entered the army when young, and was lieutenant in 1799 and captain in 1807. He married Rebekah Wells, a daughter of Captain Samuel Wells, a noted Indian fighter of Kentucky, and niece of William Wells, to be noticed hereafter.

The Pottawatomies were the Indians of the country. Signs of discontent among the Indians throughout the Northwest became plainly visible. The great chiefs saw with alarm the continual encroachments of the whites and their demands for more lands, which could only be satisfied by the cession of all the hunting-grounds of the Indians. As early as 1806, Tecumseh and his brother, the Prophet, had sought, and with considerable success, to unite all the Indians in one great confederacy to withstand the whites. It is probably true that Tecumseh intended at the first to withstand the whites peaceably. But he was soon dragged into war.

The Pottawatomies did not join with him at first. Many of their leading chiefs, through the influence of John Kinzie and the officers at Fort Dearborn, were friendly with the Americans and wished to remain so. Among these were Black Partridge, Winnemeg, Topenebe, and others. In May, 1810, the Pottawatomies, Chippewas, and Ottawas held a council at St. Joseph, to consult as to joining the confederacy, but through the influence of Winnemeg, the Pottawatomies did not join. The younger warriors among them, however, did not sympathize with the older heads, and felt the appeals to their patriotism made by Tecumseh and the Prophet. All the Indians, too, were largely under British influence, and went every year to Malden, Canada, to receive British presents. While Tecumseh was in the South in 1811, seeking to arouse the Choctaws, Cherokees, Creeks, and other southern tribes to join with him, the Prophet precipitated hostilities by attacking General Harrison's troops at Tippecanoe. The Indians were defeated, and had it not been for British influence, the confederacy would have been dissolved. Meantime, more or less alarm was felt among the settlers around Fort Dearborn, and reports of murders of the whites by hostile Indians became frequent.

A settler, named Charles Lee, had come to Fort Dearborn shortly after it had been built, with his family. He took up a large farm on the South Branch of the Chicago River, about four miles from its mouth, at a point about where Bridgeport now stands. The farmhouse was on the west side of the river. The farm was known as "Lee's place" and was afterwards called "Hardscrabble." Lee did not reside at the farm, but had a dwelling for himself and family on the lake shore, very near the fort. The farm was occupied by a man named Liberty White, who with three employés (two men and a boy) managed the place. On the afternoon of the 6th of April, 1812, a party of eleven Winnebagoes came to the farm house and entering, seated themselves without ceremony. One of the employés, a Canadian Frenchman, named Debou, became suspicious of them and remarked to the others, "I do not like the appearance of these Indians, they are none of our folks. They are not Pottawatomies." One of the others, a discharged soldier, said to the boy, who was a son of Mr. Lee, "We had better get away if we can. Say nothing, but do as you see me do." It was nearly

Gordon S. Hubbard

sunset, and the soldier and the boy started towards the canoes, telling the Indians they were going to feed the cattle on the other side of the river, and that they would then return for supper. Gaining the other side of the river in safety, they made some show of collecting the cattle, but continued to get into the woods close at hand, and then started for the fort. On their way they notified the family of Burns, whose home was on the north side, a short distance above the fort, and then made their way to the fort. They had scarcely got out of sight of the farm-house ere the Indians shot and scalped the two men who had remained behind. The family of Burns was now considered to be in great danger, and a party of soldiers under Ensign Ronau, was sent to bring them to the fort. This was successfully done, and that

I. T. Helm and Ensign George Ronau. Twelve militiamen were also under his orders. Of the regulars, a large number were on the sick list. Altogether there were not probably forty able-bodied fighting men. With them were about a dozen women and twenty children. He received his orders on the 9th. But he trusted to the friendly reputation of the Pottawatomies, through whose country he must pass, and waited for six days, until four or five hundred warriors were assembled at the fort, before he moved. He was then at their mercy. The Pottawatomie chief who had brought General Hull's order was Winnemeg, a friendly Indian, who well knew the feelings of the Indians. He at first advised that the fort be held, until reinforcements should arrive. To this Captain Heald would not agree. Win-

MAP OF CHICAGO IN 1812.

night all the settlers around the fort were housed within its walls. The Indians committed no further attacks that time, but made off, satisfied with this exploit, with the two scalps obtained. The agency-house was now turned into a sort of a fortification for the settlers, and every care was taken to protect the settlement and to provide against surprise. Various attempts were made by the Indians during the next two months, but so alert were the whites that no damage was done, except the loss of a few cattle and sheep. So the summer passed. On the 18th of June, 1812, the United States declared war against England, and on the 16th of July, Fort Mackinac surrendered to the British. On the 9th of August following, an Indian runner from General Hull, at Detroit, brought news of the war and the fall of Mackinac, to Captain Heald, with orders to evacuate Fort Dearborn and proceed with his command to Detroit, by land, leaving it to the discretion of the commandant to dispose of the public property as he thought proper. Within the next three days neighboring Indians came in from all quarters to receive the goods which they understood were to be given them. It might seem as if no other course was open to Captain Heald but to obey the orders of General Hull. His force was not as strong as that at Fort Mackinac. It consisted of fifty-four privates, and two officers, Lieutenant

nemeg's next advice was instantaneous departure, so that before the Indians could assemble or agree upon definite action, and while they would be taking possession of the goods, the force might make its escape. Mr. Kinzie, who had long known the Indians, approved of the same course. The younger officers were in favor of holding the fort—but Captain Heald resolved to pursue his own way. This was to assemble the Indians, divide the property among them, and get from them a friendly escort to Fort Wayne. On the 12th a conference was held with the Indians by Captain Heald, and they agreed to his proposals. They would take the property, and furnish him a guard of safety. Whether they really would have done so it is impossible to know, but Black Hawk, who was not present at the massacre, but knew the Indian version of it, subsequently said that the attack took place because the whites did not keep their agreement. There were two species of property that the Indians chiefly wanted, whisky and ammunition. There were large quantities of both at the fort, and the Indians were aware of that fact. On the 13th, Captain William Wells, Indian Agent at Fort Wayne, arrived at Fort Dearborn with thirty friendly Miamis, for the purpose of bringing Captain Heald on his way.

Captain Wells had lived among the Indians, and was cognizant of their character. He was the uncle

of Mrs. Heald. Born in Kentucky, he belonged to a family of Indian fighters. When he was a lad of twelve, he was stolen by the Miamis and adopted by Little Turtle, their great chief. He served with the Indians at the outbreak of the war in 1790, and was present at the battle where St. Clair was defeated. But he then began to realize that he was fighting against his own kindred, and resolved to take leave of the Indians. He asked Little Turtle to accompany him to a point on the Maumee, about two miles east of Fort Wayne, long known as the Big Elm, where he thus spoke: "Father, we have long been friends. I now leave you to go to my own people. We will be friends until the sun reaches the midday height. From that time we will be enemies; and if you want to kill me then, you may. And if I want to kill you, I may." He then set out for General Wayne's army, and was made captain of a company of scouts. He fought under General Wayne until the treaty of Greenville, after which he removed to Fort Wayne, where he was joined by his wife, who was a daughter of Little Turtle. He settled upon a farm and was made Indian Agent and Justice of the Peace. He rendered effective service to General Harrison, the Governor.

When Captain Wells heard of the intended evacuation of Fort Dearborn he volunteered to go there and act as escort to the soldiers. He arrived at the fort on the 13th of August, too late, however, to have any influence on the question of evacuation. Captain Heald had up to this point resisted the advice of Winnemeg, the friendly Indians, John Kinzie and his junior officers, as to adopting any other course. But now after all his firmness came a period of irresolution. The supply of muskets, ammunition and liquor was large. It was madness to hand over to the Indians these supplies with which first to excite and infuriate them, and then to leave them with still more abundant means of wreaking that fury on the garrison. This fact was strongly urged by both Captain Wells and John Kinzie. Captain Heald yielded, and on the night of the 13th destroyed all the ammunition and muskets he could not carry with him. The liquor was thrown into the lake. No sooner was this done than the older chiefs professed that they could no longer restrain their young men. Black Partridge, one of the most noted Pottawatomie chiefs, and always friendly to the whites since the treaty of Greenville, had received a medal from General Wayne at the time of that treaty. On the evening of the 14th he came to the fort and entered Captain Heald's quarters. "Father," he said, "I come to deliver up to you the medal I wear. It was given me by the Americans and I have long worn it in token of our mutual friendship. But our young men are resolved to imbrue their hands in the blood of the whites. I can not restrain them, and I will not wear a token of peace while I am compelled to act as an enemy."

The Indians held a council and resolved on the destruction of the garrison. And yet, with the most heroic fortitude and constancy, the officers made their final arrangements for the evacuation, sustaining and encouraging the men by their words and by their example. At nine o'clock on the morning of the 15th of August, all being in readiness, the gates of the fort were thrown open for the last time, and the march commenced. In accordance with Indian custom, and in premonition of his fate, Captain Wells had blackened his face. With fifteen of his Miami braves, whom he supposed to be trusty, he led the advance. The other fifteen brought up the rear. The women and children were in wagons or on horseback. Brave John Kinzie

determined to accompany the troops, hoping that his presence would be the means of restraining the Indians. Entrusting his family to the care of some friendly Indians, to be taken around the head of the lake in a boat to a point near St. Joseph, he marched out with the troops. He was warned by several friendly chiefs not to accompany the soldiers, but he was determined to do all in his power to bring some restraining influence to bear, if possible, on the savages. The strains of music, as the soldiers passed beyond the gates, were certainly not enlivening. By some strange and wierd choice of the band-master, who was among the killed, the "Dead March" was played as the soldiers filed out from the protection of the fortifications, on to the open plain. Scarcely had the troops departed, when the fort became a scene of plundering.

Along the lake shore ran a beaten Indian trail, which was the path pursued. Westward from this, at about one hundred yards distance, commencing perhaps a quarter of a mile from the fort, a sand-bank, or range of sand-hills, separated the lake from the prairie. When the troops started, an escort of five hundred Pottawatomies accompanied them, but when the sand-hills were reached the Indians struck out towards the prairie, instead of keeping along the beach. Concealing their movements behind the sand hills, they hurried forward and placed an ambuscade in readiness for the troops.

The little band had marched about a mile and a half when Captain Wells, who had led the advance, came riding swiftly back saying that the Indians were about to open an attack from behind the sand-bank. The company charged up the bank, firing one round, which the Indians returned. The savages, getting in upon the rear, were soon in possession of the horses, provisions and baggage, slaughtering many of the women and children in the attempt. Against fearful odds, and hand to hand, the officers and men, and even the women, fought for their lives.

But it was soon over. Drawing his little remnant of survivors off an elevation on the open prairie, out of range, Captain Heald himself wounded, proceeded to examine the situation. The Indians did not follow, but after some consultation of the chiefs, made signs for Captain Heald to approach them. He advanced alone and met Blackbird, who promised to spare their lives if they would surrender. Upon these terms Captain Heald complied with the demand.

Among the killed were Captain Wells, Ensign Ronau and Surgeon De Isaac Van Voorhis. The wounded were Captain and Mrs. Heald, Lieutenant Helm and his wife. Every other wounded prisoner was put to death. Of the whole number that had left the fort but an hour before, there remained only twenty-five non-commissioned officers and privates and eleven women and children.

The number of Indians engaged was between four and five hundred. Their loss was about fifteen.

The Miamis fled at the first attack, and took no part whatever in the fight.

Captain Wells, after fighting desperately, was surrounded and stabbed in the back. His body was horribly mangled, his head cut off, and his heart taken out and eaten by the savages, who thought by so doing some of the courage of the heroic scout would be conveyed to them.

Mrs. Helm, the daughter of Mrs. Kinzie, had a narrow escape from death. Assaulted by a young Indian, she avoided the blow of his tomahawk, and then seized him around the neck, trying to get possession of his scalping-knife. While struggling in this way for her

life, she was dragged from his grasp by another and older Indian, who bore her struggling to the lake, where in he plunged her, but with her head above the water. Seeing that it was not the Indian's object to drown her, she looked at him earnestly and found it to be Black Partridge, who was thus trying to save her. After the firing ceased, she was conducted to a place of safety. When the attack was made, Mrs. Heald was riding on a very beautiful and well-trained bay mare, which she had brought with her from Kentucky, and which had long been coveted by the Indians. During the firing Mrs. Heald received six wounds, and was shortly captured. Both she and her husband were taken by the half-breed Chandonais to St. Joseph and permitted to reside with Mr. Burnett until they recovered from their wounds. Captain Heald then delivered himself to the British at Mackinac and was paroled. But the survivors were not yet safe from the hostile Indians. Lieutenant Helm was carried by his captors to a village on the Kankakee, where he remained two months before he was discovered by Black Partridge, who had saved the life of Mrs. Helm. That chief at once informed Thomas Forsyth, half-brother of Mr. Kinzie who was stationed at Peoria, and efforts were made to secure the release of the prisoner. Black Partridge was provided with a ransom and dispatched to the Indian village. The amount that he carried with him not being sufficient to satisfy the Indians, he freely offered them his pony, his rifle and a large gold ring which he wore in his nose. This was accepted, Lieutenant Helm was released, and soon afterwards joined his wife at Detroit, where she had gone with her parents.

The day following the massacre the fort and agency building were burned to the ground and the first Fort Dearborn ceased to be. The prisoners were scattered among the various tribes, and a large number of warriors hastened away to attempt the destruction of Fort Wayne.

Among the officers of the fort who escaped the massacre, was Quarter-master Sergeant Griffith, who is mentioned by Mrs. Kinzie in "Waubun" as being absent collecting the baggage horses of the surgeon when the troops left the fort, but, hastening to join the force, was made prisoner by the chief of the St. Joseph band, who was friendly to the whites. He escaped in the boat with the Kinzies two days later. This was William Griffith, afterward a captain of General Harrison's spies. He joined Harrison's army after his escape to Michigan, was placed in command of the spies, and received two wounds in the skirmish at the Moravian towns, a few days before the battle of the Thames, but participated also in the latter engagement. He was the son of William Griffith, Sr., a farmer of Welsh descent, whose home was near the present site of Geneseo, N. Y. His sister, Mrs. Alexander Ewing, removed with her husband to Michigan in 1802, and thence to Piqua, Ohio, in 1807, from which place William Griffith probably came to Chicago. He died in 1824, leaving two sons and a daughter, and was buried near old Fort Meigs, Ohio.

The same day that Fort Dearborn was burned, General Hull surrendered Detroit to the British.

The sources of information in regard to the massacre are the official report of Heald, and the narrative of Mrs. Juliette H. Kinzie, in "Waubun," based upon the statements of John Kinzie and Mrs. Helm. A narrative by Mrs. Heald was lost in the Rebellion. The narrative of Mrs. Kinzie has been the accepted and popular one, although there are some discrepancies in it as to dates, its censure of Captain Heald is not severe, and it has much of the "after the event" flavor

about it. That the fort could have been held for any length of time against the Indians is altogether doubtful. A thousand hostile warriors would have beleaguered it within a very few days, as they did Fort Wayne shortly after, and it would have been impossible for General Harrison to have relieved both places. Without such relief it must have fallen. Instantaneous evacuation in conformity with the advice of Winnemeg might have saved the garrison, but that partook too much of the nature of flight to suit the mind of such a man as Captain Heald. Since that was not thought honorable, the only course to pursue was to rigorously adhere to the agreement with the Indians, and turn over to them all the arms and liquor. Captain Heald was dissuaded by those surrounding him from adopting that dangerous expedient.

But the probabilities are that no course whatever could have saved the ill-fated garrison. War was declared, the Indians were aroused and allied with the British. Certain ones had friendships with the Americans, and did what could be done to save individuals, but they had no friendship for the United States. Tecumseh was using all the influence of his powerful name to consolidate the Indian tribes in the British interest. The fall of Michilimackinac and the peril of Detroit showed the Indians that England was the stronger power. With all these forces at work, the fall of Fort Dearborn and the destruction of the garrison was apparently but a matter of time.

For four years the charred and blackened ruins of the fort remained, and the bodies of the slain lay unburied where they fell.

The war raged along the Canadian border for a time with varying success, until at last the British flag was driven from the lakes. Then came peace, and in 1816 it was ordered that Fort Dearborn should be rebuilt. In July of that year, Captain Hezekiah Bradley, with two companies of infantry, arrived at the Chicago River. He built a fort on the site of the former one, somewhat larger and on a different plan. The remains of the victims of the massacre were then gathered and buried.

The same year John Kinzie returned with his family and again occupied his deserted home. Other settlers came straggling along, the Indian Agency was resumed, and soon the lake shore and the river showed signs of activity and life. The familiar forms of the friendly chiefs were seen around the homes and firesides of their friends, and many were the hours that were passed in recounting the tragical scenes through which they had passed, since that fatal 15th of August four years before. All had suffered, for war possesses no discriminating hand. The village of Black Partridge had been destroyed in a single day, and his people killed or scattered. The subsequent life of the settlers was quiet and unvaried. Cultivation of the soil furnished them with the necessaries of life, and the abundance of game added a variety that many an eastern table might have envied. A thrifty bartering of the surplus of products with the occasional vessels that came for furs, supplied other wants, and thus days on the frontier passed away.

The year 1816 was also the year of the treaty of St. Louis, whereby the Ottawas and Chippewas ceded to the United States the lands surrounding the head of Lake Michigan, ten miles north and ten miles south of the mouth of the Chicago Creek, and back to the Kankakee, Illinois and Fox rivers. The fort, as rebuilt, consisted of a square stockade inclosing barracks, quarters for the officers, magazine and provision-store, and was defended by bastions at the northwest and south-

east angles. The block-house was in the southwest corner. The officers' quarters were on the west side and the soldiers' barracks on the east side. It had two gates, one on the north and the other on the south side. A garrison was stationed at the fort, under various commanders, until 1823, when it was ordered to be evacuated. The frontier line had moved westward to the Mississippi, and a garrison at Chicago was not considered necessary. During these years the officers in command were as follows: 1816 to 1817, Captain Hezekiah Bradley; 1817 to 1820, Major Daniel Baker; 1820 to 1821, Captain Hezekiah Bradley; 1821, Major Alexander Cummings; 1821 to 1823, Lieutenant-Colonel John McNeil; 1823, Captain John Greene.

In October, 1828, a garrison was again stationed at Chicago, under the command of Major John Fowle; First-Lieutenant David Hunter (subsequently General). The troops remained until May, 1831, when they were withdrawn. But the time came when the affrighted settlers sought refuge in the fort. In 1832 Black Hawk and his warriors commenced hostilities, which will be found described in later pages of this work. In June the fort was once more garrisoned, Major William Whistler being assigned to the command. This officer had helped his father in the building of the first Fort Dearborn, and now after twenty-nine years of absence returned to be the commander of the second fort.

On the 8th of July, 1832, General Scott, with troops, arrived in a steamer off Fort Dearborn.*

In May, 1833, Major Whistler was succeeded in command by Major John Fowle, who, however, remained but about one month, when he was succeeded by Major DeLafayette Wilcox, who commanded until December 18, 1833, and again from September 16, 1835, to August 1, 1836. Major John Bendu, Major John Greene and Captain and Brevet-Major Joseph Plympton were in command at various times, until December 29, 1836, when the troops were permanently withdrawn, under the following order:

"The troops stationed at Fort Dearborn, Chicago, will immediately proceed to Fort Howard, and join the garrison at that post. Such public property as may be left at Fort Dearborn will remain in charge of Brevet-Major Plympton, of the 5th Infantry, who will continue in command of the post until otherwise instructed."

And so the last morning and evening salute was fired; the last sentinel withdrawn, the last soldier marched out, and Fort Dearborn as a military post ceased to be.

AFTER THE MASSACRE.

In the year 1812, as before stated, there were five houses at Chicago, besides the fort and building attached to it. Of these, four were occupied by the families of Kinzie, Ouilmette, Burns and Lee. The fifth was on the Lee farm, on the South Branch. It has often been stated that all the houses in Chicago, except Mr. Kinzie's, were destroyed in 1812, by the Indians, but probably no buildings were destroyed except the fort and agency house.

The house of Ouilmette was occupied by himself and family, who remained in Chicago. The "Burns House" was afterward occupied by Mr. Jouett, when he was Indian Agent at Chicago, in 1817. The cabin on the Lee farm was fitted up and used as a trading-house by John Crafts, and the house of Mr. Lee near the fort, on the lake shore, was evidently sold by his widow to Jean Baptiste Beaubien, who bought "of the rightful owner thereof," a "house and piece of cultivated ground" in

that exact locality in 1812. Mrs. Lee escaped the massacre, and with her infant child was carried captive to the village of Black Partridge. She was subsequently ransomed by M. DuPin, a French trader, became his wife, and lived in the Kinzie house during the absence of the family.

JEAN BAPTISTE BEAUBIEN, who may be considered the second permanent settler of Chicago, first visited the place in 1804, but did not purchase property till the year 1812, some time after the massacre. He then bought "of the rightful owner thereof"* a house or cabin south of the ruins of the fort and near the lake shore, which had been standing there since 1804.† Here he resided when in Chicago, and although frequently absent at his trading-houses in Milwaukee and Green Bay, always considered the cabin in Chicago his home, and the home of his family, until a better house was bought five or six years later.

Jean Baptiste Beaubien was, at the time he settled at Chicago, the third of that name in America. His grandfather, Jean Baptiste Beaubien, emigrated from France at an early day and settled on the St. Lawrence. The home of the second generation of American Beaubiens was Detroit, where lived Jean Baptiste, jr., Joseph, Jean, Marie, Lambert, Antoine, Genevieve, Marion and Susan. The names of two of these brothers (Jean Baptiste and Lambert) appear in a list of the members of a company of Detroit citizens, who, under the lead of General Cass, made a raid in 1814 upon the hostile Indians in the vicinity. The names of three of the Mel-drums, prominent traders of Detroit and Mackinaw, also appear. Joseph Beaubien was the father of Jean Baptiste Beaubien of Chicago, who was born in the year 1780, at Detroit. When a young man he pushed out into the Michigan woods, and became a clerk for Wm. Bailly, a fur-trader, on Grand River. Through Bailly's instruction and help Mr. Beaubien acquired the rudiments of an education, which, supplemented by native shrewdness and vivacity, made him quite superior to the ordinary French traders of the day. He married, for his first bride, Mah-naw-bun-no-quah, an Ottawa woman, who became the mother of his two sons, Charles Henry and Madore. He was settled as a trader in Milwaukee as early as 1800, and until 1818 had a trading-house there. As before stated, he came to Chicago and bought the cabin and cultivated field south of the old fort in 1812. During that year he married, for his second wife, Josette LaFramboise, daughter of Francis LaFramboise,‡ an influential French trader then living on the

* Affidavit of Madore Beaubien.

† Captain Thomas G. Anderson, who came to Mackinaw in the spring of 1800, and was for many years engaged in trade with the Indians of the Northwest, states in his "Personal Narrative," published in Vol. IX, Wis. His. Coll., that his first winter (1800-1801) was spent on the Mississippi, near the present site of Quincy, Ill.; his second (1801-1802) among the Iowas on the Des Moines, and his third (1802-1803) among the Winnebagoes of Rock River. Toward the close of 1803 he started a trading-house at "Millwackie," having LaFramboise and LeClaire for neighbors. Here he remained until the spring of 1806. He says: "During my second year at Min-na-wack, or Mill-wackie (1804-1805) Captain Whistler, with his company of American soldiers, came to take possession of Chicago. At this time there were no buildings there, except a few dilapidated log huts, covered with bark. Captain Whistler had selected one of these as a temporary, though miserable, residence for his family, his officers and men being under canvas. On being informed of his arrival, I felt it my duty to pay my respects to the authority so much required in the country. On the morrow I mounted Kee-ge-kaw, or Swift-Goer, and the next day I was invited to dine with the captain. On going to the house, the outer door opening into the dining-room, I found the table spread, the family and guests seated, consisting of several ladies, as jolly as kittens."

‡ Probably a son of either Alexander or Francis LaFramboise, traders of Mackinaw and Milwaukee. As early as 1795 Alexander LaFramboise, of Mackinaw, established a house at the mouth of the Milwaukee River. After it was well established he returned to Mackinaw and sent his brother Francis to take charge of the Milwaukee house. The latter had some trouble with one of the neighboring chiefs, whose hostility, added to his own mismanagement, brought the house, and with it his brother Alexander, to ruin. Francis LaFramboise was afterwards murdered at a trading-house which he established among the Winnebagoes, in what is now central Wisconsin, and his business fell into the hands of his widow, Madeline LaFramboise, who, with headquarters at Mackinaw, managed it with prudence and great success. The children of Francis, who were well grown when he lived in Milwaukee, are mentioned in the early history of that city, as Claude, Alexis and LaFortune. The Chicago LaFram-

* See narrative of Captain Augustus Walker.

south side of the river, not far from Beaubien's place. In 1815, a short time before the rebuilding of the fort, an army contractor named Dean, built a house on the lake shore, at the mouth of the Chicago River, near where is now the foot of Randolph Street. In 1817, Mr. Beaubien purchased this house, which was a low, gloomy building of five rooms, for \$1,000—a large sum for those days. After this purchase he lived in the Dean house for several years, his son Alexander being born there. He used the old cabin after this for a barn.*

In the fall of 1818, he was appointed Chicago agent of the American Fur Company, and built a small trading-house near his residence.

In 1823 the fort was evacuated, and remained for several years without a garrison. The U. S. Factory-house, just outside the south wall, was sold to the American Fur Company, and again sold by the company to Mr. Beaubien for \$500. He moved into this building, and resided there until he left Chicago for his farm on the Desplaines, in or about the year 1840. During the winter of 1831-32, Mr. Beaubien was president of the village Debating Society, the meetings being held within the fort. It is said the presiding officer filled his responsible position with "much efficiency and dignity." During the Black Hawk troubles, he led a party of valiant Chicagoans to the scene of anticipated warfare, as related in the history of that war in another chapter. Two years later when the militia of Cook County was organized, he was elected its first colonel, at the famous meeting at "Laughton's Tavern," when "The Punch Bowl of Ogden Avenue" sparkled with good cheer, and the hearts of the lively crowd with fun and jollity.

THE BEAUBIEN CLAIM.—Colonel Beaubien made two pre-emption claims for the land upon which he had resided since the rebuilding of the fort, which were rejected. Finally in May, 1835, he entered at the land office in Chicago, of which Edmund D. Taylor was Receiver, and James Whitlock Register, a pre-emption claim to the southwest fractional quarter of Section 10, Township 39, Range 14 east, the quarter-section upon which he resided. After consulting the United States District Attorney for Illinois and Hon. Sidney Breese, afterward Judge of the Supreme Court of the State, the officials of the land-office allowed his claim, and Colonel Beaubien became the purchaser of a fraction over seventy-five acres of land in what was known as the "Fort Dearborn Reservation," for the sum of \$94.61. Payment was made, entry recorded and certificates and receipts delivered to Mr. Beaubien. The following year 1836, Murray McConnell, a lawyer of some ability residing at Jacksonville, Ill., to whom Mr. Beaubien had conveyed a portion of this land, brought an action of ejectment against Colonel DeLafayette Wilcox, then in charge of United States property at Fort Dearborn, which stood on a portion of the land in question. This suit was entitled "John Jackson ex dem. Murray McConnell v. DeLafayette Wilcox," and was brought before Judge Thomas Ford of the Cook County

boise came to this place from Milwaukee, and was doubtless the son of one of these brothers. The family moved to the place called "Hardscrabble," and lived there many years; Francis LaFramboise or his sons being tax-payers in 1825 and 1826."

* The old cabin must have come to its end in the cholera summer of 1832. Captain A. Walker, commander of the steamer "Sheldon Thompson," which arrived at Chicago with a part of General Scott's troops on the 10th of July of that year, says in a letter published in the Chicago Democrat in 1861: "The number of buildings at that time (1832) where your populous city now stands, was but five, three of which were log tenements—one of them, without a roof, used as a stable. We remained four days after landing the troops, procuring fuel for the homeward voyage, etc. The only means of obtaining anything for fuel was to purchase the roofless log-building used as a stable. That, together with the rail fence enclosing a field of some three acres near by, was sufficient to enable us to reach Mackinaw. Being drawn to the beach and prepared for use, it was hoisted on board by the crew, which operation occupied most of four days to accomplish."

Circuit Court, at the October term of 1836. The suit was popularly known as "the Beaubien claim."

The property involved, as before stated, was what was then known as the "Fort Dearborn Reservation," now Fort Dearborn Addition, and was by Government survey the southwest fractional quarter of Section 10, Township 39, North Range 14, East of the Third principal meridian, in Illinois, containing 75.69 acres. Colonel Wilcox was defended by David J. Baker, United States District Attorney for Illinois. Waiving any right that may have arisen from the purchase and occupation of a certain claim of land at an earlier date by Colonel Beaubien, his attorney based his case on the purchase made by him from John Dean, an army contractor or sutler, in 1817, of a house near the fort, and not far from his former residence, and for which, with its field and garden, he claimed to have paid \$1,000. The land in question was not surveyed, and was therefore not open to pre-emption until 1821. In 1822 the United States Factory at Chicago was finally closed by Government, and during 1823, the building was sold by order of the Secretary of the Treasury to Wm. Whiting, who resold it to the American Fur Company. Mr. Beaubien bought it of this company for \$500, and moved into it with his family, thus becoming by right of purchase and occupation the owner of all there was in the quarter-section on which he lived, except the fort and its immediate enclosure, still in possession of the Government. In 1824 the Commissioner of the General Land Office, at the request of the Secretary of War, "set apart" the whole of Section 10 for military uses. In 1831 the heirs of John Kinzie claimed pre-emption of the fractional quarter of Section 10, north of the river, at the nearest land-office, at Palestine, in Crawford County, which was allowed. Mr. Beaubien made a similar claim for the fractional-quarter-section south of the river, which was refused. In 1834 he again entered claim at the land-office at Danville, Vermillion County, which was again rejected, and finally in 1835, as before related, he presented his claim at the Chicago land office, which was allowed, and he bought the Fort Dearborn Reservation, at the regular rate of \$1.25 per acre, and obtained his certificate, which was dated May 28, and recorded June 26. When the suit was brought into the Circuit Court at the fall term of 1836, Judge Ford decided that Beaubien's claim was valid, but could not be enforced until he procured a patent from Washington; or, in technical terms, that "although Beaubien's claim is legal in every respect, yet he cannot assert his right against the United States in this form; a writ of mandamus against the proper officer for the patent is the proper remedy." The judgment of the Circuit Court was approved by the Supreme Court of the State, and in 1839 an effort was made in the House of Representatives at Washington, to establish Beaubien's title in accordance with the decision of the State courts. But the Solicitor of the Treasury, Henry D. Gilpin, informed the committee of the House in charge of the claim that the Government lawyers at Chicago—Butterfield, Collins and Morris—had drawn up a bill charging the local land-office with collusion in giving the original certificate to Beaubien in 1835. This information killed the hopes of the claimant in the House. Meanwhile the law suit had been carried into the Supreme Court of the United States, and Francis Peyton, attorney for Beaubien, on the last day of February, 1839, applied to the Government for certain maps which he deemed important, if not essential, to the support of his client's claim. They were not furnished, and in March, 1839, the judgment of the State Courts

was reversed.* The Secretary of War ordered the land to be divided into blocks and lots, constituting the Fort Dearborn Addition to the city of Chicago, and to be sold to the highest bidder, except block one, and fourteen lots in block two, and blocks four and five reserved to the Government. The Government was censured by the opposition journal in Chicago for its "indecent haste" in advertising in April, almost before the decision of the Court had placed on record the sale of the disputed land on June 10, 1839. It was understood that Colonel Beaubien desired to secure six lots in block five; and by general consent the citizens declined to bid against him. This kindness was, however, neutralized by James H. Collins, one of the attorneys for the Government, who secured five of the six, Beaubien obtaining only one lot (lot 11, block five), for \$225; an advance of fourteen dollars on the highest price paid by Collins. This sale took place June 20, 1839. On the morning of the 21st an indignation meeting was held by the citizens, at which Wm. H. Brown was president, and John H. Kinzie and James Wadsworth were secretaries. Resolutions were passed denouncing Collins and expressing the regret that the Government should find it necessary to be so ungenerous to an old and respected citizen, who had been of great service to the early settlers of Chicago in their relations with the Indians; but all this could not change court decisions. June 13, 1840, the United States filed a bill in the Circuit Court for Illinois, to set aside the receipt and certificate given to Beaubien in 1835. The Court decreed that he should deliver them up for cancellation, and they were duly surrendered by Beaubien, accompanied with his receipt dated December 18, 1840, for the original purchase money then refunded. In 1878, Wm. H. Standish, a lawyer of Chicago, again brought the case before Congress, "explaining the Beaubien title to the Lake front lands, etc." He went over the points above given, re-enforcing them by affidavits of old residents, including one of E. D. Taylor, the Receiver in 1835, in which he states that he and his colleague, James Whitlock, Register, took the advice of David Jewett Baker, at that time United States Attorney for Illinois, who declared that "the law made it their duty to let said Colonel Beaubien pre-empt this land, whether it hurt or benefited the United States Government," and that they received the same advice from the Hon. Sidney Breese, who "even at that day enjoyed the reputation of being an eminent lawyer." The strong points of the claim were that from August 15, 1812, to July, 1816, the land in question could scarcely be said to be a post of any sort in the actual possession of the United States, having neither Government buildings, nor soldiers nor agents there; that it had not been formally reserved for military purposes until 1824, that it was therefore subject to pre-emption by Beaubien under the law of 1813, and that it should have been as open for pre-emption to him on the south side as it was to R. A. Kinzie on the north side of the river. To which it was answered by Senator Bayard, from the committee of Congress on private land claims, May 31, 1878; that there was a reservation and appropriation for Government uses as shown by the actual occupation from 1804 to 1812; that the non-occupation from 1812 to 1816 "was caused by the compulsion of war," and "a citizen could not take advantages of the misfortunes of his Government." This bounty of pre-emption, it cannot be supposed was designed to be extended to the sacrifice of public establishments or of great public interests (13 Peters, 498). "For these and other considerations your committee," says the Senator, "report

adversely upon the bill (No. 773) and recommend that it be indefinitely postponed." The apparent similarity of the interest involved with that of the Kinzie family could furnish no solid basis for a claim against the Government, as pre-emption has been decided by the courts to be a matter of bounty on its part and could not be turned into a right against it, on the part of a citizen. Moreover, the Government had need, or use, for the southern fraction which it was actually occupying when suit was brought, while of the northern fraction it had never made any use. Had the Beaubien claimants awaited the abandonment of the land by the Government it is not improbable that they would have succeeded. Indeed, it was rumored that the patent had been actually signed in favor of Beaubien when the news of the suit aroused the indignation of President Jackson, who in his impulsive wrath tore it into fragments. The story is somewhat open to suspicion, being such as the known character of the President would have given rise to, without any foundation in fact. Eventually Congress donated to Beaubien four or five lots in the Fort Dearborn Addition as a compensation for his original outlay; but the effort to prosecute the claim before Congress in 1878, was, as has been shown, resisted with so much firmness as to leave but little hope of its successful revival at any future time.

The Fort Dearborn Addition was sold by the Government under Act of Congress of March 3, 1819. There was also some abortive agitation about obtaining the contested land for county purposes, in virtue of an act of Congress of May 26, 1824, granting any unsold public lands at \$1.25 an acre for such purposes. But it was too late, and the Beaubien Claim went into the real estate market, as stated, under the auspices of the General Government.

The homestead of Colonel Beaubien was where now is the southwest corner of South Water Street and Michigan Avenue. This was bid in at the land sale in June, 1839, by James H. Collins, for \$1,049, and, in the words of Madore, son of the old pioneer, the "very house his father was inhabiting, in which his family had been born and reared, and around which were the graves of his departed children, was sold from him in his old age. No wonder the citizens of Chicago held an indignation meeting."

Colonel Beaubien owned a farm near the place, called "Hardscrabble," to which he removed about the year 1840, and where his wife died in September, 1845. In 1850 he was commissioned Brigadier-General of militia. He returned from his farm to Chicago where he married, in 1855, Miss Louise Pinney. In 1858 he removed to Naperville, where he died January 5, 1863.

UNITED STATES INDIAN AGENTS AND FACTORS AT CHICAGO.

When old Fort Dearborn was built in 1803-4, an agency-house, for the use of the United States Indian Agents to be stationed at the post, was erected under the protection of its guns. It was situated a short distance above the fort on the same side of the river, and is described as an old-fashioned log building with a hall in the center, and one large room on each side. Porches extended the whole length of the building, front and rear. The Chicago Agency included the Pottawatomies, Sacs, Foxes and Kickapoos. All negotiations with them, all payments made to them by the United States, all settlements of disputed questions, were through the medium of the Indian Agent.

CHARLES JOUETT, the first Indian Agent at Chi-

* 13 Peters, 498.

ago, arrived and entered upon the duties of his office in 1805. He was a native of Virginia, the youngest of nine children, and was born in 1772. His father shared in Braddock's defeat in 1754, and two of his brothers

C. Jouett

fought in the War of Independence. John Jouett and his four sons were all of remarkable size and strength. Charles was six feet three inches in height and proportionally muscular. He studied law in early manhood, and practised for a short time at Charlottesville, Va. In 1802, he was appointed by President Jefferson Indian Agent at Detroit. January 22, 1803, Mr. Jouett married Miss Eliza Dodemead, of Detroit, who died in 1805, leaving a daughter, born in 1804. April 2, 1805, he was appointed Commissioner "to hold a treaty" with the Wyandotts, Ottawas and other Indians of northwestern Ohio, and what is now southeastern Michigan. The treaty was signed at Fort Industry, on "the Miami of the Lake," now the Maumee, July 4, 1805. The same year he was appointed as Indian Agent at Chicago; and was officially notified, October 26, 1805, that the Sacs, Foxes and Pottawatomies would be thenceforth included in that agency. Early in 1809 he married Miss Susan Randolph Allen, of Clark County, Ky., but born near Williamsburg, Va., in 1786. By her he had one son, born in Chicago in 1809, and there deceased in 1810; and three daughters, born in Kentucky. In 1811* he removed to Mercer County, Ky., where he became a judge in 1812. He was again appointed Indian Agent for Chicago, by President Madison, in 1815, and moved there with his family that year. He is charged with \$1,000 salary as such agent in the national accounts of 1816. The Indian agencies in Illinois were turned over to the Territory of Illinois in 1817, with a proviso that all such accounts should not exceed \$25,000 a year. It may be owing to this change that Mr. Jouett severed his connection with the Indian Department a second time. He, however, signed the Indian treaty of St. Mary's, Ohio, September 17, 1818, as witness, with the title of Indian Agent. This seems to have been his last service in that line; and he soon afterwards returned to Kentucky. At the organization of the Territory of Arkansas, in 1819, he was appointed its Judge; but the climate proved unhealthful, and after a stay of six months, during which he was engaged in establishing the institutions of the new government, he returned to Kentucky. He then settled in Trigg County, of which he remained a resident until his death, May 28, 1834. He enjoyed the friendship and confidence of three Presidents; and was noted for his integrity and fidelity to the trust imposed in him.

Soon after the building of Fort Dearborn, the United States established a Factory at the post, for the purpose of controlling the Indian trade of the vicinity. The Factory system was instituted by the Government from motives of both philanthropy and expediency. It was designed to benefit the Indians by giving them a fair equivalent for their furs in such useful articles as their needs required, and to withhold from them whisky, which was rapidly rendering them not only useless, but dangerous "wards" of Government. It was believed that by dealing fairly and honestly with them, they

would soon learn to consider the United States Factors their friends and benefactors, and gladly transfer their trade from those who first intoxicated and then cheated them, to those who came among them to better their condition. With this motive was also the desire of transferring the immense profits of the Indian trade from private traders or corporations to the United States Treasury. The system eventually proved a failure. The gentlemen sent to the frontier to deal with the Indians, although men of intelligence and integrity, were unacquainted with the nature of those they came to serve, and unequal to the task of competing with old, acute and experienced traders, whom the Indians had learned to trust, and whose influence over them was unbounded. Before the war of 1812, the factories were a partial success, but after peace was declared, and they were re-established in 1816, they proved a complete failure. The American Fur Company, after its re-organization in 1817, swept away both private traders and factories, and enjoyed for a time almost a monopoly of the Northwestern fur trade.

The name of the United States Factor at Chicago, from the time the system was established until 1810, has not been preserved, unless, as seems probable, Charles Jouett was both Indian Agent and Factor.

Matthew Irwin was Factor here from 1810 until the destruction of Fort Dearborn, August 15, 1812, and after the departure of Mr. Jouett, in 1811, probably acted also as Agent. He was the son of Matthew Irwin, Sr., a native of Ireland, who settled in Philadelphia when quite young, and becoming a wealthy merchant assisted the United States Government during the Revolution by loaning it money for carrying on its plans. In September, 1777, he was appointed Quartermaster-General of Pennsylvania, and served in General Armstrong's division, then in the field. During 1778 and 1779 he was engaged in fitting out privateers and ships against the enemy, being appointed a naval agent for the State in the latter year, and commissioner for procuring salt for the public. In 1781 he was Port Warden for Philadelphia; from 1785 served for several years as Recorder of Deeds and Master of Rolls of Philadelphia, and in 1787 was appointed Justice of the Court of Common Pleas. He became bankrupt in the latter part of 1788, partly in consequence of surety debts. The mother of Matthew Irwin, Jr., was a sister of Thomas Mifflin, General in the Revolution and afterwards Governor of Pennsylvania. His oldest brother, Thomas, was United States District Judge of Western Pennsylvania, and another brother was a merchant of Philadelphia. Matthew Irwin, Jr., was born, reared and educated at Philadelphia.

In a written communication, given to Dr. Jedidiah Morse, in 1820, and published in "Morse's Report on Indian Affairs," Major Irwin gives the following statement of the amount of business done while he was Factor at Chicago:

Amount of furs and peltries forwarded to the Superintendent of Indian trade June 30, 1810, and invoiced at	\$ 2,972.56
Amount of drafts on the Secretary of war, in favor of the Superintendent of Indian trade in that year...	1,740.01
Total amount of business done in 1810....	\$ 4,712.57
Amount of furs and peltries forwarded to the Superintendent of Indian trade Sept. 25, 1811,	5,280.50
Amount of drafts on Secretary of War transmitted in favor of the Superintendent of Indian trade,	775.39
Total amount of business done in 1811,	\$ 6,055.89

* He was charged with salary to October 1, 1811; and his successor, Captain Nathan Heald, is charged on same account from July 1, 1811 to August 15, 1812.

Amount of furs and peltries forwarded to the Superintendent of Indian trade July 11, 1812.....	\$ 5,781.91
Amount of drafts transmitted in favor of the Superintendent of Indian trade.....	500.67
Amount of articles sold for cash.....	515.48
Amount of business done in 1812.....	\$ 6,798.06

In May, 1811, Mr. Irwin gave notice to the Secretary of the Treasury of the machinations of the Shawanoe Prophet to incite the Pottawatomies of the Illinois River and surrounding country to hostility against the Government. Mr. Jouett's absence left Mr. Irwin to discharge the duties of Agent and Factor. He again writes on the 10th of March, 1812: "The Chippewa and Ottawa nations, hearing that the Winnebagoes and Pottawatomies are hostilely inclined toward the whites, sent speeches among them, desiring them to change their sentiments and live in peace with the whites;" and again on April 16, 1812: "On the 6th, a party of ten or eleven Indians surrounded a small farm house on Chicago River, and killed two men. The Indians are of the Winnebago tribe." Mr. Irwin must have left Chicago soon after forwarding goods July 11th, or he would hardly have escaped the massacre of the next month. The goods in the factory were distributed among the savages, and the subsequent war put an end, for a time, to the factory system. Mr. Irwin was appointed Assistant Commissary of Purchases in the army May, 1813, and served until June, 1815, when the army was disbanded. The following spring a military post was established at Green Bay, and he was sent there as United States Factor, remaining until the office was discontinued in 1822. Major Irwin married, in 1816, at Uniontown, Penn., Miss Nancy Walker, and his son William, born in 1817, was the first white child of American parents born at Green Bay. On the organization of Brown County, Wis., in 1818, he was appointed by Governor Cass its first Chief Justice and Judge of Probate, serving until September, 1820. Late in 1822 he returned with his family to Philadelphia, and finally settled at Uniontown, Pa., where he was employed as merchant and Postmaster, and where he died about 1845, from the effects of paralysis, at the age of nearly seventy-five years. Major Irwin is described as of a little above medium height, well proportioned, of pleasing deportment, and interesting and popular address.

On the rebuilding of Fort Dearborn in 1816, a factory was again established by Government. Jacob B Varnum, of Massachusetts, was appointed Factor, with a salary of \$1,300. The business was unsatisfactory. In a letter to Major Irwin at Green Bay, dated December 5, 1818, a year and a half after the reorganization of the American Fur Company, Mr. Varnum says:

"The indiscriminate admission of British subjects to trade with the Indians is a matter of pretty general complaint, throughout this section of the country. There are five establishments now within the limits of this agency, headed by British subjects. These, with the large number of American traders, in every part of the country, will effectually check the progress of this factory. I have hardly done a sufficiency of business this season to clear the wages of my interpreter."

The following year he writes to the superintendent of Indian affairs at Washington, evidently believing that a better day was dawning for the factories in consequence of the recent decision of the Attorney-General as to who should be considered American citizens, and granted licenses to trade with the Indians. The decision was, that unless those residing within the jurisdiction of the western ports, at the time they were given up by the British, did absolutely go into court within

the twelve months following the event, and declare themselves American citizens, they could not be considered as such without going through the process of naturalization. The Secretary of War, John C. Calhoun, immediately directed Governor Cass of Michigan Territory to revoke all licenses hitherto granted to persons thus circumstanced, and he, in turn, ordered the several Indian agents accordingly. This order temporarily threw out of employment many traders connected with the American Fur Company, which had retained in its service Canadians formerly British subjects, who had been licensed by the various Indian agents to trade, they claiming the right of citizenship under the provision of Jay's treaty. Following is the letter of Mr. Varnum:

"UNITED STATES FACTORY, CHICAGO, June 20, 1819.
"The exclusion of foreigners from the Indian trade, will, it is believed, justify the extension of the operation of this establishment. This, together with the consideration of the large supply of blankets and cloths now on hand, induces me to recommend a distribution of the goods of this factory among the adjacent villages for trade, to such an extent as will ensure the sale of nearly all by the expiration of the trading season. Such a measure, I am well convinced, will be highly gratifying to the Indians, as a great number by this means will be enabled to supply themselves with goods on more reasonable terms than could otherwise be done; nor do I apprehend any difficulty in effecting it to the advantage of the Government, as gentlemen of unquestionable integrity have already applied for such outfits.
JACOB R. VARNUM."

It may readily be seen that the American Fur Company would not quietly submit to such a diminution of its prerogatives, and measures were immediately taken to prevent the present unpleasant aspect of affairs becoming a permanent fact. Ramsey Crooks and Samuel Abbott hastened to Washington to be present at the session of 1819-20. That their efforts to obtain such terms as they desired for the company in which they were both interested were successful, is shown by the following extracts from a letter written to John J. Astor by Ramsey Crooks,* dated "New York, May, 1820." Mr. Crooks says:

"The new-fangled obnoxious Indian system died a natural death, as the House of Representatives, pleading a press of much more important business, refused to act on the bill from the Senate, and from the interest our friends took in the explanations given by them by Mr. Samuel Abbott, who remained at Washington for the purpose, I have not the smallest doubt, had the bill been brought forward, but the monster would have been strangled. Now that nothing can be effected until Congress meets again, I presume the trade will be for this summer continued under the former regulations; but had Mr. Secretary Calhoun carried his point in getting the proposed new law passed, it is no longer concealed that the first step was to license so few traders that the factories were sure of reviving; another appeal to Congress for the increase of the public trade fund would no doubt have followed; and private trade confined to a limited number of favorites, among whom I hazard but little in saying the American Fur Company would not have been found; because we will not suffer ourselves to be trampled upon with impunity either by the military or any other power, and because others, profiting by our example, have of late shown them their teeth."

The same month that the agent of the American Fur Company wrote thus to his principal, the Factor at Chicago, again discouraged, writes under date of "May 23, 1820":

"The Indians have been induced to come here this season by the facility with which they were enabled to procure whisky. In fact the commerce with them this season has been almost exclusively confined to that article. I will venture to say that out of two hundred barks (Indian boxes containing about forty pounds) of sugar taken, not five have been purchased with any other commodity than whisky. I have not been able to procure a pound of sugar from the Indians, but can get a supply from the traders at ten cents a pound."

The factors, from first to last, attributed the ill suc-

* This letter and others from which extracts are taken, are in the possession of Gurdon S. Hubbard.

cess of the system to the licensing of British traders, brought up in the business, thoroughly conversant with the nature and desires of the Indian, and determined in their opposition to the factories. On the other hand, the private traders and the fur companies affirmed that the system was radically wrong, and that the Indians were equally cheated, and equally well supplied with whisky by the factories as by themselves. Major Irwin says in letters to the Superintendent of Indian Trade, during the years 1817-19 :

" There appears a palpable incongruity in the manner of conducting the Indian trade, the factors are sent to supply the wants of the Indians, and the Indian agents can adopt such measures as to defeat all their plans to that end. It is very certain that the authority vested in them to issue licenses is well calculated to destroy all the benefits that might be expected from the factories; particularly too when they interfere with each other's districts. The truth is, the factories required to be well supported before they can be of any utility; one of the first measures to which should be the prohibition to grant licenses where the factory can supply the necessities of the Indians."

On July 5, 1821, Colonel McKenney writes from the " Indian Trade Office " to Major Irwin :

" Sir:—I have the honor respectfully to represent, that for the three years last past, the two factories on the lakes, one at Chicago, the other at Green Bay, have been in a measure useless to the Indians, and, in a pecuniary point of view, to the Government also. This state of things is owing entirely to the unsuitable provisions which exist for the regulation of the trade. . . The continuation of the same inactivity which has hitherto characterized the business at these two factories, promising to make inroads upon the fund allotted for the trade, I do not feel myself authorized further to delay a decision on the subject, and recommend it accordingly for the Executive approval; it is to break up and discontinue the two factories located at Chicago and Green Bay."

In opposition to the views of the Government Factors at Chicago and Green Bay, may be given the views of two gentlemen who visited them, the one in 1820 the other in 1822. Dr. Jedidiah Morse in his report on Indian affairs, says :

" An intelligent gentleman, who had just visited Chicago, informed me (July, 1820), that there were goods belonging to Government, at that place, to the value of \$20,000, which cost more at Georgetown than the traders ask for their goods at the post of delivery; and that the goods are inferior in quality, and selected with less judgment than those of the traders; that only twenty-five dollars' worth of furs was sold by the Factor at Chicago; that the Government makes no profit on its capital, and pays the superintendents, factors, sub-factors, and their clerks out of their funds. ' The fact,' he added, ' that the Government sells goods at cost and carriage, and pay their own agents; and that yet the Indians prefer dealing with the traders, is pretty conclusive evidence that the traders have not been exorbitant in the prices of their goods, nor have maltreated the Indians, who have had liberty to trade with one or the other as they pleased. It is evident,' he said, ' that by some means, the Indians had not confidence in the Government, as fair and upright in their trade.' Nothing was said or intimated on this subject, by the gentleman above alluded to, which in the remotest degree impeached the character or conduct of any of the factors. They appear as far as I have knowledge of them, to be upright men, and faithfully and intelligently to have discharged the duties of their office. This want of confidence in the Government, on part of the Indians, I have witnessed with solicitude in many other instances, and it has often been expressed by the Indians in my interviews with them. Whether this prejudice has arisen from foreign influence, exerted to answer particular purposes, or from that of the traders, as is alleged in the preceding communications (from the factors at Chicago and Green Bay), or has been occasioned by the manner in which their lands have been obtained from them by the Government; or by the inferiority in quality and high prices of the goods which have been offered them in barter, at the Government factories, or delivered to them in payment of their annuities, as other confidently assert, it is not for me to decide. It is my opinion, however, from all I could learn, that each of these causes has had more or less influence in creating and fixing this unhappy prejudice in their minds."

General Albert G. Ellis, who was the first editor of the Green Bay Intelligencer, the pioneer newspaper of

Wisconsin, describes, in his " Recollections,"* Green Bay as it was on his arrival in 1822. Speaking of the United States factories, he says :

" One had been placed at Green Bay, and Major Matthew Irwin, of Pennsylvania, appointed to the office. We found him at Fort Howard in 1822, the sole occupant of the post, in his stone building and living under the same roof with his family, the troops having been removed two years before to Camp Smith. Major Irwin was a gentleman of intelligence, culture and integrity, and as well fitted for the trust as any other citizen totally unacquainted with the Indian country, its trade and inhabitants, could be—that is, not fitted at all; and, moreover, being furnished by the Government with goods unsuited to the Indian trade, and coming in competing contact with life-long, experienced, astute traders, of course the effort to gain confidence, trust and influence with the Indians was a total failure. His sleazy woolen blankets, cheap calico, and, worst of all, his poor, unserviceable guns, were all rejected by the Indians, and during four years' trade he did not secure fifty dollars' worth of peltries; but the natives, as well as French inhabitants, made quantities of maple sugar—this was not current at New York for payment of goods, as peltries were, and not so much cared for by the old traders. The Indians resorted with it to the United States Factor, Major Irwin, who bought large quantities of it, and had many thousand pounds in store at the time of our arrival in 1822. . . That fall Major Irwin closed up most of the business, shipped his sugar to Detroit, turned over the concern to a young gentleman succeeding him by the name of Ringgold, and left the country. Messrs. Heron and Whitney, sutlers to the troops, bought Major Irwin's house, and the old factory was converted into a hospital building for the sick of the garrison."

The services of Mr. Varnum as Factor at Chicago ended the same year. After the order for the discontinuance of the factory was issued, A. B. Lindsey, of Connecticut, was sent to Chicago to wind up its affairs. While living in Chicago, Mr. Varnum boarded in the old John Dean house, with J. B. Beaubien, then its owner. He is spoken of by Major Irwin as a gentleman of well-known integrity. After the goods belonging to the United States remaining in the factory had been disposed of, the building, which was just south of the fort, was bought by a Mr. Whiting, probably Captain Henry Whiting, an ex-army officer, then sutler of the fort.† It was sold by Mr. Whiting to the American Fur Company, and by that company to Jean Baptiste Beaubien, whose residence it remained until 1839.

During the continuance of the factory, from the rebuilding of the fort in 1816, to its final abandonment in 1822-'23, there were two Indian Agents. Charles Jouett was reappointed in 1815, came to Chicago in 1816, and remained two years or more. His residence, and the Agency-house for that period, was a log building of two large rooms, about twenty steps from the river bank, on the north side, according to the testimony of his daughter, Mrs. Susan M. Callis, who came to the place with her parents in 1816‡ and remained here several years. She also says that this house, which was west of John Kinzie's, was built before the massacre of 1812,§ and that between it and the Kinzie house was another, occupied in 1816 by a Mr. Bridges. She mentions also an encounter which her father had with Main Poc, a furious Indian, the old war-chief of the Pottawatomies.

In a letter written by this lady to Hon. John Went-

* Wis. Hist. Coll., vol. VII.

† James E. Heron and Henry Whiting were sutlers at Fort Dearborn in 1821-'22, and were both, in 1823, at Fort Howard, Green Bay, with Captain Wm. Whistler. Heron had been Assistant Commissary of Purchases in the army from September, 1813, until disbanded, June 1, 1821; then sutler at Mackinac for a short time—at Chicago in 1822, at Fort Howard in 1823, and subsequently at Fort Leavenworth and Fort Jesup until 1843.

‡ Henry Whiting, of New York, was commissioned Second Lieutenant of the 23d Infantry, May 1, 1812, First Lieutenant in June, 1813; wounded in the battle of Niagara, July 25, 1814; Captain in September, 1814; retained on re-arrangement of the army on peace establishment, May, 1815, as First Lieutenant of 2d Infantry with brevet; disbanded June, 1821; sutler at Chicago in 1821-'22, and subsequently at Green Bay.

§ From the description supposed to be the old " Burns House," mentioned in " Waubun."

¶ " Chicago Antiquities," p. 103.

worth, she mentions other incidents and persons of early Chicago. She says :

"My mother's oldest child was Charles Lalime Jouett, who was born in Chicago, October 26, 1809, and died there September 8, 1810. It has been said that he was the first white child born in Chicago.* There was a Government Factor there named Jacob B. Varnum, who had a child born there.† Possibly this child was born before my brother. My mother's nurse was a half-breed French and Indian woman, who was bound to her until she was eighteen years of age. Her name was Madaline Alscum or Olscum. She married the day we left Chicago for the last time, Joseph Ozier, a soldier from the garrison. I remember James Riley,‡ who acted as father's interpreter. My impression is that Dr. Alexander Wolcott was father's successor as Indian Agent. Father resigned the agency at Chicago about 1818-19 and returned to Kentucky. There was a Dr. McMahon stationed at Chicago. There was a Dr. John Gale there from New Hampshire, who left before we did, and who died at Fort Armstrong, July 27, 1830. I remember the Indian chief, 'White Dog,' who pretended he could not speak English. But he got drunk one day, and we then found out that he could speak it very well. I also remember a tall and powerful Indian chief, 'White Elk,' who was pointed out to me as the man who killed the children of Mrs. Susan Corbin at the massacre of 1812.§ I remember a half-breed Indian who was in the employ of John Kinzie, named Perish LeClerc, who used to boast of his Pottawatomie descent. I also remember Major Daniel Baker, who had command at Fort Dearborn. I frequently saw an Indian called 'Blue Earth,' because he always painted his face with a sort of blue clay, which gave him a ghastly appearance. He kept principally by himself, and it was hinted he was a white man in disguise. He was out of health; and I once saw the Indians dance what was called the 'medicine dance,' around him, in hopes of effecting a cure. There were two lieutenants in the garrison, whose names do not appear in any of your Chicago publications. They were married about the same time. They visited us frequently. One was Lieutenant Brooks.¶ The other was Lieutenant James Hackley, Jr., who married Rebekah Wells, of Fort Wayne, daughter of Captain William Wells, who was killed in the Chicago massacre of 1812, and for whom your street was named.¶¶ When my mother first went to Chicago it was in midwinter, and she went all the way on horseback. This journey she often described as her bridal tour. Father had as guides a half-breed Indian named Robinson, and a negro named Joseph Battles. In traveling through Illinois they found the snow very deep and drifted on the prairies. They frequently heard the cries of panthers at night, who were deterred from them by their camp-fires. The Indians were always very kind, and mother never felt any fear. But she became tired of living so far from all society, and persuaded father to move back to Kentucky. He lived on a farm near Harrodsburg, Ky., where all his children, except the one at Detroit and the one at Chicago, were born. As he lived in Chicago when my brother died in (September) 1810, and at Harrodsburg the 8th of February, 1811, when my sister Caroline was born, you can judge when he left Chicago the first time. Mother often congratulated herself that she left Chicago in time to escape the massacre. . . . The Agency-house where we lived was on the north side of the river, nearly opposite the garrison, and John Kinzie, Sr., lived near by on the same side. Mother always said that the little river (as it then was) was lined all along its banks with wild onions, and took its name Chicago therefrom; Chicago meaning, in the original Indian tongue, 'onion.'"

DR. ALEXANDER WOLCOTT succeeded Mr. Jouett as Indian Agent in 1820, and held the position until his death in 1830. He was the son of Alexander and Lucy (Waldo) Wolcott, and was born at East Windsor, Conn., February 14, 1790. His father, who graduated at Yale in 1778, and settled at Windsor as an attorney, was a man of distinguished ability and standing. Alex-

* Two children had been born to Lieutenant William Whistler, and two to John Kinzie, in Chicago, prior to 1809.

† Subsequent to 1816.

‡ James Riley, and his brothers Peter and John, were sons of Judge Riley, of Schenectady, who was at one time a trader with the Indians at Saginaw. The boys were half-breeds, the mother being of the Indian race. ("Chicago Antiquities," p. 106.)

§ See "Waubun," p. 181. "Chicago Antiquities," p. 105. Mr. Hurlbut quotes from a letter of Mrs. Callis: "The house in which my father lived was built before the massacre of 1812. I know this from the fact that 'White Elk,' an Indian chief, and the tallest I ever saw, was pointed out to me as the savage that dashed out the brains of the children of Sukey Corbin against the side of this very house."

¶ Lieutenant Edward E. Brooks, of Kentucky. He was made Captain and transferred to Detroit about 1819. He resigned June 6, 1827. His wife was the daughter of Chief Justice May, of Michigan, and one of his daughters married H. M. School, of Chicago. Mr. Brooks died in Detroit.

¶¶ Lieutenant Hackley was promoted to a captaincy and resigned December 31, 1818.

ander Wolcott, Jr., graduated at Yale in the class of 1809. He was the third of four children. His oldest sister, Frances, married for her second husband, Arthur W. Magill of Middletown, Conn., to which place the Wolcott family had removed. Henry, the second child, was appointed Collector of the Port of Middletown by President Adams in 1828. He removed to Chicago in 1836, and died there April 5, 1846. Henry was the father of Alexander Wolcott, long the Chicago City Surveyor. Alexander, and Mary Ann, a younger sister, were the third and fourth children. After Dr. Wolcott's arrival here he finished and resided in a building commenced during Judge Jouett's incumbency. This was the agency-house on the north side of the river, near where now is the foot of North State Street, and which was facetiously called "Cobweb Castle," during his residence there as a bachelor,—probably from the noticeable accumulation of those terrors to good housekeepers during those years. On the 20th of July, 1823, he was married at the residence of John Kinzie, by John Hamlin, J. P. of Fulton County, to Ellen Marion, eldest daughter of John and Eleanor Kinzie. In 1820 Dr. Wolcott accompanied the expedition under Governor Cass from Detroit through the upper lakes to the sources of the Mississippi. The party left Detroit on the 1st of May, performed the journey, and returned to Lake Michigan the latter part of August. At Green Bay the party divided, some proceeding to Mackinac, and a part—among whom were Governor Cass, Dr. Wolcott, Major Robert Forsyth and Henry R. Schoolcraft,—coming down the western shore of the lake to Chicago, where they arrived August 29, and remained until the 31st; when Governor Cass, accompanied by his secretary, Major Forsyth, Lieutenant Mackay, John Kinzie and others, took the old Indian trail to Detroit, and Schoolcraft and Captain Douglas the route by the eastern shore of the lake to Mackinac. Mr. Schoolcraft speaks of Dr. Wolcott as a gentleman "commanding respect by his manners, judgment and intelligence." On the 29th of August, 1821, a treaty was concluded with the Indians at Chicago, which was signed in the presence of Alexander Wolcott, Jr., Indian Agent, Jacob B. Varnum, Factor, and John Kinzie, Sub-Agent. In May, 1823, the garrison was withdrawn from Fort Dearborn and the post and property left in charge of Dr. Wolcott, who moved into one of the houses erected for officers' quarters, and there resided until the fort was again occupied by United States troops in August, 1828. He was appointed Justice of the Peace for Peoria County December 26, 1827, and is recorded as judge and voter at the special election for justice of the peace and constable, held at the house of James Kinzie in the Chicago Precinct, July 24, 1830. When troops arrived to re-garrison Fort Dearborn in 1828, Dr. Wolcott and family returned to their old home in the agency-house, where he died late in the fall of 1830. By his will, dated October 18, 1830, he left all his property to his wife Eleanor* M. Wolcott and his daughter Mary Ann. The latter died in infancy, and his widow became his sole surviving heir.

Mrs. Wolcott, with her mother and half-sister, Mrs. Helm, remained at the agency-house until the spring of 1831. The order having been given for the evacuation of Fort Dearborn by the troops, the household goods of Mrs. Wolcott were sold by auction, and she accompanied her sister, Mrs. Lieutenant David Hunter (now Mrs. General Hunter) to Fort Howard, Green Bay. Mrs. John Kinzie and Mrs. Helm went to Fort Winne-

* Spelled Eleanor, both in the will of Dr. Wolcott, and in the record of her marriage in the "Wolcott Memorial." She signed her name Ellen M.

bago at the same time, with John H. Kinzie and wife, who had been in Chicago on a visit. The following extracts from a letter written in Chicago about 1821-22 by Dr. Wolcott to Governor Cass, in reply to certain queries of the latter in regard to the language and condition of the Pottawatomies, are given to show the sprightly and agreeable manner in which this early settler of Chicago expressed his ideas, and as revealing the pleasant humor of the man :*

"Dear Governor:—Thank God, I can at last in part disburthen my conscience of a crime that has long laid heavy upon it, the crime of neglecting to comply with your repeated requests respecting your queries. Many a time and oft, when I cast a rueful glance over that interminable string of 'Inquiries,' which could not be properly answered by a philosopher, till after at least ten years' study 'with all appliances and means to boot,' I have wished them at the bottom of the Red Sea, along with so many other wicked spirits, whose only object on earth was to disturb the repose of quiet, lazy people like myself. Could the necessary knowledge be acquired by the use of any kind of machinery, could it be accomplished by the use of steam it would be a matter of no difficulty. It is only to buy an engine, and the thing is done. But to find a person well acquainted with the Indian tongue who knows anything about any other language on the face of the earth, or who can be made to comprehend its most simple principles, is a pretty impossible sort of an affair. Nevertheless, I have endeavored to do a little something to quiet certain stirrings and twitchings somewhere about the region of the pericardium, which have for a long time troubled me exceedingly; more especially whenever my eyes happened to rest upon a little ugly-looking book, full of notes of interrogation. That I have done so little, and that I have done that little so imperfectly, is only to be excused from the consideration that I have worked without tools. I have been in the situation, and met with the success, you will perhaps say, of a man who should attempt to polish a diamond with a wood rasp, or fashion a watch with a sledge hammer. That I have delayed it so long cannot be excused at all, unless you will accept of the true plea, that I was deterred by the hopelessness of the task, and you have full leave to laugh when I tell you that the confusion and want of arrangement in the papers arise from want of time. But it is literally true. Since I commenced my inquiries, some weeks ago, respecting the construction of the language, I have kept myself at it night and day; but I found such amazing difficulty at every step that my progress has been but slow, and it is now too late to make any attempt at arrangement, as Captain Whiting† is ready to start. All, but what relates to language, has been written for a long time, and a meagre account it is. But the truth is, that of all the tribes and nations that people this globe, the Pottawatomies have the least that is peculiar in their manners and customs, or interesting in their history. The only very prominent trait in their character is their universal and insatiable love of ardent spirits, and that is common to all tribes who are so lucky as to live in a state of frequent intercourse with Christian men.‡ I suppose by this time you will have another book of 'queries' under way, with which you will favor your friends in due time. Should you be desirous that I should make farther inquiries, please to signify it, and I promise a more prompt attention to your request than I have given heretofore. And now I will not say another word on the subject of Indian languages except that I am as glad to escape from it as we were to escape from the unheard-of comforts of Sandy Lake. Don't you feel a horror creeping over you every time the idea recurs to your memory? I never think of it, but, like the Pharisee, I thank God that I am not as other men—Indian-traders and dwellers on the borders of Sandy Lake."

The widow of Dr. Wolcott married, in 1836, Hon. George C. Bates of Detroit, and died in that city August 1, 1860, leaving a husband and one son, Kinzie Bates, U. S. A.

Ellen M. Bates

Colonel Thomas I. V. Owen succeeded Dr. Wolcott, and served as Indian agent during the years 1831-32-33. Gholson Kercheval and James Stuart served under him

* Letter published in Schoolcraft's "Travels in the Central Portions of the Mississippi Valley."

† Captain Henry Whiting, sutler at Fort Dearborn in 1821-22.

‡ A long account of the construction of the Pottawatomic language follows here.

as sub-agents; Billy Caldwell Sauganash, as interpreter; David McKee as blacksmith, and Joseph Porthier as striker. Colonel Owen was born in Kentucky, April 5, 1801. He was appointed Indian agent in the winter of 1830-31, but did not arrive in Chicago until the spring of 1831, the sub-agent, Mr. Kercheval, attending to the duties of the office until that time. When the Town of Chicago was incorporated in 1833, Colonel Owen was chosen President of its first board of trustees. He died at Chicago, October 15, 1835.

THE FUR TRADE AND TRADERS.

Before priest or explorer found his way to the Chicago River, the fur-trader was dealing with the Indians on its banks. Father Marquette found them—evidently not strangers to the soil or its savage inhabitants—when in the winter of 1674-75 he lay sick in his cabin on the prairie of the portage. They were here before him, were awaiting his coming, and had prepared to receive him hospitably when he should arrive at their wintering-ground below the great Indian village. When they found that his ill health would compel him to pass the winter in "their cabin" at the portage, they sent him supplies from their own stores, and by their influence with the Indians made his hard winter more safe and comfortable.

Until the friendly Illinois were driven from their river, French traders passed freely to and fro over the "Chicagou route" from Canada to Louisiana, and colonists came to build their cabins around the Fort St. Louis. When the tribes of the Illinois were driven from their country, and Fort St. Louis had been abandoned and finally destroyed, this path became for a time too dangerous for even the daring voyageurs, and this route of the Canadians to the French settlements and to the interior of the country was exchanged for one more safe.

From the first settlement of New France, the most lucrative business of the colonists was the traffic in furs, and the Canadian voyageurs were, after Nicolet, the first explorers of the Northwest. The fur trade on the St. Lawrence was licensed by the French Government, the paper being drawn somewhat in the form of a colonial commission, conferring on the holder the authority of a military officer over the voyageurs in his employ. The early French traders were sometimes by the terms of their licenses made Colonial agents, with power to make treaties with the Indians and arrange terms of commercial intercourse. Their Canadian *engagés* were a wonderful class of men, maintaining by their hardihood a traffic in furs with the savages of the Northwest, which gave to the region its only great value in the eyes of the French Government. The patience, tenacity of purpose, courage and resolution displayed by these hardy, cheerful servants are almost without parallel in the history of exploration of savage countries. With their packs of merchandise, or "outfits," they left Quebec or Montreal in their frail bark canoes, traversed lakes and rivers to their destined post, penetrated to the winter haunts of the savages, toiling up the streams in their canoes, and at each portage taking both the canoe and its load on their backs from one stream to another, until a favorable spot for a "wintering-ground" was reached. Then, with their savage companions, they passed the winter in the wilderness, to secure for their employers the annual load of peltries. Sometimes they learned to love their savage life so well that they ceased to return to the St. Lawrence, but following the Indians in their wanderings, engaged in an illicit trade on their own account, and became *couriers de bois*. These fur-traders

of the woods became so numerous by the last of the seventeenth century that a royal declaration was issued against them—their vocation interfering materially with the profits of the licensed French traders. When French domination ceased in the Northwest there was an essential change in the manner of carrying on the fur trade. At a later day the *voyageurs* of the American Fur Company, and private traders were employed under written contracts, executed in Canada for a term of from three to five years—their wages from two hundred and fifty livres (fifty dollars), to seven hundred and fifty livres per year. To this was added their "outfit," consisting usually of a Mackinaw blanket, two cotton shirts, a capote and a few other articles, with the necessary goods for their Indian customers. In the fall they left Mackinac, or other headquarters of their employer, to spend the months until spring at their "wintering-ground." Their food, when with savages, consisted principally of salt pork, corn and tallow. The furs collected by the voyageurs employed by the American Fur Company were taken to Mackinac in the spring, and there re-packed for New York. The early population of Chicago was, in a great measure, made up of fur-traders. Aside from the military, almost every inhabitant was connected with this traffic, in some form or other. The first trace of white occupation of the site of Chicago after it became the home of the Pottawatomies, is by a French trader named Guarie, who located on the west side of the North Branch of the Chicago River, near the forks. Gurdon S. Hubbard, whose personal knowledge of Chicago dates back to 1818, says of this trader:*

"Prior to 1800, the North Branch of the Chicago River was called by the Indian traders and voyageurs 'River Guarie,' and the South Branch, 'Portage River.' On the west side of the North Branch a man by the name of Guarie had a trading house, situated on the bank of the river about where Fulton Street now is. This house was enclosed by pickets. He located there prior to 1775. This tradition I received from Messrs. Antoine Deschamps and Antoine Besom, who from about 1778 had passed from Lake Michigan to the Illinois River yearly; they were old men when I first knew them in 1818. This tradition was corroborated by other old voyageurs. The evidences of this trading-house were pointed out to me by Mr. Deschamps; the corn-hills adjoining were distinctly traceable, though grown over with grass."

Baptiste Pointe de Saible doubtless traded in furs with the Indians, during his long residence on the Chicago River, but whether white traders were settled here during those years is unknown. Wm. Burnett, a trader at St. Joseph, whose wintering-ground in 1790-91, was on the Kankakee, says in a letter written at St. Joseph, May 6, 1790:† "I received a letter yesterday from Chicago, wherein it is said that nothing is made in the Mississippi this year." February 6, 1791, he writes: "The Pottawatomies at Chicago have killed a Frenchman about twenty days ago. They say there is plenty of Frenchmen." Whether these Frenchmen were traders with headquarters at Chicago, or merely passing voyageurs, is not known; neither is there any clew to the name of Mr. Burnett's correspondent. He again writes, in the summer of 1798, to Mr. Porthier, a merchant at Mackinac:‡

"In the course of last winter I wrote you that it is expected that there will be a garrison at Chicago this summer, and from late accounts I have reason to expect that they will be over there this fall, and should it be the case, and as I have a house there already, and a promise of assistance from headquarters, I will have occasion for a good deal of liquors, and some other articles for that post. Therefore, should there be a garrison at Chicago this fall, I will write for an addition of articles to my order."

On the arrival of Major Whistler to build and garrison Fort Dearborn, he found at Chicago, as the only

residents in the summer of 1803, three French fur-traders; LeMai, who bought the cabin of De Saible in 1796, and had probably been a resident since that time; Antoine Ouilmette, who lived near him, and a trader by the name of Pettell, of whom nothing more is known. A year later Le Mai sold his cabin to John Kinzie, and Antoine Ouilmette entered the service of the latter, and long remained his employé. Ouilmette's house was just north, and within a very short distance of Mr. Kinzie's. At the time of the Fort Dearborn massacre, it became the hiding place of Mrs. Helm, where she was preserved from the furious savages who sought her life by the courage and coolness of Mrs. Bisson, a sister of Mrs. Ouilmette. It was in Ouilmette's garden that William Griffith,* the Quartermaster at the fort, hid himself behind the currant bushes, and when discovered by the family was disguised as a Canadian voyageur and helped to escape with the Kinzies.

After the departure of the boat containing his employer's family, Ouilmette was left the sole white inhabitant of Chicago. After the arrival of Alexander Robinson, who probably came to Chicago to live in 1814, Ouilmette and he cultivated the field formerly used as the garden of the fort, raising there good crops of corn. The crop of 1816 was sold to Captain Bradley after his arrival to rebuild the fort. At the treaty made at Prairie Du Chien in 1829 with the tribe of which his wife was a member, Ouilmette was granted, on her account, a reservation at Gros Point, now Wilmette. There he made a farm and remained until the Pottawatomies were removed to the West. He accompanied them with his family, and both himself and wife died at Council Bluffs, Iowa. His daughter Elizabeth married Michael Welch, of Chicago, and after his death, Lucius R. Darling, of Silver Lake, Kansas. Another daughter, Josette, mentioned in "Waubun" married John Derosche, and with the other children of the family—Michell, Lewis, Francis, Sophie and Joseph—settled on the banks of the Kansas River, with the tribe.

Before the rebuilding of the fort, one other trader settled in Chicago. This was M. Du Pin, who married the widow of Mr. Lee (the former proprietor of the cabin and garden on the lake shore near the fort), and lived in the Kinzie house during the absence of the family. After his removal to Chicago in 1804 John Kinzie became a very successful trader. His trading-house apparently absorbed all the rival establishments—except the United States Factory. A description of its growth and success is given in "Waubun" as follows:

"By degrees more remote trading-posts were established by him, all contributing to the parent one at Chicago; at Milwaukee with the Menomonies; at Rock River with the Winnebagoes and the Pottawatomies; on the Illinois River and Kankakee with the Pottawatomies of the Prairies, and with the Kickapoos in what was called 'Le Large,' being the widely extended district afterward erected into Sangamon County. Each trading-post had its superintendent, and its complement of *engagés*—its train of pack-horses, and its equipment of boats and canoes. From most of the stations the furs and peltries were brought to Chicago on pack-horses, and the goods necessary for the trade were transported in return by the same method. The vessels which came in the spring and fall (seldom more than two or three annually), to bring the supplies and goods for the trade took the furs that were already collected to Mackinac, the depot of the Southwest and the American Fur Companies. At other seasons they were sent to that place in boats, coasting around the lakes."

When the fort was rebuilt in 1816, Government re-established the United States Factory connected with it. Soon after this a trading-house was established by Conant and Mack, wealthy merchants of Detroit, at the

† "Chicago Antiquities," p. 57.

‡ Commonly spelled Mackinaw from about 1812.

* Afterward Captain William Griffith of General Harrison's "Spies."

point formerly known as "Lee's Place" four miles up the South Branch from the fort. This was on government land, being included in the "six-miles-square tract," and these merchants having bought the old cabin where Mr. White and his man were murdered in the spring of 1812, sent John Crafts with a large supply of Indian goods, to take possession of the place and establish there a branch house. The location was directly in the path of the Indians of the interior as they brought their furs from the Illinois, Desplaines and Kankakee, and crossed the portage to the factory at Chicago. The establishment was a decided success. The Indians had no great love for United States factories, and the house at the "portage" secured almost a monopoly of the furs of the region, until the American Fur Company decided to swallow both the factory and the establishment owned by Mr. Crafts. This was accomplished by the close of 1822—the factory had ceased to exist, and Mack and Conant had transferred their interests in the fur trade of the region about Chicago to its prosperous rival.

THE AMERICAN FUR COMPANY AND ITS TRADERS IN CHICAGO.—When the military possession of the Northwest passed from France to Great Britain in 1760, the Hudson's Bay Company, which had been chartered by Parliament as early as 1670, acquired almost an exclusive monopoly of the fur trade. Its success excited the envy of other capitalists, and in 1783, the Northwest Fur Company was organized at Quebec, and established its posts at various points on the upper lakes and throughout the interior. The new company, contrary to the custom of the older one, employed voyageurs for its extended trade, and soon diminished the profits of the Hudson's Bay Company. Other organizations were formed—among them an association of British merchants called the Mackinaw Company, which became a successful rival to the older companies.

In 1809, John Jacob Astor organized the American Fur Company, which was chartered by the New York Legislature—Mr. Astor being the Company. In connection with the Northwest Company he bought out the Mackinaw Company in 1811, and formed the Southwest Company. The War of 1812 temporarily interrupted the existence of that organization, but it was revived. In 1815 Congress prohibited foreigners from dealing in furs in the United States and Territories. The Southwest Company, composed mainly of British merchants, sold out its interest to Mr. Astor soon after, and the company was known as the "American Fur Company" after the spring of 1817.*

"Having entire charge of the management of the company in the West were Ramsey Crooks and Robert Stuart. To William Matthews was entrusted the engaging of voyageurs and clerks in Canada, with his headquarters in Montreal. The voyageurs he took from the *habitant* (farmers); young, active, athletic men were sought for; indeed, none but such were engaged, and they passed under inspection of a surgeon. Mr. M. also purchased at Montreal such goods as were suited for the trade to load his boats. These boats were the Canadian *batteaux*, principally used in those days in transferring goods to upper St. Lawrence River and its tributaries, manned by four oarsmen and a steersman, capacity about six tons. The voyageurs and clerks were under indentures for a term of five years. Wages of voyageurs \$100, clerks from \$120 to \$500 per annum. These were all novices in the business. The plan of the company was to arrange and secure the services of old traders and their voyageurs, who at the (new) organization of the company were in the Indian country, depending on their influence and knowledge of the trade with the Indians; and as fast as possible secure the vast trade of the West and Northwest within the district of the United States, interspersing the novices brought from Canada, so as to consolidate, extend and monopolize as far as possible over the country, the Indian trade. The first two years they had succeeded in bringing into their employ seven-eighths of

* Gurdon S. Hubbard, in "Chicago Antiquities."

the old Indian traders on the upper Mississippi, Wabash and Illinois rivers, Lakes Superior and Michigan, and their tributaries as far north as the boundaries of the United States extended. The other eighth thought that their interest was to remain independent; toward such, the company selected their best traders, and located them in opposition, with instructions so to manage by underselling as to bring them to terms. At Mackinaw, the trader's brigades was organized, the company selecting the most capable trader to be the manager of his particular brigade, which consisted of from five to twenty *batteaux* laden with goods. This chief or manager, when reaching a country allotted to him made detachments, locating trading-houses with districts clearly defined, for the operations of that particular post, and so on, until his ground was fully occupied by traders under him, over whom he had absolute authority."

The law excluding foreigners from trading in the Indian country seemed designed to apply to companies and not individuals. The American Fur Company, controlled by an American, was considered an exclusively American company, and was allowed for the successful prosecution of its business, certain privileges which did not conform to the letter of the law. The various Indian agents at the western posts were directed through the Governor of Michigan Territory, to grant licenses to such traders as the agents of Mr. Astor should designate. The British traders formerly connected with the Southwest Company were familiar with the fur trade, and were trusted by the Indians, over whom their influence was unbounded. The Canadian voyageurs were indispensable to the successful prosecution of the business, and it was not long before licenses were in the hands of British traders, who sent their *engagés* to every part of the Indian country, holding that they were American citizens under the provisions of Jay's treaty, and that the form of naturalization was unnecessary.

RAMSEY CROOKS, agent of the American Fur Company, was born in the town of Greenock, Scotland, January 2, 1787. When sixteen years of age he migrated to Canada, and was for awhile employed as junior clerk in the mercantile house of Maitland, Garden & Auldjo, in Montreal. In 1805, he engaged in the service of a merchant named Gillespie, and went to the then frontier village of St. Louis, where he remained two or three years, afterward trading with the Indians on the Missouri River on his own account. Robert McClellan was one of his associates and friends while in Missouri, and the two young traders fought manfully for their rights against the arrogance and tyranny of the Missouri Fur Company, which with Manual Lisa at its head, did not scruple to instigate the Sioux to acts of violence against rival traders. In 1809, John Jacob Astor conceived the design of establishing a chain of trading-posts on the Missouri and La Platte rivers to the Rocky Mountains, and thence to the Pacific. Mr. Crooks relinquished his business on the Missouri, and at the desire of Mr. Astor joined the party of traders and trappers which, starting from St. Louis, was to traverse the country to the Pacific, and at the mouth of the Columbia River establish the principal station of the company. After much suffering and many wanderings, the party reached Astoria in May, 1812. Mr. Crooks returned to St. Louis in 1813, and the following year, through the capture of the station by the British, and the failure of our government to give protection to the American fur-traders. Mr. Astor relinquished all operation on the Pacific coast. In 1817, at the re-formation of the American Fur Company, Mr. Crooks again joined Mr. Astor, and was the agent of the company at Mackinaw for the ensuing five years. Although his residence was in New York, he spent much time at Mackinaw, and was well known, and personally esteemed by the many traders connected with the company, at the stations at Chicago, Green Bay, Milwaukee and elsewhere in the Northwest. The partnership with Mr. Astor was dissolved in 1830, when Mr. Crooks resumed his former position as a salaried employé of the company, but in 1834, Mr. Astor, beginning to feel the infirmities of age, sold out the stock of the company, and transferred the charter to Mr. Crooks and others, and this gentleman was thereupon elected president of the company. However, the business did not continue prosperous, and in 1842, the American Fur Company made an assignment and passed out of existence. In 1845, Mr. Crooks opened a commission house, for the sale of furs and skins in New York. This business, which proved very successful, he continued until his death, which occurred at his residence in New York city on the 6th of June 1859, in the seventy-third year of his age. Mr. Crooks was noted for his extreme modesty and

unobtrusiveness, his sterling integrity, and purity of life, and the kindness, patience and humanity he exhibited to all those with whom he had to deal—both white man and red.

Ramsey Crooks left New York to assume the duties of agent of the American Fur Company at Mackinaw, in March, 1817. From that time he was intimately connected with many of the Chicago traders—furnishing goods both to the traders connected with his company and those who acted independently. In a collection of his letters, now in the possession of Gurdon S. Hubbard, there is much to be found relating to the early trade and traders of Chicago and to the general operations of the company. The following extracts are from these letters. On the 22d of June, 1817, Mr. Crooks writes from "Michilimackinac" to John Kinzie of Chicago:

"Dear Sir:—Since my arrival seven days ago, no opportunity of communicating with you has presented itself. By the arrival of Mr. Lamorandiere I am happy to learn your success in the late campaign, and sincerely hope it may continue. I look for a visit from you soon, but should that be inconvenient yet for some time, any communication you may, in the interim, favor us with shall be duly attended to.

"Enclosed is a letter to Mr. Daniel Bourassa,* who appears to have been shamefully imposed upon by Mr. Buisson and associates; however being averse to forming an opinion injurious to any one without proof, I have requested Mr. Bourassa to avail himself of the first conveyance† to this place, in order that on the arrival of these gentlemen a full investigation may take place, which, without his presence must be imperfect and unsatisfactory. Bourassa may perhaps dread the consequences of putting himself in my power, but his general character hitherto does not permit my entertaining any suspicions of his honesty, and he may come here without apprehension. Should Mr. Buisson and his friends have acted as basely as report says, they may possibly try to intimidate Bourassa so as to prevent his coming here, but I trust you will assure him my only wish for his presence is to state before them the circumstances attending this transaction in its different stages."

In a letter enclosed to Mr. Bourassa in the above, and which is written in French, Mr. Crooks says:

"I am very sorry to learn the arrangements you have thought proper to make with the goods given you by Mr. Rocheblave for the Southwest Company, but as I am persuaded that you have not been well treated in this affair, it is for your advantage to take the first opportunity to come here (Mackinaw) where, when Mr. Buisson arrives, the difficulty will be settled in the most equitable manner."

On the 23d of June, 1817, in a letter to Mr. Astor, Mr. Crooks says:

"In Lake Michigan the complexion of our adventures are various—only one person we equipped (on his own account) has yet come in. He has done pretty well. Kinzie at Chicago is said to have been fortunate, but at other points report speaks a more equivocal language. We hear that the people in the Illinois River have made out tolerably." . . . "Governor Cass, although positively instructed to be guided by the orders of the War Department of last year in regard to the granting of licensing to foreigners, and having no directions from Acting Secretary Graham to bestow any specific indulgences on your agents, has written Major Puthuff (Indian Agent at Green Bay, afterward dismissed) to attend particularly to our wishes; and should he act as the discretionary nature of his orders will allow, he can serve our purpose almost as effectually as if foreigners had been excluded generally and we had obtained the number of licenses in blank which you at one time so confidently expected. With this knowledge of the disposition evinced by the Governor of Michigan Territory for our success, you may well suppose no effort on our part to engage the Indian Agent here (Colonel Bowyer at Mackinaw) in our cause, but his not being bound to pursue any particular system will leave all we obtain to be acquired by our own exertions. No conflicting will be the claims on his indulgence, and so many stratagems will be tried to thwart our views, that it would be the extreme of folly to hazard an opinion of the result, but if he only remains true to the line of conduct we may prevail on him to adopt, we flatter our-

* Daniel Bourassa long remained a resident and trader at Chicago. His name is on the poll list of 1826 and his residence was on the east side of the South Branch, not far from the forks. He was married at Chicago, by John Kinzie.

† In the enclosed letter to Mr. Bourassa, Mr. Crooks tells him he shall expect him "by the return of the Baltimore."

‡ Buisson and Pensonneau, traders for the old Southwest Company.

selves with getting hold of a larger share of the trade than last year."

From Michilimackinac, 31st July, 1817, to John Kinzie at Chicago:

"Dear Sir:—Your favor of the 4th instant came duly to hand, as also the seventy-three Packs by Captain Barney, the freight of which I paid and had them safely stored where they still remain in the shape you sent them, as Mr. Beaubien could not possibly get a press, so busy have we been since his arrival here. However, I shall do what you wished him to execute, though from the unheard-of desertion of our men on the way from Montreal, we are left almost helpless, and men cannot be got here on anything like reasonable terms. Would you believe that ordinary boatmen ask a thousand livres, many get eight or nine hundred, and those who can just talk enough Indian to tell their master's private business to the savages, will not listen to anything short of eleven or twelve hundred livres, with an equipment which could not be purchased here for less than fifty dollars. If therefore you have any idea of depending on this post for men, my advice would be to abandon every thought of the kind, and secure those you have about you. Mr. Beaubien sold me his skins after a residence of several days had given him an opportunity of becoming intimately acquainted with the highest value set on them by contending parties, and I am very sure they were well sold. He has directed me to credit you with \$1,087-5 on his account, which has been done. Your account against Pensonneau has been acknowledged and passed to your credit. The best Indian Corn will not command above two dollars per bushel, at this time, and indeed an immediate sale at that price could not be effected, for cash. I cannot therefore, take upon myself to sacrifice your property, and prefer keeping it till better times. Accept my thanks for your goodness in forwarding my request to Bourassa, but should he not come soon, his appearance will only be an additional charge to no purpose, as Pensonneau will be off in a few days. Should Bourassa not be already on the way to this place when you receive this please say he need not come on my account."

From Michilimackinac, August 15, 1818, to Mr. Kinzie at Chicago:

"Dear Sir:—Being very busy at this moment, I have only time to say your son reached me in good health, which he has continued ever since to enjoy with but little interruption. Mr. Dickson made but a short stay here, and although I mentioned your desire of his arranging with me, on your part for John he was so entirely absorbed in the pressure of his own affairs as not to have an hour to bestow on the settlement contemplated. I am anxious that a perfect understanding should be had as to your son, with as little delay as the case will admit of, and beg you by the very first conveyance to give me at length, your ideas on this interesting subject. I am inclined to think, from all I have seen of him that he will realize all your hopes. I bought M. Chandonet's skins, but the amount does not meet your expectations. Your several favors have been duly received, and with some exceptions the sums to be collected for you are at your credit. The accounts detailing everything shall be forwarded by Mr. Deschamps, who goes off in a few days. Messrs. Chandonet and James Kenseie* are equipped by us. I send you a Pork-eater† for three years. His engagement is enclosed, and his account with us is:

For advances in Canada.....	99.13
ditto at Mackinac.....	312.12
	411.24

The amount, stated in American money, was \$68.70.

From Michilimackinac, September 19, 1818, to Mr. Jean Bte. Beaubien at "Milliwakie:"

"Dear Sir:—Per the schooner 'Hercules' I have shipped to the care of Mr. John Kinzie at Chicago, according to your order, 8 Barrels Flour and 6 Barrels Whiskey containing 199 1-2 gallons marked J. B. B. which I hope will reach you in good order. I am glad to learn by Mr. Pertian, just arrived from Detroit, that you had left that place for your home without making a very long stay....."

On September 19, 1818, Mr. Crooks writes to Jean Bte. Chandonnais, Chicago‡:

* The different spellings of Kinzie and Mackinaw are unchanged by the editors, who sacrifice uniformity to literalness.

† Voyageur.

‡ Chandonnais was formerly clerk for John Kinzie, and on the day of the Fort Dearborn massacre was instrumental in saving the life of Mrs. Captain Heald, afterward conducting both herself and husband to a place of safety. ("Waubun," p. 183-191, spelled Chandonai.) In "Chicago Antiquities," the same person is probably alluded to on page 79, as being in the service of the United States during the War of 1812, although spelled "Chandonia." He is also mentioned in "Fergus Series" No. 16, p. 19, (Hist. Fort Dearborn, by

"*Dear Sir:*—By Capt. Church in the 'Hercules' you will receive four barrels whiskey containing 144 gallons, and 6 barrels Flour, which I hope will reach you in good order. To Mr. Schindler I will deliver the barrel Flour, as you directed. I cannot promise you any more liquor, for spirits of every kind are not only dear but uncommonly scarce. Messrs. Mack & Conant have received the draft I remitted them on your account—say \$1,174, but by the enclosed accounts from these gentlemen it appears you are still in their debt. The first account they furnished showed a balance of \$216.37 1-2 against you, but by another they made out afterwards, you are their debtor only \$168.87 1-2. We enclose those accounts, and your note to Sherbal Conant & Co. cancelled, which will give you all the information we possess on the subject of your affairs with these gentlemen.

"P. S. The two barrels you left here are also in the 'Hercules.'"

From Michilimackinac September 19, 1818, to John Kinzie, Chicago :

"*Dear Sir:*—Having just returned after an absence of fifteen days, I am as yet unable to transmit by this opportunity your account current, but I will devote my first leisure moments to that object. We remitted to Messrs. Conant and Mack \$1,174, on your account of Mr. Chandonnait, but by the papers enclosed by this conveyance to that gentleman, it appears that he is still in arrears with that house. Your letter covering remittances to them has been forwarded. By Capt. Church, in the 'Hercules' you will receive a keg of Madeira Wine, as per acct subjoined, which I hope you will find good. We have not a drop of Port, otherwise your request relative to that article would have been attended to. Enclosed is Bill Lading of J. B. B. 14 Barrels & J. B. C. 12 barrels, the former for Mr. Beaubien and the latter for Mr. Chandonnait, which we were directed to consign to you. We will settle with the Captain for the freight of these. John is in good health and writes by the 'Hercules.'

August 11, 1819, Mr. Crooks again writes to John Kinzie :

"*Dear Sir:*—Your several favors up to 19th ulto. have come to hand and their different enclosures attended to. All has been passed to your credit as they were severally collected, but where any inaccuracy existed, we made the necessary alteration, which you will discern in your account now enclosed ; by this the balance now is \$220.00, which, of course, stands at your debit. The indentures of your son John, I had filled up with the intention of sending you an exact copy signed by me, but Mr. Robert Dickson, arriving here in the meantime, I consulted him as you originally proposed, and at his instance put in \$125 for each of the 2 last years of John's apprenticeship. I hope this will meet your approbation. The instrument duly executed is now enclosed, a copy of which please execute and return me by first conveyance to this place. Thus far your son has behaved in a becoming manner. Mr. Abbott did, I believe, everything in his power last winter to improve his general knowledge, as also his scholastic knowledge ; and my friend Mr. Robert Stuart, in whose charge he will pass the approaching season, will not fail to do him justice. He is attached to our retail store, but I now and then have him with me in the wholesale department, and so soon as he is eligible, he will be so much in the counting-house as to give him an opportunity of understanding our general business, but in concerns of some intricacy and infinite detail to keep him there now would be a loss of precious time, both to him and the Company. You may however rest assured that every attention will be paid to making your son a man of business. With surprise and astonishment I learn the very questionable course Mr. Jean Bte. Chandonnait has thought proper to pursue ; but relying with the utmost confidence on your influence over him, I still flatter myself that at least a part of the amount he owes us would have been remitted before this time, more particularly as several gentlemen informed me he had in his possession \$1,000 arising from the sale of his peltries to Mr. Crafts. At your recommendation I gave him credit, for without that I never would have trusted him a dollar, and your being on the spot where he resided, I certainly felt as safe as with the best man we deal with. Strange and unaccountable it is, that we have not received any kind of remittance, notwithstanding the extravagant conduct of this person ; but, as you introduced him to us, I am bound to hope, although you have not mentioned even his name in any of your letters this summer, that you have done, and will continue to do all in your power to insure the payment of our claim, at no very distant day. He owes us upwards of \$4,000. I shall impatiently wait your answer. We return you Brooks' re-

Hon. John Wentworth) in connection with the escape of Captain Heald and wife after the massacre. Chandonnait was the son of Chippewague, a Pottawatomie woman, and was related to Mrs. Judge Fisher of Green Bay, and Madame Therese Schindler of Mackinaw.

ceipt for shipping packs, etc., for Cabanne, which M. Rolette refuses to pay, as he says Cabanne was to deliver them to him on board at Chicago.

A number of letters are written in regard to the difficulty with Mr. Chandonnait, both to Mr. Kinzie and Mr. Beaubien.

Mr. Crooks writes from "Mackinac," September 17, 1819, to John Dean, "U. S. Factor at Chicago :"

"*Sir:*—Finding in the note of goods returned us by Edward Upham something we had not furnished for our trade at the south end of Lake Michigan in 1818, a discovery was made of his having bought goods of you at Chicago, on terms not now distinctly recollected.

"Upham was immediately ordered to designate and put apart every article connected with this transaction. Mr. John F. Hozel accompanied him and took the account exhibited to you this morning, in conformity to which, I to day delivered you 5 common calico shirts, 19 Cotton Handkfs, 5 Snuff Boxes, 1 Skein Worsted Yarn, 30 Strings Wampum, 62 Hawk Bells, 78 1-2 pairs Large Square Ear Bobs, 117 small Double Crosses and 30 yds. Indian Calico, being everything put into our hands by Edward Upham, as appertaining in any manner to the purchase in question. In reply to your letter dated Chicago, 3d June, 1819, I have only to remark that the duty of Edward Upham, or any other person employed by the American Fur Company, in their Indian Trade, was, and is, solely and exclusively to exchange the goods entrusted to their management, for the products of the country they are placed in ; but neither him nor any other person ever possessed the power to purchase anything whatever on the Company's account, unless specially authorized to that effect in writing. The Cash price of Good Muskrat Skins at this place during the past summer was 25 cents per skin."

Mackinac, 29th October, 1819, to John Kinzie, Chicago :

"*Dear Sir:*—Permit me to tender you my most sincere thanks for the interest you took in securing that part which we received of our claim against Mr. Chandonnait, and you will still add to the obligation by using your influence in getting anything more that may be practicable from him during the winter and ensuing spring. It is probable he will draw a good many of his credits ; and it is much better for us to pay him even more than the market price for his skins, than get nothing at all. You and Mr. Beaubien will therefore use your own discretion in this respect, for we have all confidence in your doing everything in your power for our benefit. If the lands he received from the Indians (either last or this year's treaty) are confirm'd to him, can you not get a mortgage on them ; pray spur the fellow to exertion, for we wholly depend on the vigilance of yourself and Mr. Beaubien for what may hereafter be procured ; I will thank you to send me a few pieces of good Hickory, sufficient to make 3 or 4 dozen Axe Helves ; if you can send them by return of the 'Jackson,' it will be preferable. John enjoys good health, and will, I have no doubt, turn out a fine fellow. I am much pleased with his conduct and will give him every advantage this place and his situation affords."

From the above letters it is evident that John Kinzie was engaged largely in the fur trade after his return to Chicago in 1816, and was not entirely confined to his trade of silversmith, as has been believed. A letter from David Stone, agent of the American Fur Company at Detroit in 1825, shows that John Crafts was alive at that time, and the agent of the company at Chicago. [This letter is in the possession of the Chicago Historical Society.] It was written at Detroit, June 30, 1825, and was evidently to Ramsey Crooks. The address is lost. The letter is as follows :

"*Dear Sir:* I understand from Coquillard,* that it is very important for his trade that there should be some whiskey deposited at Chicago subject to his order. He says Bertrand always sells whiskey to the Indian trade, which gives him a great advantage. He says the whiskey can be landed on one side of the St. Joseph River where it will be on United States lands, that it may be transported all the way to his house on Government land. His house is also on Government land, and this he thinks a protection. If I understand Judge Polk's construction of the law regulating Indian

* Alexis Coquillard was afterward the clerk of the American Fur Company at St. Joseph. In 1827 Mr. James Abbott wrote of him in a letter to Mr. Robert Stuart. "In Relation to Mr. Coquillard, it may be proper to observe that he is an excellent clerk but rather of a singular character, and must have carte blanche, otherwise nothing can be done for him. I shall, nevertheless, bear in mind your wishes regarding his outfit."

trade, this would be no protection to the property so long as the country is occupied by Indians. To me this seems like a forced construction to meet the case of Wallace & Davis's goods. (At Hardscrabble). I could not say anything definite to Coquillard on this subject, as I did not know what would be done. I, however, told him the matter would be referred to Mr. Stuart, who would let him know through Mr. Crafts what provision would be made. Coquillard says General Tipton gave him a license last year, and permission to take a few barrels of whiskey. . . I believe a young man by the name of Bosie has gone to Chicago or its vicinity for Schwartz. If Mr. Crafts has left Mackinaw, it would be well to advise him of this. Schwartz does not conduct his business either with prudence or economy. I am told he makes great calculations on Bosie this season. Should he be prevented from doing much, I think he would be compelled to give up the business as soon as next season."

July 12, 1826, Mr. Stone writes from Detroit to Mr. Robert Stuart, agent of American Fur Company at Mackinaw:

"I have found a small account against the American Fur Company, for a set of Cart Boxes and some Corn Baskets which Mr. Crafts gave David Cooper an order to purchase for the Chicago adventure. I have paid the same and charge the amount to your department and forward you the account herewith."

John Crafts, mentioned in the above letter, remained at the Lee place, as trader for Conant & Mack, until about 1822. In the fall of 1818 Jean Baptiste Beaubien was transferred from Milwaukee to Chicago, by the American Fur Company, as its agent. He erected a small trading-house at the mouth of the Chicago River (then about the foot of what is now Madison Street) and commenced business. After a few years he succeeded in obtaining so large a share of the Indian trade that Conant & Mack sold out their establishment to the American Fur Company, and Mr. Crafts became the Chicago agent with Mr. Beaubien under him. Mr. Crafts remained in charge of the Chicago house until his death in the latter part of 1825,* and John Kinzie was appointed his successor, but lived only about two years after his appointment.

William H. Wallace had a trading establishment at Hardscrabble, after the post was vacated by Mr. Crafts. This trading-house is mentioned in one of the letters quoted in this chapter as "Wallace & Davis's." Mrs. Kinzie, in "Waubun," speaks of the trading-house of George Hunt and Mr. Wallace, but locates it at Wolf Point.† Mrs. Archibald Clybourne, in her account of the arrival of her father's family at Chicago in 1826, also mentions Mr. Wallace. William H. Wallace was a Scotchman, and had been connected with the American Fur Company since Mr. Astor attempted to found the Pacific station at Astoria. When the company was reorganized in 1817 he became one of its clerks, and had charge of the details of fitting out the flotillas at Montreal, arranging the crews, and assigning the clerks to their several boats. In 1818 he was assigned by Messrs. Crooks and Stuart to the lower Wabash, with headquarters at Fort Harrison. In a letter to these gentlemen dated at Fort Harrison, December, 1818, now deposited with the Chicago Historical Society, Mr. Wallace gives some interesting particulars of his journey to that place. He mentions his arrival at the mouth of the St. Joseph on the 22d of September and at the "Cow-pen" on the 26th, where he was detained, to his great indignation, by "Mr. Reame," until two of the party could go to Fort Wayne to show their licenses to the agent there; which took twelve days. After various delays, and much difficulty, he arrived at Fort Harrison on the 4th of December, and says: "The country is far beyond my expectations, and if the business is well conducted where Reame is, we shall do well, for there

is plenty of furs and Indians in the country." Mr. Wallace was on the Lower Wabash as late as 1821-22, and at the same time John H. Davis was clerk for the American Fur Company on the Upper Wabash. It is very possible that these two composed the firm of "Wallace & Davis," as there was a John (L.?) Davis residing here in 1830. Mr. Wallace was living in Hardscrabble in the winter of 1826-27, and is said to have died in Chicago. In 1822, after the abandonment of the United States Factory at Chicago, by Government, the factory building was bought by the American Fur Company, and soon after sold to John B. Beaubien, who made it his dwelling house. After the death of John Crafts in 1825, John Kinzie was appointed agent of the Company. He moved, after the "Winnebago Scare," from his old home on the North Side to the house of Mr. Beaubien, and died soon after, having his residence there, although absent on a visit to his daughter in the fort at the time of his death.

The Indian trade had become comparatively unimportant in the region of Chicago before the death of Mr. Kinzie. The treaty with the Pottawatomies and neighboring tribes, and their consequent removal to the West a few years later, terminated what importance the place still retained as a trading station.

THE KINZIE FAMILY.—The biography of John Kinzie has already been given. In that is included the history of Margaret McKenzie, the mother of his three eldest children—William, James and Elizabeth.

WILLIAM, the oldest son, accompanied his mother to Virginia, on her separation from Mr. Kinzie. He was there married, and subsequently removed to Indiana, where he died.

JAMES KINZIE, who was born at Detroit, April 21, 1793, returned to the West soon after the close of the War of 1812. As early as the summer of 1818 he was a trader connected with the American Fur Company, and in 1821 is mentioned by the United States Factor at Green Bay as having been "detected in selling large quantities of whiskey to the Indians at and near Milwaukee of Lake Michigan; in consequence of which the Indian agent at Chicago directed him to close his concerns at Milwaukee in sixty days, and leave the place." He probably came to Chicago soon after this, as Mark Beaubien bought a log house of him in 1826. In 1829, in company with Archibald Caldwell, he built a tavern at Wolf Point, on the West Side, at the "forks" of the river. Mr. Caldwell sold out his interest to James Kinzie and the latter rented the house to Elijah Wentworth, who arrived at Chicago in the fall of 1829 and opened the Wolf Tavern in 1830. Mr. Kinzie built, in 1833, the Green Tree Tavern on the northeast corner of North Canal and West Lake streets, its name being from a solitary oak which stood near. This hotel, afterward called the Chicago Hotel, was situated, together with the dwelling of Mr. Kinzie, and the store of Messrs. Kinzie & Hall, on Lot 7, Block 22, original Town of Chicago. Mr. Kinzie's partner was his half brother, Mr. Hall, who formerly resided in Virginia. Mr. Kinzie was one of the trustees of the School Section in December, 1829; the first Sheriff appointed by the Governor for Cook County; the first town auctioneer; and one of the Town Trustees in 1825. He married his first wife, Leah See, daughter of William See, a preacher and blacksmith, who also lived at Wolf Point. Mr. Kinzie removed to Racine (then Root River), Wis., as early as 1835, where his wife died June 22, 1835. On his removal to Racine he at first opened a store for white and Indian trade, and afterward engaged in milling and farming. The second wife of Mr. Kinzie was Virginia Hale, who survived him. He removed from Racine to the interior of Wisconsin, and died in Clyde, Iowa Co., January 13, 1866.

ELIZABETH KINZIE, sister of William and James, came to Chicago from Virginia, and was married by John Kinzie, her father, to Samuel Miller, July 29, 1826. Mr. Miller was the owner of a house on the North Side, at the forks, which was used as a tavern and known as the Miller House. He received a license as tavern-keeper in April, 1831, but the house had been used for that purpose several years prior to that date. In the spring of 1832, the Miller family, with many others, moved into Fort Dearborn, from fear of the Indians, and soon after that time Mrs. Miller died, and it is believed that Mr. Miller left Chicago the same year. Mr. Miller had been in partnership with Archibald Clybourne, selling goods, in 1829, and they were that year authorized to keep a ferry across the Chicago River "at the lower forks." He was one of

* See letter of David Stone.

† "Waubun," p. 201.

the Commissioners of the County, and one of the first licensed innkeepers and merchants of the town. He removed from Chicago to Michigan City, where he died.

"About the year 1800," John Kinzie married Mrs. ELEANOR (Lytle) MCKILLIP. This lady had been a captive four years when a child among the Seneca Indians, and upon her recovery, her parents removed from the valley of the Alleghany, their home for

James Kinzie

several years, to the safe neighborhood of Detroit, settling at Grosse Pointe, eight miles from the former post. Eleanor here married Colonel McKillip, a British officer, who was accidentally killed near Fort Defiance, in 1794, when in command at that post, leaving one daughter, afterward Mrs. Margaret (McKillip) Helm. After Mrs. McKillip's marriage to John Kinzie, about the year 1800, she went with her husband to live on the St. Joseph River, in Michigan, where now is the town of Bertrand, and thence came to Chicago in the summer of 1804. The story of her escape with her little children from the perils of the day of the Fort Dearborn massacre, and their subsequent return to re-occupy the old home with her family, and her hospitable kindly spirit, which made her house a home for every stranger, has been often told. When the children had left the old roof for homes of their own or to engage in business, and Mr. Kinzie was appointed agent of the American Fur Company, she went with him to the house of Mr. Beaubien, and after his death moved into the agency-house belonging to her son-in-law, Dr. Wolcott, on the North Side. In the spring of 1831, with her daughter, Mrs. Helm, she accompanied her son, John H. Kinzie, and his wife on their return to Fort Winnebago, travelling on horseback a large portion of the way, mounting her horse "in spite of her sixty years" and her incurable and terrible disease, "with the activity of a girl of sixteen." In the fall of the following year (1832) Mrs. Kinzie was taken by her son John H. to Prairie du Chien for medical treatment, the journey being made in an open boat from Fort Winnebago down the Wisconsin River to the Mississippi. Her disease—a cancer in the face—was incurable. After remaining some months in Prairie du Chien, she returned to Fort Winnebago, and thence went to New York City, where she died early in the year 1834.

At a meeting of the Chicago Historical Society, July 11, 1877, Hon. I. N. Arnold, President of the Society, read the following sketch of the late Colonel John H. Kinzie, eldest son of John and Eleanor Kinzie, which he received from Mrs. Nellie (Kinzie) Gordon, daughter of John H. Kinzie, and which was written by the late Mrs. Juliette A. Kinzie, his wife :

JOHN H. KINZIE was born at Sandwich, U. C., on the 7th of July, 1803. It was not by design that his birthplace was in the British Dominions, for his mother was patriotic beyond most of her sex; but having crossed the river from Detroit, the place of her temporary sojourn, to pass the day with her sister, Mrs. William Forsyth, it so happened that before evening her eldest son drew his first breath on a foreign soil. While still an infant he was carried in an Indian cradle, on the shoulders of a French *engage*, to their home, at what is now the town of Bertrand on the St. Joseph River, in Michigan. At one of their encampments, on the journey, he made a narrow escape with his life, owing to the carelessness of his bearer in placing him against a tree in the immediate proximity of a blazing fire. A spark escaping, lodged in the neck of his dress, causing a fearful burn, of which he carried the mark ever after. His father having purchased the trading establishment of Mons. LeMai, at the mouth of the Chicago River, removed with his family to the place on the following year. Some companies of infantry, under command of Major John Whistler, arrived at the same time—4th of July—and commenced the construction of Fort Dearborn. At his home, on the banks of the river, nearly opposite the fort, the childhood of Mr. Kinzie was passed, until the breaking out of the War of 1812. The frontier at that time afforded no facilities for education. What children contrived to scramble into must be acquired under the paternal roof. Mr. Kinzie loved to describe his delight upon one occasion, when on the opening of a chest of tea, among the stores brought by the annual schooner, a spelling-book was drawn forth and presented to him. His cousin, Robert Forsyth, at that time a member of his father's family, undertook to teach him to read, and, although there seems to have been but little patience and forbearance on the part of the young peda-

gogue to sweeten the task of learning, the exercises gave to the pupil a pleasant association with the fragrance of green tea, which always kept that spelling-book fresh in his mind. A discharged soldier was upon one occasion engaged to take charge of him, along with the officer's children, but the teacher's habits of drunkenness and irregularity caused the school to be discontinued in less than three months. His best friend in these days was Washington Whistler, a son of the commanding officer, in after years a distinguished civil engineer in his own country, and in the service of the Emperor of Russia. At the time of the massacre in 1812, Kinzie was nine years of age. He preserved a distinct recollection of all the particulars that came under his own observation. The discipline of these thrilling events doubtless helped to form in him that fearlessness as well as that self-control which characterized his manly years. The circumstances of the massacre are familiar to all. When the troops left the garrison, some friendly chiefs, knowing what was in contemplation by their young men, who would not be restrained, took possession of the boat in which was Mrs. Kinzie and her children, and guarded them safely till the fighting was over.

John H. Kinzie

They were the next day escorted by the Chief "Robinson," and other friends, in their boat, to the St. Joseph River, to the home of Mme. Bertrand, a sister of the famous Chief "To-pee-nee-bee haw," whence, after a short sojourn, they were carried to Detroit, and delivered as prisoners of war to the British commanding officer, Colonel McKee. The family, after the father rejoined them in the following winter, were established in the old family mansion, on the corner of Jefferson Avenue and Wayne Street, Detroit. One of the saddest features of the ensuing winter was the spectacle of the suffering of the American prisoners, who were from time to time brought into headquarters by their Indian captors. The tenderness of feeling, which was a distinguishing trait in the subject of this sketch, made him ever foremost in his efforts to bargain with the savages for the ransom of the sufferers, and many were thus rescued, and nursed, and cared for—sometimes to the salvation of their lives, though too often to merely a mitigation of the tortures they had undergone. Mr. Kinzie, Sr., had been paroled by General Proctor, but upon a suspicion that he was in correspondence with General Harrison, who was known to be meditating an attempt to recover the city of Detroit, he was seized and sent a prisoner to Canada, leaving his wife and young family to be cared for as they might, until, after the lapse of some months, the capture of the place by General Harrison secured them a fast friend in that noble

and excellent man. The father was at length released and restored to his family, with one solitary shilling in his pocket. That little coin has always been carefully preserved by his descendants, as a memento of those troublous times. It so happened that in Detroit,

as upon more remote frontiers, the advantages of education were extremely limited. The war had disarranged everything. During the four years' sojourn of the family in this place the children had occasional opportunities of beginning at a school which promised well, but which, as a general rule, was discontinued at the end of the first quarter. Amid such unpropitious circumstances were the rising generation at that day obliged to acquire what degree of learning they found it possible to attain.

In 1816, the Kinzie family returned to their desolated home in Chicago. The bones of the murdered soldiers, who had fallen four years before, were still lying unburied where they had fallen. The troops who rebuilt the fort collected and interred these remains. The coffins which contained them were deposited near the bank of the river, which then had its outlet about at the foot of Madison Street. The cutting through the sand-bar for the harbor caused the lake to encroach and wash away the earth, exposing the long range of coffins and their contents, which were afterwards cared for and reinterred by the civil authorities. In the year 1818, when he was in his sixteenth year, Colonel Kinzie was taken by his father to Mackinaw, to be indentured to the American Fur Company, and placed under the care of Ramsey Crooks, "to learn," as the articles express it, "the art and mystery of merchandising in all its various parts and branches." This engagement was for five years, during which time he was never off the island, except upon one occasion, when he was taken by Robert Stewart, who succeeded Mr. Crooks at the head of the company, to visit the British officers at Drummond Island. He was never during this period at an evening entertainment, never saw "a show," except one representation by an indifferent company, who had strayed up the lakes, of some pantomimes and tricks of sleight-of-hand. His days were passed from five o'clock in the morning till tea-time, in the warehouse or in superintending the numerous *engages*, making up outfits for the Indian trade, or receiving the packs and commodities which arrived from time to time. In the evening, he read aloud to his kind and excellent friend, Mrs. Stewart, who was unwearied in her efforts to supply the deficiencies

which his unsettled and eventful life had made inevitable. To her explanations and judicious criticisms upon the books he read, and her patience in imparting knowledge from her own well-stored mind, he was indebted for the ambition which surmounted early disadvantages, and made him the equal of many whose youthful years have been trained in schools. Mr. Stewart was a severe disciplinarian. He believed that the surest way to make of a clerk a systematic and methodical man of business was never to overlook the slightest departure from the prescribed routine of duty. Upon one occasion, young Kinzie, out of patience with the slow-dragging movements of a party of his employes, who were engaged in hauling wood in sledges across the straits from Bois Blanc Island, took the reins from the hands of one, and drove across and returned with his load, to show the men how much more they could have accomplished if they had made the effort. Mr. Stewart's commendation was, "Ah, you have changed your occupation for that of hauling wood, have you! Very well, you can continue it;" and, as the young man was too proud to ask to be relieved, he actually drove the sledge and brought wood through the bitter winter till the ice gave way in May. His chief recreations throughout this period were trapping silver-gray foxes during any chance leisure hour in the winter, and learning to play on the violin, his instructor being a half-breed woman. In 1824, being still in the employ of the Fur Company, he was transferred from Mackinaw to Prairie du Chien. He had made a visit to his parents on attaining his majority, and had returned to Mackinaw in a small boat, coasting the western shore of Lake Michigan. He was the first white man who set foot on shore at Wau-kee-gan—at least since the days of the explorers. While at Prairie du Chien, Mr. Kinzie learned the Winnebago language, and compiled a grammar, as far as such a task was practicable. The Ottawa, Pottawatomie, and Chippewa dialects he had been familiar with from his childhood. He also learned the Sioux language, and partially that of the Sauks and Foxes. About this time, Colonel Kinzie received an invitation from General Cass, then Governor of the Territory of Michigan, to become his private secretary, and in 1826, he escorted a deputation of Winnebagoes to Washington to visit their Great Father, the President. He was at the Treaty of "Butte des Morts" in the summer of 1827, and accompanied the Commissioner, Colonel McKenny, to the Portage of the Fox and Wisconsin rivers, to be present at the surrender of the "Red-Bird," a Winnebago chief, who, with his comrades, had been concerned in the murder of the Gaznier family at Prairie du Chien. Mr. Kinzie took a different view of the actual complicity of Red-Bird from what has been given to the public. His journal, kept at the time, is of great interest. He was called from his station, beside the military officer appointed to receive the prisoners, by Kau-ray-man-nee, the principal chief of the nation, to stand beside him, and listen to what was said on both sides at this interview, and tell him whether his speech to the "Big Knives" and their reply to him were rightly interpreted. During the time of his residence with General Cass, who was by virtue of his appointment, also superintendent of the Northern Division of the Indian Tribes, he was sent to the vicinity of Sandusky, to learn the language of the Wyandots, or Hurons, their manners and customs, legends, traditions, etc. Of this language he also compiled a grammar. The large amount of Indian lore which he collected in these various researches, was, of course, placed in the hands of his chief, General Cass; and it is greatly to be regretted that as far as can be ascertained not a trace of it now remains extant. Mr. Kinzie received the appointment of Agent for the upper bands of the Winnebagoes in 1829, and fixed his residence at the portage, where Fort Winnebago was in that year constructed. In 1830 he married, and continued to reside among his red-children—to whom he was, and is still proclaimed by the oppressed few who remain, a kind, judicious, and watchful "father." In 1833 the Kinzie family, having established their pre-emption to the quarter section upon which the family mansion had stood since 1804, Colonel Kinzie (such was then his title as aid to the Commander-in-Chief, Governor Cass,) came with his brother-in-law, General Hunter, to Chicago, and together they laid out that part of the town since known as Kinzie's Addition. In 1834 he brought his family to Chicago to reside. He was first President of the village, when a prediction of the present opulence and prosperity of the city would have seemed the wildest chimera. He was appointed Collector of Tolls on the canal immediately on its completion. In 1841 he was made Registrar of Public Lands by General Harrison, but was removed by Tyler when he laid aside the mask under which he gained the nomination for Vice-President. In 1849, General Taylor conferred upon him the appointment of Receiver of Public Moneys and Depository. His office of Collector he held until commissioned by President Lincoln as Paymaster in the Army, in 1861. The latter appointment he held until the close of the War. His labors were vast and wearying, for he had the supervision of Michigan, Wisconsin, and Illinois; yet he was too conscientious, in the state of the public finances, to apply for more aid. During the four years

he discharged this large amount of duty with the assistance of but a solitary clerk. It was too much for him; his health gave way. When a tardy leave of absence arrived, he set out with his family upon a journey, in hopes that mountain air or sea-bathing would recruit his exhausted forces. But he was destined to reach hardly the first stage of his journey. While riding in the cars approaching Pittsburgh, and conversing with his ordinary cheerfulness, he remarked a blind man approaching, and, perceiving that he was asking alms, he characteristically put his hand in his pocket. In the act, his head drooped gently, and with a peaceful sigh, his spirit departed to its rest.

Colonel Kinzie married, in Middletown, Conn., August 9, 1830, Miss Juliette A. Magill, daughter of Arthur Magill of that place. He was at that time Indian Agent at Fort Winnebago, and the young couple, after a brief visit in New York, set out for their home in the western wilderness. In the latter part of September they arrived at Detroit, and took passage on the steamer "Henry Clay," for Green Bay, via Mackinaw. Arriving there they passed down the Fox River to the Portage and Fort Winnebago. Colonel Kinzie visited Chicago in the fall of 1830, at the time of Dr. Wolcott's death, and again in the spring of 1831, the latter time accompanied by his wife. The family came to Chicago to reside in 1834. St. James' parish was organized the same year, and on the 12th of October Rev. Isaac W. Hallam arrived in the place to take charge of it. Mr. and Mrs. John H. Kinzie were from the first most influential and devoted members of St. James' Church, and with Gurdon S. Hubbard and Mrs. Margaret Helm may be considered its founders. The first regular services of the Church were held in a room in a wooden building standing on the corner of Wolcott (now North State) and Kinzie streets, which was fitted up by Mr. Kinzie, and the lots on the southeast corner of Cass and Illinois streets, where a church edifice of brick was erected in 1836-37, were donated by him. The home of Mr. and Mrs. Kinzie was on the northeast corner of Cass and Michigan streets, and the generous hospitality of both host and hostess was proverbial. Mr. Kinzie left a widow, one son and two daughters. His eldest son (born at Fort Winnebago) was killed in an engagement at White River, in the summer of 1862, and he had also buried a daughter. Mrs. Juliette A. Kinzie died September 15, 1870, at Amagansett, L. S. Her death was caused by the fatal mistake of a druggist, who sent her morphine, which she unfortunately swallowed instead of quinine, which she had ordered.

ELLEN MARION KINZIE, eldest daughter of John and Eleanor, was born in the "Kinzie House," in December, 1804, and was probably the first white child born in Chicago. During the residence of the family in Detroit she attended school at that place, and afterward at Middletown, Ct. On July 20, 1823, she was married to Dr. Alexander Wolcott, then Indian Agent at Chicago. Her husband died at the agency-house in 1830, and the following year with her sister, Mrs. Hunter, she accompanied the troops, then vacating Fort Dearborn, to Fort Howard, Green Bay. In 1836 she married, at Detroit, Mich., Hon. George C. Bates of that city. Mrs. Bates died at Detroit, August 1, 1860, at the residence of Bishop McCoskey, leaving a husband and one son, Kinzie Bates.

MARIA I. KINZIE was born in 1807, and married Lieutenant David Hunter (now General), when he was stationed at Fort Dearborn, accompanying him in 1831 to Green Bay. The following is an extract from a letter of General Hunter, dated May 24, 1879, and published in the Calumet Club Reception Pamphlet:

....."More than half a century since, I first came to Chicago on horseback from St. Louis, stopping on the way at the log cabins of the early settlers, and passing the last house at the mouth of the Fox River. I was married in Chicago, having to send a soldier one hundred and sixty miles, on foot, to Peoria for a license. The northern counties in the State had not then been organized, and were all attached to Peoria County. My dear wife is still alive, and in good health; and I can certify, a hundred times over, that Chicago is a first rate place from which to get a good wife."

ROBERT ALLEN KINZIE was born in Chicago, February 8, 1810. Although but two and a half years of age at the time the family escaped the Fort Dearborn massacre, its horrid scenes were indelibly imprinted on his memory—even to minor details. He returned with the family to Chicago in 1816, and when about nine years of age accompanied his father on a trip to St. Louis. He was sent to Detroit to attend school, going by way of the lakes, and returning on horseback. In 1825 he went to Prairie du Chien and took a position there under his brother John H., who was chief clerk for the American Fur Company, afterward taking his brother's position when the latter was appointed agent of the company. In 1827 he returned to Chicago, and the following year went to Detroit. In 1829 his brother John removed to Fort Winnebago as Indian Agent, and Robert went to that place, where he was em-

ployed as sutler to the fort. Mrs. Kinzie mentions in, "Waubun," the fact of his being there when she arrived in the fall of 1830, and he probably accompanied his brother to Chicago a few weeks later on receiving intelligence of the alarming sickness of Dr. Wolcott, his sister's husband. He remained in Chicago when the rest of the family left in the spring of 1831, and early in 1832 erected a frame store on the West Side—the first frame store in Chicago—and probably the first frame building, aside from the one erected by Government for Billy Caldwell in 1828, near the junction of North State and Chicago Avenue. Mr. Kinzie married the daughter of Colonel Wm. Whistler, who came to Chicago as Lieutenant in his father's command in 1803, and returned to the place as commandant at Fort Dearborn in 1832. In 1835 Mr. Kinzie became a member of the firm of Kinzie, Davis & Hyde, hardware dealers; in 1840 he moved on to a farm at Walnut Grove, Illinois, where he remained three years. In 1845 he was at Des Moines, and thence went beyond the Missouri River in Kansas to trade with the Indians. In May, 1861, he was appointed Paymaster in the army, with the rank of Major, and remained in the service to the time of his death. From 1861 to 1864, he was in Washington, D. C.;

R. A. Kinzie

from 1864 to 1868 in New Mexico and afterward in Chicago. In person, Major Kinzie was a very powerful, as well as active man. His death was from heart disease, and very sudden. He seemed quite as well as usual in the morning, but later in the day suddenly became ill, and died in a few moments, at his residence on Thirty-fifth Street, Chicago, on Saturday afternoon, December 13, 1873. The funeral services were conducted by Father Riordan, at St. James' Roman Catholic Church; the interment was in Graceland Cemetery. It has been written of Robert A. Kinzie: "He was a man of sterling character and honesty. While his life presented no brilliant succession of great deeds, he was a man who would be remembered as 'Good Major Kinzie.'"^{*}

^{*} For many of the facts in relation to the youngest son of John and Eleanor Kinzie credit is here given to Hurlbut's "Chicago Antiquities."

CHICAGO FROM 1816 TO 1830.

From 1816, when Fort Dearborn was rebuilt, to 1829-30 there was little change in the outward appearance of Chicago. Samuel A. Storrow, of Massachusetts, Judge-Advocate U. S. A., in 1816-18, made a three months' tour through the West in 1817, visiting Fort Dearborn on his route. In a letter to Major-General Brown which was published in the Wisconsin Historical Society's Collections, he says :

"On the 2d of October after walking for three or four hours, I reached the River Chicago, and after crossing it entered Fort Dearborn, where I was kindly entertained by Major Baker and the

for Fort Wayne, having provided less uncomfortable means of traveling than for the ten previous days."

When Henry R. Schoolcraft visited Chicago, in 1820, he found four or five families living here. He mentions those of John Kinzie, Dr. Alexander Wolcott, John B. Beaubien and John Crafts, the latter being then at Hardscrabble.

Two years later (1822) Charles C. Trowbridge made a trip from Michigan to Chicago on Government business. He found only "the little Fort Dearborn, one log house, occupied by Mr. John Kinzie, agent for Mr. Astor, another by Dr. Wolcott, United States Indian Agent, and another by the late General Beaubien, then

FORT DEARBORN, AS REBUILT IN 1816.

officers of the garrison, who received me as one arrived from the moon. At Chicago I perceived I was in a better country. It had become so by gradual amelioration. That which I had left was of a character far above mediocrity, but labors under the permanent defects of coldness of soil and want of moisture. * * * The River Chicago (or, in English, Wild Onion River) is deep, and about forty yards in width. Before it enters the lake, its two branches unite, the one proceeding from the north, the other one proceeding from the west, where it takes its rise in the very fountain of the Plain or Illinois, which flows in an opposite direction. The source of these two rivers illustrates the geographical phenomenon of a reservoir on the very summit of a dividing ridge. In the autumn they are both without any apparent fountain, but are formed within a mile and a half of each other, by some imperceptible undulations of the prairie, which drain it and lead to different directions. But in the spring the space between the two is a single sheet of water, the common reservoir of both, in the center of which there is no current toward either of the opposite streams. . . . The site and relations of Fort Dearborn I have already explained. It has no advantage of harbor, the river itself being always choked and frequently barred from the same causes that I have imputed to the other streams of this country. In the rear of the fort is a prairie of the most complete flatness, no signs of elevation being within the range of the eye. The soil and climate are both excellent. Traces yet remain of the devastation and massacre committed by the savages in 1812. I saw one of the principal perpetrators (Nes-cot-no-meg).* On the 4th of October I left Chicago

* Mrs. Kinzie says, ("Waubun," p. 148) that Nec-scot-no-meg, one of the most famous chiefs of the nation, was the father of the wife of Billy Caldwell.

a trader." So it was year after year—Fort Dearborn, and the houses of John Kinzie, Dr. Wolcott and Jean Baptiste Beaubien. William H. Keating, who reached Chicago, with the second expedition of Major Long, June 5, 1823, describes the village as "consisting of a few huts," and offering no inducements to the settler as a place of business for "the whole amount of the trade on the lake did not exceed the cargo of five or six schooners, even at the time the garrison received its supplies from Mackinaw." Ebenezer Childs, of La Crosse, made a trip from Green Bay to Chicago in 1821, and again visited the latter place in 1827. He says the place had not improved any since his former visit. John H. Fonda, of Prairie du Chien, came to Chicago in 1825. He says :

"At that time Chicago was merely an Indian Agency, it contained about fourteen houses, and not more than seventy-five or one hundred inhabitants at the most. An agent of the American Fur Company, named Gurdon S. Hubbard, then occupied the fort. The staple business seemed to be carried on by the Indians and run-away soldiers, who hunted ducks and muskrats in the marshes. There was a great deal of low land; and mostly destitute of timber. The principal inhabitants were the [Government] Agent [Dr. Wolcott], Mr. Hubbard, a Frenchman by the name of Ouillette, and John B. Beaubien."

Chicago, at the time of Mr. Fonda's visit, was a part of Peoria County. He says there were some fourteen cabins in the place, and the assessment roll of John L. Bogardus, Assessor of Peoria County for the same year (1825) shows just fourteen tax-payers, as follows :

Tax-Payers' Names.	Valuation.	Tax.
1 Beaubien, John B.....	\$1000	\$10.00
2 Clybourne, Jonas.....	625	6.25
3 Clark, John K.....	250	2.50
4 Crafts, John.....	5000	50.00
5 Clermont, Jeremy.....	100	1.00
6 Coutra, Louis.....	50	.50
7 Kinzie, John.....	500	5.00
8 Laframboise, Claude.....	100	1.00
9 Laframboise, Joseph.....	50	.50
10 McKee, David.....	100	1.00
11 Piche, Peter.....	100	1.00
12 Robinson, Alexander.....	200	2.00
13 Wolcott, Alexander.....	572	5.72
14 Wilemet [Ouilmette], Antoine.....	400	4.00

Of these tax-payers, Jonas Clybourne and John K. Clark, lived several miles up the North Branch, where now are the North Chicago rolling-mills ; the Laframboise brothers lived about an equal distance up the South Branch, at Hardscrabble ; John Crafts, the agent of the American Fur Company, had quarters with John B. Beaubien ; David McKee lived on the North Side, near the agency-house of Dr. Wolcott, and John Kinzie and Antoine Ouilmette lived nearly opposite the

JOHN K. CLARK.

fort. Alexander Robinson had a cabin at Hardscrabble but probably lived near the "forks" on the West Side, in 1825. Jeremy Clermont and Peter Piche were Indian traders. In January, 1828, Mr. Fonda came again to Chicago as bearer of dispatches from Fort Howard to Fort Dearborn. He says there was no improvement in the place since his former visit, save that the fort was strengthened and garrisoned. Since 1820, however, several permanent settlers had arrived at Chi-

cago, and made homes in its immediate vicinity, prominent among whom were :—

THE CLYBOURNE FAMILY (1823-24).—Elizabeth McKenzie, a young girl taken prisoner by the Indians in

ARCHIBALD CLYBOURNE.

Virginia, in the latter part of the eighteenth century, was released after a long captivity, and with her sister Margaret found her way, or was taken, to Detroit. Elizabeth became the wife of a trader, Clark, and the mother of John K. Clark, an Indian trader for many years in Chicago, and of a daughter named Elizabeth, who married William Ahert, and settled in Laporte, Indiana. Mr. McKenzie, the father of Elizabeth and Margaret, learning that his daughters were alive, visited Detroit, and on his return to Virginia was accompanied by both of them with their children.

Elizabeth subsequently married Jonas Clybourne of Virginia, the fruit of this union being two sons, Archibald and Henley.

ARCHIBALD CLYBOURNE, the eldest son was born in Giles County, Va., August 28, 1802. His half-brother, John K. Clark, came early to Chicago to seek his fortune, and Archibald followed him as soon as he arrived at manhood. He reached Chicago August 5, 1823, and after remaining about one year returned to Virginia with John K. Clark, to bring his father and mother to the place he had determined to make his home. The Clybourne family, consisting of father and mother, Jonas and Henley, arrived at Chicago on the 23d of August, 1824. They were accompanied by John K. Clark and Elizabeth Kinzie, a daughter of John Kinzie, who subsequently married Samuel Miller. John K. Clark had an Indian wife, named Madaline Mirandeu, sister of Mrs. Joseph Porthier (Victoire Mirandeu), who lived in Chicago both before and after the massacre, although not here at the time. A daughter of John K. Clark and Madaline Mirandeu, the wife through whom he received his land in Chicago, is still living at Milwaukee. Clark married, July 21, 1829, Permelia Scott, daughter of Stephen J. Scott, who settled at Gros Point, (Wilmette) in 1826.

JONAS CLYBOURNE, with his wife and two sons, and their half-brother Clark, settled on the North Branch of the Chicago River, near where now are the North Chicago rolling mills—building there two cabins. On the 10th of June, 1829, Archibald Clybourne was

married at the "Grand Rapids" of the Illinois River, now the town of Marseilles, to Mary Galloway, daughter of James Galloway, who had been there settled some two years. This seems to have been the earliest marriage of Americans recorded in La Salle County.

In the summer of 1824, James Galloway left his home in Sandusky, Ohio, and came on horseback to Chicago, arriving in the fall. He spent a year in the vicinity, trapping and examining the country for a favorable site for a home. During the year he bought the claim of a man named Weed on the Illinois River, at the point then known as the "Grand Rapids of the Illinois." The following year he returned to Ohio, and disposed of his property there, preparatory to making his home in Illinois. After various hindrances Mr. Galloway and his family, consisting of his wife, his daughter Mary, aged about fourteen, Jane nine or ten, Susan about two, and his son John, aged about six, started from Sandusky for Chicago in October, 1826. The vessel in which the family embarked was a small schooner, which was to touch at Detroit and Mackinaw before making Chicago. Mr. Galloway, in anticipation of an extensive trade with the Indians, provided himself with a large assortment of articles suited to the business, which with his household goods were placed on board the schooner. The passage to Detroit and Mackinaw was slow and tedious, and at both those ports the passengers were delayed while the captain had a "jolly time" on shore. Leaving Mackinaw late in the fall, in the midst of a heavy storm, and against the advice of all prudent people, the captain ran his vessel aground off the island of St. Helena, about fifteen miles from Mackinaw, where his passengers were obliged to remain three or four days, and until they were picked up by a vessel belonging to the American Fur Company which left Mackinaw for Chicago, a few days later. The stranded vessel was well filled with water, although still whole, but much of its cargo was spoiled, including a large part of the goods of Mr. Galloway. What could be saved was taken on board the vessel of the American Fur Company, although with serious misgivings on the part of the captain as to the propriety of taking the goods of any trader who was not connected with the company which employed him. Communication was opened with the agent at Mackinaw, who would give consent to have Mr. Galloway's goods carried to Chicago on the vessel only on condition that all those appertaining to the Indian trade should be placed in charge of the agent at Chicago, and kept by him until spring, thus throwing Mr. Galloway out of a winter's work. He would not consent to this, and some arrangement was made with the captain whereby he was to be allowed to place his goods in some safe place, before the Chicago agent should know that he was authorized to claim them for the winter. The story of the experiences of the family, after reaching Chicago in 1826, as narrated by Mrs. Archibald Clybourne (the Mary Galloway of the story), and published in the Chicago Sunday Times, gives a good picture of the little settlement and how the people lived here at that early day. The following extracts are from the article:

"There was a goodly company on board the American Fur Company's schooner, and its capacity was taxed to the utmost. Besides the two crews and the Galloway family, there were two carpenters, who were coming on to do some repairing at the fort, and a Mr. Arthur and wife from Detroit, who, like Mr. Galloway and family, intended to embark in a farming enterprise. There were still others, but Mrs. Clybourne at this late date (1877) fails to call up their identity. All these folk were most kindly disposed toward Mr. Galloway and swore to stand by him if the agent in Chicago seemed disposed to make him any trouble. When the vessel made a landing somewhere near the foot of Madison Street, at a point where J. Baptiste Beaubien, as agent of the American Fur Company* had a rookery, which was known as a "warehouse;" the captain told him to look about him for a place to store his goods. As soon as Mr. Galloway had gone, the captain most treacherously turned about and handed the letter of introduction to Mr. Beaubien, and that functionary hastened to secure help to have the goods conveyed to the warehouse. In the meantime Mr. Galloway had been to the fort, standing almost unoccupied on the bank of the river, but as the keeper of the stockade went "snooks" with the Fur Company, he refused the newcomer even a room for shelter for his family, to say nothing for store-room for his goods. Finding himself balked at that point, he scarcely knew where to turn, when he was apprised of what was happening at the vessel, and he quickly retraced his steps. Such an occurrence as the arrival of a schooner, with twenty or thirty people on board was naturally an "event" of extraordinary moment to the settlement and, as a matter of course, everybody—Americans, French half-breeds and full blooded Indians for miles around, were on the scene, and taking a deep interest in all that was going on. It was well that Mr. Galloway was not an entire stranger to the place. During his former visit he had made a num-

* John Kinzie was agent of the American Fur Company at this time, but Mr. Beaubien had bought of the Company its right to trade with the Indians of the vicinity.

ber of acquaintances, not to say friends, especially in the rival settlement of Hardscrabble, and these people combined, with the two ship carpenters and Mr. Arthur, were disposed to make a stand for him. When noses were counted it was found that Mr. Galloway's friends were decidedly in the majority and Beaubien, swearing a blue streak in execrably mixed French and English, was forced to desist from carrying out the behests of the agent at

MRS. ARCHIBALD CLYBOURNE.

Mackinaw. Failing of finding quarters at the fort, and there being no shelter "down town," Chief Alexander Robinson informed Mr Galloway that he had an old log cabin at Hardscrabble, which he was welcome to occupy. The offer was thankfully accepted, and as the flat-boat of Mr. Wallace* of Hardscrabble, also a friend of the new-comers, was near, the goods were hurriedly piled into it and poled up the river to the shanty, which was located near the west branch of the South Branch, about four miles from the fort. The winter that followed was terribly severe, and the little cabin of one room, crowded besides with barrels, proved a most uncomfortable place for a family of six persons to live in. At this period of Chicago's history, the Indian was still monarch of all he surveyed. Red skins were the rule and white ones the exception, and the cabin stood near the most frequented trail that led to the Desplaines and Fox River country—it having formerly been used as a trading-house. The cabin was the farthest in the direction of the Indians, and it was indeed, a terrible ordeal for the family to be transformed, at one move, from comfort and civilization into the very heart of savagery. The older inhabitants, most of them brought up in the midst of savages, cared no more for an Indian than a white man—indeed they minded him less—but the same indifference could not well be expected of newcomers, the more as the women folk were left much of the time alone, Mr. Galloway being about a considerable portion of his time on his claim near the "Grand Rapids" of the Illinois. One day during the absence of Mr. Galloway, some idle rumor reached the cabin that the Indians on the Auxplaines had taken the war-path. Old settlers would have paid little attention to such a story, but the new comers were terribly frightened. Mr. Galloway was expected home in the evening, and when he did not come, the family took it for granted that he had been brutally massacred. It was a terrible night. The snow was drifting furiously; a keen northwest wind was raking the prairie as with grape shot, and when about midnight the household was awakened by unearthly yells, and loud beatings on the door and windows, they concluded that their hour had come. The wife assumed that the husband—

* William H. Wallace. See sketch of Indian Fur-Traders at Chicago.

who had been detained by the severity of the storm—had been murdered, and that the fiends, still reeking with his blood, had now come to dispatch the family. It was evident that there were from a dozen to twenty Indians on the outside, yelling and rattling the door and windows. The fact was that these Indians still supposed the house to be a trading-post, and all they wanted was a shelter from the searching blast. Returning from an extensive hunting expedition nearly frozen, to be denied admission where they expected a warm welcome—for the fur-laden Indian was always a cheering sight to the trader—was a mystery to them which they were determined to solve. They attempted to force the door, but failed. Every night, before retiring, it was Mrs. Galloway's custom to thoroughly barricade the door, and it was so arranged that nothing short of utter demolition would move it from its place. Mrs. Archibald Clybourne (Mary Galloway) was then a girl fourteen years of age, and being the eldest, was the only one her mother could depend upon for assistance. There were two axes in the cabin. One of them the mother gave to the daughter, and posted her at one window; the other she grasped herself, and took a position near the other window. Having made this disposition of affairs, she said, "They have killed father and now they mean to kill us. But I am bound to kill one Indian at least before they do it, and you must kill another. The moment you see a head forcing its way by that window, strike." The two women stood guard the whole night, during several hours of which the Indians kept running round and round the cabin to keep warm, now and then emitting unearthly yells. Finally they gave up the effort to gain admittance and made their way to Lawton's (Laughton's) the nearest neighbor, a trader about half a mile away in a southerly direction. Here they met with a ready welcome, and with chattering teeth told how they had fared at the other place. In a few words the situation was explained to them, and, as quickly as possible, a Frenchman was dispatched to quiet the fears of the women, who were still standing as guard, fearing at any moment the return of the howling redskins. The Frenchman did his best, talking through the keyhole to make them understand that no danger was to be apprehended; but as the folks inside surmised he was only an Indian imitating a Frenchman's broken English, and that the other red-devils were close behind him in ambush, his well intended mission utterly failed of its object, and the stout-hearted women held their post until the dawn of the morning revealed that the coast was clear.*

Mrs. Clybourne described the appearance of Chicago in the winter of 1826, as a black and dreary expanse of prairie, with occasional patches of timber. At the mouth of the Chicago River, which was then at the foot of Madison Street, stood the cabin of Jean Baptiste Beaubien, and his shanty warehouse, somewhat nearer the lake. Where the river turned to the south, at the point where Rush-street bridge now crosses the stream, was old Fort Dearborn. On the other side of the river, nearly opposite the fort a double log house occupied jointly by John Kinzie and Alexander Wolcott,* and near this the blacksmith shop of David McKee and Joseph Porthick (Porthier). At the forks of the river, on the South Side, a cabin used for a store, owned and occupied by James Kinzie and David Hall of Virginia.† At Hardscrabble there were five or six cabins, several of which were occupied by the Laframboises, of whom there were four: Francis Sr., Francis Jr., Joseph and Claude. Another was occupied by Mr. Wallace, another by Barney Lawton. [Bernadus H. Laughton, who married, November 11, 1830, Sophia Bates from Vermont, a sister of Mrs. Stephen Forbes who taught school in Chicago in 1830.] The Galloways were in the cabin of Chief Robinson, and there was still another, but Mrs. Clybourne had forgotten the occupant. The Clybournes were on the North Branch—Jonas and wife, his sons Archibald and Henley and John K. Clark their half-brother. In the spring of 1827 Mr. Galloway moved his family to his claim at the "Grand Rapids," and there Mary became acquainted with Archibald Clybourne, whose business as drover and butcher took him often to that region, and on the 10th of June, 1829, she became his wife, the marriage taking place at the frontier cabin on the Illinois. They were married by Rev. Isaac Scarritt. On the 12th of June the young couple reached Chicago, and Mrs. Clybourne found that several changes and improvements had been made since she left the cabin at Hardscrabble as Mary Galloway. Both the "Miller House," and "Wolf Tavern" had been erected during her absence. The "Miller House," which was built as early as 1827, by Samuel Miller, was occupied by Miller and his wife as a dwelling and tavern, and also as the store of Miller and Archibald Clybourne. The Wolf Tavern, which was rented to Elijah Wentworth the fol-

* The agency-house, owned by Dr. Wolcott, was not occupied by him at this time. He was living at the fort, of which he had charge during the absence of the troops. Probably Mr. Kinzie lived at the agency-house, as his own was fast going to ruin.

† This must have been the cabin bought by Mark Beaubien. James Kinzie and David Hall were keeping store on the West Side at Wolf Point as late as 1834, and Dr. Enoch Chase, now of Milwaukee, was their clerk.

lowing year, was occupied in the summer of 1829 by James Kinzie and wife, and his father-in-law, Rev. William See. Mr. and Mrs. Clybourne remained at the Miller House two days, and on the 14th of June went to their home on the North Branch of the river, at "Clybourne Place," near the North Chicago rolling-mills, Archibald and his wife lived with his parents until 1835. In September of that year he built a small frame house on the "Elston Road," now Elston Avenue, into which he moved with his family, then consisting of wife and three children. In 1836 he erected the main building of brick, a spacious building facing the south. It was described in 1877 as standing "a veritable patriarch among its surroundings." "In its day it was the most pretentious residence in the city—though it is doubtful if the limits of the corporation extended to that point at the time—and it is now (1877) the oldest brick building in the city, and with one exception, an old rookery on the northeast corner of Lake and Canal streets, the oldest structure of any sort. The Clybourne mansion—so called in its days of glory—is a curious structure. It contains about twenty rooms. Toward the west it presents the appearance of a plain double two-story brick, with an ordinary entrance in the center. That which is now the front of the building facing Elston Avenue, was once its side, the real front of the old time facing south, toward Chicago, and this has a spacious columned porch. When built there was neither street nor landmark to determine how the structure should face, except the proprietor's personal preference, and now (1877) by a freak of the surveyor, or other cause, the building stands in the middle of the lot, the main front facing an adjoining lot instead of the street. The brick for the structure was made near its site, and the maker was he who subsequently became very intimately associated with the history of Chicago,

DAVID HALL.

under the name of Hon. Francis C. Sherman, founder of the Sherman House, and many times elected to the honorable position of Mayor."

Archibald Clybourne was the first Constable of Chicago, when it was a precinct of Peoria County. The following orders were issued by "Peoria County Court, September 6, 1825."

"Ordered: That the first precinct contain all that part of the County east of the mouth of the DuPage River, where it empties its waters into the Auxplains River, and that the elections be held at the agency-house or Cobweb's Hall."*

* "Cobweb Castle," according to Mrs. Kinzie in "Waubun." It was situated at the southwest corner of the present North State and North Water streets. Dr. Alexander Wolcott occupied the house from 1820 to 1823, and from 1828 until his death in 1830.

At the same time ordered: "That Archibald Clybourne be appointed Constable in and for the County of Peoria, and that the Clerk of this county take his official bond." In June, 1829, the month of his marriage, he was authorized to keep a ferry in conjunction with Samuel Miller "across the Chicago River, at the lower forks, near Wolf Point, crossing the river below the Northeast branch, and to land on either side of both branches, to suit the convenience of persons wishing to cross." It was ordered that "said Clybourne and Miller pay a tax of two dollars and execute a bond with security for one hundred dollars. The rates for ferrriage to be one half the sum that John L. Bogardus gets at his ferry at Peoria." In the latter part of the same year, December 8, 1829, he was appointed one of the first trustees of the school section, Archibald Clybourne, Samuel Miller and John B. Beaubien comprising the board. He was made Justice of the Peace in 1831. Jonas Clybourne and his son Archibald were the early butchers of Chicago. They furnished the garrison at Fort Dearborn, and

the sect in Chicago, and, as a layman, ought ever to rank as one of the fathers of that church; a father to whom the many who now hold to his faith in these latter days may point with pride, and whose memory may well be cherished by them with enduring affection.

DAVID MCKEE, a settler in Chicago in 1822 or '23, was born in Loudoun County, Va., December 2, 1800. His parents were Scotch, and emigrated from their native country to Virginia, subsequently settling in Pennsylvania, and later in Ohio. At the age of thirteen David was placed in a blacksmith shop in Cincinnati to learn the trade, and was there employed until 1821, when he made a short visit to New Orleans. By the terms of the Indian treaty made at Chicago in 1821, a blacksmith was to be kept by Government at the Chicago agency, for the benefit of the Indians. Mr. McKee, who was then in Cincinnati, was employed by Colonel Benjamin Kerchival, Indian Agent at Detroit, to come to Chicago in that capacity. According to his own recollection he arrived in

THE CLYBOURNE HOUSE.

sometimes extended their trade to Mackinaw. When the Black Hawk War, in 1832, brought crowds of frightened settlers from the country to the shelter of the fort, the Clybournes and John Noble and sons fed nearly the entire population until the pioneers could return to their homes. The Clybourne family, with the rest of Chicago, took refuge in the fort until the danger was past. Mr. Clybourne lived on the old place until his death, August 23, 1872. He left, at that time, his widow, still living in Chicago with her daughter, Mrs. Parks, and ten living children: Sarah Ann (Mrs. Vincent Barney) born March 24, 1830, still alive; Margaret E. (Mrs. Richard Holden) born October 10, 1831, now living in Chicago; Martha Ann, born November 18, 1833, still living in Chicago; James A., born October 14, 1835, now in the old business of his father, at 441 North Clark Street; John H., born June 27, 1838, died September, 1875, (see his record in Military History—Zouaves); William H., born April 14, 1840, now a resident of Chicago; Henry C., born May 2, 1842, lives at Desplaines; Mary V., now wife of J. C. Parks, general manager of the North Chicago Rolling-mills, born November 16, 1844; Charles A., still living in the old house, born October 2, 1847; Frank, now with firm of Gregory & Cooley, born April 5, 1857. They had two boys and one girl who died in infancy.

Mr. Clybourne's record as an old pioneer is unclouded by any of the prevalent vices of the time. He lived the life of an unselfish and guileless man, and went to his rest full of years and not lacking the full measure of honors that honesty and a broad charity for his fellow-men could bring. In his religious faith he was a member of the then quite unpopular and unevangelical sect known as Universalists. He was one of the earliest and staunchest supporters of

1822, but as he accompanied from Fort Wayne to Chicago the exploring expedition of Major Stephen H. Long, he must have left Fort Wayne May 29, 1823, and reached Fort Dearborn June 5 of the following month. Mr. McKee found but two houses on the north side of the river on his arrival—those of John Kinzie and Dr. Alexander Wolcott. The third house was built near the agency-house, by Joseph Porthier, and the fourth by Mr. McKee himself. All these houses were of logs—the agency-house being afterward clapboarded part way up. In June, 1827, Mr. McKee was married, by John Kinzie, J. P., at the residence of the latter, to Wealthy, daughter of Stephen J. Scott, of Gros Point, now Wilmette. About the time of his marriage, or somewhat before, he was appointed mail-carrier for the Government between Fort Dearborn and Fort Wayne, and made monthly trips between those places during 1827-28. His route from Chicago was via Niles, Mich., and Elkhart, Ind. The journeys were made on horseback, carrying his mail-bag, camping equipments and lastly his rifle, upon which he relied for his daily food. The time of his average trip was fourteen days—the shortest was ten days. He resided in Chicago until 1832, at which time he owned four lots near the present site of the Northwestern Railroad depot. This land he sold for \$800. and with the money purchased a farm in DuPage County, where he lived until 1874. He moved from this farm and settled upon another near Aurora, Kane County, where he died April 9, 1881.

THE MIRANDEAU AND PORTHIER FAMILIES.—Among the few houses built on the north side of the river prior to 1826, was one which was built and occupied by Joseph Porthier, a blacksmith and striker for Mr. McKee. The widow of Mr. Porthier is be-

lived to be the only person, now living, who saw and remembers any circumstances which transpired in Chicago, prior to the massacre of 1812. She is the fifth child of Jean Baptiste Mirandea, the earliest permanent white settler in Milwaukee and a sojourner in Chicago in 1811. She is now living (September, 1883) at Bay View near Milwaukee, and retains a vivid and clear recollection of very early times in Chicago, which are deemed of historic value, as they were given at two different interviews, between which sufficient time had elapsed to test the reliability of her recollection. Without prompting on the part of the interviewer, she corroborated all statements made at the first. She is the "good Victoire," mentioned by Mrs. Kinzie in "Waubun" (p. 369), and the family servant of John Kinzie and Dr. Wolcott. Genéviève and Jean Baptiste, with the amusing "Tomah," who accompanied John H. Kinzie and Lieutenant Hunter to Fort Winnebago in 1833, were her sister and brothers. The family record kept by her father was destroyed after his death, and Mrs. Porthier cannot give the exact date of her birth, but from collateral evidence it is believed to have been in 1800 or 1801.* What follows is as given by Mrs. Porthier herself in August and September, 1883:

"My mother was an Ottawa woman; my father was a Frenchman. He was a good scholar, a very handsome man, and had many books. He taught us children to speak French, and we all learned to speak Indian of the tribe and mother. We had no schools nor education. I never learned to read or write. My father had his house in Milwaukee, where he traded with the Indians and did some blacksmithing for them, and for other traders. He fixed guns and traps for them. Before the fort was burned (August, 1812) my father was down to the fort—the year before—and did blacksmith work there. The family went down while he was there, and some of us lived in the Ouilmette house, across the river from the fort. My sister Madaline (afterward the wife of John K. Clark) and I saw the fight between old John Kinzie and Lalime when he (Lalime) was killed.

"THE LALIME HOMICIDE.—It was sunset when they used to shut the gates of the fort. Kinzie and Lalime came out together and soon we heard Lieutenant Helm call out for Mr. Kinzie to look out for Lalime, as he had a pistol. Quick we saw the men come together; we heard the pistol go off, and saw the smoke. Then they fell down together. I don't know as Lalime got up at all, but Kinzie got home pretty quick. Blood was running from his shoulder where Lalime had shot him. In the night he packed up some things, and my father took him to Milwaukee, where he staid till his shoulder got well and he found he wouldn't be troubled if he came back. You see Kinzie wasn't to blame at all. He didn't have any pistol nor knife—nothing. After Lalime shot him and Kinzie got his arms around him, he (Lalime) pulled out his dirk and as they fell he was stabbed with his own knife. That is what they all said. I didn't see the knife at all. I don't remember where Lalime was buried. I don't think his grave was very near Mr. Kinzie's house. I don't remember that Mr. Kinzie ever took care of the grave. That is all I know about it. I don't know what the quarrel was about. It was an old one—business, I guess.

"After Mr. Kinzie came back (1816) he came up to Milwaukee and visited my father and took me to live with him. (We were not there when the fort was burned—we had gone back to Milwaukee.) I lived with him until he died, then I married Joseph Porthier. He was a Frenchman, and a kind of blacksmith. He worked for McKee."

Victoire Mirandea, who has partially told her own story, above, was married at Fort Dearborn to Joseph Porthier, by Colonel J. B. Beaubien, J. P., November 5, 1828. She lived in Chicago until 1835, when Mr. Porthier, wife and three children, removed to Milwaukee, where he had bought a quarter section of land. Mr. Porthier died in 1875, and was buried in Milwaukee. His widow lives near Bay View, south of the city of Milwaukee, in a small house built for her by the old settlers of that city. Her large family of children, like her brothers and sisters, have all died of consumption—the last daughter during the late summer of 1883—and the sorrowful old lady is indeed alone. When speaking of her early friends in Chicago—the Kinzies, Wolcotts, Beaubiens and the many members of her tribe, her sad refrain is ever "dead—all gone." Her little home, though plain to poverty, is a model of neatness and order, and the garden, tended by her own hands, is bright with flowers and vines. She speaks French, English, and several Indian dialects well. It is well said of her in the "Milwaukee History": "If she could have had the advantages of an education, Mrs. Porthier would have been a remarkable woman, as her memory is almost as accurate as a written record; her powers of perception are wonderful, and her ideas of right and wrong rigidly and justly correct. But her closing years

* The Milwaukee History, in a foot note referring to a statement of Dr. Enoch Chase, that she was probably born in 1805, says: "She was born in the winter of 1800-1801, according to her best recollection and the Kinzie family memoranda."

are dreary enough—shorn as they are of relatives and friends, pinched by poverty and burdened by sorrow." It is indeed sad that this solitary woman, forming perhaps the only living link connecting the present with the "by-gone days" of Chicago and Milwaukee, should close her days in poverty and an ever present dread of being the recipient of public charity.

JEAN BAPTISTE MIRANDEAU, the father of Mrs. Porthier, was an educated French gentleman belonging to one of the first families of Quebec. He studied for the priesthood, but on the eve of taking orders abandoned his intention, and about the close of the Revolutionary War left Quebec with John Vieux for the northwest. He became an employé of the American Fur Company, and traded some years in the Lake Superior region and afterward on the Washash. He came to Milwaukee about the year 1795, bringing with him his Indian wife whom he had recently married, and to whom

MRS. VICTOIRE (MIRANDEAU) PORTHIER.*

he was faithful until his death, which occurred in 1820. He built a house in Milwaukee and around it had a well cultivated garden.† "He was a religious man, and had prayers in his house every evening. His library was quite large, and he spent all his leisure time in reading. He was a tall fine looking man, with crisp curly hair. He was a great favorite of his wild neighbors, who promised him all the land between the river and the lake as far as the North Point, when they made the treaty for the sale of their lands, but he died before that treaty, and Mr. (Solomon) Juneau succeeded him as the chief white man in Milwaukee. His widow survived him until 1838, and was well known to many of the early settlers of Milwaukee. . . Mr. Mirandea was the first white man who ever moved here, spent his married life here, died and was buried here (Milwaukee)."

The children of Mr. Mirandea were ten. Jean Baptiste 1st, was poisoned when a child, at the mouth of Rock River. Madaline 2d came to Chicago, for a time lived in the family of Lalime, the Indian Interpreter, and afterwards became the wife of John K. Clark, and died leaving a daughter who still lives at Milwaukee. The fourth child was Joseph; the fifth, Victoire (Mrs. Joseph Porthier). Then came Louis, Jean Baptiste 2d, Rosanne, Genevieve and Thomas. Jean Baptiste and Genevieve were servants in John Kinzie's and Dr. Wolcott's families, and Thomas the youngest was

* The oldest resident of Chicago living. Taken from a photograph in August, 1883.

† From address of Dr. Enoch Chase before Old Settlers' Club of Milwaukee. Dr. Chase says he has known the history of the Mirandea family thirty-five years.

the "Tomah" of "Waubun." Nearly all of the younger children died in Kansas. After the death of Mr. Mirandea, his widow, left with no relatives or friends except among the Indians, took up her abode among them, and the papers and books of her husband were lost or destroyed. Mr. Mirandea was an intimate friend of John Kinzie, and probably placed his children in his family that they might escape, as far as possible, the influence of the Indians.

STEPHEN H. SCOTT and family came to the West from Bennington, N. Y., a small place about twenty-eight miles from Buffalo. Although the family did not settle, as a family, directly in Chicago, one of the sons, Willis, lived here continuously from 1826

Willis Scott

to 1832, and after removing to the neighboring town of Waukegan, returned again to Chicago about 1866-67. The daughters also married and lived in Chicago. Stephen Scott started for the West intending to settle at St. Joe, Mich., but on arriving at that place concluded to cross to Chicago. The schooner, bringing his family and effects, arrived at Chicago August 20, 1826. After looking about the country in the vicinity a little, Mr. Scott decided to settle at Gros Point, now Wilmette, and departed for that place with his family, by schooner, sending word to one of his sons—Willard—who had remained behind with a portion of the goods at St. Joe, to bring them to that point. The family landed at Gros Point on the 22d, and as soon as possible a log cabin was erected, in which the family lived until 1831. Willis, however, returned immediately to Chicago where he worked around the fort for a time as hostler for the Post-surgeon, Dr. Finlay, and also worked for the Clybournes. About the year 1829 or 1830, Archibald Clybourne made a journey to Virginia to get a girl strong and willing to come to Chicago and assist his mother, who was growing old and unequal to the tasks of pioneer life. He brought back with him a relative, Louisa B. Caldwell, sister of Archibald Caldwell, who with James Kinzie built the Wolf Point Tavern. Willis Scott became acquainted with this girl at Mr. Clybourne's, and on the 1st of November, 1830, she became his wife, the marriage ceremony being performed by Rev. William See. The Scott family remaining at Gros Point consisted of a son Willard and three daughters, all of whom were married while residing there. Wealthy Scott, married, January 23, 1827, David McKee, and lived on the north side of the river near the foot or what is now North State Street, where their son, Stephen J. Scott McKee was born September 18, 1830.*

PERMELIA SCOTT was married, July 21, 1829, to John K. Clark whom she survived; Deborah, who was the widow of Munson Watkins when she came to the West, was married again to Joseph Bauskey, a Frenchman, May 5, 1828. Mr. Bauskey died of cholera in Chicago in 1832. Willard married Caroline Hawley, July 21, 1829, and was long a resident of Naperville, Ill. After the family had lived at Gros Point five years, it was discovered that Mr. Scott's claim was on the reservation granted by Government to Antoine Ouilmette; and he removed to Desplaines, and took charge of a tavern owned by the Laughton brothers, where now is the site of Riverside. This tavern was quite pretentious for the times, and a favorite resort of the Chicago people. Mrs. Kinzie, in that wonderful picture of early Chicago and the vicinity, "Waubun," mentions a call she made there in 1831, where she found carpets, a warm stove, and other luxuries not common at that day.

MARK BEAUBIEN, a younger brother of General J. B. Beaubien, was born in Detroit in the year 1800. When very young, he married in that city, Mademoiselle Monique Nadeau; the children of this union being sixteen, five of whom—Josette, Mark Jr., Oliver, Joseph and Emily were born in Detroit. In 1826, Mr. Beaubien came to Chicago to visit his brother, and decided to make the place his home. He tells the story of his arrival thus:† "I arrived in Chicago in the year of 1826, from Detroit; came with my family by team; no road only Indian trail. I had to hire an Indian to show me the road to Chicago. I camped out doors and bought a log house from Jim Kinzie. There was no town laid out; didn't expect no town. When they laid out the town, my house laid out in the street; when they laid the town I bought two lots where I built the old Sauganash, the first ‡ frame house in Chicago." The frame building mentioned above, and called "the Sauganash" in honor of the Chief Billy Caldwell, was at the southeast corner of the present Lake and Market streets. The old log house which Mr. Beaubien bought of

"Jim Kinzie," formed a wing of the new building which is described in "Waubun" as "a pretentious, white two-story building with bright blue wooden shutters, the admiration of all the little circle at Wolf Point." Mr. Beaubien commenced hotel keeping in the log cabin which he bought of Mr. Kinzie, and continued the business in the Sauganash, remaining in the latter, which became a very famous house of entertainment, until 1834. In the latter year he completed another house on the northwest corner of Wells and Lake streets, which was called the "Exchange Coffee House," and first kept by Mr. and Mrs. John Murphy. It seems probable that the Sauganash was afterwards called the "Eagle Exchange," as one of Mr. Beaubien's daughters, Mrs. Emily (Beaubien) Le Page, states that she once lived in the first frame building in Chicago, "called the Eagle Exchange on Market street, near the corner of Lake." Early in 1831, at a meeting of the Commissioners Court of Cook County, Mr. Beaubien filed his bond with James Kinzie as security, agreed to pay into the county treasury fifty dollars, and was licensed to run a ferry across the South Branch of the Chicago River—the first ferry in the town. All citizens of Cook County were to be ferried free with their "traveling apparatus," but outsiders were to pay specified rates. A scow was purchased of Samuel Miller for sixty-five dollars, and Mark entered upon his duties. During that year the Canal Commissioners held a meeting at Chicago, and the extra ferrage on their account was paid by Cook County. The ferryman charged for his services \$7.33. He was licensed as a merchant during 1831, and the combined duties of landlord and storekeeper, with occasional hours of

Mark Beaubien

recreation in the way of horse-racing, caused perhaps some want of attention to the ferry, and the court accordingly ordered that the ferry should be kept running "from daylight in the morning, until dark, without stopping," for the accommodation of Cook County passengers. In the same year he received a license to keep tavern, and probably soon after opened the Sauganash. When Chicago was incorporated as a town in 1833, the first election of trustees was at the house of Mr. Beaubien, which was ever a favorite resort both for purposes of business and of amusement; the merry good-

‡ An error; there had been a frame house built for Billy Caldwell.

souled landlord, and his wife, who is described as "a noble woman, and devoted Christian mother," making the Sauganash a place to be remembered by all early travelers. Mr. Beaubien married for his second and last wife Elizabeth Matthews of Aurora, by whom he had seven children. He lived in Chicago for many years, and was the last light-house keeper in the place, being appointed by President Buchanan, at a salary of \$350. He was one of the leaders in the organization of St. Mary's Church, the first Catholic society in the city, toward the construction of which he paid liberally. He was a kind friend to the Indians, who at their treaty with Government in 1834 conveyed "to their good friend, Mark Beaubien" a reservation of sixty-four acres of land at the mouth of the Calumet, of which he received the patent signed by Martin Van Buren, nearly forty years later—having been unconscious of the gift during all those years. When Mark Beaubien came to Chicago he brought with him from Detroit a fiddle, which in his hands discoursed sweet music in the old days, and will always be remembered in connection with the old Frenchman, who, till the last, loved his instrument, and at his death bequeathed it to the Calumet Club of Chicago, where it remains, a valued possession. Mr. Beaubien is described as being in his prime "a tall athletic fine appearing man, Frenchy and polite, frank, open-hearted, generous to a fault, and, in his glory at a horse-race." His favorite dress on "great occasions" was a swallow-tail coat with brass buttons, and, if in the summer, light nankeen trousers. His quaint old song, in regard to the surrender of General Hull at Detroit in 1812, of which he was a witness, was sung with as much gusto, as Monie Musk and Fisher's Hornpipe were played, and the young people of the new generation listened to his music and stories with as much pleasure as did his companions in early Chicago. His last visits to Chicago were in 1879 and 1880, at the time of the Calumet Club receptions to old settlers, where his vivacity and enthusiasm gave no token of the approaching end, then so near. The children of Mr. Beaubien, as given in the Chicago Times, in an article entitled "By-gone Days," March 26, 1876, were Josette, Mark, Oliver, Joseph and Emily, (born in Detroit), Solistion, David, George, Napoleon, Edward, Helena, Elizabeth, Gwinny, Frances, Monique and an infant who died unnamed—children of Mark and Monique Beaubien; and Robert, Frank, Mary, Ida, Jimmy, Jesse and Slidel, children by his second marriage. He died on the 16th of April, 1881, in Kankakee, Ill., at the house of George Mathews, who married his daughter Mary.

MADORE B. BEAUBIEN, second child of General J. B. Beaubien and Mah-naw-bun-no-quah, an Ottawa woman, was born July 15, 1809, at Thompson's Creek, of Grand River, Mich. Before General Beaubien became agent for the American Fur Company and permanently settled at Chicago, in the fall of 1818, Madore had visited Chicago where his father had again married and bought a house, and as early as 1813, he says, he recollects climbing over the blackened ruins of old Fort Dearborn. The business of General Beaubien as Indian trader required his presence at Mackinaw, Milwaukee and Chicago during certain portions of each year and in these trips he was usually accompanied by his family—relatives of his wife (Josette La Framboise) living in all those places. Madore had not been many years in Chicago, before his father sent him to the Baptist school established by Rev. Isaac McCoy, under the auspices of Government, at the place now Niles, Mich., then called the Carey Mission. In 1831, Madore was licensed as a merchant, and soon after built a two roomed log house which was the first building on lot No. 1, now the southwest corner of South Water and Dearborn streets. He brought a stock of goods from Detroit and opened a store in one of the rooms, while the other was occupied as a tailor's shop, by Mr. Anson H. Taylor, who had arrived in Chicago in 1829, and first opened his goods at the old Kinzie house on the north side of the river. In 1832 Mr. Taylor, assisted by his brother Charles, then landlord at the Wolf Tavern, built a wooden bridge over the South Branch of

Madore B. Beaubien

the Chicago River, near the forks—a log foot-bridge having been previously constructed over the North Branch. The following year Madore B. Beaubien was appointed one of the committee to contract for repairing these bridges. His store was not a success. Looking at the courtly old gentleman of seventy-four—erect, handsome, suave and polished, it is easy to see that the young man of twenty-one would hardly relish any confinement to the drudgery of trading and bartering with Indians. So he failed in business, but was ready for both the sports and dangers of frontier life, and until the tidings of the Black Hawk War aroused him, the attractions of the wolf hunt, the race or the dance, kept him from a

more useful life. He was Second Lieutenant of the Naperville militia company during the war, and showed himself brave and fearless. He was later First Lieutenant in Captain Boardman's Chicago company. Mr. Beaubien first married, in Chicago, Maria Boyer, daughter of John K. Boyer, who arrived here in the spring of 1833. This marriage was dissolved by divorce. His second wife was Keez-ko-quah, an Indian woman, and on June 2, 1854, he married for his third and present wife his cousin Therese (La-framboise) Harden, formerly Watkins, the divorced wife of Thomas Watkins of Chicago, and widow of Mr. Harden. This marriage took place at the Baptist Indian Mission, in what is now Shawnee County, Kan. Mr. Beaubien left Chicago with the Pottawatomies in the fall of 1840; resided at Council Bluffs until 1847, and then with the tribe went to Kansas. For many years he was one of the interpreters of the Pottawatomies, and was one of the six commissioners employed by the Nation to transact their business with the United States. In November, 1861, a treaty was made with the Pottawatomies, by which those who so elected were given land in severalty, and those who desired to continue tribal relations were removed to a diminished reservation. At the time of this treaty Mr. Beaubien officiated as one of the "head men" of the tribe, but with many others, elected to become a citizen of the United States, and received an allotment of land on account of his wife and mother. He now resides on a farm in Silver Lake Village, of which he and A. T. Thomas—afterward a resident of Topeka, and Clerk of the United States Circuit Court—were the original proprietors. The first store in the village was started by Mr. Beaubien in connection with C. S. Palmer. Mr. Beaubien has three children by his third marriage—Philip H., John B., and George E.

THE LAUGHTONS.—David and Bernardus Laughton were Indian traders who early had a store at Hardscrabble on the South Branch, but about 1827–28 removed to the Desplaines, where Riverside is now. The wife of Bernardus Laughton was Miss Sophia Bates, of Vermont, a sister of the wife of Stephen Forbes, who taught the first regular school in Chicago.

RUSSEL E. HEACOCK was born at Litchfield, Conn., in the year 1779. While yet quite young he lost his father. He afterwards learned the trade of carpenter, and worked at it with but little intermission until he was over thirty, and occasionally in after life, in the intervals of a profession which never occupied his whole time, and largely in the improvement of his own property. He removed to St. Louis in 1806, where he earned liberal wages, making sometimes as much as ten to fifteen dollars a day. His health becoming somewhat impaired through the prevailing malaria, his thoughts were turned to the legal profession through the influence of a cousin, Russel Easton, a lawyer residing at St. Louis. Mr. Easton offered him free use of his library and office, and he entered on a desultory course of study, earning money at his trade

R. E. Heacock

in the more busy seasons. He was admitted to the Bar in 1816. Meanwhile he had become acquainted with his future wife, and was married, in 1816, at Brownsville, Jackson Co., Ill., to Rebecca, second daughter of William Ozborn, a soldier of the Revolution, who had emigrated from South Carolina to settle with his family in a free state. Three sons were born to them in 1817, 1818, and 1820. On the 24th of January, 1821, Mr. Heacock was licensed to practice by the Supreme Court of Illinois. In 1823 his fourth son was born, William O., now (1883) of Delaware, Iowa, to whom we are indebted for many of the facts here given. In that year, too, moved by the representations of a brother, Reuben B., of Buffalo, N. Y., he left Jonesboro, Union Co., Ill., for Buffalo, where he resided over three years, and where a daughter was born to him in 1825. In 1827 Mr. Heacock again turned his face westward, intending to settle at Fort Clark, now Peoria, Ill., and arrived at Chicago, July 4. Here he concluded to remain, and took up his residence within the enclosure of Fort Dearborn, at that time unoccupied by the military; and here a second daughter was born early in 1828. About May of that year he removed to a log cabin and claim, which he had purchased of Peter Lampsett. It was about the center of Section 32, Township 39, Range 14; "about three-quarters of a mile southeast of the lock at Bridgeport, and one mile due south of Hardscrabble." At one of the elections in 1830, he was judge and at another clerk; and in 1831, he was one of two commissioners appointed to lay out a road from Shelbyville to Chicago. He was licensed to keep tavern, and was one of the seven justices appointed

for Cook County, September 10, 1831. He seems to have been one of the first justices to hold court; but as lawyer or Justice his business was not large in 1831. In 1832 it was but little better, Chicago's greatest interest of that year centering in the Black Hawk War and the Asiatic cholera; and Heacock made a living chiefly by his trade. About 1832 there appeared in a Buffalo paper several letters from him to his brother, a merchant of that place, describing Chicago and the territory immediately to the west, in glowing terms—the beauty of the country and the fertility of its soil. He referred to the land grant by Congress for the construction of the Illinois & Michigan Canal; and, to show the entire feasibility of the project, stated that in high water boats passed from the South Branch of the Chicago River into the Desplaines, and that by this means the American Fur Company transported their annual supplies to their trading posts on the Illinois River and its tributaries. At a meeting for incorporation of Chicago as a town, August 10, 1833, of the thirteen votes cast his was the only one against the incorporation, which showed at least exceptional fidelity to conviction and independence of opinion, recognized as characteristic of the man. At the Indian treaty of September 26, 1833, he received one hundred dollars. Meanwhile in the summer of 1833, the Chicago school section was subdivided, and all but four of its one hundred and forty-two blocks sold at auction for \$38,865, on a credit of one, two and three years on the petition of the inhabitants.* Several of these lots came into possession of Mr. Heacock, among others, Lot 7, Block 117, frontage south on Adams Street, which he designed for a residence. He was among the original subscribers to the first Chicago newspaper in November, 1833. That his children might be nearer school, he removed, in 1834, into a house on the east bank of the South Branch, a little south of Randolph Street. The lands around Chicago being thrown on the market in 1834, Mr. Heacock became as extensive a purchaser as his means would permit, being one of the most sanguine men of his day as to the great development in store for the then insignificant town. He pre-empted the quarter section upon which his purchase from Lampsett was situated, going to Danville, Vermillion County, the nearest land-office in 1834, for his land certificate. In the spring of 1835, he built a house on what he supposed was his lot, only to find that he was on Monroe Street, not Adams, whither he proceeded to remove it on rollers. "This house," says his son, "he occupied, off and on, until his death." Here his fifth son and youngest child was born. Under date of August 5, 1835, we find him advertised as attorney, which is perhaps an indication that he did not seek re-election as a Justice; and he appears as attorney in the Chicago directories until 1848. Besides his profession, he cultivated some land at his place on the South Branch, called Heacock's Point, where he had been licensed to keep a tavern in April, 1831. His investments in real estate were large for the period, in accord with his anticipations of Chicago's future, and led to much distress of mind and financial embarrassment in the years succeeding the panic of 1837. It was perhaps owing to the pressure of this misfortune in his declining years that he was disabled by a stroke of paralysis in 1843, from which he never completely rallied. During the cholera epidemic of 1849, he fled with his family to a farm he owned at Summit, where he himself, his wife, and two sons were attacked, and died in quick succession between the 28th and 30th of June. In the protracted discussion of the canal question, Mr. Heacock, with his strong individuality took an independent and isolated attitude in favor of a less deep and therefore less expensive excavation, whence he got the mistaken nickname of "Shallow Cut." With the name he received such flippant and superficial censure from Press and platform as usually falls to the lot of those who dare dissent from the public opinion of the hour. His views prevailed, however, in the end. "As a public speaker," says Judge Goodrich, "he was pleasing, instructive and often eloquent; his earnest and straightforward outspokenness, his fine conversational powers, his generosity and frankness of character, and his inexhaustible fund of narrative and anecdote made him most companionable." In politics he was a Jackson Democrat, but also a Free-soiler, and an earnest adversary of the dominant influence of the South in national affairs. "He was not regarded as a brilliant lawyer," continues Mr. Goodrich, "and though the first on the ground he was soon crowded out of practice by the younger and more active members of the profession." It is however true that there were always lawyers enough for all the law business that offered; and Heacock in those first years, 1827 to 1835, made more money as a carpenter than as a lawyer or justice. "He was," says Judge Caton, "a very fair lawyer;" and adds: "When on one occasion my youthful presumption got the better of me, the old man gave me the best dressing down I ever got."

THREE FRIENDLY CHIEFS AND THE OLDEST RESIDENT.

ALEXANDER ROBINSON (Che-che-pin-qua), a chief of the United Pottawatomies, Chippewas and Ottawas, was born at Mack-

* It received ninety-five signatures, embracing most of the principal citizens.

inaw, 1762, according to popular belief, and his age as stated at the time of his death, although the years of his life are somewhat doubtful. His father was a Scotch trader who had been an officer in the British army, and his mother was an Ottawa woman.* He married at Mackinaw and moved with his wife to the St. Joseph in Michigan, where he became an Indian trader, and, it is said, an associate of Joseph Bailly. With other friendly Pottawatomies he did all in his power to shield the Americans from the fury of the hostile Indians, at the time of, and after, the Fort Dearborn massacre. He arrived on the scene too late to do anything to prevent the massacre, of which he was a witness; but, on his return to St. Joseph, he received and sheltered the family of Mr. Kinzie, who received from himself and wife "all possible kindness and hospitality for several months."† Not confining their good deeds to the family of Mr. Kinzie, the generous host and hostess. Finding that Captain and Mrs. Heald, who had been brought to St. Joseph by Jean Baptiste Chandonnais, clerk of Mr. Kinzie, were in danger of being recaptured and taken back to the Kankakee, he carried them safely in a bark canoe to Mackinaw, a distance of three hundred miles, where they were surrendered to the British commandant. It is not known just when Robinson settled in Chicago, but he had been here, at least two seasons, and with Antoine Ouillette had cultivated the field belonging to the fort, raising thereon corn, when Captain Bradley arrived to rebuild Fort Dearborn in 1816. In 1825 his personal property was assessed at \$200, by the Peoria County Assessor. He served in 1823 and 1826 as Indian interpreter under Dr. Wolcott, at a salary of \$365, during the latter year. He is recorded as a voter in 1825, 1826 and 1830, and on June 8 of the latter year was licensed to keep tavern in Chicago. He had owned prior to this time, a cabin or trading-post at Hardscrabble, but vacated it before 1826. On September 28, 1826, he was married by John Kinzie, J. P., to Catherine Chevalier, daughter of Francois and Mary Ann Chevalier. Francois Chevalier was chief of a united band of Pottawatomies, Ottawas and Chippewas; with his village at the Calumet. At his death, Robinson became chief of the band. At the treaty of Prairie du Chien, July, 1829, he was granted two sections of land on the Desplaines; by the treaty of Camp Tippecanoe, October 20, 1832, a life annuity of \$200, and by the Chicago treaty of September, 1833, an additional annuity of \$300. His exertions, with those of Billy Caldwell, prevented the tribe from joining the Sauks in the Winnebago War of 1827, and Black Hawk in 1832. During the latter part of his residence in Chicago, he lived at Wolf Point, where he had a store or trading-house. After the Indians were removed beyond the Mississippi, he settled with his family on his reservation on the Desplaines, where he lived until his death, which occurred April 22, 1872. His wife died August 7, 1860. They were both, with two sons and a daughter-in-law, buried on the bank of the river near the old home.

BILLY CALDWELL (Sauganash), one of the most conspicuous, as well as one of the most notable, characters identified with the history of early Chicago, was an Indian half-breed. He was the son of a Colonel Caldwell, an Irish officer in the British army stationed at Detroit, and was born about the year 1780. His mother was a Pottawatomie, and is said to have been remarkable for her beauty and intelligence. Billy received a good education at the Jesuit schools of Detroit and learned to speak and write the French and English languages fluently. He also acquired the knowledge of a number of Indian dialects. Little is known in

detail of the events of his life, but we know that he took an active part against the Americans in the War of 1812. In person he was large and commanding, of great strength and power of endurance. At first his Indian name was "Straight Tree," on account of his fine appearance, but he is better known by the name of Sauganash, or the Englishman. He early fell under the influence of Tecumseh, became the secretary of that warrior, and was intimately associated with him from 1807 until Tecumseh's death. Very little is known of Caldwell's career as a warrior, for upon the subject of the war he was always remarkably reticent. He undoubtedly was engaged in most of the battles or actions in which Tecumseh was engaged, and he was often sent by his chief on important missions. He and Shaw-bo-nee, do not appear to have been present at Fort Dearborn before or at the time of the massacre, but we find them

† "Waubun," p. 190.

both here the next day when they were instrumental in saving the family of John Kinzie. It is altogether likely that they were the runners sent by Tecumseh to the Pottawatomies to inform them in regard to the fall of Fort Mackinac and to bring them as far as possible in league with him. The incident of his saving the Kinzie family is related in the sketch given elsewhere of the life of John Kinzie. Caldwell participated in the battle of the Thames, October 5, 1813, where Tecumseh was killed, but what active service he was engaged in after that is not known. The credential he gave Shawbonee shows that he was a captain in the British Indian Department as late as 1816. That document reads as follows:

"This is to certify that the bearer of this name, Chamblie, was a faithful companion to me during the late war with the United States. The bearer joined the late celebrated warrior Tecumseh, of the Shawnee nation, in the year 1807, on the Wabash River, and remained with the above warrior from the commencement of hostilities with the United States, until our defeat at Moravian Town, on the Thames, October 5, 1813. I also have been witness to his intrepidity and courage as warrior on many occasions, and he showed a great deal of humanity to those unfortunate sons of Mars who fell into his hands.

"B. CALDWELL, *Captain I. D.*

"Amherstburg, August, 1816."

At what time Caldwell took up his residence near Fort Dearborn is not definitely known, but probably about the year 1820. Chicago was still a trading post, but the fort had been rebuilt and an Indian Agent resided here. It was a central point where the Indians gathered to receive their annuities and do their trading. In 1826 we find Caldwell duly appointed Justice of the Peace for Peoria County, but he probably was seldom called upon to act in his official capacity. He was a voter, and his name appears on the poll lists of 1826 and 1830. He usually officiated as one of the clerks of the election. By the treaty with the Pottawatomies held at Prairie du Chien in 1829, two and one-half sections of land on the Chicago River were granted to him, and by the subsequent treaties of 1832 and 1833 an annuity aggregating one thousand dollars was bestowed by the Government. The land was located on the North Branch, about six miles from the junction with the main river. This land he sold at an early day. There was also a house built for him by the Department for Indian Affairs on the North Side near where is now the corner of State Street and Chicago Avenue. He was always, after his removal to Fort Dearborn, the unchangeable friend of the whites, and his influence with his tribe was exerted to preserve peace. In 1827 at the time of the threatened outbreak by the Winnebagoes, and when the latter were doing all in their power to engage the Pottawatomies in a war with the whites, it was the influence of Caldwell and Shawbonee that prevented it. And again in 1832 he prevented his people from allying themselves with Black Hawk in his desperate raid on the white settlements. Caldwell was very desirous of teaching his people the habits and customs of the whites. He wanted them to become educated and civilized. When Mr. Watkins started a school in 1832, Caldwell offered to pay the tuition and buy books and clothes for all Indian children who would attend school, if they would dress like the Americans, but it is stated none of them accepted. Neither did he approve the Indian custom of polygamy, and he never had but one wife. He found in her however a temper sufficiently hot for several, and his cabin is said to have often resounded with her animated tones, when rating her liege lord. She is said to have been a sister of the chief "Yellow Head", and a daughter of Nee-scot-ne-meg, one of the principal participators in the massacre of 1812. They had one son who died in youth. James M. Bucklin, the chief engineer of the Illinois & Michigan Canal in 1830, says of Caldwell:

"From Billy Caldwell, a half-breed, with some education and great intelligence, who had explored the country in every direction, I often procured valuable information during my explorations. It was he who first suggested making a feeder of the Calamie River."

When the time came for the removal of the Indians, under the various treaties made with them, Caldwell's influence was exerted to make the removal peaceful and successful. He determined to leave his cherished white friends behind, and cast his fortunes with his people, and share their privations and trials with them. In 1836, under the leadership of Captain Russell the Government Agent, and Billy Caldwell, the Indians to the number of nearly twenty-five hundred assembled for the last time at Chicago, to receive their payments and then take up their line of march for their new home on the Missouri, at Council Bluffs. Through the influence of Sauganash the removal was accomplished with ease and success. He never returned again to the scenes of his youth and manhood. Age was coming on him, and the bustling activity of the ambitious young city had no charm for one whose life had been passed amid the wildness of nature. He seems to have taken some interest in public affairs and during the exciting presidential

campaign of 1840, he with his friend Shawbonee, published the following letter:

"COUNCIL BLUFFS, March 23, 1840.

"TO GENERAL HARRISON'S FRIENDS:

"The other day several newspapers were brought to us; and peeping over them, to our astonishment we found that the hero of the late war was called a coward. This would have surprised the tall braves, Tecumseh of the Shawnees, and Round Head and Walk-in-the-Water of the Wyandotts. If the departed could rise again, they would say to the white man that General Harrison was the terror of the late tomahawkers. The first time we got acquainted with General Harrison, it was at the council-fire of the late Old Tempest, General Wayne, on the headquarters of the Wabash, at Greenville, 1796. From that time until 1811, we had many friendly smokes with him; but from 1812 we changed our tobacco smoke into powder smoke. Then we found General Harrison was a brave warrior and humane to his prisoners, as reported to us by two of Tecumseh's young men who were taken in the fleet with Captain Barclay on the 10th of September, 1813, and on the Thames, where he routed both the red men and the British, and where he showed his courage and his humanity to his prisoners, both white and red. See report of Adam Brown and family, taken on the morning of the battle, October 5, 1813. We are the only two surviving of that day in this country. We hope the good white men will protect the name of General Harrison. We remain your friends forever.

"CHAMBLEE [SHAWBONEE], Aid to Tecumseh.

"B. CALDWELL, [SAUGANASH], Captain."

Caldwell did not long survive the removal, but died in his new home in Council Bluffs on the 28th of September, 1841, at the age of sixty-two. His most striking characteristic was his humanity. In this respect he resembled his great leader, Tecumseh. He did all in his power to alleviate the horrors of the war, and in time of peace did all he could to promote the feeling of friendship between the Indians and whites. By the first residents and settlers of Chicago he was highly respected, and some are still surviving who esteemed it no small privilege to accompany him on a hunting excursion. The esteem in which he was generally held is well reflected in the action of Mark Beaubien, when he named his new tavern. It was suggested to Mark that he should name his house after some great man. He could think of no greater personage than Billy Caldwell and so his tavern became celebrated as the "Sauganash."

SHAW-BO-NEE, whose name has been written in many ways, among others, as Chamblie, in Billy Caldwell's certificate heretofore given, was the son of an Ottawa chief, and was born near the Maumee River in Ohio about the year 1775. He married the daughter of a Pottawatomie, and he seems thereafter to have been more identified with the Pottawatomies than with the Ottawas, though these tribes were always more or less intimately associated. His village was on the Illinois near where the present city of Ottawa now stands, but he subsequently removed it to what is now known as Shabbona Grove in De Kalb County. Shawbonee became associated with Caldwell and Tecumseh about the year 1807, and was their firm ally in all their enterprises, until the death of Tecumseh. Shawbonee was present at the battle of the Thames, and was by the side of Tecumseh when he was killed. He always maintained that it was Colonel Richard Johnson who fired the fatal shot that killed his chief. After the war was over he gave in his adherence to the United States Government, and from that time forth until the end of his life he was a strong and constant friend to the Americans, and on more than one occasion risked his own life to save his white friend. At the time of the so-called Winnebago war, in 1827, there was no military force at Fort Dearborn, and it was greatly feared by the settlers in the neighborhood that the Pottawatomies would be led to join with the northern tribes in war against the whites. After the annual payment was made in September of that year, rumors that Big Foot's band, which had their villages on Lake Geneva, would certainly join with the Winnebagoes, fell thick and fast upon the ears of the startled settlers. At this juncture Shawbonee and Caldwell used their influence to restrain their own bands, and also volunteered to find out what were the plans of the Winnebagoes, and whether Big Foot's band really intended to join with them. With this purpose in view they visited Big Foot's village, and by their astuteness and clever management, succeeded in preventing Big Foot's band from entering into the threatened alliance. The last attempt made to engage the Pottawatomies in war with the whites was that made by Black Hawk in 1832. That celebrated warrior, emulating the example of Tecumseh a quarter of a century before, sought to enlist all the Indian tribes in a general war. A great council was held at Indiantown in February, 1832, and there with great eloquence and force Black Hawk enlarged upon the necessity of co-operation in order to save their hunting grounds from the encroachments of the whites. "Let all our tribes

unite," said the tawny orator, "and we shall have an army of warriors equal in number to the trees of the forest." The appeal was powerful and it required all the influence of Shawbonee, Caldwell and Robinson to overcome it. But these men well knew the power and military resources of the whites, and how hopeless a war with them would be. Said Shawbonee in answer to Black Hawk's figure of speech as to their numbers, "Your army would equal in number the trees of the forest, and you would encounter an army of palefaces as numerous as the leaves on those trees." The council failed in uniting the Indians in a common cause and although Black Hawk made one more effort to gain Shawbonee in his cause, he utterly failed. Not only did Shawbonee repel all the efforts of Black Hawk, but when the war broke out, by his personal exertions, and at the risk of his life, he succeeded in warning some of the frontier settlers in time to save their lives. By the treaty of Prairie du Chien two sections of land were granted to Shawbonee. This was located by him at the place where for many years his village had been situated in De Kalb County. A survey and plat were made accordingly, and here Shawbonee resided until his band was removed to the West in 1837. He accompanied them with his family, but unfortunately their reservation was in the neighborhood of that of the Sacs and Foxes. The feud which had arisen between the tribes on account of Shawbonee's refusal to co-operate with Black Hawk still existed, and culminated in the murder of Shawbonee's eldest son and nephew by some of the revengeful Sacs and Foxes. Shawbonee himself narrowly escaped and he was induced to return again with his family to his old home. He resided at his favorite grove with his family, for a number of years, until his tribe was removed to their new reservation in Kansas. This induced him to again join his red brethren, but he remained with them only for three years, when he again returned to his Illinois home. But a change had now recurred. The Land Department had ordered a new survey and ignored Shawbonee's claim, holding that he had forfeited it by removal from it. It was entered at the land-office at Dixon for sale, and when Shawbonee returned, he found his favorite home in the possession of strangers. His eminent services in behalf of the whites in the early days were all forgotten and he was ruthlessly driven from the spot he so much loved and about which clustered so many of his dearest recollections. A few of his early friends hearing of his circumstances, united in the purchase of a small tract of twenty acres near Morris. Here he lived with the remnants of his family until July, 1859, when he died. His remains lie buried in the cemetery of Morris. In personal appearance he was one of the finest specimens of the American Indian. Tall, straight, and muscular, he was said to have been a model of physical manhood. Until late in life his habits were temperate, but the misfortunes of his later years often led him to the intemperate use of that liquor which has ever been the enemy of his race. He owed much to the teachings and precepts of Tecumseh, and he in all things endeavored to conform himself to the example of that great warrior. He was humane as well as courageous, and always exerted his influence to protect unfortunate captives from the violence of the savages. A portrait of him adorns the walls of the Chicago Historical Society rooms, and his name and memory are preserved in the records of that association.

GURDON S. HUBBARD, the earliest resident of Chicago now alive, was born in Windsor, Vt., August 22, 1802. He was the son of Elizur and Abigail (Sage) Hubbard. He received in his youth only the ordinary education afforded by the common schools.

At the age of ten years he left home and went to North Bridgewater, Mass., where he was a pupil in the school of Rev. Daniel Huntington for nearly three years. In the spring of 1815 he returned to his parents at Windsor, and soon thereafter removed with them to Montreal, Canada. Soon after this removal the youth began life on his own account. He evinced a wonderful aptitude and taste for trade and traffic, even at this early age. His first ventures were in the poultry trade between northern Vermont and Canada, which as a mere boy without capital or friends, he managed so as to bring him a living and something more. In the fall of 1816, he gave up the traffic and entered the hardware store of John Frothingham, of Montreal, as a clerk, where he continued until 1818. In the spring of that year, being then sixteen years of age, he bound himself for five years, for the sum of \$120 per year, to William W. Matthews, then the agent of the American Fur Company. Under this new engagement, he left Montreal for the wilds of the great Northwest, May 13, 1818.

He was one of a party consisting of thirteen clerks, and one hundred and twenty men besides, the latter being all Canadians. The party traveled in thirteen batteaux. The destination was Mackinac on the lakes. The route was long and the journey dangerous. The party without accident ascended the St. Lawrence and in due course of time reached Toronto, then called Yorktown. So many of the Canadian voyageurs had deserted the expedition *en route*, that at this point Mr. Matthews the commander decided to change his plans, and instead of continuing to coast Lake Ontario, he hired teams to haul his boats and goods over the Young-street road to Lake Simcoe, then embarking and taking on board two yoke of oxen. He coasted Lake Simcoe to the point nearest the Nottawasaga River, and then with the aid of the oxen made another portage to that river about six miles; then re-embarking they proceeded to the mouth of the river and continued their voyage, coasting along the shores and around the islands of Georgian Bay and Lake Huron to Mackinac Island, which they reached July 4, 1818. Mr. Hubbard is the only surviving white man who was an inhabitant of the vast region from Mackinac to far south of Chicago at that early period. Young Hubbard remained at Mackinac, working in the company's warehouse, until the middle of September, when, joining the Illinois Brigade, consisting of one hundred men, under the agent, Antoine Des Champs; he set out, via Lake Michigan, for the Illinois country. The party had a full stock of supplies, such as would be required in trade with the Indians, and the fleet consisted of twelve batteaux. Passing through the straits, they crept along the east shore of Lake Michigan, stopping only when compelled to do so by heavy or head winds on their voyage. On the last day of October or first of November, 1818, the party reached Fort Dearborn, then all there was of Chicago. Mr. Hubbard remained there three days, being the guest of John Kinzie, at his house on the North Side. He then, with the party, pushed into the interior country. They went, via the South Branch and through Mud Lake (near Bridgeport), and laboriously carrying their goods upon their backs, and dragging their batteaux across the intervening land, came to the Desplaines River, which they descended to the Kankakee, and thence down the Illinois River. Mr. Hubbard was ordered to the trading-post at the mouth of Bureau River, then in charge of a Frenchman named Bebeau, who could neither read nor write. Young Hubbard was detailed to keep the accounts and assist in the details of the business of this post, by Mr. DesChamps. He reached his appointed post early in November, but was allowed by the agent to proceed down the river to St. Louis, where he met his father and brother, who were on their way to Arkansas. On the trip he saw no white men, except members of his own party, until he reached Portage de Sioux, about eighteen miles above St. Louis, then a town of some six hundred inhabitants. About the middle of November he returned to Bebeau's trading-post, where he remained performing his clerical duties until spring. At that time, the trade with the Indians being over, he returned by the same weary route, in the same batteaux, now laden with furs, and manned by many of his companions and voyageurs of the downward trip, to Mackinac, the headquarters of the American Fur Company. From that time till 1823, his duties during the summer months spent at Mackinac were to assist Mr. Matthews, who had charge of that department, in receiving, assorting and packing the furs and peltries of the American Fur Company, and shipping them to New York. John Jacob Astor of that city being the president of the company. He made trips to the interior every winter, returning to Mackinac each summer. During the winter of 1819-20, he was in charge of a trading-post at the mouth of Muskegon River. The following winter he spent in charge of a post near the present site of Kalamazoo, Mich. In the late fall of 1821 he again visited Chicago on his way to Crooked Creek, a tributary of the Illinois River, skirting the northern boundary of what is now Brown County, and emptying into the river a few miles below the present town of Beardstown. He spent the succeeding three winters in charge of the business of the company at Iroquois.

On his second visit to Chicago he found the same inhabitants outside the fort as at his former visit, viz.: John Kinzie and family, and Antoine Ouilmette, his Indian wife and half-breed children. From that time he became identified with the history of Chicago, although he did not become a permanent resident until many years after. For the four succeeding years he passed through the region now known as Chicago, and then as a geographical point called Fort Dearborn, many times each year. His supplies were all brought by water navigation to that point, and nearly all his furs were shipped from there. Chicago was the objective point of the Indian trade during those years, and young Hubbard, then the most active and vigorous agent of the company, became known to every man, woman and child at the fort. Subsequent to 1822, no person lived about the mouth of

Chicago River who did not know this young, brave, and vigorous fur-trader.

Mr. Hubbard remained in the employ of the American Fur Company two years beyond the term for which he was bound—seven years in all—during which time he had accumulated some wealth, and had acquired what was better, the entire confidence of every man connected with the trade of the Northwest, both American and Indian. His wages, as has been stated, were, during the five years of his indenture only nominal—\$120 per year*—but, for the succeeding two years, while he remained in the employ of the company, he received \$1,300 per year and was, during the last year of his engagement a special partner. He severed his connection with the American Fur Company in the spring of 1827. During the last year of his engagement, he, at his own solicitation, was allowed to open up an inland trade, on the Iroquois, his station being at the site of the present town of Watseca. While there he laid his plans, afterwards carried out, for an immense trade all along the line of what afterwards became famous as Hubbard's trail.

During the period of Mr. Hubbard's engagement with the American Fur Company, he made twenty-six voyages to and from his interior posts and via Chicago, to the headquarters at Mackinac. In 1827, having purchased of the company its franchises and good-will, he commenced business for himself. He no longer confined his trade to the water-ways as had been formerly done, but, scuttling his boats for safety within the South Branch of the Chicago River, he fitted out what at that time might be termed a most formidable caravan, consisting of nearly fifty heavily-laden ponies, which he had bought of the Pottawatomie chief Big Foot at his village fifty miles away, at the head of what is now known as Geneva Lake, Wisconsin. With this outfit he moved south toward the Wabash River, and established trading-posts all along the line, nearly to the mouth of the Wabash, at intervals of thirty to fifty miles. The trail thus first marked out by Hubbard's caravan, and for years after traveled between his trading posts, became familiarly known as "Hubbard's trail," and was for fifteen years the only well known and constantly traveled road between Chicago and the Wabash country. Danville, now the shiretown of Vermillion County, was the principal inland depot of supplies, and there Mr. Hubbard made his home for several years, although his business kept him mostly on the trail between his various posts. Thus it happened that, although not at the time a resident of Chicago, he was present at the partial burning of the fort in 1827; and, during the "Winnebago scare" which succeeded, made his memorable ride from Chicago to the Wabash country for help, the particulars of which are related elsewhere.

As the settlements increased along the line of trading-posts established, the Indian trade gradually languished, and, one after another, Mr. Hubbard abandoned them on the south, until, after the extinction of the Indian title in 1833, and the certainty that his Indian customers would leave the country within two years, he abandoned the trade altogether, and became a permanent resident of Chicago, transferring his wonderful energy to his new home. This occurred in 1834. The intimate connection of Mr. Hubbard with the history of Chicago since that date is apparent on nearly every page, and in nearly every topic. It is unnecessary to repeat. He stands prominent as one of the foremost merchants for the succeeding twenty years, during which period, besides carrying on one of the largest shipping, commission, packing, and forwarding trades in the city, he held nearly every office of trust and honor that his fellow-citizens could thrust upon him. It may be said here that he never violated any trust bestowed, and, in his old age, he lives among the scenes of his active and useful life, with a character above reproach and a reputation untarnished by the business vicissitudes of half a century.

In the spring of 1831 Mr. Hubbard married Elenora Berry, daughter of Judge Elisha Berry, of Urbana, Ohio. They had one child, Gurdon S. Hubbard, Jr., who was born in Chicago, February 22, 1838, and is now (1883), an honored citizen of the town where he was born. Mrs. Hubbard died February 28, 1838.

In 1843 Mr. Hubbard married Miss Mary Ann Hubbard, daughter of Alhira Hubbard, Chicago, who, with her honored husband still lives after forty years of married life, the worthy wife of the oldest and one of the worthiest of Chicago's citizens.

CHICAGO IN 1830-33.

Prior to 1830 there was no town of Chicago. The region round-about, and the embryo settlement outside Fort Dearborn, had been known by that name,

*Mr. Hubbard's father died in 1819. Out of the very moderate pittance of \$120 per year, during the years of his indenture, he set apart for his widowed mother one-half of his earnings. A letter from the agent, January 26, 1821, to his mother, then at Middleton, Conn., speaks in the highest terms of her faithful son, and notes the inclosure to her of \$75, which he had set apart for her before leaving for his winter trip.

which had been applied since the time of the early French explorations quite indiscriminately to the Desplaines River, to all the marshy district lying about its source, and extending to and embracing the site of the present city.*

The canal commissioners † appointed by the Legislature of 1829 were empowered to "locate the canal, to lay out towns, to sell lots, and to apply the proceeds to the construction of the canal." The members of this board were Dr. Jayne of Springfield, Edmund Roberts of Kaskaskia, and Charles Dunn. These commissioners were the official fathers of the city. They employed James Thompson to survey and plat the town of Chicago on Section 9, Township 39, Range 14. The completion of this survey, and the filing of the plat bearing date August 4, 1830, marks the date of the geographical location of the town, now the great city of Chicago.

The part of Section 9, platted as above, was bounded as follows: Commencing at the corner of Madison and State streets, on the south by Madison Street to its intersection with Desplaines; on the west by Desplaines; on the north by Kinzie; and on the east by State Street. It embraced the little settlement at Wolf Point and the lower village on the South Side, and comprised an area of about three-eighths of a square mile.

The population of the new town and suburbs, outside the fort (where two companies of United States infantry, under command of Major Fowle, were stationed), numbered, including the white families, half-breeds, and three or four French traders, not to exceed a hundred. Colbert's Chicago (pp. 5 and 6), gives the following regarding the residents of Chicago in 1829 and 1830.

"In 1829, the residents of the town besides the garrison were the following: John Kinzie, ‡ residing on the North Branch; Dr. Wolcott, Indian Agent, and son-in-law to Mr. Kinzie, residing near the site of the present Galena freight depot, just east of Clark Street (he died in the fall of 1830); John Miller, keeper of a log tavern, near the forks of the river, at Wolf Point, North Side; John B. Beaubien, residing near the lake shore, a little south of the fort; three or four Indian traders whose names have not been preserved, residing in log cabins west of the river."

The more elaborate "directory," given by the same author at the date of the finishing of Thompson's plat of the town, shows considerable increase of the resident population, or that the "census" of the previous year was imperfectly taken. It reads as follows:

"At this time (August 4, 1830,) the commercial strength of Chicago was composed and located as follows:

"Taverns—Elijah Wentworth, north side of the river, near the fork; Samuel Miller, west side of the river, just north of the fork; Mark Beaubien, east side of the river, just south of the fork. §

"Indian Traders—Robert A. Kinzie, near Wentworth's tavern; Mr. Bourisso (Leon Bourassea), just south of Beaubien's

*The earlier maps do not designate the present Chicago River by that name, although many of them mark the region about the mouth of the present Chicago, as "Chicagou," while on the same map the river Desplaines was designated as the Chicagou River. It was also recognized as a locality under the name of Chicago in the official records of Fulton County, then embracing the present county of Cook. Concerning this, Hon. John Wentworth in a historic lecture published in Fergus's Historical Series, No. 7, says: "From St. Clair County, what is now Cook County was set off in the new county of Madison; thence in the county of Crawford; in 1819, in the new county of Clark; and so little was then known of the northern country that the act creating Clark County extended it to the Canada line. In 1821 we were set off in the new county of Pike; in 1823, in the new county of Fulton; and in 1825, in the new county of Peoria. I have not only caused the county records of these counties to be examined, but have also corresponded with their earliest settlers, and I can find no official recognition of Chicago until we reach Fulton County. The Clerk of that county writes me that the earliest mention of Chicago in the records is the order of an election at the term of the Fulton County Commissioners Court, September 2, 1823, to choose one major and company officers, polls at Chicago to be opened at the house of John Kinzie. The returns of this election cannot be found, if they were ever made." Chicago was also a voting precinct of Peoria County, an election being held there as early as August 7, 1826.

† For a full account of the development of the canal project, and the progress of the work to the time of its completion, see the article on "Canal," which appears elsewhere in this volume.

‡ John Kinzie died January 6, 1828.

§ Wentworth's tavern was on the West Side, and Miller's on the North Side.

tavern; Log Cabin, near foot of North Dearborn Street; J. B. Beaubien, present site of Illinois Central depot.

"Butchers—Archibald Clybourne,* North Branch.

"Merchants—George W. Dole.†

"James Kinzie and family, William See and family, and Alexander Robinson and family, resided near Wentworth's tavern. The old Kinzie house, on the north side of the river and opposite the fort, was then unoccupied and in a dilapidated state. The Government agency-house, known as 'Cobweb Castle,' was left unoccupied by the death of Dr. Wolcott. In its vicinity were small log buildings occupied by the blacksmith, Mr. McKee, and Billy Caldwell, an Indian chief, who was also interpreter for the agency. At this time, or soon after, G. Kercheval and Dr. E. Harmon and James Harrington had arrived, and were making claims on the lake shore in the succeeding spring."

List of voters at an election held at Chicago August 2, 1830.*

1. Stephen J. Scott, Chicago.
2. John B. Beaubien, Chicago.
3. Leon Bourrassea, Chicago.
4. B. H. Laughton, six miles southwest (now Riverside).
5. Jesse Walker,† Methodist minister, Plainfield, Ill., Fox River.
6. Medore B. Beaubien, Chicago; now (1883) lives at Silver Lake, Kan.
7. Jean Baptiste Chevalier, Chicago.
8. James Kinzie, Chicago; see sketch of Kinzie family.
9. Russel E. Heacock, Chicago; see his biography.
10. James Brown, unknown.
11. Joseph Laframboise, Chicago; Indian chief by marriage.

THOMPSON'S PLAT.

The poll-book used at an election held at the Chicago precinct of Peoria County, at the house of James Kinzie, August 2, 1830, gives additional information as to the inhabitants of Chicago and the surrounding country, embraced within the precinct of that time. The public are indebted to the Hon. John Wentworth for its publication. It appears in his lecture published in Fergus's Historical Series, No. 7, p. 16. The list embraces the names of thirty-two voters, some of whom were not residents of Chicago, although living within the limit of the precinct † and sufficiently near to attend the election. The list is given below, with residence so far as can be ascertained.

12. John L. Davis, Chicago; Welch tailor, afterward went to Milwaukee; lived there in 1882.
13. William See, Chicago; minister and blacksmith. See biography.
14. John Van Horn, unknown.
15. John Mann, unknown.
16. David Van Eaton, unknown.
17. Stephen Mack, Chicago; clerk of American Fur Company.
18. Jonathan N. Bailey, Chicago (first Postmaster); lived in part of old Kinzie house.
19. Alexander McDale, unknown.
20. John S. C. Hogan, Chicago.
21. David McKee, Chicago; blacksmith Born in 1800; moved to Aurora, Ill.
22. Billy Caldwell, Chicago.
23. Joseph Thiibeant, Chicago.

* Clybourne's place might be said to be almost outside the limits, it being on the west side of the North Branch, nearly two miles above Wolf Point. He was, however, the butcher not only for the garrison but for the citizens, and might thus be counted in. Besides the wife and children of Archibald, his family included his father Jonas, and a half-brother, John K. Clark.

† The name of George W. Dole is erroneously inserted in the above list. He did not arrive until May 4, 1831. See same author, p. 5.

‡ The limits of the precinct (called the first) embraced all that part of Peoria County east of the mouth of the Du Page River, where it empties its waters into the Desplaines River. The area was greater than all of Cook County, although not extending to its present western limits.

* Two other poll lists have been published (see appendix to second historic lecture of Hon. John Wentworth, Fergus's Historical Series, No. 7, pp. 54, 55). One is of the voters at a special election for Justice of the Peace at the Chicago precinct, of Peoria County, at the house of John Kinzie on Saturday, July 24, 1830, which contains fifty-six names; the other is for a special election at John Kinzie's house for Justice of the Peace, for Peoria County, November 25, 1830, on which twenty-six names appear. At the latter election Stephen Forbes was elected, receiving eighteen votes, against eight votes cast for Rev. William See. The full particulars of these early elections are recorded in the article on politics in this volume.

† Superintendent of missionary work from Peoria to Chicago (Hurlbut, p. 597). His family came in 1832 (Hurlbut, p. 502, note.)

NOTE—The names given on various tracts of land are those of the primary patentees, or persons by whom entry was made, entered or patented between the years 1828 and 1836. The information is taken from "Book of Original Entry." Streets as shown were laid out subsequent to 1830.

TOWNSHIP 40 NORTH

**MAP OF
CHICAGO**

1830.

24. Peter Frique, Chicago.
25. Mark Beaubien, Chicago.
26. Laurant Martin, Chicago.
27. Jean Baptiste Secor, unknown.
28. Joseph Bauskey, unknown.
29. Michael Welch, Chicago.
30. Francis Ladusier, Chicago; single, died at Archibald Clybourne's.
31. Lewis Ganday, unknown.
32. Peresh Leclerc, Chicago; Indian interpreter.

The French names are mostly of Indian traders who ever followed the Indian tribes with whom they had become allied, first in the interest of their trade, and later from family or tribal relations which had come from intermarriage. Most of them had Indian wives.

A few not shown in the foregoing list were, at that date, living in Chicago. Among them was Stephen Forbes, who taught a private school in what was known as the "Dean house" during the spring months of 1830. He went to Ohio during the summer of that year, returned with a wife in September, and they together re-opened his private school. The following sketch of the Forbes family is taken from Hurlbut's "Chicago Antiquities":

"STEPHEN FORBES was born in Wilmington, Vt., 26th July, 1797; his parents were John and Anna (Sawyer) Forbes. He married in Newburgh, Ohio, 25th March, 1830, Elvira (born in Moncton, Vt., 30th November, 1806), daughter of Noble and Aurilla (Booth) Bates. Mr. Forbes first came to Chicago in the summer of 1829, and returned to Ohio the ensuing fall; came back to Chicago in the spring of 1830, and taught school three months, and then went to Ohio again, and returned here with Mrs. Forbes in the month of September, of that year. They lived in the Dean house, so called, just by the outlet of the river. The boats, which unloaded the vessels, turned in there just by this house. The house was a block or timber-built one, being of logs hewed on two sides, with two main rooms, with an addition of one room. The school was kept in this house, Mrs. Forbes and her class occupying one room, and Mr. F. and the boys the other. Of the children of this school, a boy and girl came from the garrison; the girl, whose name was Julia Shuttleworth, was the daughter of an Englishman, a soldier in the fort. The other scholars were mostly French or half-breeds. Late in 1831, Mr. F. removed to where Riverside is now, or near there, where the Laughtons lived, but returned to Chicago in 1832, in consequence of the Indian troubles. David and Bernardus H. Laughton were Indian traders, and a few years before had a store at Hardscrabble, on the Chicago South Branch. The wife of the last-named gentleman was a sister of Mrs. Forbes. Mr. Forbes returned to live at Laughton's, and when both those gentlemen died within a few weeks of each other; he helped to bury them. Mr. F. was the first Sheriff of Cook County elected by the people, 1832. These items, with others, we received from Mr. F. at an interview on his eighty-first birthday, July 26, 1878. The above portraits were copied from photographs taken about 1868; the autograph signature of Mr. F. is the same as the one which accompanies his letter; that of Mrs. F. was written in her seventy-second year. Mr. F. had a paralytic attack some years since, but continued to walk out frequently in pleasant weather. He died suddenly of apoplexy, in Chicago, at the house of his son-in-law, Nathan S. Peck, on Tuesday evening, 11th February, 1879."

RELIGIOUS GERMS.—As a whole, the Chicago of 1831 could not have been considered a pious town.* There was no church edifice, and outside the fort, with the exceptions of the ministrations of the Jesuit priests among the Indians, and the visits of McCoy, Scarrett, and Walker on the part of Protestant missions, it does not appear that the preaching of the gospel had been an element in the life of the town. William See, a Methodist exhorter, occasionally essayed to preach. He was a blacksmith, and worked for Mr. McKee. Mrs. Kinzie heard him preach in the spring of 1831. He preached in what she termed the "little school-house" at Wolf Point. It does not appear, however, that his ministrations were rewarded with a religious awakening

* See Religious History.

sufficient to result in an organization of the few devout persons who heard him preach. He was a man of unblemished character, and, as a faithful servant of his Master, did what he could to prepare the way for the more efficient, though not more meritorious, work done by his immediate successors, with whom he continued to co-operate in religious labor after their arrival. He is entitled to the distinction of being the first ordained resident preacher of the modern Chicago. "Chicago Mission" was designated in 1831 as a point in the Sangamon District of the Methodist Episcopal Church, and the Rev. Jesse Walker, then living at Plainfield, forty miles distant, was appointed to the charge. He paid his first visit after his appointment in company with Rev. Stephen R. Beggs. Mr. Beggs held his first meeting in Dr. Harmon's room, in the fort, on the evening of June 15, 1831. On the following day he preached in the log school-house at Wolf Point, where William See had occasionally preached before. The meeting resulted in the formation at that time of a Methodist class, and the permanent establishment of the Methodist Episcopal Church in Chicago. The venerable pioneer of Methodism, Mr. Beggs, in an address before the Calumet Club in Chicago, May 27, 1879, forty-eight years after, spoke of the formation of the class and its members as follows:

"My next (second) service was in the log school-house north of what is now Washington Street, on the first block west of the

Elizabeth Wentworth

river, upon or near what is now Canal Street, and near Wolf Point. I invited all to come forward who wished to enroll themselves in the Methodist Church. Ten responded. Among them were: William See, who was made class-leader, who moved to Racine, Wis., and died there; * Elijah Wentworth, Jr., the first Coroner of

* Hurlbut—see "Antiquities," p. 373—states that See died in Iowa County, Wis., in 1858.

Cook County, who died at Galesburg, Ill., on the 18th of November, 1875; his mother, Lucy (Walker) Wentworth, who died at Chicago, of cholera, July, 22, 1849, and his two sisters, Mrs. Charles Sweet, now of St. Joseph, Mich., and Mrs. Elijah Estes, of Milwaukee, Wis., whose daughter is now the wife of Rev. Isaac Lineburger, at Dixon, in this State. This same log school-house afterwards served as chapel and parsonage for the itinerant clergyman. Here were his kitchen and parlor. At the Methodist Conference held at Indianapolis the 4th of October, 1831, I was appointed to Chicago, and held my first quarterly meeting in January, 1832, being the first ever held here, and there was also the first Methodist communion service. T. B. Clark, of Plainfield, carried provisions on an ox-sled to sustain the people through the quarterly meeting."

Mrs. Zebiah (Wentworth) Estes is still living (1883) at Bay View, near Milwaukee, and is believed to be the only surviving member of the class. Her sister, Mrs. Susan (Wentworth) Sweet, died at St. Joseph, Mich., March 25, 1882.

No other efforts to establish stated religious services in Chicago were made until the following year. As auxiliary to the religious movement above mentioned, weekly prayer meetings were begun in the fall, at the house of Mark Noble, Sen. (the old Kinzie house). Mr. Noble, his two daughters, and Mrs. R. J. Hamilton, all Methodists, were the originators and zealous supporters of this first Christian prayer meeting of Chicago.

THE FIRST POST-OFFICE was established at the town of Chicago in the spring of 1831, and Jonathan N. Bailey appointed Postmaster. He was, at that time, living in the old Kinzie house, opposite the fort. It is probable that the mails were first opened and distributed at his dwelling. The mail facilities at the time the post-office was established were not of the best. There were no post-roads. The mail was received once in two weeks from Niles, that being the nearest distributing post-office.

The village did not grow rapidly during the first year after the survey was made. A few men came in to swell the permanent population, but not sufficient to give it any decided certainty of being the leading city of the West. The sale of lots by the land commissioners was made largely to speculators or to the few residents who took a local interest in the embryo town. The prices realized were by no means extravagant when compared with those of to-day. As showing the first market value of city lots in Chicago, the following partial list of purchasers of 1830, and the prices paid or promised to be paid, is given:

PARTIAL LIST OF PURCHASES OF CANAL LOTS AND LAND SURVEYED AND BROUGHT INTO MARKET IN 1830.

NAME.	DESCRIPTION.	PRICE, ETC.
J. B. Beaubien	Lots 1 and 2, block 17	\$100
Mark Beaubien	Lots 3 and 4, block 31	102
William Belcher	Lots 5 and 6, block 29	109
Wilson A. Bell	Lots 4 and 5, block 34	48
Lyon Bourissa	Lots 1 and 2, block 44	114
Archibald Clybourne	Lots 4 and 5, block 5	42
Charles Dunn	Lot 1, block 16	75
John Evans	Lot 5, block 33	21
Clement A. Finley	Lots 5 and 6, block 31	101
Amos Foster	Some 26 lots	
Thomas Hartzell	Lot 1, block 20	50
	Also 80 acres west half of northeast quarter Section (9?)	1.55 per acre
John S. C. Hogan	Lots 1, 2, 5 and 6, block	116
Clark Hollenbeck	Lot 7, block 8	11
Gurdon S. Hubbard	Lots 1 and 2, block 19	75
William Jewell	Lots 5 and 6, block 28	21
Benjamin Kercheval	80 acres, west half of north-west quarter	1.25 per acre
E. Roberts		
Edward Keyes	Lots 5 and 6, block 8	47

NAME.	DESCRIPTION.	PRICE, ETC.
Paul Kingston	Lot 7, block 20	27
James Kinzie	Lots 5, 6, 7 and 8, block	76 for 4 lots
John H. Kinzie	Lot 2, block 2	37
William Lee (See ?)	Lots 3, 4 and 5, block 23	64
Stephen Mack	Lots 7 and 8, block, 43	
David McKee	Lot 7, block 49	130
Peter Menard, Jr.	Lots 4, block 29	100
E. Roberts		
George Miller	Lots 5 and 6, block 36	63
Samuel Miller	Lots 3, 4, 5 and 6, block 14	110
Jonathan H. Pugh	Lot 1, block 18	24
Edmund Roberts	Lot 2, block 18	45
Alexander Robeson	Lots 1 and 2, block 29	138
Thomas Ryan	Lot 2, block 14	42
James Walker	Lot 4, block 10	20
John Wellmaker	Lots 1 and 2, block 14	54
John P. Wilburn	Lot 1, block 1	60
Alexander Wolcott	Eight lots in block 1, also east half of northeast quarter, Section 9, Town 39, Range 14, 80 acres	1.62 1/2 per acre
Jedediah Woolsey, Jr.	Lot 9, block 44	50

The changes in the resident population during 1831 mentioned by the early chroniclers, were as follows:

The troops in garrison were removed in June to Green Bay, and the Government property left in charge of Indian Agent Colonel T. J. V. Owen, assisted by his brother-in-law, Gholson Kercheval.

Among those who became citizens of the town were: Colonel R. J. Hamilton, who came April 9; George W. Dole, May 4; P. F. W. Peck, who brought with him a small stock of goods in the schooner "Telegraph," which arrived in July; Rev. Stephen R. Beggs, June, 1831; R. N. Murray, July, 1831; J. W. Pool, October, 1831; Mark Noble and family, August, 1831; Dr. Elijah D. Harmon, who came in 1831, as appears in Mrs. Kinzie's "Waubun," p. 205. He lived in the fort, but is entitled to a place among the early settlers of Chicago. Of him Mrs. Kinzie wrote:

"When we chose the path across the prairie toward the south, we generally passed a newcomer, Dr. Harmon, superintending the construction of a sod fence, at a spot he had chosen, near the shore of the lake. In this inclosure, as the season advanced, he occupied himself in planting fruit stones of all descriptions, to make ready a garden and orchard for future enjoyment. We usually stopped to have a little chat. The two favorite schemes of the Doctor were horticulture and the certain future importance of Chicago."

The accounts are quite unanimous in the statement that many emigrants were temporary sojourners in the fort, and the buildings surrounding, during the summer and fall, but it does not appear that many of them remained permanently. Most of them went beyond to the Fox and Rock River countries and made settlements there.

Colbert, p. 5, states: "The same vessel (the 'Telegraph') brought a number of families who, however, did not settle here. Emigration set in largely in the fall, and by September the fort was filled with emigrant families, the occupants numbering some four hundred souls."

Governor Bross, "History of Chicago," p. 18, says:

"The 'Telegraph,' which arrived in July, and the 'Marengo,' were the only arrivals during the season, except the one that transported the troops to Green Bay.* The principal part of the population of Chicago during the winter of 1831-32 occupied the quarters in the garrison, and were ministered to, in the way of creature comforts, by our estimable citizen George W. Dole, who was the only merchant then in Chicago, except Mr. R. A. Kinzie, at Wolf Point."

* The "Napoleon," Captain Hinckley.

Mr. Colbert chronicles the arrival of P. F. W. Peck on the "Telegraph," "with a small stock of goods," and states that "he built a small log store near the fort," thus making an important addition to the trade of Chicago. If the statement is correct, Mr. Peck doubtless took his share of the trade with Messrs. Kinzie and Dole.*

There is no mention of any building being done during the year, except the store of Peck, before mentioned.

CHICAGO BECOMES A COUNTY SEAT.—The act creating Cook County was passed by the General Assembly of Illinois, and approved January 15, 1831. By the same act the town of Chicago was made the county seat. Section 1 of the act read as follows:

"Be it enacted by the people of the State of Illinois, represented in the General Assembly, That all that tract of country, to wit: commencing at the boundary line between the states of Indiana, Illinois, at the dividing line between towns thirty-three and thirty-four, north; thence west to the southwest corner of town thirty-four north, of range nine, east; then due north to the northern boundary line of the State; thence east with said line to the northeast corner of the State; thence southwardly with the line of the State to the place of beginning,—shall constitute a county to be called Cook,† and the county seat thereof is hereby declared to be permanently established at the town of Chicago, as the same has been laid out and defined by the land commissioners."

Section 8 directs that an election be held "at Chicago, in Cook County, on the first Monday in March next, for one sheriff, one coroner, and three county commissioners."

Section 10 locates the public buildings at Chicago "on the public square, as laid off by the Canal Commissioners, on the south side of the Chicago River," and in the succeeding section the County Commissioners were authorized "to sell the same whenever they may think it best, and apply the proceeds thereof to the erection of a court-house and jail."

Section 13 established a ferry at the "seat of justice." The County Commissioners were without delay to provide a suitable boat, or other water craft, and hire a ferryman at their discretion as to terms. The ferry was to be free to the inhabitants of the county; others to be ferried at such rates as should be reasonable and just.

In March, 1831, Cook County was organized. It then embraced, besides its present limits, all of what are now the counties of Lake, McHenry, DuPage, and Will. The only voting place in the county was Chicago, at the first election. No general election was held until the following year, before which time the county had been divided into three precincts. The first commissioners were Samuel Miller, Gholson Kercheval, and James Walker, who, on March 8, held their first court in Chicago, and took the oath of office before Justice of the Peace J. S. C. Hogan. William See was appointed Clerk and Archibald Clybourne, Treasurer. With the exception of Walker, who lived on the DuPage River, the governing power of Cook County was vested in residents of Chicago. During the first session of the court, which lasted two days, the following proceedings were made matter of record:

"An order was passed that the southwestern fraction of Section 10, Township 9, Range 14, east, be entered for county purposes. The Treasurer was authorized to borrow one hundred dollars with which to make the entry, at a rate of interest not to exceed six per cent. Jesse Walker was appointed as agent to enter the land in behalf of the county. ‡

* Robert A. Kinzie, Samuel Miller, Alexander Robinson, John B. Beaubien, Madore B. Beaubien, and Mark Beaubien had all been licensed to sell goods at this time. Perhaps the five last mentioned traded exclusively with Indians.

† The county was named in honor of Hon. Daniel H. P. Cook, who as a member of Congress, had been chiefly instrumental in procuring the passage of the canal bill and land grant of 1827.

‡ The project failed. Mr. Walker at a subsequent meeting (June 6) reported that he had been refused permission to make the entry, and returned the money.

"Jedediah Wooley was nominated for appointment by the Governor as County Surveyor.

"Three voting precincts were established and their boundaries defined, designated as the Chicago precinct, the Hickory Creek precinct and the DuPage precinct.

"Grand and petit jurors were selected, and other unimportant business transacted after which, as was recorded, 'the court adjourned until court in course.'"

April 13, 1831, a special term of the Court of County Commissioners was held in Chicago—present, Samuel Miller and Gholson Kercheval, the two Chicago members. At this session considerable business was transacted relating especially to the history of Chicago.

It was ordered that a tax of one-half per cent be levied on the following description of property, to wit: "On town lots; on pleasure carriages; on distilleries; on all horses, mules, and neat cattle above the age of three years; on watches, with their appurtenances; and on all clocks."

The first two tavern licenses were granted by Cook County to Chicago landlords—Elijah Wentworth, for \$7, and Samuel Miller, for \$5.

Following the granting of these licenses, the records show that it was—

Ordered that the following rates* be allowed to tavern keepers to wit:

Each half pint of wine, rum, or brandy.....	\$.25
Each pint do.....	.37½
Each half pint of gin.....	.18¾
Each pint do.....	.31¾
Each gill of whisky.....	.06¼
Each half pint do.....	.12½
Each pint do.....	.18¾
For each breakfast and supper.....	.25
For each dinner.....	.37½
For each horse fed.....	.25
Keeping horse one night.....	.50
Lodging for each man per night.....	.12½
For cider or beer, one pint.....	.06¼
For cider or beer, one quart.....	.12½

During the same session, Russel E. Heacock was licensed "to keep a tavern at his residence,"† and Robert A. Kinzie, Samuel Miller, and B. Laughton,‡ were licensed to sell merchandise. James Kinzie was duly licensed as an auctioneer.

Action was had for the establishment of a ferry across the branches of the Chicago River at the forks. The people of Cook County, "with their traveling apparatus," were to be passed free; all others were to be charged for ferriage as per a schedule of rates then adopted. Whoever should be appointed ferryman would be required to file a bond in the sum of \$200 for the faithful performance of his duty, and to pay into the county treasury the sum of \$50. A ferry scow was purchased of Samuel Miller for \$65. At the next term of court (June 6, 1831) Mark Beaubien was duly appointed ferryman of Chicago, having filed the required bond, with James Kinzie as surety, and entered into an agreement to pay into the county treasury the required sum of \$50.

The Clerk, being empowered to do certain acts necessary to keep the wheels of government in motion, during the vacation of the court, granted permits to sell goods to Alexander Robinson, John B. Beaubien, and Madore B. Beaubien.

The second regular session of the Court was held June 6.

* At that time dimes and half dimes were not in circulation, and the computation of all small transactions, involving less than one dollar, was based on the Spanish coin, valued at 12½ cents, known in New York as the "York shilling," and in New England as a "nine pence."

† Mr. Heacock, who had been licensed by Peoria County, June 3, 1830, lived up the South Branch some five miles from the present court-house. His place was known as Heacock's Point—his claim was on Section 32, Township 39, Range 14.

‡ Barney H. Laughton kept his store at what is now Riverside, some miles southwest of the village. One authority says "three miles up the South Branch."

At that session Mark Beaubien, O. Newberry,* and Joseph Lefenboys were licensed to sell goods in Cook County. Subsequent records show that, during 1831, in addition to those before mentioned, merchants' licenses were granted to Brewster, Hogan & Co., Peck, Walker & Co., Joseph Naper, and Nicholas Boliveu.

FIRST COUNTY ROADS.—The initiatory steps were taken during this session for the establishment of two country roads. The first was to be located "from the town of Chicago to the house of B. Lawton, from thence to the house of James Walker, on the DuPage River, and so on to the west line of the county." The viewers appointed were Elijah Wentworth, R. E. Heacock, and Timothy B. Clark. The second was to run "from the town of Chicago, the nearest and best way to the house of Widow Brown, on Hickory Creek." James Kinzie, Archibald Clybourne, and R. E. Heacock were appointed viewers. These two highways were intended to open communication with the southern and western parts of the county, and between the voting places in the three precincts established. The projected road to Widow Brown's was laid out from the town of Chicago on what is now State Street and Archer Avenue. The DuPage road ran essentially on the line of Madison Street to Ogden Avenue, thence on said avenue to Lawton's, near what is now Riverside.

The first report of the viewers of the last-named road does not appear to have been satisfactory to the court as the record says: "the report is rejected and the viewers shall have no pay for their services." The court perhaps transcended its authority in thus cutting off the pay of the derelict viewers, but, as there is no record to the contrary, it is believed that the punishment was meekly borne by the luckless trio, and that no attempts were made on their part to obtain redress. Thus early in history did the county fathers frown upon undesirable practices in the civil service, whether corrupt or otherwise. Slight lapses from the inflexible integrity of the early court have since occurred, and the practice of depriving officials of the emoluments of office when under clouds of suspicion has long ago fallen into disuse.

FIRST PUBLIC LAND SALE.—The Canal Commissioners deeded Cook County a tract of ten acres including what is now the court-house square.

It was decided by the commissioners to sell off by public auction a part of the land. The sale occurred July 1831, James Kinzie being the auctioneer. The county records show that the rate of commissions allowed him were two and one-half per cent for the first \$200, and one per cent for all over that sum. For his services he received a county order for the sum of \$14.53¾. Computing from the amount of the auctioneer's commissions, it would appear that the gross amount of sales was \$1,153.75.

AN INDIAN PAYMENT.—The last occurrence worthy of note in the annals of Chicago for the year 1831, was the gathering of nearly 4,000 Indians to receive their annuities, which were disbursed by Colonel Owen, assisted by Kinzie and Gholson Kercheval. The payment occurred during the latter part of September, and was the occasion of no little anxiety on the part of the whites, as it was known that there were emissaries from the Sacs of Black Hawk's band, who had but recently reluctantly moved to the western banks of the Mississippi, attempting to incite the tribes gathered to make common cause with them against the whites, and to inaugurate a general war for the extermination of the settlers and the repossession of their

old hunting grounds. It was known that the counsels of the Pottawatomies were far from unanimous for peace. Black Foot, leader of a powerful band, having his home at the head of Big Foot, now Geneva Lake, was ready to put on his war paint, as were most of his braves. His influence was, however, not sufficient, against the strenuous opposition of Billy Caldwell (Sauganash) who was the staunch friend of the whites, to carry the tribe into the proposed warlike alliance; and much to the relief of the whites the plot fell through, and the payment ended in a bloodless orgie of drunkenness, after which the various tribes returned to their villages, some evincing surly disappointment that blood had been averted. The sentiment of the tribes as a whole was not reassuring for a lasting peace. Although, through the firmness of Colonel Owen and the influence of the friendly chiefs, no hostile alliance had been effected, it was quite generally believed that in case of any attempt on the part of the Sacs to repossess their lands about Rock Island, the Pottawatomies would at best be only neutral as a tribe, while Big Foot's band might prove secret allies so far as to give aid and comfort to the enemy.

EARLY AMUSEMENTS.—During the winter of 1831-32 the settlement, almost shut out from the outside world, found amusement, pastime and profit within the narrow range of its own resources. There were dances at Mark Beaubien's. A "debating society" was organized at the fort, J. B. Beaubien being the president. A chronicler states that he presided with "much efficiency and dignity." Although not very conversant with Jefferson's Manual, he had no occasion to use it, as every member was disposed to be orderly and behave himself, and each and all seemed bound to contribute as much as possible to the general sum of knowledge and usefulness. Here Chicago oratory was first fledged, and the ever-recurring questions of debate on such occasions were for the first time debated, if not settled, on the western shore of Lake Michigan.

Mark Noble and family, Mrs. Hamilton, the Wentworths, Mr. See and wife, Rev. Stephen R. Beggs and family and other religious souls, if such they were, held weekly prayer meetings, either at Mr. Noble's house or at the fort. Thus, the grave, the gay and the intellectual found sources of enjoyment in this far-off hamlet of the West. The monotony of the short winter days was broken by an occasional scrub-race on the ice between one of Mark Beaubien's horses (he had two) and any other that could be found to score with him. An occasional wolf hunt within the present city limits also helped to while away the time until the warm spring should bring the expected arrival of more emigrants, and the consequent renewal of business, which had been quite brisk with passing emigrants till cold weather set in.

AN UNEXPECTED SET BACK.—The spring came, and with it came rumors which blighted all hopes of a renewal of the tide of emigration early in the season. They were to the effect that Black Hawk,* with his band, although unsuccessful in his attempts at an alliance with the Pottawatomies the fall before, had recrossed the Mississippi in violation of his treaty, and with the apparent intent of re-occupying his old village and the territory along the Rock River which he had so recently left. The alarming rumor was confirmed on the arrival of Hon. Richard M. Young, at Fort Dearborn. He was at that time one of the circuit judges of the State. He was accompanied by Benjamin Mills, Esq., a lead-

* For fuller account concerning the Black Hawk War, see article on Fort Dearborn and the Military History.

* Oliver Newberry was then a merchant of Detroit.

ing member of the Illinois Bar, and Colonel Strode. They had come from Galena, by way of Dixon, and reported that the Indians at the latter point showed evident signs of their hostile intentions. Later arrivals confirmed their statements. The aggressive march of the band up the Rock River, their meeting with Stillman's force, their subsequent breaking up into small bands to prey upon the defenseless settlers, the massacre at Indian Creek, and the general panic which ensued, has all been told elsewhere. The tidings of the campaign as it progressed came daily to Chicago, and created, as may well be imagined, a consternation and excitement which overshadowed all other interests for the time. The nearest, and in fact the only place of refuge for the settlers on the Desplaines and vicinity, was Fort Dearborn. The settlers were warned by Shawbonee, a friendly Pottawatomie chief, through scouts sent by him to the various settlements to inform them of the impending danger.* By the last week of May Fort Dearborn was a crowded caravansary of frightened fugitives numbering more than five hundred persons. The quarters were crowded, a single room often being occupied by two families. As the fort overflowed, the later comers made temporary homes in rude huts and shanties hastily and rudely put together for the emergency, from such materials as the place afforded. Nothing was thought of or talked of except the war and the danger that menaced the whites. Although no great fear was entertained for the safety of those within the garrison from Black Hawk's band, a vague fear, an undefinable dread lest other tribes might, at any time, without warning, take sides with the hostile band and join them in their murderous raid, gave the settlers a continued anxiety, known only to those who have experienced it. The anxiety was increased by information given to Colonel Owen by Billy Caldwell that the hostile chiefs were still tampering with the Ottawa, Pottawatomie and Chippewa Indians who belonged to the Chicago agency, and who had thus far refused to make common cause with them; that the young men and some of the older chiefs had become exasperated at the conduct of Stillman's men in needlessly beginning the war, and had gained courage, which gave them hope of success from the subsequent victory of Black Hawk's warriors over the whites who first fired on them. To if possible avert the danger, an informal council was called of the chiefs of the various bands having lodges nearest the fort.† At this council Colonel Owen addressed the Indians. He pointed out the absolute folly of any alliance with the hostile tribe; he showed them the certainty of ultimate defeat, and the disastrous results to them which would follow should they needlessly take up arms in a cause not their own—a loss of their annuities, probably followed by the destruction of their tribes or their forcible removal to beyond the Mississippi. Big Foot addressed the council, detailed the common grievances of the Indians, told of the many instances of injustice and faithlessness on the part of the Government which his tribe had suffered, and gave it as his conviction that the present was a favorable time to make common cause in seeking with knife and tomahawk redress for their cumulated wrongs. His speech was favorably received by many of the young men, but the stanch opposition to the foolhardy stroke for vengeance proposed by Big Foot was made by both Robinson and Caldwell. Their influence in the tribe, backed by their eloquence, together with the decided and fearless talk of Colonel

* Shawbonee was an Ottawa by birth, and became a chief of a Pottawatomie band. See his biography.

† The exact date of this council is not known—it was probably about June 1.

Owen, who represented the Government, decided the council in favor of peace, much to the chagrin of Big Foot and his immediate followers. Subsequent to this council many of the Pottawatomies did good and faithful service as spies and scouts, in watching and reporting the whereabouts of the enemy, and in protecting the growing crops which the fleeing settlers had left behind.

The few residents of Chicago labored to their utmost to feed and shelter the fugitives. Shelter, such as it was, was provided once for all, but the food had to be replenished daily. Archibald Clybourne, the only butcher, found it impossible to furnish the meat for a community suddenly increased five-fold beyond that usually looking to him for supplies. He did his best, but short rations on meat would have been declared, had not the Noble boys (John and Mark) have driven in their stock which they had been raising in the Sangamon district—some one hundred and fifty head. Their timely arrival averted a meat famine. An early chronicler says:

"In this emergency, it was fortunate that the Nobles had concluded to go into stock-raising. Archibald Clybourne was the Government butcher for the Pottawatomies, and used to do a little in the same line for settlement, but he had no adequate supply for the population that he now found suddenly on his hands,* and, as soon as the one hundred and fifty head arrived from the south, the Nobles turned butchers and fed the population and the troops until the last steer had bit the dust."

The following extracts from a letter, written by George W. Hoffman, a member of the company of Michigan volunteers, gives some light on the subject:

"DETROIT, 5th April, 1879.

"My Dear Sister: I received your letter three or four days ago and was real glad to hear from you, as I always am, and I should have answered sooner but I have been looking out for our Adjutant-General to get from him some dates relating to the Black Hawk War, and only met him yesterday and was surprised to find that he has nothing in his office relating to the subject.

"My recollection is that in May, 1832, there was received at Niles a letter from Major Owen (Indian Agent at Chicago whose name I cannot call to mind), calling for help on account of the approach towards Chicago of Black Hawk and his warriors, who were killing and plundering all in the way of their march through Illinois and Michigan to Canada, their destination. As northern Indiana and southwestern Michigan were then but sparsely settled, there was great fear and a panic among the farmers and in the small villages along the supposed route of the Indians.

"Colonel Haston, of the regiment (24th, I think), including Bemis and Cass counties, immediately called them into service and in the course of two or three days had three or four hundred men at Niles, very poorly equipped for such an emergency. Indeed they had only such rifles and shotguns as they happened to have for hunting purposes, with but very little ammunition of any kind. Some had powder-horns with a few bullets, and some had neither.

"Volunteers were called for to be hurried to Chicago, and after a day or two some fifty or sixty men, some on foot and some on horseback started, for Chicago, and got some five or six miles in the woods north from the Door Prairie, in Indiana, and toward Bailleys (Baze), who lived on the Calumet River on the route towards Lake Michigan, and the shore of which was the only road to Chicago. Early in the morning, when about to have a camp, a carrier from Chicago arrived announcing that no danger was now apprehended at Chicago. We at once started on a return to Niles, and on the next day had arrived at Teneconpe Prairie, about twelve miles from Niles, when we were again overtaken by a carrier, with more alarming reports than before, and the officers determined to turn and face again toward the enemy; but most of the men became mutinous, and we proceeded toward Niles, and when within four or five miles were met by an officer sent by General I. R. Williams, who had arrived at Niles with a company of minute-men from Detroit, with orders for us to turn back towards Chicago. Here again our men were disposed to disobey, but as General Williams had quite a large number of men at Niles, one or two other regiments from as far east as Tecumseh and other towns having arrived, our boys con-

* During the early part of May, so soon as rumors of danger reached Michigan, a company of volunteers was sent to Chicago to help defend the place, the fort at that time being ungarrisoned by United States troops. They were quartered in the fort with the fugitives, and did patrol duty while there.

cluded at least to halt and wait further developments. One officer and myself rode on to Niles, and when we arrived at the river (St. Joseph) were confronted by a sentinel, who said he had orders to prevent any one from returning to the east side of the river. We said all right, and turned back and rode down to the ford and crossed over and reported to General Williams. The next day we again started for the seat of war, General Williams and his minutemen only going with us. The other militia were sent back to their homes. When we arrived at the Door Prairie, four miles west of the now city of LaPorte, we took possession of a stockade that the farmers had thrown up, and remained there a week or ten days, but I cannot remember why, unless that we were waiting for further news from Chicago. The farmers about the region of the Door had all left their homes and fled to the more southern settlements. From the Door we went to Chicago, in June * (I think), and took possession of old Fort Dearborn. The few inhabitants of Chicago had, before our arrival, felt their heads every morning to make sure that their scalp-locks were still there; but there were not many there then, and the Indians would have obtained but few trophies of that kind, had they taken them all. Besides the fort there were two frame houses on the North Side, and the old Kinzie house, which stood close by the river and almost directly opposite the fort. On the South Side were two or three small farm houses; and on the West, the Kinzie store at the forks, as we then called the North and South branches, and there was Mark Beaubien's tavern on what is now Michigan Avenue, about where the Exposition building now stands.† There a few officers lived. I myself 'put up' with Mark, and some of the refugees from the country who were in the fort thought we were a reckless set of fellows who deserved to be scalped, because while there was so much danger from the dreadful Indians, Mark would play his fiddle and we boys would dance. One day there came a report from Naper's settlement that the Indians had been seen in that region, and the inhabitants were in great alarm, and wanted troops sent from Chicago to escort them safely from their homes to the fort. Volunteers were called for, and some sixty or seventy of us, well mounted, left Chicago in the afternoon and rode all night, arriving at Naper's the next morning, and went into camp, as our commander, Colonel Edward Brooks (formerly of the army), had particular orders from General Williams not to look after the Indians, as our force was so small; but to offer escort to all who were disposed to flee to Chicago. We remained in camp that day and night, and as there was no one needing our attention and the alarm of a day or two previous having passed away, we started on our march back to Chicago. On the afternoon of the day we left them, three men went out with a wagon and pair of horses to a grove of timber to get long shingles to cover a block-house, and as they entered the woods, Indians rose up and fired at them, killing two of the men, and taking with them the horses. One of the men escaped, and on his giving the alarm, the Indians were followed, but not seen nor overtaken. In the early morning before our arrival at Naper's, Robert Kinzie called the attention of Dr. Winslow, H. Redfield and myself to objects near this same grove, and said he believed they were Indians; and if we stopped and turned our horses toward them, if they were Indians they would disappear, as they were no doubt watching us. We dropped to the rear of the command, and were hardly separated from them before they were gone out of sight; Kinzie reported to Colonel Brooks, and we proposed to take ten or fifteen men and go to the grove to see whether they were Indians or not, but the Colonel said he had strict orders not to leave the road or divide his small force. After hearing of the killing of the two men, we had no doubt the Indians had seen us and watched our return toward Chicago. We remained in the fort until the arrival of a part of the second division, under Colonel William Whistler, when your good husband found me at battalion drill, to which duty I had been assigned, being the only one (except Colonel Brooks) who knew anything about such matters. You will very well remember the arrival of General Scott, with troops, soon after (in July), on board of steamer boats, when the startling news (much more alarming than Indian depredations) came on shore, that the Asiatic cholera was aboard, when you and other ladies and children ran to the open prairie and at last found shelter under some boards in the fence corners, to get rid of exposure to that terrible disease.

"When in Chicago, now I can hardly realize that my horse, with fifty or a hundred others, found wild, uncultivated pasture where now stands the court-house; in the midst of a great and beautiful city, once destroyed, but now more grand and beautiful than in its former greatness; when there was not a house between the fort and the woods, as we then said, a distance of three or four miles, except Mark Beaubien's tavern, where now are such splendid streets and magnificent buildings. So much for the Black Hawk War. I have often wished I had kept a diary of events then, with reference not only to the war but the Western country, as we then called it."

* It was in May.

† A mistake in location.

Mrs. Mary A. Penrose, wife of the then Second Lieutenant James W. Penrose, to whom the above letter was written, was one of the women who came with Whistler's command with her husband. Her reminiscences of those times were given to Rev. H. C. Kenney, February 28, 1879, and are here published for the first time:

"In the year 1832, probably in May, my husband, Lieutenant James W. Penrose, who was then Lieutenant of the 2d Infantry Regular Army, was ordered from Sackett's Harbor to Chicago, with several other companies of the same regiment, under Colonel Whistler. At what point we took the sailing vessel I do not remember, but it was probably at Buffalo. On arriving at Chicago, the troops were first landed in little boats. Then the officers' families were sent on shore. A storm having arisen, it was three days before Colonel Whistler's family and the wife of Major Kingsbury were able to land.

"There were in Chicago at that time about twelve houses. I think that all of these were made of logs. Our quarters were in the fort. The troops took possession of the fort, relieving a company of militia from Michigan. About six weeks after our arrival, our little company was increased by the arrival, on a steamer, of General Scott, with several other companies. These had been sent to Chicago to proceed to Rock Island to fight the Indians there.

"The boat brought not only the troops but also the cholera. At twelve o'clock A. M., Lieutenant Summer (afterwards General Summer of the War of the Rebellion) came to the fort and ordered all the families in the fort to leave before sunrise, stating that at that time the troops down with the cholera would be moved into the fortification.

"I had then a little babe who is now Brevet Brigadier-General William H. Penrose of the 3d Infantry U. S. A.

"I remember the names of the members of the following families: Colonel Whistler, Major Kingsbury, Captain Johnson, Lieutenant Day, Lieutenant Long, and my own. In my own family was, besides the before-mentioned babe, my husband's mother and two sisters. Four of these families, finding the house of Mark Beaubien vacant (its owner having left an hour before, without taking anything with him), with joy went into that building. Mrs. Johnson and I, with my family were, however, not so fortunate, for even the four-roomed house of Mr. Beaubien could only hold four families. Going on about a mile we came to the house of a butcher, containing but one room. Exhausted, I threw myself on my mattress, which the soldiers had carried down from the fort, and there I laid during the night.

"The next morning in vain did we seek for a house. A rail fence was, however, in sight. Into one corner I moved. A few boards made the floor. A carpet kept off the wind from our heads and backs. Other boards formed a far from water-proof roof. Here we remained three days and three nights, cooking on the ground. My companions in misery were Mrs. Johnson and family.

"After three days Captain Johnson and my husband secured a lot of green lumber. In sight of our fence stood the frame of a house. To this the green boards were soon nailed and a temporary partition put in. Here our two families moved. Mr. Penrose's mother and sister nightly crawled up a ladder to their beds.

"General Scott, who from the steamer had gone to the hotel at the Point, after five days made his appearance. Every day he would ride up to our house and, looking up to the open end of the frame, would talk with the ladies, invariably dwelling upon the fact that they were in more comfortable quarters than Mrs. General Scott, who was then at West Point. Our cooking had to be done in the open air. Generally we got more sand than salt in our food.

"After remaining in these quarters, the house of the Indian Agent, Colonel Owen, having been vacated through fear of the before-mentioned disease, we obtained permission to move into it, on the condition of permitting the Colonel to remain with us. This house stood on the North Side, and contained four or five rooms on a floor. The family of the Colonel had left even their dishes, and had gone to Springfield.

"I should have stated that on the same night that General Scott arrived, the troops that were in the fort before the arrival of the steamer were marched along the lake shore and were encamped in tents about eight miles from the fort. There they had remained from that time. Several of their number, as well as many of the later arrived officers and soldiers, took the cholera and died. As soon as the disease abated the rest of the soldiers, excepting a small garrison, were ordered to Rock Island.

"I remained in the house of the Indian Agent, until Colonel Owen's family returned. I then had to seek for other quarters. My sister and myself got into a log canoe and, paddling across the Chicago River, called on the officer in charge (Colonel Whistler) and requested from him permission to again take up our abode in

the fort. After a little perseverance we succeeded in obtaining two rooms. About six weeks afterward the troops that had been in Rock Island returned to Chicago, and from thence were sent to the posts from which they had been collected. In all I remained in Chicago about eighteen months."

"I was born at New York, my maiden name Mary A. Hoffman, my father was Colonel William Hoffman, 6th Regiment, U. S. A.

"I was married at Sackett's Harbor, to James W. Penrose. For nineteen years I lived in soldiers' garrisons.

"My husband died from disease contracted in the Mexican War. MRS. MARY A. PENROSE.

"Joliet, February 27, 1879."

Under the protection of the fort and the militia, and with the encouraging rumors that Black Hawk's bands were moving up the Rock River toward the Winnebago country, and away from Chicago and the outlying settlements, the panic abated somewhat, although a wholesome fear still kept all non-combatants within the crowded precincts of the fort, or within retreating distance of its protecting inclosure. The men organized scouting parties,* composed in part of friendly Pottawatomies, and made frequent tours of observation to the deserted settlements. No hostile Indians were seen after the raid was over that had caused the first alarm, although signs were not lacking of their presence in the vicinity.

The inconvenience and suffering borne uncomplainingly by the fugitives in camp were great. Food, not at all times in good supply, cooking conveniences of the crudest kind, crowded room, added to the entire lack of anything like retirement, privacy, or quiet, rendered what to the well was inconvenient to the sick almost unbearable hardship. Under these unfavorable conditions the population was increased by the arrival of fifteen who had not fled to Chicago through fear of the Indians. Rev. Stephen R. Beggs, in his book, vouches for the truth of the above. He says:

"The next morning (after a severe tempest, during which the room in which he and his family were quartered was struck by lightning) our first babe was born, and during our stay fifteen tender infants were added to the number. One may imagine the confusion of the scene—children crying and women were complaining within doors, while without, the tramp of soldiers, the rolling of drums, and the roar of cannon added to the din."

The Wolverine soldiers certainly conducted themselves in an unhandsome manner if, as the reverend gentleman intimates, they made any unnecessary noise during this protracted series of interesting events.

On June 17 Major Whistler arrived at Fort Dearborn with his command, and, in accordance with his orders proceeded to garrison the fort. He humanely allowed the families to remain in the garrison until quarters could be provided for them outside. The Michigan volunteers were, however, obliged to evacuate, in order to make room for the newcomers; which they did, not without considerable murmuring, and went into camp at Grosse Point, near where Evanston now stands. Major Whistler immediately set about preparing new quarters for the soon-expected arrival of General Scott's forces, and the anxiety of the sojourners as to their future was increased, as it was well known that when they came their quarters would have to be given up. On the evening of July 10,† the steamer "Sheldon Thompson," Captain A. Walker, arrived from Buffalo, having on board General Scott, his staff, and four companies of troops. The news of their arrival was accompanied with the intelligence that the dreaded scourge of Asiatic cholera was on board, in such violent type as to have already decimated the troops on the voyage. It required

* See Military History.

† Blanchard's History, p. 376, puts the date of Scott's arrival on the evening of the 8th of July. Captain Walker states positively that it was on the 10th.

no direct orders from either General Scott or Major Whistler to make room in the garrison for the newly arrived troops. The sojourners who, a few weeks before, had fled from the Indians, now fled with more precipitate haste and terror from the deadly pestilence that had entered their place of refuge. The residents also, with few exceptions, left with their families. Some went to Laughton's, some to Grosse Point, some to Wentworth's place; anywhere to get away from the plague-stricken garrison. By the 12th the village was virtually depopulated and given over to the sick, the dying, the dead, and those whom duty compelled or humanity urged to remain to minister to them. The garrison became a hospital. There was no thought on the part of General Scott to make any aggressive move or to take any part in the campaign against Black Hawk until the disease should cease its ravages. Eight days later (July 18) the steamer "William Penn" arrived with Government stores, and a further detachment of cholera-stricken soldiers. The flight of the inhabitants and sojourners confined the ravages of the pest to the soldiers and the officers with their families. It is impossible in words to depict the horror of the time. A few old letters and reminiscences have preserved all that will ever be known of it.

A. Walker, captain of the "Sheldon Thompson," on which General Scott was embarked at Buffalo and arrived at Chicago, July 10, 1832, wrote a long account of the voyage and the ravages of the cholera during the passage. The letter appears in Fergus's Historical Series, No. 16, Appendix (L), pp. 72-76. The letter is addressed to Captain R. C. Bristol, and is dated Buffalo, October 30, 1860. Extracts relevant to the Chicago history are given below:

"It will also be remembered, as stated in my former communication, that four steamers, the 'Henry Clay,' 'Superior,' 'Sheldon Thompson,' and 'William Penn,' were chartered by the United States Government for the purpose of transporting troops, equipments, and provisions to Chicago, during the Black Hawk War, but, owing to the fearful ravages, made by the breaking out of the Asiatic cholera among the troops and crews on board, two of those boats were compelled to abandon their voyage, proceeding no further than Fort Gratiot. The disease became so violent and alarming on board the 'Henry Clay,' that nothing like discipline could be observed, everything in the way of subordination ceased. As soon as the steamer came to the dock, each man sprang on shore, hoping to escape from a scene so terrifying and appalling. Some fled to the fields, some to the woods, while others lay down in the streets, and under the cover of the river bank, where most of them died, unwept and alone. There were no cases of cholera causing death on board my boat until we passed the Manitou Islands (Lake Michigan). The first person attacked died about four o'clock in the afternoon, some thirty hours before reaching Chicago. As soon as it was ascertained by the surgeon that life was extinct, the deceased was wrapped closely in his blanket, placing within some weights secured by lashing of small cordage around the ankles, knees, waist, and neck, and then committed with but little ceremony, to the deep. This unpleasant though imperative duty was performed by the Orderly Sergeant, with a few privates detailed for that purpose. In like manner twelve others, including this same noble Sergeant, who sickened and died in a few hours, were also thrown overboard before the balance of the troops were landed at Chicago. The sudden and untimely death of this veteran Sergeant and his committal to a watery grave, caused a deep sensation on board among the soldiers and crews, which I will not here attempt to describe. The effect produced upon General Scott and the other officers, in witnessing the scene, was too visible to be misunderstood, for the dead soldier had been a very valuable man, and evidently a favorite among the officers and soldiers of the regiment.

"There was one singular fact—not one of the officers of the army was attacked by the disease, while on board my boat, with such violence as to result in death, or any of the officers belonging to the boat, though nearly one-fourth of the crew fell a prey to the disease on a subsequent trip, while on the passage from Detroit to Buffalo.

"We arrived at Chicago (as stated in the former communica-

tion) on the evening of the 10th of July, 1832. I sent the yawl-boat on shore soon after with General Scott and a number of the volunteer officers, who accompanied him on his expedition against the hostile tribes, who, with Black Hawk, had committed many depredations (though, perhaps, not without some provocation), compelling the whites to abandon their homes in the country and flee to Chicago, taking refuge in the fort for the time being. Before landing the troops next morning, we were under the painful necessity of committing three more to the deep, who died during the night, making, in all, sixteen who were thus consigned to a watery grave. These three were anchored to the bottom in two-and-a-half fathoms, the water being so clear that their forms could be plainly seen from our decks. This unwelcome sight created such excitement, working upon the superstitious fears of some of the crew, that prudence dictated that we weigh anchor and move a distance sufficient to shut from sight a scene which seemed to haunt the imagination, and influence the mind with thoughts of some portentous evil.

"In the course of the day and night following, eighteen others died and were interred not far from the spot where the American Temperance House* has since been erected. The earth that was removed to cover one made a grave to receive the next that died. All were buried without coffins or shrouds, except their blankets, which served for a winding sheet; there left, as it were, without remembrance or a stone to mark their resting-place. During the four days we remained in Chicago, fifty-four more died, making an aggregate of eighty-eight who paid the debt of nature.

"On approaching Chicago, I found quite a fleet of sail vessels at anchor in the offing, where we also came to, near them. As soon as it was ascertained that cholera was on board, no time was lost in communicating from one vessel to the other the intelligence, which induced them to weigh anchor at once, and stand out to sea, hoping to escape the pestilence, which, at that time, was considered contagious. In the morning some of them were nearly lost in the distance, though in the course of the day they mostly returned and re-anchored near by, in hailing distance. Among the fleet were some vessels belonging to Oliver Newberry, Esq., of Detroit, that were employed in transporting provisions and stores from the Government to that port.

"It is proper in this connection to state that all the mattresses and bedding belonging to my boat, except sufficient for the crew, were taken by order of Gen. Scott for the use of the sick, giving his draft for the purchase of new bedding, which was not only a deed of mercy to those suffering ones, but a matter of favor to me, in procuring a fresh outfit, so necessary after that disastrous voyage. There was no harbor accessible to any craft drawing more than two feet of water, hardly sufficient to admit the batteau in which the troops were landed. But little else was seen besides the broad expanse of prairie, with its gentle undulated surface, covered with grass and variegated flowers, stretching out far in the distance, resembling a great carpet interwoven with green, purple, and gold; in one direction bounded only by the blue horizon, with no intervening woodland to obstruct the vision. The view, in looking through the spy-glass from the upper deck of our steamer, while lying in the offing, was a most picturesque one, presenting a landscape interspersed with small groves of underwood, making a picture complete; combining the grand and beautiful in nature, far beyond anything I had before seen. The Chicago River, at that time, was a mere creek, easily forded at its mouth, while it wended its way along the beach, flowing into the lake a small distance south of the present locality of Lake Street. The provisions and stores brought by the sail-vessels were landed on the beach of the lake, near the mouth of the river, where now are seen the extensive railroad improvements.

"We remained four days after landing the troops, procuring fuel for the homeward voyage, etc. The only means of obtaining anything for fuel was to purchase the roofless log-building used as a stable. That, together with the rail fence inclosing a field of some three acres near by, was sufficient to enable us to reach Mackinaw. Being drawn to the beach and prepared for use, it was boated on board by the crew, which operation occupied the most of four days to accomplish. After getting the fuel on board, I was detained some six hours, waiting the arrival of a gentleman whose name I think was Chamberlain. I had dispatched a messenger for him, he residing some fifteen miles in the country. At length he arrived, and engaged to accompany me as far as Detroit and act in the capacity of physician, having some knowledge in preparing medicine, being a druggist by profession. During this protracted stay, in waiting for the doctor, the crew became quite uneasy to get under way, and leave behind them a scene fraught with associations of the dead and dying, which they had witnessed so frequently, until they became almost mutinous. But as soon as orders were given to get under way, the celerity with which the yawl was hoisted to the stern was a scene of exciting interest, as the duty

* Northwest corner of Lake Street and Wabash Avenue.

was performed with a will and a spirit of cheerfulness, accompanied with a hearty song of 'Yo-heave-ho'. As they hove at the windlass, they seemed almost frantic with joy when the anchor came in sight and her prow turned homeward. We had no cases of cholera on our passage to Detroit. The physician returned across the country, after receiving the stipulated sum for his services, which I think was some two hundred dollars, besides the stage-fare, which was one of the items in the stipulation."

During the ten days succeeding General Scott's arrival a hundred dead soldiers were silently carried without the gates of the garrison and hastily laid to their final rest, in a common grave, without coffin, or other shroud than the soldiers' blanket in which each had gone to his last sleep.

About the 20th of July, General Scott moved his soldiers, such as were able, out to the Desplains River, and encamped at the present site of Riverside, where they remained ten days, their health rapidly improving meantime. Thence by easy stages they commenced their march toward the enemy's country. General Scott, with twelve men and two baggage wagons, were a few days in advance. The main body advanced under the command of Colonel Cummings. The train consisted of fifty baggage wagons, in which were carried the supplies and such sick or convalescent soldiers as were unable to march. Judge Robert N. Murray, then a lad of seventeen, living with his parents, who had recently settled at Naperville, served as one of the teamsters. The route taken was through Gilbert's Grove on the DuPage River; thence crossing the Fox River three miles below Elgin, and through the Pigeon woods to the present site of Belvidere; thence to an old Indian village near the present site of Beloit, Wis., where, perhaps owing to the fatigue of the march, the cholera again broke out with such virulence as to render it necessary to go into camp for rest. Here they remained for a week, during which time several more deaths occurred. While still in camp at this place news was brought that the war was at an end. August 2, the final battle had been fought between Black Hawk's forces and the militia under General Dodge, assisted by a detachment of United States troops under Colonel Zachary Taylor, near the mouth of Bad Axe River in what is now Vernon County, Wis. The commanding officer was ordered to proceed with his force to Fort Armstrong (Rock Island), and, on renewing the march, the train turned south over the prairies to the present site of Rockford, and thence down the Rock River to Fort Armstrong, where the march ended. The route took the troops through the most beautiful and fertile region of the then unknown Northwest, embracing the northern counties of the present State of Illinois, a part of southern Wisconsin, and the beautiful Rock River Valley from Rockford to its mouth. The campaign, although fruitless from a military point of view, was fraught with events of great importance, not only to Chicago, but to the whole region over which the soldiers marched.

On their return to the East their glowing accounts of the beauty and fertility of the hitherto unoccupied country, so soon as it was believed that it was open to pre-emption, created a perfect furor of emigration from the East to the lands described. Their first point of destination, prior to pushing beyond to the promised land, was Chicago. So it happened, that the tide of emigration which set in in the fall of 1832, and continued in increasing volume for the succeeding four years, brought to Chicago a floating population from which she constantly added to her permanent resident population, such as saw in her future brighter prospects than in the allurements of the country beyond.

The fall of 1832 saw peace restored and Chicago a busy mart of trade for immigrants that had begun to arrive in vast numbers. They came in every form and in all sorts of conveyance—in families and singly—on foot, on horseback, in carriages—with money or supplies—with neither. Many only stopped at Chicago temporarily, and pushed out further west for a settlement, while a few remained to swell the population of the embryo city.

The picture of Chicago at the close of 1832 would have shown little outward improvement. A score of permanent residents had been added to the population, and a dozen new buildings, mostly of a very primitive kind, had been erected during the year. There was, however, a strong faith awakened that Chicago was, from its geographical position and its natural advantages as a harbor, destined to become the emporium of a yet undeveloped and uncivilized country; and, inspired by this, many of the new-comers remained to the close of life.*

The fall witnessed quite an accession to the permanent settlers, among whom were John Bates, Dr. Phillip Maxwell, G. W. Snow, Philo Carpenter, J. S. Wright, Dr. E. S. Kimberly.

During the summer George W. Dole built what was probably the first frame building used for business purposes in Chicago. It stood at the southeast corner of Water and Dearborn streets where it remained until 1855. Mr. Peck, during the fall commenced the erection of a frame building at the southeast corner of Water and LaSalle streets, which was completed and occupied the following May. The two above named were certainly the first frame business structures built in Chicago. Of the first named, the Democratic Press of April 23, 1855, said:

"The first frame building erected by George W. Dole for a warehouse, in the summer of 1832, and occupied early in the fall of that year, which had stood for nearly twenty-three years on the southeast corner of Water and Dearborn streets, is being moved southward."

It is stated on reliable authority † that George W. Dole commenced the slaughtering of beeves and hogs and the packing for market of beef and pork, and that he slaughtered and packed during the fall of 1832, in the rear of the building he had erected, "close to the present site of the Tremont House," two hundred cattle and three hundred and fifty hogs." Clybourne, the Noble brothers, and Gurdon S. Hubbard had driven in and slaughtered large droves of hogs and cattle before that time, but it is not believed that any provisions had been packed for the mercantile trade of the lakes prior to the fall of 1832, and the first so packed was by George W. Dole. ‡ He was the father of the provision, the shipping, the warehouse, and the elevator business of Chicago.

The early spring brought a most tremendous tide of emigration. The town doubled its population during the spring and early summer months. The test of residence was not, however, severe. Any man who remained in Chicago long enough to pay his board by the week was considered a resident, and if, in addition, he had

* Of those living (August, 1883) in Chicago who came here prior to January, 1833, are: John Bates, Philo Carpenter, Gurdon S. Hubbard, A. D. Taylor.

† Colbert's History, p. 7.

‡ Colbert, p. 45, alluding to Mr. Dole's inauguration of beef and pork packing in Chicago says: "In October of that year (1832) he slaughtered and packed one hundred and fifty head of cattle for Oliver Newberry, of Detroit. The cattle were purchased by Mr. Dole from Charles Reed, of Hickory Creek, at \$2.75 per one hundred pounds—the hides and tallow being thrown in for the slaughtering." They were slaughtered by John and Mark Noble on the prairie near the lake, the beef packed in Mr. Dole's warehouse, and shipped to Detroit.

In December Mr. Dole killed, "in the back yard of his warehouse" three hundred and thirty-eight hogs, bought of John Blackstone, who had driven them in from the Wabash Valley. This pork was shipped to Detroit and New York the following spring.

bought a lot, or put out his sign as a lawyer, doctor or a real estate dealer he was recognized as a permanent inhabitant. There were built during the spring and summer of 1833 nearly one hundred and fifty frame buildings, mostly on the north and south sides of the Chicago River below the forks.

The arrivals of emigrants who came to Chicago during the season and made the place their home were too numerous to be named in detail. Several events transpired during the year, which combined went far to increase the prosperity and brighten the future prospects of Chicago.

HARBOR IMPROVEMENTS BEGUN.—Up to 1833 Chicago could not be said to have had a harbor. The bar across the mouth of the river, as it is now, made it impracticable for any laden vessel to enter it, and, except as a roadstead where ships might anchor off shore and be lightened of their cargoes, it had no claims to be called a harbor. The canal project, calculated to open a water-carriage from the lakes to the Gulf of Mexico, by way of the projected Michigan & Illinois Canal had been already inaugurated by favorable Legislative grants, by the preliminary survey of some of the town sites, and by the sale of lots and lands sufficient to establish the belief that the work would be speedily begun and ultimately finished. Chicago, as the lake terminus of the proposed canal, must necessarily have a harbor, and Congress having already shown favor to the canal scheme, could do no less than to render it feasible by improving the harbor. An appropriation of \$25,000 was accordingly made March 2, 1833, and work commenced on the improvement July 1. Major George Bender was the superintendent. His subordinates were Henry S. Handy, assistant superintendent; Samuel Jackson, foreman of construction; A. V. Knickerbocker, clerk. Joseph Chandler and Morgan L. Shapley had executive charge of the work, Jones & McGregory being contractors for the wood work. Under the direction of these men, and with a large force of laborers the building of the present magnificent harbor was begun.* During the summer and fall some five hundred feet of the south pier was finished, and in the subsequent spring the north pier was extended a like distance, cutting off the old tortuous channel to the south, and making a straight cut for the river across the bar into the lake. Little dredging was done, but a heavy freshet in the spring of 1834 cleared the new channel so that vessels of large burden came up the river for the first time during the summer of that year. †

THE GREAT INDIAN TREATY OF 1833.—The close of the Black Hawk War had resulted in the final extinguishment of the title of the Sac and Fox Indians to all their lands east of the Mississippi. September 15, 1832, a treaty was concluded at Fort Armstrong, whereby the Winnebago nation ceded all their lands to the United States "lying south and east of the Wisconsin River and the Fox River of Green Bay." The Chippewas, Ottawas, and Pottawatomies still held their title to the land of northeastern Illinois and southern Wisconsin, besides large tracts not very definitely defined in Indiana and Michigan. It was necessary, in order to open up to civilization the lands ceded by the other tribes lying west and northwest, that the Indian title to this vast tract of land lying along the western shore of Lake Michigan should be extinguished. For Chicago, it was a vital necessity, as the town was girt on all sides and for many miles north and west by

* See article entitled Harbor and Marine for full history.

† On Saturday, July 11, 1834, the schooner "Illinois," the first large vessel that ever entered the river, sailed into the harbor amid great acclamations. Colbert's History, p. 46.

the lands of the United Nation of Chippewa, Ottawa, and Pottawatomie Indians.*

In September, 1833, a grand council of the chiefs and head men was called to meet at Chicago to negotiate a treaty whereby the lands might be peaceably ceded, and the Indians removed therefrom, to make way for the tide of white emigration which had begun to set irresistibly and with ever increasing volume to the coveted region. It was a most important matter for both the Indians and the Government; but to the former most momentous, since it involved the extinction of not only their title to the land which had been their home during a period which only their traditions could dimly measure, but the obliteration of all associations dear to them in their tribal or family relations. Black Hawk's ill-starred campaign, followed by the subsequent treaty made by his tribe, showed them the inevitable result which must follow resistance. They knew quite well that they had no alternative. They must sell their lands for such sum and on such terms as the Government agents might deem it politic or just or generous to grant. The result of the treaty was what might have been expected. The Indians gave up their lands and agreed for certain considerations, the most of which did not redound to their profit, to cede all their lands to the Government, and to leave forever their homes and the graves of their fathers for a land far toward the setting sun, which they had never seen and of which they knew nothing.

Charles J. Latrobe, an English traveler, gave a very graphic description of the gathering of the Indians to the grand council, how the negotiations were conducted to a conclusion, and a description of Chicago as it appeared to him, crowded with adventurers who had been drawn thither to prosecute their claims against the Indians, or to reap such harvest from them as duplicity and knavery might gather from the drunken orgies that were the inevitable concomitants of every gathering of Indians where they met the whites, whether in trade or council. The account reads as follows:

"When within five miles of Chicago, we came to the first Indian encampment. Five thousand Indians were said to be collected around this little upstart village for the prosecution of the treaty, by which they were to cede their lands in Michigan and Illinois.

"I have been in many odd assemblages of my species, but in few, if any, of an equally singular character as with that in the midst of which we spent a week at Chicago. This little mushroom town is situated upon the verge of a perfectly level tract of country, for the greater part consisting of open prairie lands, at a point where a small river (whose sources interlock in the wet season with those of the Illinois) enters Lake Michigan. It however forms no harbor, and vessels must anchor in the open lake, which spreads to the horizon to the north and east in a sheet of unbroken extent. The river, after approaching nearly at right angles to within a few hundred yards of the lake, makes a short turn, and runs to the southward parallel to the beach. Fort Dearborn and the light-house are placed at the angle thus formed. The former is a small stockaded inclosure, with two block-houses, and is garrisoned by two companies of infantry. It had been nearly abandoned, till the late Indian war on the frontier made its occupation necessary. The upstart village lies chiefly on the right bank of the river, above the fort. When the proposed steamboat communication between Chicago and St. Joseph's River, which lies forty miles distant across the lake, is put into execution, the journey to Detroit may be effected in three days, whereas we had been upwards of six on the road. We found the village, on our arrival, crowded to excess; and we procured, with great difficulty, a small apartment, comfortless and noisy from its close proximity to others, but quite as good as we could have hoped for. The Pottawatomies were encamped on all sides—on the wide, level prairie beyond the scattered village, beneath the shelter of the low woods which chequered them, on the side of the small river, or to the leeward of the sand hills near the beach of the lake. They con-

sisted of three principal tribes, with certain adjuncts from smaller tribes. The main divisions are the Pottawatomes of the Prairie and those of the Forest, and these are subdivided into district villages under their several chiefs. The General Government of the United States, in pursuance of the scheme of removing the whole Indian population westward of the Mississippi, had empowered certain gentlemen to frame a treaty with these tribes to settle the terms upon which the cession of their reservations in these states should be made. A preliminary council had been held with the chiefs some days before our arrival. The principal commissioner had opened it, as we learned, by stating that as their Great Father in Washington had heard that they wished to sell their land, he had sent commissioners to treat with them. The Indians promptly answered, by their organ, 'that their Great Father in Washington must have seen a bad bird which had told him a lie; for, that far from wishing to sell their land, they wished to keep it.' The commissioner, nothing daunted, replied, 'that nevertheless, as they had come together for a council they must take the matter into consideration.' He then explained to them promptly the wishes and intentions of their Great Father, and asked their opinion thereon. Thus pressed, they looked at the sky, saw a few wandering clouds, and straightway adjourned *sine die*, as the weather is not clear enough for so solemn a council. However, as the treaty had been opened, provision was supplied to them by regular rations; and the same night they had great rejoicings—danced the war dance, and kept the eyes and ears of all open by running, howling about the village. Such was the state of affairs on our arrival. Companies of old warriors might be seen sitting smoking under every bush; arguing, palavering, or pow-wow-ing, with great earnestness; but there seemed no possibility of bringing them to another council in a hurry.

"Meanwhile, the village and its occupants presented a most motley scene. The fort contained within its palisades by far the most enlightened residents in the little knot of officers attached to the slender garrison. The quarters here, consequently, were too confined to afford place of residence for the Government Commissioners for whom, and a crowd of dependents, a temporary set of plank huts were erected on the north side of the river. To the latter gentlemen, we, as the only idle lookers on, were indebted for much friendly attention; and in the frank and hospitable treatment we received from the inhabitants of Fort Dearborn, we had a foretaste of that which we subsequently met with everywhere under like circumstances during our autumnal wanderings over the frontier. The officers of the United States Army have, perhaps less opportunities of becoming refined than those of the Navy. They are often, from the moment of their receiving commissions after the termination of their cadetship at West Point, and at an age when good society is of the utmost consequence to the young and ardent, exiled for long years to the posts on the Northern or Western frontier, far removed from cultivated female society, and in daily contact with the refuse of the human race. And this is their misfortune, not their fault; but wherever we have met with them, and been thrown as strangers upon their good offices, we have found them the same good friends and good company. But I was going to give you an inventory of the contents of Chicago, when the recollection of the warm-hearted intercourse we had enjoyed with many fine fellows, whom probably we shall neither see nor hear of again, drew me aside. Next in rank to the officers and commissioners may be noticed certain store-keepers and merchants, residents here, looking either to the influx of new settlers establishing themselves in the neighborhood, or those passing yet farther to the westward, for custom and profit, not to forget the chance of extraordinary occasions like the present. Add to these a doctor or two, two or three lawyers, a land agent, and five or six hotel-keepers. These may be considered as stationary, and proprietors of the half hundred clapboard houses around you. Then for the birds of passage, exclusive of the Pottawatomes, of whom more anon, and emigrants and land speculators, as numerous as the sand, you will find horse-dealers, and horse stealers—rogues of every description—white, black, brown, and red; half-breeds, quarter-breeds, and men of no breed at all; dealers in pigs, poultry, and potatoes; men pursuing Indian claims, some for tracts of land, others like our friend 'Snipe,'* for pigs which the wolves had eaten; creditors of the tribes, or of particular Indians, who know that they have no chance of getting their money if they do not get it from the Government Agents; sharpers of every degree; pedlars, grog-sellers; Indian Agents and Indian traders of every description, and contractors to supply the Pottawatomes with food. The little village was in an uproar from morning to night, and from night to morning; for during the hours of darkness, when the housed portion of the population of Chicago strove to obtain repose in the crowded plank edifices of the village, the Indians howled,

* A sobriquet applied to a late fellow-passenger, "on his way to Chicago, to be present at the impending treaty, with a view to prefer certain claims to the Government commissioner for the loss of hogs, which, doubtless, the wolves had eaten; but which, no matter, the Indians might be made to pay for."

* These Indians, had, by treaty at Prairie du Chien, July 29, 1829, ceded all their lands in the northwestern part of Illinois.

sing, wept, yelled, and whooped in their various encampments. With all this, the whites seemed to me to be more pagan than the red man. You will have understood that the large body of Indians collected in the vicinity consisted not merely of chiefs and warriors, but in fact the greater part of the whole tribe were present; for where the warrior was invited to feast at the expense of the Government, the squaw took care to accompany him; and where the squaw went, the children followed, or papooses, the ponies, and the innumerable dogs followed, and here they all were living merrily at the cost of the Government.

"All was bustle and tumult, especially at the houses set apart for the distribution of the rations. Many were the scenes which here presented themselves, portraying the habits of both red men and the demi-civilized beings around them. The interior of the village was one chaos of mud, rubbish, and confusion. Frame and clapboard houses were springing up daily under the active axes and hammers of the speculators, and piles of lumber announced the preparation for yet other edifices of an equally light character. Races occurred frequently on a piece of level sward without the village, on which temporary booths afforded the motley multitude the means of 'stimulating,' and betting and gambling were the order of the day. Within the vile two-storied barrack, which, dignified as usual by the title of hotel, afforded us quarters, all was in a state of most appalling confusion, filth, and racket. The public table was such a scene of confusion that we avoided it from necessity. The French landlord was a sporting character, and everything was left to chance, who, in the shape of a fat housekeeper, fumed and toiled round the premises from morning to night.

"Within there was neither peace nor comfort, and we spent much of our time in the open air. A visit to the gentlemen at the fort, or prairie, filled up the intervals in our perturbed attempts at reading or writing indoors, while awaiting the progress of the treaty.

"I loved to stroll out, towards sunset, across the river, and gaze upon the level horizon, stretching to the northwest over the surface of the prairie, dotted with innumerable objects far and near. Not far from the river lay many groups of tents constructed of coarse canvas, blankets, and mats, and surmounted by poles supporting various painted Indian figures dressed in the most gaudy attire.

"Far and wide the grassy prairie teemed with figures; warriors mounted or on foot, squaws, and horses. Here a race between three or four Indian ponies, each carrying a double rider, whooping and yelling like fiends. There a solitary horseman with a long spear, turbaned like an Arab, scouring along at full speed; groups of hobbled horses; Indian dogs and children; or a grave conclave of gray chiefs seated on the grass in consultation. It was amusing to wind silently from group to group, here noting the raised knife, the sudden drunken brawl quashed by the good-natured and even playful interference of the neighbors; there a party breaking up their encampment, and falling, with their little train of loaded ponies and wolfish dogs, into the deep, black, narrow trail running to the north.

"It is a grievous thing that Government is not strong-handed enough to put a stop to the shameful and scandalous sale of whisky to these poor, miserable wretches. But here lie casks of it for sale under the very eye of the commissioners, met together for purposes which demand that sobriety should be maintained, were it only that no one should be able to lay at their door an accusation of unfair dealings, and of having taken the advantage of the helpless Indian in a bargain whereby the people of the United States were to be so greatly the gainers. And such was the state of things day by day. However anxious I and others might be to exculpate the United States Government from the charge of cold and selfish policy toward the remnant of the Indian tribes, and from that of resorting to unworthy and diabolical means in attaining possession of their lands—as long as it can be said with truth that drunkenness was not guarded against, and that the means were furnished at the very time of the treaty and under the very nose of the commissioners—how can it be expected but a stigma will attend every transaction of this kind?

"But how sped the treaty? you will ask. Day after day passed. It was in vain that the signal-gun from the fort gave notice of an assemblage of chiefs at the council fire. Reasons were always found for its delay. One day an influential chief was not in the way; another, the sky looked cloudy, and the Indian never performs any important business except the sky be clear. At length, on the 21st September, the Pottawatomies resolved to meet the commissioners. We were politely invited to be present.

"The council-fire was lighted under a spacious open shed on the green meadow on the opposite side of the river from that on which the fort stood. From the difficulty of getting all together it was late in the afternoon when they assembled. There might be twenty or thirty chiefs present, seated at the lower end of the enclosure, while the commissioners, interpreters, etc., were at the in-

upper. The palaver was opened by the principal commissioner. He requested to know why he and his colleagues were called to the council. An old warrior arose, and in short sentences, generally of five syllables, delivered with a monotonous intonation and rapid utterance, gave answer. His gesticulation was appropriate, but rather violent. Rice, the half-breed interpreter, explained the signification, from time to time, to the audience; and it was seen that the old chief, who had got his lesson, answered one question by proposing another, the sum and substance of his oration being that the assembled chiefs wished to know what was the object of their Great Father at Washington in calling his red children together at Chicago! This was amusing enough, after the full explanation given a week before at the opening session, and particularly when it was recollected that they had feasted sumptuously during the interval at the expense of their Great Father; it was not making very encouraging progress. A young chief arose, and spoke vehemently to the same purpose. Hereupon the commissioner made them a forcible Jacksonian discourse, wherein a good deal which was akin to threat was mingled with exhortations not to play with their Great Father, but to come to an early determination whether they would or would not sell and exchange their territory; and this done, the council was dissolved. One or two tipsy old chiefs raised an occasional disturbance, else matters were conducted with due gravity. The relative positions of commissioner and the whites before the council-fire, and that of the red children of the forest and prairie, were to me strikingly impressive. The glorious light of the setting sun, streaming in under the low roof of the council-house, fell full on the countenances of the former as they faced the west, while the pale light of the east hardly lightened up the dark and painted lineaments of the poor Indians, whose souls evidently clave to their birth-right in that quarter. Even though convinced of the necessity of their removal, my heart bled for them in their desolation and decline. Ignorant and degraded as they may have been in their original state, their degradation is now ten-fold after years of intercourse with the whites; and their speedy disappearance from the earth appears as certain as though it were already sealed and accomplished. Your own reflection will lead you to form the conclusion, and it will be a just one, that even if he had the will, the power would be wanting for the Indian to keep his territory; and that the business of arranging the terms of an Indian treaty, whatever it might have been two hundred years ago, while the Indian tribes had not, as now, thrown aside the rude but vigorous intellectual character which distinguished many among them, now lies chiefly between the various traders, agents, creditors and half-breeds of the tribes, on whom custom and necessity have made the degraded chiefs dependent, and the Government Agents. When the former have seen matters so far arranged that their self-interest, and various schemes and claims, are likely to be fulfilled and allowed to their hearts' content, the silent acquiescence of the Indian follows, of course; and till this is the case, the treaty can never be amicably effected. In fine, before we quitted Chicago on the 25th, three or four days later, the treaty with the Pottawatomies was concluded—the commissioners putting their hands, and the assembled chiefs their paws, to the same."

The commissioners on the part of the Government were: G. B. Porter, Thomas J. V. Owen, and William Weatherford; on the part of the Indians all the chiefs and the leading men of the United Nation that could be gathered—a most motley crowd, of whom only one out of seventy-seven signed his name to the treaty without "his X mark," and probably not over half a dozen understood the provisions of the treaty, except as explained to them imperfectly by interpreters, few of whom were themselves passable English scholars.

The treaty consummated at this time was signed on September 26, 1833, and ratified by the Senate, after some unimportant changes, May 22, 1834. Its provisions and terms were as follows:

Article 1 ceded to the United States all the lands of the United Nation of Chippewa, Ottawa, and Pottawatomie Indians "along the western shore of Lake Michigan, and between this lake and the land ceded to the United States by the Winnebago nation at the treaty of Fort Armstrong, made on the 15th of September, 1832: bounded on the north by the country lately ceded by the Menominees, and on the south by the country ceded at the treaty of Prairie du Chien, made on the 29th of July, 1829, supposed to contain five millions of acres." This cession completely extinguished

all the title to lands owned or claimed by the United Nation east of the Mississippi, and left the whole Northwest, with the exception of some minor and unimportant reservations, open to the settlement of whites who, henceforth, could look to the United States to protect them under its laws in any legal title they might acquire by pre-emption or purchase.

The considerations for thus yielding up their whole country were stated in Articles 2 and 3, and were :

(1) A tract of land of like extent as that ceded, five million acres, situated on the east bank of the Missouri River, between the mouth of Boyer's River on the north and the mouth of Nandoway River on the south ; the eastern and northern boundary being the western State line of Missouri and the western boundary of the reservation of the Sacs and Foxes, north to a point from which, if a straight line be drawn to the mouth of Boyer's River, the whole tract inclosed by the said boundaries should comprise five million acres.*

A deputation consisting of not more than fifty Indians, accompanied by five agents of the United States, were to visit the lands granted previous to the removal of the tribes, at the expense of the Government, and, on the ratification of the treaty by the United States, the tribes living within the boundaries of the State of Illinois were to remove to the new reservation immediately : those living further north, in the Territory of Wisconsin, to remain, if they desired, three years longer, unmolested and under the protection of the United States Government, and were to receive subsistence on their journey, and for one year after their arrival at their new homes.

(2) Further payments in money and goods were to be made as follows : \$100,000 to satisfy sundry individuals in behalf of whom reservations were asked, which the commissioners refused to grant ; and also to indemnify the Chippewa tribe, who are parties to this treaty for certain lands along the shore of Lake Michigan, to which they make claims, which have been ceded to the United States by the Menominee Indians. The manner in which the sum was paid is set forth in schedule A, further on : \$150,000, to satisfy claims made against the said United Nation, "which they have here admitted to be justly due, and directed to be paid." Who got this money appears in schedule B, hereafter : \$100,000 to be paid in goods and provisions, a part to be delivered on the signing of the treaty, and the residue during the ensuing year ; \$280,000, to be paid in annuities of \$14,000 per year for twenty years ; \$150,000 for the erection of mills, houses and shops for agricultural improvements, the purchase of agricultural implements, and the support of physicians, millers, farmers, blacksmiths and such other mechanics as the President of the United States may see fit to appoint ;

* These were the boundaries as defined in the treaty. An amendatory treaty, made October 1, and signed by the United States Commissioners and a minority of the chiefs and head men of the tribes numbering only seven, of whom Caldwell was one, changed the boundaries for a consideration of \$10,000, for the benefit of the nation, and the further sum of \$2,000 "to be paid to Gholson Kercheval for services rendered the said United Nation of Indians during the late war between the United States Government and the Sacs and Foxes," and \$1,000 to George E. Walker, "for services rendered the said United Nations in bringing Indian prisoners from west of the Mississippi River to Ottawa, LaSalle Co., Ill., for whose appearance at the Circuit Court of said county said nation was bound."

The boundaries were, for the above consideration, changed as follows : "Beginning at the mouth of Boyer's River ; thence down the Missouri River, to a point thereon from which a due east line would strike the northwest corner of the State of Missouri ; thence along said east line to the northwest corner of said State ; thence along the northern boundary of said State of Missouri till it strikes the line of the lands of Sacs and Fox Indians ; thence northwardly along the said line to a point from which a west line would strike the sources of the Little Sioux River ; thence along said west line till it strikes the sources of said river ; thence down said river to its mouth ; thence down the Missouri River to the place of beginning : Provided, the said boundary shall contain five million acres, but should it contain more, then said boundaries are to be reduced so as to contain the said five million acres."

\$70,000 for educational purposes, to be applied at the discretion of the President of the United States.

(3) Individual stipends were granted as follows : Billy Caldwell, \$400 per year for life ; Alexander Robinson, \$300 per year for life ; in addition to annuities before granted them ; \$200 per year, each, for life, to Joseph Laframboise and Shawbonee ; \$2,000 to Wah-pon-eh-see and his band ; and \$1,500 to Awnkote and his band for nineteen sections of land, granted them at the treaty of Prairie de Chien, which were to be given up.

Article 4 provided for an equitable distribution of the annuities to the various bands.

Article 5 confirmed as grants in fee simple to all individuals to whom reservations had been ceded by previous treaties, all such lands, to their heirs and assigns forever.

The close of the important document and the signatures annexed read as follows :

"In testimony whereof, the said George B. Porter, Thomas J. V. Owen, and William Weatherford, and the undersigned chiefs and head men of the said nation of Indians, have hereunto set their hands at Chicago the said day and year (September 26, 1833).

* The names of neither Alexander Robinson nor Billy Caldwell, both leading chiefs of the Pottawatomies, appear among the signers of the treaty. They were both able to write their names. Robinson's Indian name was "Che-chee-bing-way or, as one historian spells it, "Che-che-pin-gua." The "Che-che-bin-quay" signature attached to the treaty was probably Robinson's. "Shaw-waw-nas-see" was probably the signature of Billy Caldwell (Sauganash). To each of these signatures is attached the mark (x) of illiteracy. They could both write, but their signatures do not appear except in the above form.

One hundred thousand dollars \$100,000

Originally \$150,000 was provided for the payment of claims acknowledged as justly due, and by a supplementary treaty \$25,000 additional. Schedule B, following, shows that \$175,000 was apportioned to claimants sufficiently numerous to constitute nearly a complete census of the white male population of the Northwest. It is not believed that these claims were audited on the part of the Indians, although they acknowledged them to be justly due by the formality of accepting the treaty of which the schedule formed a part. It was an apportionment of the ready money of the tribes among all the whites who could bring a claim against an Indian. The honest debtor and the unjust and dishonest claim-

* Cut down by the U. S. Senate to \$5,000 each.

ant absorbed the fund. How large a portion of it represented robbery, theft, and perjury will never be known until the great book is opened at the last day. The list of names and amounts apportioned is as follows :

\$175,000

The above claims have been admitted and directed to be paid only in case they be accepted in full of all claims and demands up to the present date.

G. B. PORTER.
T. J. V. OWEN.
WILLIAM WEATHERFORD.

Of the \$100,000 to be paid in goods and provisions, the following record and receipt for delivery appears:

Agreeably to the stipulations contained in the third article of the treaty, there have been purchased and delivered at the request of the Indians, goods, provisions and horses, to the amount of sixty-five thousand dollars, (leaving the balance to be supplied in the year one thousand eight hundred and thirty-four, thirty-five thousand dollars).

As evidence of the purchase and delivery as aforesaid, under the direction of the said commissioners, and that the whole of the same have been received by the said Indians, the said George B. Porter, Thomas J. V. Owen, and William Weatherford, and the undersigned chiefs and head men, on behalf of the said United Nation of Indians, have hereunto set their hands, the twenty-seventh day of September, in the year of our Lord one thousand eight hundred and thirty-three.

G. B. Porter,	Tshee-Tshee-chin-be-quay,
Th. J. V. Owen,	Joseph, his x mark, [his x mark,
William Weatherford,	Shab-e-nai, his x mark,
Jo-pen-e-bee, his x mark,	Ah-be-te-ke-zhic, his x mark,
We-saw, his x mark,	E-to-won-cote, his x mark,
Ne-kaw-nosh-kee, his x mark,	Shab-y-a-tuk, his x mark,
Wai-saw-o-ke-ne-aw, his x mark,	Me-am-ese, his x mark,

Ne-see-waw-bee-tuck, his x mark, Wah-be-me-mee, his x mark,
 Kai-kaw-tai-mon, his x mark, Shim-e-nah, his x mark,
 Saw-ko-nosh, We-in-co, his x mark.

In presence of

Wm. Lee D. Ewing, sect'y to	Andw. Porter,
the commission.	Joseph Bertrand, jr.
R. A. Forsyth, U. S. A.,	Jno. H. Kinzie.
Madn. F. Abbott,	James Connor, interpreter,
Saml. Humes Porter,	J. E. Schwarz, Adjt.-Gen. M. M.

It is not now essential to the object of the historian or to the interest of the reader to know how the sixty-five thousand dollars of goods was paid, or in what the goods consisted, nor whether the chiefs who signed the receipt knew anything of the value thereof, nor whether they were drunk or sober when they signed.

The treaty was consummated—the Indian title to lands in Illinois was extinguished. After two more annual payments to the Pottawatomies who lingered in Wisconsin, the tribes disappeared from the region, and with them went many of the earlier settlers who had intermarried and thus become identified with them. The Bourassas, Laframboise, Madore B Beaubien, the Bourbonnais, the Mirandeaus (all but Victoire—Mrs. Porthier), some of the Clark Indian children, a part of the Juneau family—in fact nearly all the half-breed families moved west with the Indians with whom they had become allied, and their descendants are to-day leaders in the tribe in the Indian Territory and Kansas, or, having severed their tribal relations, have become leading citizens of Kansas.*

INCORPORATION AS A TOWN.—Anticipating the results of this, which was quite sure to extinguish the Indian title in the vicinity of Chicago, the citizens felt that the time had come to take upon themselves corporate powers and to assume the functions of self-government as the statutes provided. Heretofore the residents of the Chicago settlement had been, legally, only citizens of Cook County, having no peculiar corporate powers outside those vested in the County Board, or Court of Commissioners.

In accordance with the provisions of the statutes, a preliminary meeting of the citizens of Chicago was held, August 5, 1833, to decide by vote whether or not they would assume the functions of an incorporated town. There were cast at this meeting twelve votes "for incorporation," and one "against incorporation."† The single vote in opposition was cast by Russel E. Heacock, he living at that time beyond the extreme southern border of the proposed town, although having his business and professional interests at the settlement. He moved into the town the following year.

The first election of Town Trustees was held at the house of Mark Beaubien, August 10. It is believed that every legal voter of Chicago cast his vote on that occasion. They numbered twenty-eight. The following were elected Trustees: T. J. V. Owen, 26 votes; George W. Dole, 26 votes; Madore B. Beaubien, 23 votes; John Miller, 20 votes; E. S. Kimberly, 20 votes.

The first meeting of the new board was held August 12, at which little was done except to organize. Thomas J. V. Owen was chosen president, and Isaac Harmon was appointed clerk. It was agreed that the meetings should hereafter be held at the house of Mark Beaubien.

At the session of September 3, George W. Dole was appointed Town Treasurer; and another free ferry

established across the Chicago River at Dearborn Street. Charles H. Chapman was appointed ferryman.

The limits of the new town were, on November 6, extended so as to embrace not far from seven-eighths of one square mile. The boundaries were: Jackson Street, on the south; Jefferson and Cook streets, on the west; Ohio Street, on the north; and north of the river, by the lake, and south of the river, by State Street, on the east.

November 7, Benjamin Jones was appointed Street Commissioner, and Isaac Harmon, Collector, his fees to be "ten per cent on all money put into the treasury."

December 4, the corps of town officials was completed by the appointment of George Snow as Assessor and Surveyor, and John Dean Caton as Corporate Attorney.

CHICAGO FROM 1833 TO 1837.—The close of the year 1833 found Chicago a legally organized town. Its population at the time has been variously estimated at from one hundred and fifty to one thousand. No record of any enumeration of the inhabitants is extant, and all statements as to the actual population at that time are estimates, based on the whims, impressions, or rumors of the time. It required a population of 150 to form a corporate town organization, and it is not probable that Chicago had more than the required number. Based on the number of voters (twenty-eight) at the first election, and allowing a population of five to each voter, the resident population was 140 in August, 1833, at the time the first election was held. The influx drawn in during the Indian treaty, in September, added largely to the permanent population of the town, as many who came here at that time remained. The population on January 1, 1834, was not far from 250.

The new town of Chicago as organized in the fall of 1833, although as small in population as the law would allow, had all the required elements of civilization within itself.

The village was built along the south side of Water Street and westerly toward the settlement at the forks. There were scattered shanties over the prairie south, and a few rough, unpainted buildings had been improvised on the North Side between the old Kinzie house and what is now Clark Street. All together it would, in the light of 1883, have represented a most woe-begone appearance, even as a frontier town of the lowest class. It did not show a single steeple nor a chimney four feet above any roof. A flagstaff at the fort, some fifty feet high, flaunted, in pleasant weather and on holidays—a weather-beaten flag, as an emblem of civilization, patriotic pride, national domain, or anything else that might stir hearts of the denizens of the town. The buildings of the fort were low posted, and none of them exceeding two low stories in height. Approaching the village by land from the south, one would see on emerging from the oak woods, near Twenty-third Street, a good stretch of level grass, the lake on the right, woods along the borders of the main river, and, lying on the background of the green woods, only a thin cloud of smoke from the shanty chimneys, a line of almost indefinable structures, and the flag over the fort, if perchance it was flying. A brown path, where the grass had been trodden out, led to the fort, and another, better trodden and wider, led across the prairie towards the forks where the Sauganash Hotel then flourished. A letter from Charles Butler, a brother-in-law of William B. Ogden, written from New York December 17, 1881, is here given as relevant to a description of the town at this time. The letter somewhat anticipates the history as

* For further concerning the Pottawatomies, see the preceding Indian history in this volume.

† For voters' lists, and other details concerning the early town elections, see corporate history.

regards its subsequent growth and development, and brings Hon. William B. Ogden upon the stage before his time, but is given entire, nevertheless. It reads as follows :

" In the winter of 1832-33 I was spending some time with my friend Arthur Bronson in New York as his guest. Among other topics we discussed that of a visit to the Western country the following summer for information and pleasure. The recent occurrence of the Black Hawk War (which took place in 1832, the previous summer) had directed attention to that region of country west of Lake Michigan (where it had taken place) in the northern part of Illinois and southern portion of the then Territory of Wisconsin. We decided on the plan of a journey to Chicago, the ensuing summer. My residence was then at Geneva, in Ontario County, in the western part of the State of New York, and it was arranged that Mr. Bronson would leave New York in June following and I would join him at Geneva. Having settled upon this plan, we directed our attention to obtaining some information in regard to that region of country and the methods of traveling. General Scott, who had charge of the campaign against the Black Hawk Indians,* and who had but recently returned from the West, was a friend of Mr. Bronson's and he applied to him for information on the subject. General Scott had been very much impressed by his visit, with the extent, beauty and attractions of that portion of the United States, and he expressed the opinion to Mr. Bronson that Chicago in the future settlement of the country, would be likely to become an important town. In further prosecution of his inquiries he was advised to apply to Mr. Daniel Jackson, then a leading merchant of this city (New York), who was engaged in the business of furnishing Indian supplies, and Mr. Bronson had recourse to him. On going to the store and stating the object of his visit to Mr. Jackson, the latter responded to his application with interest, and said that he would then introduce him to a man from Chicago, who at that moment happened to be in his store making purchases of Indian goods. This was Robert A. Kinzie, and Mr. Bronson was introduced to him. The result of this interview with Mr. Kinzie (from whom Mr. Bronson obtained all the information needed for the journey) was a voluntary offer on the part of Mr. Kinzie to Mr. Bronson, that, if the latter and his friend had in view the purchase of any property in the West, or if they should desire to purchase any when there, he had an interest in some land in Chicago which he would sell to us, and he gave Mr. Bronson a description of the property, stating the quantity, terms, etc., with the privilege of considering it and of deciding whether he would take it or not, after we should have seen it. The land thus offered was one-fourth interest in the north fractional half of Section ten (10), in common and undivided, on which Kinzie's addition to the town of Chicago was afterwards laid out—Mr. Robert A. Kinzie as one of the heirs at law of his father being entitled to one-fourth part thereof.

" In the summer of 1833, in accordance with the arrangement previously made in the winter, as above stated, Mr. Bronson and I proceeded on our Western journey. We stopped at Niagara Falls, to which place we were accompanied by our respective families, from whom we parted there, and went on to Buffalo, where we took a steamer for Detroit. We duly arrived at Detroit, where we remained some time. Arrangements were then made for the journey to Chicago. The country between Detroit and Chicago was then a comparative wilderness, and the route to Chicago was by what was known as the Indian Trail, which traversed the southern portion of the Territory of Michigan in a southwesterly course from Detroit through Ypsilanti to White Pigeon Prairie, where it approached the northern boundary line of the State of Indiana, and passing through South Bend and LaPorte Prairie (the Door prairie) to Michigan City. Preparatory to the journey, we provided a wagon and pair of horses and two saddle horses, and arranged with a young man, named Gholson Kercheval, who was familiar with the route, having been connected with the Indian agency at Chicago, to accompany us all the way from Detroit to Chicago; we laid in supplies, provisions and groceries, such as we thought might be needed on the way. The journey occupied several days. On arriving at White Pigeon Prairie, where there was a settlement, we were so attracted by the beauty of the country that we stopped several days there and made short excursions in the vicinity. At LaPorte they were just then establishing the site of the county town, now the city of LaPorte, and a Government agency for the sale of lands. It was about this time that this portion of the State of Indiana was brought into market by the Government for sale.

" We arrived at Michigan City late in the evening. There was but a single house there at which we could stop. It was kept by General Orr. We there met with Major Elston, of Crawfords-

* It is well known that General Scott did not reach the ground until hostilities were over.

ville, who had become the purchaser of the section of land on which Michigan City was laid out, and he had just then completed a survey and map of the town, which he exhibited to us, and offered to sell us lots. It was a great novelty to us, this map of Michigan City, and in the morning, when daylight came, and we could look out upon the land around us, the novelty was still more striking, for a more desolate tract of sand and barren land could hardly be conceived of. There was scarcely a tree or shrub to distinguish it, much less any houses; it was literally in a state of nature. Major Elston had been attracted to it by the fact that it was the only place on Lake Michigan, within the territory of the State of Indiana, where it might be possible at some future time to establish a commercial port in connection with the navigation of the lake; and this distant vision of possibilities attracted his attention at this early day, and the first step towards its realization had now been taken by him in the survey and map just then completed of Michigan City.

" From Michigan City to Chicago, a distance of about sixty miles, the journey was performed by me on horseback. There was but one stopping place on the way, and that was the house of a Frenchman named Bayeux, who had married an Indian woman. At Calumet River, which was crossed on a float, there was an encampment of Pottawatomie Indians. There were some trees on the westerly bank of the river, and in some of these the Indians had hammocks. In making the journey from Michigan City to Chicago I followed the shore of the lake nearly the whole distance.

" I approached Chicago in the afternoon of a beautiful day, the 2d of August, (1833); the sun setting in a cloudless sky. On my left lay the prairie, bounded only by the distant horizon like a vast expanse of ocean; on my right, in the summer stillness, lay Lake Michigan. I had never seen anything more beautiful or captivating in nature. There was an entire absence of animal life, nothing visible in the way of human habitation or to indicate the presence of man, and yet it was a scene full of life; for there, spread out before me in every direction, as far as the eye could reach, were the germs of life in earth, air and water. I approached Chicago in these closing hours of day, 'So calm, so clear, so bright,'—and this was the realization of the objective point of my journey.

" But what was the condition of this objective point, this Chicago of which I was in pursuit, to which I had come? A small settlement, a few hundred people all told, who had come together mostly within the last year or two. The houses, with one or two exceptions, were of the cheapest and most primitive character for human habitation, suggestive of the haste with which they had been put up. A string of these buildings had been erected without much regard to lines on the south side of the Chicago River (South Water Street). On the west side of the South Branch, near the junction, a tavern had been improvised for the entertainment of travelers, erected by James Kinzie, but kept by a Mr. Crook (?); and there we found lodgings. On the north side of the Chicago River at that time, there was but a single building, known as the Block House. I crossed the river in a dug-out canoe about opposite to it. My recollection is that the house which had once been occupied by Mr. Kinzie, the Indian Agent, on the North Side, near the lake shore, had been previously destroyed by fire. The Government had just entered upon the harbor improvement of the Chicago River; the work was under the charge of Major Bender. Fort Dearborn was a military establishment, and just at this time there was a transfer of a company of United States troops from Green Bay or Sault Ste. Marie to Fort Dearborn, under the command, I think, of Major Wilcox, accompanied by the Rev. Jeremiah Porter, as chaplain, to whom I had a letter of introduction. On the morning after my arrival, in walking out, I met a gentleman from whom I inquired where he could be found, and on exhibiting my letter, he said he was the person and that he was then on his way to attend the funeral of a child, and he asked me if I would accompany him as it was near by, which I did. On going to the house, which was one of the kind I have described, new and cheap, we found the father and mother; the dead child lay in a rude coffin. There was no one else present except the parents, Mr. John Wright, Dr. Kimball, Mr. Porter and myself, and it became a question how the remains of the child should be conveyed to the cemetery, which was on the west side of the North Branch of the river. I recollect that while we were attending this simple service, we were interrupted by the noise of a hammer of a workman outside, who was engaged in putting up a shanty for some new-comers, and Mr. Porter went out and secured the assistance of this workman. We acted as bearers in conveying the remains of this poor child from the house to the grave and assisted in burying it.

" Emigrants were coming in almost every day in wagons of various forms, and, in many instances, families were living in their covered wagons while arrangements were made for putting up shelter for them. It was no uncommon thing for a house, such as

would answer the purpose for the time being, to be put up in a few days. Mr. Bronson himself made a contract for a house, to be put up and finished in a week. There were, perhaps, from two to three hundred people in Chicago at that time, mostly strangers to each other. In the tavern at which we staid, the partitions were chiefly upright studs, with sheets attached to them. The house was crowded with people—emigrants and travelers. Many of them could only find a sleeping-place on the floor, which was covered with weary men at night.

"The east window of my bed-room looked out upon Lake Michigan in the distance, Fort Dearborn lying near the margin of the lake; and, at this time, there was nothing, or very little, to obstruct the view between the inn and the lake, the fort and the buildings connected with it being the principal objects; and those buildings were very low structures; and I could, from my window, follow the course of the river, the water of which was as pure as that of the lake, from the point of junction to its entrance into the lake.

"A treaty was to be held in September, at Chicago, with certain tribes of Indians of the Northwest, by Governor Porter, of Michigan, as commissioner on behalf of the Government, for the extinguishment of the Indian title to that region of country now forming that part of Illinois north of Chicago, and the adjacent territory now included in the State of Wisconsin. Preparatory to this, the Indians were gathered in large numbers at Chicago, and it was a curious spectacle to see these natives in groups in their wigwams scattered about on the prairie, in and around the town, chiefly near the junction of the branches of the river, some on the west side and some on the east side of the North Branch. This treaty was held in September, and by it the Indian title to all that region of country was extinguished, and the lands were subject to survey, and were afterwards (in May, 1835,) brought into market. The line of Indian territory, to which their title had been previously extinguished, extended about twelve miles north of Chicago. But these lands, including Chicago, had not yet been brought into market by the Government, and were not, therefore, subject to purchase by emigrants. They could only acquire a pre-emptive right by actual settlement, and it was in this way that the title to what is now called Kinzie's addition, was acquired. At this time, the patent for it had not been obtained, and the land lay in a wild state.

"It was on this visit to Chicago with Mr. Bronson, that we spent some time, and made the acquaintance of the principal men of the place. Among these, as I now remember, were Mr. Richard J. Hamilton, the Kinzies (John H. and his brother Robert A.) and James Kinzie (the latter a half-brother to the former), Mr. John Wright, Dr. Temple, Gurdon S. Hubbard, Colonel Owen, and George W. Dole.

"The present condition and prospects of Chicago, and its future, and that of the country around it, was, of course, the subject of constant and exciting discussion. At this time, that vast country lying between Lake Michigan and the Mississippi River (which then seemed to be the natural boundary of the West,) and the country lying northwest of it, which now includes Wisconsin, Minnesota, and Iowa, lay in one great unoccupied expanse of beautiful land, covered with the most luxuriant vegetation—a vast flower garden—beautiful to look at in its virgin state, and ready for the plow of the farmer. One could not fail to be greatly impressed with this scene, so new and extraordinary, and to see there the germ of that future, when these vast plains would be occupied and cultivated, yielding their abundant products of human food, and sustaining millions of population. Lake Michigan lay there, four hundred and twenty miles in length north and south, and it was clear to my mind that the productions of that vast country lying west and northwest of it on their way to the Eastern market—the great Atlantic seaboard—would necessarily be tributary to Chicago, in the site of which, even at this early day, the experienced observer saw the germ of a city, destined from its peculiar position near the head of the lake and its remarkable harbor formed by the river, to become the largest inland commercial emporium in the United States.

"Michigan was then a territory with a population of about twenty thousand people, occupying the eastern portion of the State. Its western half was a comparatively unoccupied wilderness.

"Northern Indiana was in the same condition, and northern Illinois, including the country between Chicago and the Mississippi River, contained only a sparse population, confined to small settlements on the western water-courses.

"With this feeling of inspiration with regard to the future of Chicago, which pervaded in common the leading spirits of the place, we entered into plans to promote its future development, and among these the most important which was at that time discussed was a project for the construction of a canal or railway to connect Lake Michigan at Chicago with the Illinois River at

Ottawa or Peru, a distance of about eighty or one hundred miles. A grant had been made by Congress to the Territory or State of Illinois, at an early day, of each alternate section of land in aid of the construction of a canal between Lake Michigan at Chicago and the Illinois River, but no steps had been taken to avail of this grant.

"New Orleans at this time was regarded as a market for the valley of the Mississippi, as it could be reached by the Mississippi River and its tributaries, so the construction of such a canal between Lake Michigan and the Illinois River would secure to Chicago the benefit of this western outlet to market by a continuous water communication, and this was regarded as an object of great importance for the future development of the country. The leading men of Chicago were anxious that we should interest ourselves in the prosecution of this work; and so enthusiastic had we become in our views of the future of this region of country and of Chicago as its commercial center, that we entered into their views, and it was agreed that an application should be made to the Legislature to incorporate a company for the construction of a canal or a railroad between Chicago and the Illinois River, to which company the State should convey its land grant, coupled with conditions for the construction of either a canal or a railway within a certain time, and upon such conditions as might be imposed by the Legislature; and that certain persons who were then present at Chicago, of whom Lucius Lyon (afterwards the first Senator in Congress from the State of Michigan), Mr. Hamilton, Mr. Kinzie, and Dr. Temple, I think, as a committee, were to take charge of this memorial and submit it at the next session of the Legislature of the State of Illinois. A memorial to the Legislature and a letter of instructions to the committee were carefully prepared by Mr. Bronson and myself, embodying our views and suggesting the terms and conditions upon which the company should be incorporated.

"The committee were to proceed to Jacksonville with the memorial at the next session of the Legislature. Whether this proposition was ever formally submitted to that body or not I am not able to state, but it is certain that the discussion caused by it had the effect to stimulate the Legislature at the session of 1834-35 to avail of the liberal and yet dormant grant made by Congress for the purpose, and a bill was passed at that session authorizing a loan for the construction of the canal as a State work; and the work was soon after commenced and, though retarded by embarrassments which overtook the State and for a time prostrated its credit, it was finally completed and remains to this day a monument not only of the enterprise of the State, but of its integrity in the fulfillment of its pecuniary obligations to its creditors.

"It may not be amiss to say in this connection that, when the State of Illinois, in common with several of the Western States, failed to meet the obligations it had incurred in its efforts to carry out prematurely, having respect to its population and ability, a vast system of internal improvement—that the question, What can be done to arrest the ruin and retrieve the credit of the State? became one of vital importance not only to its citizens but to all who had any interest in the State. Of course Mr. Bronson and myself were deeply interested, and gave to it a good deal of time and thought—the result of which was the suggestion that the only feasible plan would be for the State to ask of its bondholders, who were chiefly in Europe, to make a further advance of money sufficient for the completion of the canal, for the payment of which the canal, its lands and revenues should be pledged, backed by the faith and credit of the State; and upon this basis the arrangement was finally made by the State which insured the completion of the canal.

"I am happy to avail myself of this occasion to record this brief tribute to the memory of my friend, Arthur Bronson, to remind the citizens of Chicago of one who was a friend of their State and city at that most eventful period in their history. No one but he who then lived, and fully understood the situation, can rightly appreciate the value of such aid and influence as Mr. Bronson rendered, affecting the honor and prosperity of a State.

"While at Chicago our attention was directed to the property which Robert A. Kinzie had offered us, viz.: his quarter interest as one of the heirs-at-law of his father, in the north fractional half of Section 10. This purchase was declined after a careful reconnaissance of the land by me in person, accompanied by a surveyor, mainly because the remaining three-quarters, being owned by other persons, their co-operation in the disposition of the property would be essential to a satisfactory management. It was ascertained that Major-General Hunter, then and now in the United States Army, had become the owner of one-half interest in the same property and that he also owned eighty acres in the adjoining Section No. 9, that is to say, the east half of the northeast quarter of Section 9, now known as Wolcott's addition; and as the result of our consideration on the subject we concluded to open a negotiation with him for the purchase of his entire interest in Chicago. This negotiation

was begun by correspondence with him. His engagement in the service of the country at remote military stations rendered communication with him difficult and slow, and the negotiation with him, though commenced in the fall of 1833, was not consummated until late in the summer of 1834, when a proposition was received from him offering the property, viz.: the half of Kinzie's addition and the whole of Wolcott's addition (and Block No. 1 in the town of Chicago, lying on the north side of the river) for the price of \$20,000, at which sum it was purchased by my friend Mr. Arthur Bronson and his associates in the fall of 1834, and the title to it was taken in the name of his brother, Mr. Frederic Bronson. For private reasons I took no interest in the purchase, although the negotiations up to the final offer of Major Hunter had been conducted in accordance with the original suggestion, for our joint account and interest. In the month of May following I purchased of Mr. Bronson the same property for the consideration of \$100,000. While the title was in Mr. Bronson, arrangements had been made for an auction sale of the property in the month of June, following simultaneously with the Government sale of lands, which had been advertised to take place at Chicago in May, 1835—the first of the kind in that portion of the United States, the surveys for which had been completed and the Indian title to which had been extinguished. It was expected that this would attract a very large concourse of people to Chicago, as it did, for it brought into notice and offered for sale lands in the most attractive and fertile portion of the United States. The sale of the lots in the property, which I had acquired by purchase from Mr. Bronson, was to follow after the sale of public lands; all the preliminary steps to effect it had been taken, and Frederic Bronson was then on his way to Chicago to superintend the sale. Of course all these proceedings were now subject to my control, and the disposition to be made by me in regard to it was under consideration. In making the purchase I had contemplated this condition, and had in view my brother-in-law, William B. Ogden, as the best person to take charge of the whole business. He was then a member of the Legislature of this State, from the county of Delaware, during the memorable session of 1835. I wrote to him requesting that he would terminate his labor there at the earliest possible moment, and go to Chicago to take charge of this property. This he consented to do, and in May, 1835, he went to Chicago and there met Frederic Bronson, who turned the property over to him as my agent. This was Mr. Ogden's introduction to Chicago, and his first visit to the country west of Niagara. He had been born at Walton on the Delaware River, in Delaware County, and had lived there up to this period of his life. His father, who had been a successful business man engaged in manufacturing industry and in the lumber trade, had been stricken down by paralysis and disabled from active business, when William, his eldest son, was about seventeen years of age; and in consequence, the responsibilities of the family and the conduct of business had devolved mainly on him.

"It was in May, 1835, that Mr. Ogden went to Chicago for the purpose above stated. The spring had been one of unusual wetness, and on his arrival at Chicago to take charge of the property committed to his care, his first impressions were not at all favorable. The property lay there on the north side of the river an unbroken field, covered with a course growth of oak and underbrush, wet and marshy, and muddy from the recent heavy rains. Nothing could be more unattractive, not to say repulsive in its surface appearance. It had neither form nor comeliness, and he could not at first sight in looking at the property, in its then primitive condition, see it as possessing any value or offering any advantages to justify the extraordinary price for which it had been bought. He could not but feel that I had been guilty of an act of great folly in making the purchase, and it was a cause of sad disappointment and of great depression. To him it was a new experience; it was novel and different from anything that he had ever been engaged in. But Mr. Ogden had gone there for a purpose and to execute an important trust. A great deal of work had to be done to prepare this wilderness field for the coming auction. It had to be laid out and opened up by streets and avenues into blocks and lots, the boundaries of which must be carefully defined, maps and plans must be made, surveys perfected and land marks established. Mr. Ogden addressed himself to this work with energy and brought to it his extraordinary ability in the handling of all material interests. The work that he accomplished on this property in a short time, under circumstances discouraging and depressing, was wonderfully effective. He conceived what would be required in order to attract the attention of purchasers, so that by the time the auction sale approached he could exhibit it in business form. It will be remembered that the tract covered 131 acres, exclusive of the half belonging to the Kinzies, which lay in mass with it, say fifty-one acres, which, added to my purchase represented by Mr. Ogden, made a tract of 182 acres. The Government sale of lands had brought together a large collection of people from all parts of the country,

particularly from the East and Southeast, and these were there when Mr. Ogden offered the property on the North Side. The result of the auction was a surprise to him, for the sales amounted to more than one hundred thousand dollars and included about one-third of the property. This result, although it was astonishing to him, seemed yet to fail of making the impression on his mind of the future of the town which was to become the scene of his after life, and in the development and growth of which he himself was to become an active and most important factor.

"As he expressed himself to me in giving an account of the transaction, he could not see where the value lay nor what it was that justified the payment of such prices. He thought the people were crazy and visionary. Having completed the sales, he left Chicago in the summer and did not return there until the summer following (1836). But he was not long, after this experience, in grasping the idea of the future of that portion of the United States, and of the natural advantages which Chicago offered as the site of a commercial town, which in the future growth of the country would become so important. As the result of this agency and the care of this large property interest, regarding it as an occupation, he gave his mind to the consideration of the whole subject, and it determined him in the end to make his home in the West and identify himself with the fortunes of Chicago. It was a field suited to his taste and to his habits, and for which his previous life and experience in his native country had trained him, although that life and experience had up to this time been narrow as was the boundary the Delaware River on which he had been reared. Now, his mind and his energies were directed to the development of the vast and boundless prairies of the West. He had been reared in a country of dense forests, and surrounded on every side by mountain scenery, and now he was in a field where there were no forests and no mountains.

"It was not long before Mr. Ogden became imbued with an enthusiastic appreciation of the capabilities and attractions of this new country. His descriptions of it were poetic and inimitable.

"And from this time onward up to the close of his life he gave to Chicago the full benefit of his rare talents and ability; and he has left in the city of his adoption the distinctive marks of his life work, as well as through the West and Northwest, where the great railways which he projected and promoted to completion will remain ever as monuments of his genius and his enterprise. No man exercised a more magical influence in stimulating all around him to acts of usefulness and improvement in the interest of intellectual, social and material progress, and the development of the country; and few men were capable of accomplishing so much useful work in so short a time. He was comprehensive and broad in his views as the country in which he lived. The later years of his life were devoted largely to the extension of lines of railways to the Pacific coast, and especially the Northern Pacific, which is now approaching completion. Mr. Ogden had always regarded this route as one of the most important, and the country which it traversed—and which by its completion would be opened to settlement—as one of the most attractive and richest in its soil productions of any of the projected lines connecting the Atlantic with the Pacific coast.

"During all this period, from 1835 to 1865, my house was Mr. Ogden's home when in New York. As memory sweeps back over these most active years of his life—associated as they are indissolubly with Chicago and the West—and reproduces the picture mellowed by time, of what he was as a man, and of what he was doing and what he did do; the charm of his influence is still felt, fragrant with sympathy for his fellow-men in all conditions of life—one on whose tombstone might be appropriately inscribed, 'Write me as one who loves his fellow-men.'

"And the citizens of Chicago do but honor themselves by placing in their Historical hall the portrait of him whose name should ever be cherished as one of their foremost and most notable citizens."

John Bates, a settler of 1832, in an interview October 15, 1883, said:

"In 1833 the settlement of the new town, so far as buildings showed, was mostly on what is now Water Street. There was nothing on Lake Street, except perhaps the Catholic church begun on the northwest corner of Lake and State. Up and down Water Street, between what is now State and Wells streets, now Fifth Avenue, all the business houses and stores were built. Also nearly all the cabins for dwellings. You could, from every store and dwelling, look north across the river, as there were no buildings on what is now the north side of that street. At that time a slough emptied into the river, at what is now the foot of State Street, and was a sort of bayou of dead water through which scows could be run up as far as Randolph Street, near the corner of Dearborn, and there was a dry creek up as far as where the Sherman House now stands. There was a foot-bridge of four logs run lengthwise across

the creek near the mouth of the creek. At that time there was no bridge across the main river, and never had been. There was a sort of bridge built the year before by Anson Taylor across the South Branch near Randolph Street—a log-bridge, quite near the water, over which teams could pass. Hall & Miller had, in 1833, a large tannery on Wolf Point. There was no foot-bridge across North Branch, that I remember, at that early day. At the Wolf Point Hotel there was a sign-post up; perhaps there was at one time a sign of a wolf on it, but if so, it was a temporary charcoal or chalk sign put up by the boys. I don't remember it."

The population numbered not far from two hundred and fifty at the close of the year. It comprised six lawyers—Russel E. Heacock, who had come in 1827; Richard J. Hamilton, 1831; and Giles Spring, John Dean Caton, Edward W. Casey and Alexander N. Fullerton, who had put out their signs in 1833. There were also eight physicians: Elijah D. Harmon came May, 1830; Valentine A. Boyer, May 12, 1832; Edmund S. Kimberly, 1832; Phillip Maxwell, February, 1833; John T. Temple, spring of 1833; William Bradshaw Egan, fall of 1833; Henry B. Clark, 1833; and George F. Turner, Assistant-Surgeon U. S. A., at the garrison.

There were at that time four religious organizations holding stated services at places, and with pastors as follows:

St. Mary's Catholic Church, near the southwest corner of Lake and State streets, Rev. J. M. L. St. Cyr.

The Presbyterian, in the Temple Building, at the southeast corner of Franklin and South Water streets; Rev. Jeremiah Porter, pastor.

Baptist, in the same building; Rev. Allen B. Freeman, pastor.

Methodist, in the same building; Rev. Jesse Walker, pastor.

The Temple Building, where most of the Protestant religious services of the town were held, was built through the agency and efforts of Dr. John T. Temple, who had arrived early in July, 1833, with his family, consisting of a wife and four children. He was a pious and earnest Baptist Christian, and came to Chicago from Washington, D. C., armed with a contract to carry the mails from Chicago to Fort Howard, Green Bay. His contract gave him a surety of a living, so that his surplus energy could well be used in the services of the Lord, as he understood it. Through his efforts, he, heading the subscription paper with \$100, found funds to build a two-story building at the corner of Franklin and South Water streets, which was the earliest structure dedicated especially to religion and education erected in Chicago. The lower story was a hall for religious services, the upper floor was a school-room, where Granville Temple Sproat kept one of the first public schools. Miss Chappel (Mrs. Jeremiah Porter), Miss Sarah Warren (Mrs. Abel E. Carpenter), and S. L. Carpenter were at different times teachers in schools held in this building.*

The Temple Building did not derive its name from its dedication to sacred uses, but from the fact that Dr. Temple built it and rented it to such societies, religious or otherwise, as could pay the rent. The name of the builder gave to the building itself a double sanctity that its subsequent career could not sustain.

There were four hotels: The old Wolf Point Tavern, formerly kept by Caldwell & Wentworth, then by Chester Ingersoll, who had re-christened it "The Travelers' Home;" the Sauganash, on the south side of what is now Lake Street, near the forks of the river, still kept by the original proprietor, Mark Beaubien; the Green Tree Tavern, just built by James Kinzie,

* See Schools.

and leased to David Clock, who was the landlord; the Mansion House, where are now numbers 84 and 86 Lake Street. It was at that time an unpretentious log tavern kept by Dexter Graves, and according to some authorities had no name, being on the site of the building which was afterwards known by the above-mentioned name. Besides this there were several boarding-houses where transients were fed and lodged, if there was room, which depended upon how particular the regular boarders might be as to the number or character of the said transients who had to be stowed away in their rooms, either as bed-fellows, or on the floor. Mrs. Rufus Brown kept one of the first-class boarding houses.

In addition to the ministers, lawyers, doctors, landlords and others before named, a fair assortment of druggists, merchants, butchers, carpenters, blacksmiths, and other artisans were settled in the town. There was also a score of adventurers, comprising moneyed speculators and prospectors, as yet undecided whether to stay at Chicago or go on.

The following is an imperfect list of the denizens of the town in the fall of 1833, not before named: Philo Carpenter, still living in Chicago, druggist, who came in July, 1832; Peter Pruyne, druggist, early in 1833; George W. Dole, merchant; P. F. W. Peck, merchant; Madore W. Beaubien, merchant; John Bates, Jr., still living in Chicago, auctioneer, who came in 1832; Alanson Sweet, 1832; Augustin Taylor, builder, still living in Chicago, arrived June, 1833; J. B. Beaubien, merchant; the Kinzies, John and Robert A., merchants; T. J. V. Owen, who came in 1831; John Watkins, school-master, came in 1832; James Gilbert, came in 1833; Charles H. Taylor, came in 1832; John S. C. Hogan, Postmaster, came in 1832; William Ninson, came in fall of 1832; Hiram Pearson, came in spring of 1833; George Chapman; John Wright; Mathias Smith, came in 1833; David Carver, seaman and lumber merchant, came in 1833; Eli A. Rider, came in 1832; Dexter J. Hapgood, came in 1832; George W. Snow, came in 1832; Gholsom Kercheval, Government Agent and clerk, came in 1831, died in California; Stephen F. Gale, from New Hampshire; Captain DeLafayette Wilcox, in the garrison; Lieutenant Louis T. Jamison, in the garrison; Enoch Darling, W. H. Adams, C. A. Ballard, Captain J. M. Baxley, came June, 1833, and remained until April, 1836; Lieutenant J. L. Thompson, came June 20, 1833, and remained until December, 1836; Jabez K. Botsford, speculator and capitalist; Morris Bumgarden, came in 1832; Henry and Samuel L. Brooks; Stephen Rexford, came July 27, 1833; Charles Wisencraft, came in 1833; John S. Wright, then a minor, afterward editor of *Prairie Farmer*, and one of the most meritorious pioneers of Chicago, came in 1832; John Wright, came in 1832, a merchant; Timothy and Walter Wright, came in 1833; Patrick Welch, in 1833; John Calhoun, printer and editor of the first newspaper published in Chicago, arrived in November, 1833, and issued the first number of the *Chicago Democrat* November 26, 1833; Tyler K. Blodgett, came in the spring of 1833, and started the first brickyard, between Dearborn and Clark streets, on the North Side; Oscar Pratt and Beckford, printers, were in the employ of Mr. Calhoun at that time; E. H. Mulford, watch-maker, came in 1833; Lemuel Brown, blacksmith, came in 1833; Joseph Meeker, carpenter and builder, came in the summer of 1833; Major Handy, bricklayer and mason; E. K. Smith; L. D. Harrison; Archibald Clybourne, butcher, came in 1823, then living north of the town limits, and not a voter in the new village; John K. Clark, half-brother of A. Clybourne, then living with him; Nelson R. Norton,

ship-carpenter, and builder of the first draw-bridge over the main river, at Dearborn Street, in March, 1834, came November 16, 1833 (he also built the first sloop, the "Clarissa," launched May 12, 1836); Anson H. and his brother, Charles Taylor, came in 1832; John Miller, brother of Samuel, the landlord, came in 1831, and run a tannery just north of Miller's tavern; Benjamin Hall, tanner, a partner of John Miller, who came in 1832; Martin D. Harmon; Willard Jones; Ashbel Steele, plastered Calhoun's printing office in November, 1833; S. B. Cobb, a minor, came June 1, 1833.

Many of these names are not on the list of voters for 1833, for the reason that they had not been in Chicago a sufficient time to gain the right under the law to vote. They are, nevertheless, entitled to a place in the list of actual residents of the new town of Chicago, as organized in 1833.

As appears from the above list there were besides, four churches, a newspaper, a private school, and a job printing office ministering to the higher wants of the community; and besides the taverns enumerated, a half dozen stores and a butcher, to minister to the physical necessities of the citizens. There was not at that time a single dram shop or what would in these later days be denominated a saloon, where the sale of spirituous liquors was the only ostensible business. That was carried on in connection with the stores and hotels, the tavern-keeper being by the terms of his license allowed to sell liquors to his guests, and not forbidden to sell to others.

The bridges were quite primitive, and consisted of a rude foot-bridge crossing the North Branch above the Wolf Tavern; and a log bridge across the South Branch, between Randolph and Lake streets, nearer Randolph. The latter is stated to have been build by Anson H. Taylor and his brother Charles, in 1832. Its total cost, as stated in Hurlbut's Antiquities, p. 556, was \$486.20, of which sum the Pottawatomie Indians contributed \$200. The bridge is frequently mentioned by the early comers of 1833. It was, prior to 1834, the only bridge across the river or its branches over which teams could pass. At a meeting of the Town Trustees December 4, 1833, both these bridges were reported as "needing repairs," as the historian says, "probably because, in contravention of the law, their bulk had been lessened, for the building of fires; the said bridges being nothing more nor less than piles of rough wood thrown into the channel."

The only manufactory established at that early day was the rude shed called a tannery, near the Miller tavern, where John Miller and Benjamin Hall were tanning a few hides into a rough but durable leather. A saw-mill was in operation on the North Branch, below Clybourne's, at the mouth of a slough just south of Division Street.* At that time there was but one street running to the lake, described by Jedediah Wooley, who surveyed it April 25, 1832, as extending "from the east end of Water Street (at the west line of the Reservation) in the town of Chicago, to Lake Michigan. Direction of said road is south 88½° east; from the street to the lake eighteen chains and fifty links." The street was fifty feet wide, and was reported by the viewers as "a road of public utility, and a convenient passage from the town to the lake. It was only staked out and marked by the travel from the town to the fort. There was a rough bridge thrown across the slough at State Street to make the highway available.

At this time, although the work of making a harbor had been begun by building the first section of the south pier, which shut off the current of the river through the

old mouth, there was no harbor, only a roadstead, where craft might find fair anchorage and safe landing by boats or lighters in any but the most tempestuous weather.

The close of the year 1833 saw the town, above imperfectly described, fairly born and in its corporate swaddling clothes. Its past history or present condition did not warrant, at that time, the extravagant hopes that its citizens had in its future development. Its subsequent history has transcended the wildest prophesies of its early friends.

THE TOWN, 1833 TO 1837.—The history of the town of Chicago covered a period of nearly four years—from August 10, 1833, to March 4, 1837. On the latter date the act incorporating the city was passed, and the election of the first city officers under the act was held on the first Tuesday of the May following. The annals of the town of Chicago for the period of its existence show a most wonderful growth in population, commerce and trade. During this era the tide of immigration set in vigorously to the lands of the Pottawatomies just acquired. Its principal route to the region, by land, lay through Chicago, which became the portal to the coveted territory, and through which, with increasing volume, it flowed until suddenly checked by the general financial collapse of 1837. This disaster for a time retarded all business, checked immigration and brought the town itself to such a sudden stop in its headlong career of prosperity as to seriously dampen the ardor, and still more seriously deplete the pockets, of its enterprising and over-sanguine citizens. As the entrepot of this vast westward moving and endless caravan, Chicago could but increase its own population from the ever-changing throng of sojourners. This was the era of the wildest speculations in land ever known in the country, and Chicago became the western center of the craze which began in 1835, developed in 1836, culminated in the early part of 1837, and finally burst into thin air in the fall of the latter year.

The sale, by public auction, of the school section (16) occurred October 20, 21, 22, 23, and 24, 1833, was made under R. J. Hamilton, commissioner, and by John Bates, auctioneer, and realized prices quite beyond expectations. The section embraced the square mile between State and Halsted streets on the east and west, and Madison and Twelfth on the north and south. It was divided into one hundred and forty-four blocks, the area of each being not far from four acres, not including the streets. All but four of the lots were sold, and brought in the aggregate the sum of \$38,865, or an average of \$6.72 per acre. The land was sold mostly on credit of one, two and three years at ten per cent interest. No such favorable chance for purchasers of limited means to become possessed of land near the village occurred again until after the financial revulsion of 1837. These blocks, afterward cut up into lots, together with the canal lots in Section 9, were the original lots on which the trading and speculation was begun, which, as the mania increased, was supplemented by various "additions" to the town, which were platted on paper, and the lots thrown into market.*

THE GREAT LAND CRAZE.—Early in the spring of 1834 emigration from all parts of the East, even to the hitherto extreme western settlements, set for the lands just open to occupation by the treaty made at Chicago the previous September. By the middle of April, the van had arrived in Chicago, and by the middle of May there was no room for the constant crowd of incomers,

* An advertisement by the Collector of lots to be sold for delinquent taxes October 1, 1836, mentions the original town (Section 9) Section 16, Wolcott's addition, North Branch addition, and Wabansia addition.

* John Bates says there was no mill there.

except as buildings were hastily put up for their accommodation, or as sojourners, leaving the town, made room for them. The hotels and boarding houses were always full; and full meant three in a bed sometimes, with the floor covered besides. Many of the emigrants coming in their own covered wagons had only them or a rude camp, hastily built, for home or shelter. All about the outskirts of the settlement was a cordon of prairie schooners, with tethered horses between, interspersed with camp fires, at which the busy house-wives were ever preparing meals for the voracious pioneers.

The price of real estate in Chicago was not long in evincing signs of what in later times would have been styled "a boom." Over one hundred and fifty houses, stores and shanties were put up, mostly on the canal section (9) during the spring and early summer. Lots which had sold at \$20 to \$50 at the first sale of canal lots, and for two years thereafter had been bandied about by the luckless owners, and swapped and bartered in regular horse-jockey style, suddenly assumed the true dignity of real estate, and had a price and a cash valuation. Many an old settler discovered that he was, if not rich, the possessor of possible wealth in what he had before deemed a possible incumbrance at tax-paying time, and, to strangers from the East seeking to invest, began to put on the airs of a landed proprietor. It was not long before land-agents became plenty in Chicago, and their offices the most crowded business resorts in the city.

At first the purchases were what might be termed legitimate; a lot for cash on which the purchaser would erect a dwelling or store. The legitimate demand soon absorbed the floating supply and prices began to advance under the competition of anxious buyers. Lots purchased one day for \$50 were sold the next for \$60, and resold in a month for \$100. It did not take long under such circumstances to develop a strong speculative fever, which infected every resident of the town and was caught by every new-comer. At the close of the year 1834, the disease had become fairly seated. Whatever might be the business of a Chicagoan, or however profitable, it was not considered a full success except it showed an outside profit on lots bought and sold. The next year was but a continuance of the trade, enlarged by the constantly increasing number of speculators who now bought, not so much for investment, and with less regard to actual value, as the increasing number of purchasers made a quick turn at a large profit apparently sure.

The excitement was greatly increased during the summer and early fall of 1835 by the opening of the Government Land-Office, which occurred May 28, where the sales continued, with some intermissions, until September 30. The sale brought to the town, not only thousands of the *bona fide* settlers who came to secure a title to the lands they had already entered, but a crowd of adventurers and speculators who saw visions of untold wealth in the lands now for the first time offered for sale. The order in which the sales were made, and the sums realized, was stated in the American, October 10, 1835:

Lands entered under pre-emption laws, from May 28 to June 30	\$ 33,066 90
* At public sale, from June 15 to 30, inclusive	354,278 57
By private entry, from August 3 to 31, inclusive	61,958 57
By private entry, from September 17 to 30, inclusive	10,654 71
	\$459,958 75

* These sales by auction were made in a building on the west side of Dearborn Street, near Water Street. The building was erected by John Bates, and afterwards occupied by him in his business as an auctioneer.

As the interior became settled the mania for land speculating spread throughout the newly settled country, and Chicago became the mart where were sold and resold monthly an incredible number of acres of land and land-claims outside the city, purporting to be located in all parts of the Northwest. It embraced farming lands, timber lands, town sites, town lots, water lots, and every variety of land-claim or land title ever known to man. The location of the greater portion of property thus sold was, as a rule, except so far as appeared in the deed, unknown to the parties to the trade; and, in many cases, after the bubble had burst, the holders of real estate, acquired during the excitement, on investigation failed to find the land in existence as described. Town lots were platted, often without any survey, all over Wisconsin and Illinois, wherever it was hoped that a town might eventually spring up, or wherever it was believed that the lots could be floated into the great tide of speculative trade.

The following are a few of the many paper towns advertised in the Chicago papers during 1836: Lots in Warsaw; in Michigan City; in Koshkonong, Wis.; in Macomb, McDonough County; in Winnebago, on Rock River; in Oporto, opposite Dixon's Ferry; in New Boston, Mercer County; in Liverpool, Ind.; in Oquaka; in Concord—fifty lots; in Calumet, in Rockwell, an addition to the town of Stephenson; lots in Sheboygan, Wis.; in Wisconsin City,* now Port Washington, Wis.; also Ottawa Canal lots, which the American, November 19, 1836, stated were sold at \$21,358, being \$3,266 in excess of the valuation; also canal Port lots in Vienna, Will County.

The leading advertisers were: John Bates, Jr.; Thompson & Wells; Higgins, Montgomery & Co.; R. K. Richards, agent of Chicago and New York Land Company office, in July, 1836, over the drug store of W. H. & A. F. Clarke, corner Lake and Clark streets; A. Garrett, auction room, on Dearborn Street. Mr. Garrett's room was the most popular resort of the speculating crowd. The American, October 31, 1835, stated that during the

* The following description of "Wisconsin City," and what became of it, is given as the probable history of nearly all the paper towns and cities platted and sold during those exciting times. "They [the proprietors] forthwith laid out the town and named it 'Wisconsin City.' The original plat was on the north side of Sauk Creek, along the lake shore, on the site of the present village of Port Washington. The streets were laid out north and south, and east and west from the bluffs to the lake, all except Lake Street, which ran diagonally in a northeasterly direction along the shore. The street nearest the creek, destined for docks and wharves when the dredging was completed, was named Canal Street. The parallel streets in order, going north, were Main, Washington and Jackson, each having a width of sixty-six feet, except Main, which was eighty feet in width; Lake Street intersected Canal Street at its foot and ran along the lake front, City Street starting at the intersection of Lake and Canal streets ran due north and south, intersecting Main, Washington and Jackson streets; west and parallel came in order Franklin, Wisconsin, Milwaukee, Montgomery and Clay streets, all of the regulation width of sixty-six feet except Wisconsin, which was eighty feet wide. The public square was in the block bounded by Washington on the south, Wisconsin on the east, Jackson on the north and Milwaukee on the west. Alleys twenty feet in width running north and south, intersected each block. The lots were 60x120 feet in size. The names of the proprietors of this embryo city, as appears in the recorded plat, were Solomon Juneau, Morgan L. Martin, G. S. Hosmer, Allen O. T. Breed, Wooster Harrison, Calvin Harmon, G. S. Hosmer, Thomas A. Homes and William Payne, all non-residents except General Harrison. The land seems to have been ceded by the Government to Harrison and sold to his partners, whom he let into the speculation on easy terms. Some sixteen acres of land were cleared and several buildings erected; a tavern, two stores, and several dwelling-houses, among them that of the "father of the city," General Harrison, which is still (1881) standing. A dam was built on the creek some distance from the city and a saw-mill erected. The first transfer of property by deed appearing on the records was a part of this tract. It bears date December 1, 1835, and conveys to Thomas A. Homes an undivided half of about eleven acres, the consideration being \$100. In January, 1836, Holmes sold about four acres of this lot to Solomon Juneau for \$500. In February, 1836, Levi Mason bought two acres for \$100. Prices went up rapidly but culminated in the crash of 1837. The highest point was reached in August of that year. On the 28 of that month Solomon Juneau sold to one Jasper Bostwick one 'city lot' (Lot 12, Block 19) for \$300, equivalent to nearly \$1,800 per acre.

The decadence of Wisconsin City was as sudden as its growth had been rapid. The crash of 1837 brought it to a dead halt, and it was abandoned entirely except by Harrison, who remained there when not in Milwaukee, to look after the ruins of what had been the darling hope of his life. The present village of Port Washington, after forty-five years, is built on the old plat, and along the streets then laid out, and, in its beauty, is the counterpart of the Wisconsin City that poor Harrison built on paper and in his fancy so many years ago. Not until 1842 was any attempt made to revive the deserted village.

ten months of the year he had sold \$1,800,000 of property, real and personal, and that he had fitted up a large room, "equal to any in New York or Philadelphia." A single advertisement of R. K. Richards, July 2, 1836, offered for sale lots in Chicago, Joliet, Penn, Dorchester, Tremont, and Pekin; also lots in Dearbornville, Constantine, Mottville Mills, St. Joseph and Milwaukee.

The American, July 2, 1836, said, "The rapidity with which towns are thrown into market is astonishing. Houses are born in a night, cities in a day, and the small towns in proportion."

The speculative mania was not confined to Chicago or the West. A superabundance of paper money, issued under divers State laws, had flooded the whole country, in volume far in excess of the requirements of legitimate trade, and was seeking outside investment in all quarters. In the great money centers of the East, New York, Boston, and Philadelphia, a furor of speculation in all commodities and in real estate was at its height, before the Western mania was fairly started. The rumor of the fortunes made in a day at Chicago in the purchase of Western lands soon reached New York, where, among capitalists, the excitement became but little less intense than at home. There a new speculative demand grew up which proved an outlet for the avalanche of new towns that were being thrown into market. But for this, the craze might have spent itself sooner; as it was, Eastern capitalists, after once embarked in the trade, became the most reckless and wildest speculators and held the excitement at fever heat until the collapse, which began at the East, forced them to take an observation, which resulted in a sudden and complete stoppage of monetary supplies from that source. The trade was thrown back upon its own resources, and fell into a state of languishment at once, from which it went into a rapid decline, ending before the close of the year in absolute death. Although innumerable fortunes were made, few survived the wreck, and no class suffered more in the final crash than the non-resident speculators, who, in fact, were about the only ones who ever put much real capital into the business.

The first historic lecture ever delivered in Chicago was by Joseph N. Balestier, before the Chicago Lyceum, January 21, 1840. Speaking of the "Land Craze," he said:

"The year 1835 found us just awakened to a sense of our own importance. A short time before, the price of the best lots did not exceed two or three hundred dollars; and the rise had been so rapid, that property could not, from the nature of things, have acquired an ascertained value. In our case, therefore, the inducements to speculation were particularly strong; and as no fixed value could be assigned to property, so no price could, by any established standard, be deemed extravagant. Moreover, nearly all who came to the place expected to amass fortunes by speculating. The wonder then is, not that we speculated so much, but rather that we did not rush more madly into the vortex of ruin. Well indeed would it have been had our wild speculations been confined to Chicago; here, at least, there was *something* received in exchange for the money of the purchaser. But the few miles that composed Chicago formed but a small item among the subjects of speculation. So utterly reckless had the community grown, that they chased every bubble which floated in the speculative atmosphere; madness increased in proportion to the foulness of its aliment; the more absurd the project, the more remote the object, the more madly were they pursued. The prairies of Illinois, the forests of Wisconsin and the sand-hills of Michigan, presented a chain almost unbroken of supposititious villages and cities. The whole land seemed staked out and peopled on paper. If a man were reputed to be fortunate, his touch, like that of Midas, was supposed to turn everything into gold, and the crowd entered blindly into every project he might originate. These worthies would besiege the land offices and purchase town sites at a dollar and a quarter per acre, which in a few days appeared on paper, laid out in the most approved rectangular fashion, emblazoned in glaring colors, and exhibiting the public spirit of the proprietor in

the multitude of their public squares, church lots, and school lot reservations. Often was a fictitious streamlet seen to wind its romantic course through the heart of an ideal city, thus creating water lots and water privileges. But where a *real* stream, however diminutive, did find its way to the shore of the lake—no matter what was the character of the surrounding country—some wary operator would ride night and day until the place was secured at the Government price. Then the miserable waste of sand and fens which lay unconscious of its glory on the shore of the lake, was suddenly elevated into a mighty city, with a projected harbor and light-house, railroads and canals, and in a short time the circumjacent lands were sold in lots, fifty by one hundred feet, under the name of 'additions.' Not the puniest brook on the shore of Lake Michigan was suffered to remain without a city at its mouth, and whoever will travel around that lake shall find many a mighty mart staked out in spots suitable only for the habitations of wild beasts.

"If a man were so fortunate as to have a disputed title, it made no great difference where the land lay, or how slender was his claim, his fortune was made; for the very insecurity of the purchase made it desirable in the eyes of the venturesome. A powerful auxiliary to the speculative spirit was the sale of lands by auction. When bodies of men, actuated by a common motive, assemble together for a common object, zeal is apt to run into enthusiasm; when the common passion is artfully inflamed by a skillful orator, enthusiasm becomes fanaticism, and fanaticism, madness. Men who wish to be persuaded are already more than half won over, and an excited imagination will produce almost any anticipated result. Popular delusions have carried away millions at a time; mental epidemics have raged at every period of the world's history, and conviction has been ever potent to work miracles. Now the speculating mania was an epidemic of the mind, and every chord struck by the chief performers produced endless vibrations, until the countless tones of the full diapason broke forth in maddening strains of fascination. The auctioneers were the high-priests who sacrificed in the Temple of Fortune; through them the speculators spread abroad their specious representations. Like the Sibyls and Flamens of old they delivered false oracles, and made a juggle of omens and auguries.

"But the day of retribution was at hand; the reaction came—and the professional speculator and his victims were swallowed up in one common ruin. Trusting to the large sums due to him, the land operator involved himself more and more deeply, until his fate was more pitiable than that of his defrauded dupes.

"The year 1837 will ever be remembered as the era of protracted notes; it was the harvest to the notary and the lawyer—the year of wrath to the mercantile, producing, and laboring interests. Misery inscribed its name on many a face but lately radiant with high hopes; despair was stamped on many a countenance which was wont to be 'wreathed in smiles.' Broken fortunes, blasted hopes, aye, and blighted characters; these were the legitimate offspring of those pestilent times. The land resounded with the groans of ruined men, and the sobs of defrauded women, who had entrusted their all to greedy speculators. Political events, which had hitherto favored these wild chimeras, now conspired to hasten and aggravate the impending downfall. It was a scene of woe and desolation. Temporary relief came in the shape of Michigan money—but like all empty expedients, it, in the end, aggravated the disease it pretended to cure—it seemed a sovereign panacea, but it proved a quack specific. Let us turn from this sickening spectacle of disaster and ruin. Mad as her citizens had been, Chicago *was* Chicago still. Artificial enterprises had failed, but nature was still the same. There stood Chicago 'in her pride of place'—unmoved and immovable. Though mourning and desolate, she could still sustain an active population. Need I add that SHE HAS DONE IT?"

The delinquent tax-list, published in the American, October 1, 1836, showed a large number of lots owned by non-residents. The taxes levied and remaining unpaid were ridiculously small, in comparison with the high market valuation then current. Doubtless many of the visionary owners, who counted their wealth in these lots by thousands had not the wherewith in ready money to pay the taxes on their possessions, small as they were. Of two hundred and twenty lots advertised in Section 16, one hundred and fifty-five were taxed less than one dollar each; forty-two, from \$1 to \$5; ten, from \$5 to \$10; twenty-two, from \$10 to \$25; and one at \$39. In Wolcott's addition, one lot was taxed \$10.50; three, from \$7.50 to \$10; and others at less than \$7 each. In North Branch addition, no single lot advertised was taxed as high as one dollar. In Waubansia

addition, the three lots advertised were assessed, respectively, \$2.50, \$3.50 and \$7.50. In the original town, Section 9, the lots were assessed—one for \$50.50; two for \$30, one for \$19, thirteen from \$17 to \$10, and eighteen for less than \$10. At that time it is apparent that the most valuable property, in the practical eyes of the assessors, was on the old town plat.

The following extracts, letters and personal reminiscences, more or less relevant, will give the reader a more distinct idea of the occurrences, and the people, while the excitement was at its height, than could be obtained from an unbroken narrative.

The incipient stages of the disease, as it began to show in old residents, is told in a short letter, dated August 18, 1883, from Dr. Horace Chase, now a resident and a leading citizen of Milwaukee. He writes :

"Soon after the sale of lots in Chicago, in 1833, I think, Robert Kinzie, on his way to Detroit, stopped at Marsh's trading-post, near Coldwater. There happened to be several of us present, and Bob, finding an audience he took for green-horns, began to boast about Chicago, and what a great city it would become. 'Why,' said he, 'I bought some of the best lots in Chicago for twenty dollars apiece, and, by G—, those lots are worth sixty dollars apiece to-day.' It seemed to us utterly absurd that a lot should be worth sixty dollars, when two hundred dollars would buy one hundred and sixty acres of land of the best quality, and in 1833 there were tens of thousands of such chances in Michigan. Not a single person in the crowd believed Bob's yarn."

John S. Wright,* in his most valuable book, "Chicago: Past, Present, and Future," gives his own experience during the speculative era. He died in Philadelphia, September 26, 1874. His remains rest in Rose Hill, Chicago. From his autobiographical sketch, pp. 289, 290, the following interesting extracts are taken :

"In 1832, at the age of seventeen, my father took me to Chicago with a stock of merchandise. The town then contained some one hundred and fifty people (exclusive of the garrison), two framed stores and no dwellings, except those built of logs. After remaining a few weeks, examining the country south and west, and satisfying myself that he had made the right location, he left me to shift for myself. In 1834 he removed his family to Chicago and lived until 1840, having his first convictions strengthened year by year that it was rapidly to become one of the largest cities of the country, and of the world.

"Though a mere boy, I, too, became impressed with the advantages of the point which was the western extremity of the great lake navigation, with a certainty of its connection by canal with the Illinois and Mississippi rivers, and which was the natural commercial center of a country so fertile, and so easily tilled, and so vast in extent. In the winter of 1833 and 1834, I induced a wealthy uncle to take some purchases which I had made, expecting to share in the profits. He took them, and has made out of those and other operations, through me, several hundred thousand dollars, but all the benefit to me, directly or indirectly, has been \$100. He came to Chicago in the spring of 1835, and the next day after his arrival said, if I would sell his lot—one of those which I had bought fifteen months previously for \$3,500—for \$15,000, he would give me one hundred dollars! I sold the lot that day for cash and the \$100 was reckoned into my credit in our final settlement in 1838. * * *

In 1834 I began to operate in real estate on my own account, and in February, 1835, went to New York to buy merchandise, and sold for \$10,000 an eighty-acre tract which had cost \$4,000, the profits of which more than paid for all my other purchases. Thereafter increasing my operations, I sold in the spring of 1836, to

* The extracts here given might, in the absence of other information, lead to a misapprehension concerning the character of Mr. Wright. Although a born trader and a bold speculator, he was a man of rare virtues, and during his long residence in Chicago was identified with nearly every enterprise and measure calculated to promote its prosperity or elevate the educational, mental, moral, or religious standards of the city. The benefactions of this wonderfully energetic citizen permeated nearly every channel of Chicago life, and showed in every phase of her early growth. The building of the early railroads, the development of manufactures; the first Presbyterian Church, Sabbath schools, and the common school system of the State, the Press—to all these he devoted his energies, and gave of his means in no stinted measure. Frequent mention of him appears elsewhere in this volume—see church history, schools, railroads, manufactures, the Press, etc. An old friend, Rev. J. Ambrose Wight, at the close of a long letter, dated February 1, 1876, deservedly eulogistic of him, thus sums up his business character: "Chicago—old Chicago—knew Mr. Wright's peculiarities well enough. He saw further into a subject in the beginning than most men. But once in it, he seemed to lose his ability to handle it, and often his interest in it; and the outcome sometimes threw undeserved obloquy on the whole undertaking. Had he been able to carry things through as he began them, he had probably been a millionaire, and alive to-day."

various parties in New York, real estate for over \$50,000, receiving about two-thirds of the pay cash in hand, and giving my individual obligations to make the conveyance when I came of age, the July following. My father would have been my heir, in the event of my death, and they knew he would fulfill my contracts. I had, then, in 1836, acquired a property of over \$200,000, without any assistance even from my father, never having used his money for my operations, the store being his, and for conducting it only my expenses had been paid. My uncle was the only relative who could have aided me, and he never would, even temporarily. So far from it, he was in my debt continuously from 1834 to our final settlement in 1838. But 1837 brought ruin to me, as it did to nearly all who owed anything; though it was not so much speculation in real estate as engaging in mercantile business that involved me. At that age it seemed desirable every way to have regular occupation to promote good habits, and in accordance with my father's wishes, I purchased in 1836 a warehouse and dock-lots, to engage in the shipping business, which cost \$23,500. My whole indebtedness was about \$25,000. I had nearly \$20,000 due to me, which was supposed to be well secured, it being chiefly the final payments on property of which over half the cost had been paid. To provide ample means for business, I sold in the autumn of 1836 a tract adjoining the city for \$50,000, quick pay. This trade was unfortunately broken up by the merest accident, and thereafter I had no opportunity to sell at what was deemed a fair price. I came in possession of the warehouse May 1, 1837; and though having small cash resources, I thought best to commence business, hoping there would soon be a favorable turn. But all went down, down, and I was soon inextricably involved. The money used to buy those lots for business, not speculation, would have carried me through. By 1840, my property had all gone; one piece that had been worth \$100,000, went for \$6,000; another that had been worth \$12,000 went for \$900, and so on."

J. D. Bonnell, a young man of far more ardent hope than his financial condition would warrant, came to Chicago in 1837. He subsequently found a safe haven in Lake City, Minn. From that place he wrote to the Chicago Times a letter dated March 15, 1876, from which the following is quoted :

"My first entry into the city of Chicago was forty years ago, August 25, 1835, approaching the city on foot from the south. On emerging from the oak openings, I came upon the hotel of Hollis Newton, and on entering the house I found the landlord at home, and alone. Asking him how far it was to Chicago, he informed me it was three miles, and in answer to whether there was any house on the way, he said yes—that Mr. Clarke's house was about half way. On his asking where I came from and for what I came, I answered that I had made a claim in Thorn Grove for my parents, who were soon coming on, with ox teams, from Ohio, and that I was going into the town to learn what I could find to do. He immediately proposed to sell me his tavern stand with the forty-acre lot upon which it stood, for \$500, so that he could go on to a farm, for he was 'd—d sick of keeping tavern on that sandy beach, where his eyes were constantly full of sand.' But I declined to make any bargain with him, and jogged along over the sand hills for Fort Dearborn and Chicago, where I arrived in the evening, having walked from Thorn Grove via Thornton, thirty-three miles, to Chicago, that day; which, if taken into consideration, away back in those days, when there was scarcely a road at all, was a good day's walk. And yet, by the Hoosiers on the Chicago & Cincinnati road, there was much teaming in 'prairie schooners,' in bringing corn-meal and bacon to the Chicago market, and loading back with salt.

"On arriving at Chicago I stopped over night at the Mansion House. In the morning I commenced looking over the town and prospecting for a boarding-place, and to learn what I could find to do. The hotels were all pretty full, and their prices ranging too high for my finances, I walked across the street, where the first thing that attracted my attention was the sound of a violin. On entering a small wooden sturture, their stood behind a rudely constructed counter Mr. Dalton, a recent arrival from Columbus, Ohio, a former tailor there, but who had now opened a liquor shop, and played the fiddle to attract customers.

"Passing east, toward the mouth of the river, was the Lake House in course of construction, east of which was the residence of Dr. Kimball, who was a partner of Mr. Pruyn in a drug store on South Water Street. Mr. Pruyn was State Senator. Opposite Dr. Kimball's was Hunter & Hinsdale's warehouse. Adjoining on the west was Newberry & Dole's warehouse, and on one part of the latter building was the hat store of McCormick & Moon, of Detroit, Mr. Moon being the partner of the Chicago store. In the back part of the store was Jesse Butler's tailor shop. In turning the corner of Dr. Kimball's residence, away to the northeast, among the sand-hills, close by the lake shore, stood a small yellow

house, occupied by Parnick Kelsey as a boarding-house, ostensibly run by Eve, Parnick's wife, for Mr. Kelsey was a sub-contractor in removing stumps and grubs, preparatory to the grading of the street on the North Side, through the swamps and bogs, which at that time rendered traveling almost impossible. But as Mrs. Kelsey had all the boarders that she could accommodate, I was obliged to seek other quarters.

"Dearborn Street at the time I write was the 'lively' street, for Garrett's auction-room was located there, on the west side of the street, close to Cox & Duncan's clothing store, just opposite to which were Mr. Greenleaf's auction-rooms. To the latter place I was wont to go of evenings and bid off town and city lots, having the next day in which to secure a purchaser, and in case I failed to sell for an advance of my purchase I returned at night and paid Mr. Greenleaf a dollar and the property was offered again for sale.

"The winter of 1835-36 was a gay one for Chicago. Mr. Jackeax had a dancing-school at the New York House once a week, which called out the elite of the city. Lincoln's coffee-house was the popular drinking place, situated, I think, on the corner of St. Clair and Wells streets. Mr. Lincoln had a favorite horse, an iron grey, and quite fleet on foot, particularly so when in pursuit of a prairie wolf. Many a time in the winter of 1835-36 I have seen Mr. Lincoln mount his horse when a wolf was in sight on the prairie toward Bridgeport, and within an hour's time come in with the wolf, having run him down with his horse and taken his life with a hatchet or other weapon.

"In 1833, Mr. Kingsbury, the original owner, offered all the land, and a great deal more than is now included in the Kingsbury estate to Captain Joseph Naper, for \$900. Fortunately for the heirs the doughty Captain couldn't see the bargain, and Mr. Kingsbury was constrained, much against his will, to hold on to what he had. The land thus offered for \$900 included a good portion of the four blocks that surrounded the court-house square, including the Kingsbury and Ashland blocks.

"The most historic lot in Chicago undoubtedly is the one occupied by the Tremont House. It has been in the 'raffle-box,' swapped for ponies, refused for a barrel of whisky, and when an old settler wants to give you an idea of the city when he first stuck his brogans in the mud, he will somehow associate the price of the Tremont House lot with it; and any old settler will tell the year of your arrival by giving him the value of the lot at that particular time. One old codger will tell you, 'When I came here I could have bought the lot the Tremont House stands on for a cord of wood.' That means 1831. Another puts the value, with the preliminary remark, at a pair of boots. That means 1832. A third fixes the price at a barrel of whisky. That means 1833. The fourth adds a yoke of steers and a barrel of flour. That means 1834. A fifth talks about \$500. That means 1835. A year or two afterward it was worth \$5,000, and now it is nearer \$500,000. In 1833 Captain Luther Nichols refused to give Baptiste Beaubien forty cords of wood for it, and wood was then worth \$1.25 per cord.

"John Noble still has in his possession the original deed, signed by the County Commissioners, conferring on him a title to the lot occupied by the 'Tivoli,' on the southwest corner of Clark and Washington streets, for the sum of \$61 in lawful money. The deed is dated June 14, 1832. Many regard this as the most valuable lot in the city, and is worth in the neighborhood of \$3,000 a front foot."

The following description of the metes and bounds is as appears in a deed of a piece of property situated on Chicago Avenue, adjoining the river, conveyed by John Noble to James B. Campbell and George E. Walker. It reads as follows:

"The following described tract or parcel of land, situated, lying and being in the county of Cook, in the State of Illinois, and being the one equal and undivided half of a lot or parcel of land transferred by Mark Noble, Sr., and wife, to James B. Campbell and George E. Walker, by deed bearing date the 28th day of August, 1833, and the said lot or parcel of land is bounded by the following metes and bounds, to-wit: Beginning at a hickory stake on the east side of the road on the North Branch of the Chicago River, on the dividing line between Section 4 and river, in Township 39 north, Range 14 east, thence east along said line two chains and twenty links to a hickory stake cornered and running from a large basswood with three hacks, south eighty-five, west twenty-two links; thence north eight chains eighty-one links; thence west crossing a sluice to a white oak standing on the river bank, blazed on the south side, nine chains ninety-two links; thence southeast along the shore of said river to the place of beginning, containing 10.04 acres, more or less."

Gurdon S. Hubbard, the oldest living settler, still a

resident of Chicago, was, in those days, a bold and successful land speculator.

At the first sale of canal lots in 1829 in Section 9, he bought two lots, one on the northwest corner of Lake and LaSalle streets, and the other on the southwest corner of LaSalle and South Water streets. They were eighty by one hundred feet in size, and were bought for \$33.33 each. In 1836 the lots would have found ready purchasers at \$100,000. Mr. Hubbard disposed of a part of the property during the excitement, and the remaining portion after the crash, on a falling market; nevertheless, he realized in the aggregate, \$80,000 on his investment of \$66.33.

A chronicler in the Sunday Times, October 24, 1875, tells the following story concerning another large and successful operation, which illustrates how the mania raged in New York, and how that Eastern "bonanza" was worked by local operators in Chicago:

"Early in the spring of 1835, about the month of March, Mr. Hubbard purchased, with two others, Messrs. Russell and Mather, what has since been known as Russell & Mather's addition to Chicago. This tract comprised eighty acres, and was bounded on the south by Kinzie Street, on the east by the river, on the north by Chicago Avenue, and then ran west to Halsted Street and beyond. For these eighty acres they paid \$5,000. At that time one section of the prospective city was as desirable as another, but time has developed that this particular eighty acres was one of the most undesirable within the entire territory now embraced within the city limits. A few months after the purchase Mr. Hubbard had occasion to visit New York City, and to his surprise found the rage for Chicago real estate at a point where it might be called 'wild.' Having sought and received the consent of one of his partners, who lived in Connecticut, he looked up an engraver, gave him such a sketch of the lay of the land as he could call up from memory, had a plat prepared, and from this plat, without any actual subdivision of the land, sold half of it at public auction for the sum of \$80,000. This within three or four months after paying \$5,000. News of this transaction reached Chicago in the course of stage-coach time, but it was generally discredited, until Mr. Hubbard returned with the positive confirmation; and the—well, then, every man who owned a garden patch stood on his head, imagined himself a millionaire, put up the corner lots to fabulous figures, and, what is strange, never could ask enough, which made him mad because he didn't ask more."

William S. Trowbridge, now a resident of Milwaukee, came West in 1835. He was a land surveyor and, during the excitement, made Chicago his headquarters, surveying lands in the region round about. Early in 1836 he was sent up to survey and plat the city of Sheboygan, which embraced a section. Having completed his work he entered for himself an adjoining section intending to settle there. On his return he found the excitement at fever heat. So soon as it was known that he had secured this claim on suburban property, directly adjoining the city which he had just built on paper, anxious buyers appeared, and in less than one week he had sold out his claim at a profit of \$1,500. He immediately returned to Sheboygan and entered another section, adjoining the city on another side, with which he returned to Chicago, and which he readily sold out on better terms than the first. As he stated, he thus continued the business until he had "Sheboygan cornered." Out of this peddling of wild land he realized what, to him, then a quiet young man of an unspeculative turn of mind, seemed an independent fortune. Unlike most young men of the time he withdrew with his modest gains, and settled in the town of Milwaukee, where he has since lived the quiet life of moderate affluence which comes to the few whose judgment is not obscured or warped by sudden and unexpected fortune thrust upon them.

A correspondent to the New York Evening Star wrote from Chicago in January, 1837, as follows:

"I am now in a large hotel, in a large city; for Chicago contains a population of 6,000 souls. I have just returned from a stroll to the lake shore, where two years ago I so gladly landed after a long and perilous voyage. I can scarcely recognize it as the same spot. Where I then walked over the unbroken prairie, the spacious avenue is now opened, crowded with carts and wagons, and occasionally a showy family rolling and dashing in the hurry of trade or the pomp of native 'sucker,' stumbling, as I do, over bales and boxes on the sidewalks, or gaping at the big signs and four-story brick houses. I am boarding at the United States Hotel, where I pay only two dollars per day for self, and a dollar and a half for horse. There is one noble ship (the 'Julia Palmer') and two others, four brigs, and I know not how many steamboats and schooners, regularly plying between this and Buffalo. A lot I was offered for \$650 at my first visit (1834) has now upon it a splendid forwarding and commission store, and sold this spring (the naked lot) for \$9,000."

From the files of the same paper, May 27, 1837, the following extracts from letters to the Star, written from Chicago, in the fall of 1836, are taken:

"Well, we have arrived at this place, or city that is to be—this nest of emigrants, merchants and speculators—where nearly all the Western towns are hatched, and from which their brood migrates to every part of the Union, in the shape of town and village lots. Men make fortunes here in less time than I could box the compass—I say men, for there is a melancholy disproportion of numbers between the sexes. Harry is now suffering under the effects of his dinner parties. He there caught the disease of speculation, which I fear will terminate in a collapse of his pocket before he gets back. Strange indeed for one who entered this climate so pure in thought and purpose; but so it is. He thinks and talks of nothing but emulating the virtues and enterprises of a certain great modern D. D., by hunting up a town site equal to 'Marion City'!! or of the hundred and one great towns at the mouth of Maumee River!! and selling the lots out to his friends at the East at a profit of \$200,000. He seems determined, and wishes me to say that if you will speak well of the place he will name a street after you."

Two items from the Chicago American show the price of real estate when the excitement was at its height. August 15, 1835, it said: "Fractional Block No. 7 sold last June for \$1,300; August 1 it was sold for \$1,950. Lot No. 1, Block No. 2, sold in June for \$5,000, and was resold in August for \$10,000. Lot No. 8, in Block No. 16, sold in June for \$420, and was resold in August for \$700." October 17, 1835, the American announced the sale of a lot fronting on Dearborn Street, next the corner of Water, about fifty-five feet deep, for \$11,000.

In a letter from Charles Butler, published in the American, September 3, 1836, it is stated that in the year 1833 one-fourth of Kinzie's addition was offered to him for \$5,500, then (1836) worth \$100,000; another tract of land in Chicago of forty acres, worth in 1833 \$400, was then worth \$200,000; and that the Hunter property (so-called) was purchased in the spring of 1835 for \$20,000, resold during that year for \$100,000 and was worth, at the time he wrote, \$500,000.

The Milwaukee Advertiser, July 14, 1836, had the following editorial squib, illustrative of the Chicago craze: "I say," said one gentleman to another, in Chicago, "what did you give for your portrait?" "Twenty-five dollars, and I have been offered fifty for it."

The end of the excitement came unheralded. An act passed by Congress, June 23, 1836, "regulating the deposits of the public money, made it the duty of the Secretary of the Treasury to discontinue the use, and discredit the issues of such banks as should at any time refuse to redeem their notes in specie. This was a death-blow to wild-cat banking, and resulted, in the following May, in a general suspension of specie payment throughout the country and the total failure of most of the Western banks which had run thus far, and floated their bills entirely on credit.* All payments to

* See History of Banking in this volume.

the Government, under the law, were to be made in specie or bank notes redeemable in specie, on demand. It followed that, with credit greatly extended and prices already enhanced a hundred-fold above what could be measured by the entire amount of specie in the country, in the process of adjustment to the arbitrary conditions of the law, a collapse in prices occurred sufficient to bring the valuation of all property to a specie standard. Unfortunately, the debts of the sanguine speculators did not shrink proportionately, with the sudden decrease in the value of their securities. Prices of lots valued in Chicago in 1836 at a thousand dollars suddenly fell to the specie value of three years before—perhaps fifty dollars; while the note that the last speculative buyer had given for it remained \$1,000, as before. Widespread ruin was the consequence, and the bubble burst May, 1837. When the town of Chicago became a city, many of its inhabitants, who had reveled in supposititious wealth for past years, were in sackcloth and ashes, mourning over city lots from which all value had departed, or bewailing the existence of notes of appalling magnitude, which were the only reminders of the glorious times gone by, which the law had not rendered valueless.

MINOR ANNALS OF THE TOWN.

The following letter, written by Enoch Chase, from Milwaukee, dated August 2, 1883, is of historic value, showing, as it does, something of the geography of the surrounding country and concerning the town itself from 1834 to 1836.

"In July, 1831, I arrived in Detroit, Mich. From Detroit to Tecumseh there were two lines of stages—the Pioneer and the Opposition. From Tecumseh to Niles there was a tri-weekly line of mud-wagons. From Niles to Chicago the mail was carried on horseback. During the winter of 1831-32 the line of mud-wagons hauled off and the mail was carried weekly from Tecumseh to Chicago on horseback. Early in the spring of 1832 Mr. Savary of White Pigeon put on a daily line of post coaches from Tecumseh to Niles, and the travel was brisk from the opening of navigation on Lake Erie till the Sac war broke out (about the middle of May) which put a damper on emigration for that year.

"In May, 1832, the Michigan Militia was called out to prevent the Indians from passing through Michigan to Detroit. But when we rendezvoused at Niles, an express met us with the information that the Indians were retreating to the north and that our services were not needed. We were, therefore, disbanded and returned home. The inhabitants of Branch and Hillsdale counties constituted a battalion of three companies under the command of Major B. Jones—less than eighty men in all; and not a half dozen able-bodied men left at home in the two counties.

"In the month of October, 1834, I made my first visit to Chicago. The country along the Chicago road from Coldwater to Michigan City was tolerably well settled. The travel from the latter place to Chicago was along the beach of the lake, and after a northeast storm, when the sand was packed by the waves, the drive was just splendid; but when the sand was dry and loose, it was just horrible. A good team would make the distance in six hours when the way was all right, and it was a six days' good drive when the way was all wrong.

"The first hotel west of Michigan City was some ten miles out; the second was Bennett's, about ten miles farther; the third was Denis Hard's; the fourth was the Widow Bangs's; the fifth, Maur's, at the Calumet, and the sixth, Mr. Merrick's, about half way between the Calumet and Chicago.

"The beach of the lake took the main travel in 1835-36. There was another route by the way of Bailey Town and Thornton, which the undersigned drove over in February, 1837.

"Chicago, in October, 1834, at the time of the Indian payment, was a lively place. There were two hotels. The Sauganash, which was situated near the junction of Lake and South Water streets, was kept by Mark Beaubien, who said he 'kept tavern like h—l'; and a log tavern on the north side of Lake Street. The South Branch was crossed by a bridge, and if I recollect right the bridge was covered with poles or puncheons [as split logs were called] instead of planks. Besides the log cabin on the West Side, kept by Mr. Stiles, there was a blacksmith shop. That was all. On the North Side were John Kinzie's house and a few others.

A similar bridge crossed the river about half way between the forks of the river and the lake. On the South Side there was one house south of Lake Street, which was situated on the west side of Clark Street just south of Lake. On Lake and South Water streets was the main village. Lake Street boasted one brick block, which belonged to either "Yankee" Hubbard, "Horse" Hubbard or "Indian" Hubbard, I forget which. It was quite an imposing structure. Clybourne's butcher shop was not far from it. Jim Kinzie's store, P. F. W. Peek's store, Harmon's and Loomis's were all on South Water Street.

"It seems to me that the Indians were paid on the north side of the river nearly opposite Fort Dearborn. I had occasion to go west as far as the crossing of the Desplaines River. Between Stiles's log tavern on the west side of the South Branch and the tavern at the crossing of the Desplaines River, there was not a vestige of civilization except the wagon tracks, and it seemed to me the dreariest road I ever traveled. The prairie mud of the North Branch was drier.

"Of all the men in the early days that I was acquainted with, including Clybourne, John H., Robert and James Kinzie, Crouch, Rossiton Darwin, Stiles and G. S. Hubbard, the latter alone survives.

"Chicago is a wonderful city, and has been lucky in having far-seeing citizens who gave her a start on the road to prosperity. While the early settlers of Milwaukee were wrangling about which side of the river should be most prosperous, the citizens of Chicago acted as a unit to promote the interest of the whole.* But while Chicago is the most enterprising, Milwaukee is the most beautiful city on the American continent; and let those who doubt the truth of this assertion come and see for themselves.

"In the spring of 1835, the only houses between Chicago and Milwaukee were those at Grosse Point, Sunderland's, west of Waukegan, and Jack Vicaw's, at Skunk Grove. Myself and party, on our way to Milwaukee, staid the first night at Ouilmette's, near Grosse Point; the second night at Sunderland's, and the third night we camped in the Milwaukee woods. From Sunderland's to Milwaukee woods we followed an Indian trail. We found a bridge over Root River and Oak Creek, but the Kinnekenick we forded.

"The above short sketch will give you a slight idea of the country from 1831 to 1835. While Chicago was well known to the people of the United States in 1831, I never heard the word Milwaukee spoken till 1834. When on my way from Milwaukee to Coldwater, Mich., in May, 1835, I heard the leading citizen of Michigan City discussing the merits of Milwaukee and the Territory of Wisconsin. The conclusion they came to was that it was a cold, bleak, inhospitable country which would never be inhabited except by Indians and Indian traders. Little did they imagine that in less than half a century the territory west of Lake Michigan would contain white inhabitants enough to constitute an empire."

POSTAL AFFAIRS.—The post-office in 1833, John S. C. Hogan, Postmaster, was kept in a small log building near the corner of Lake and South Water streets. At that time there was but one Eastern mail per week, to and from Niles, Mich., which was carried on horseback. The building was twenty by forty-five feet in size, was partitioned off so as to serve as a post-office on one side, and as the store of Brewster, Hogan & Co., on the other. John Bates, Jr., still living in Chicago, was the Assistant Postmaster, and assorted the mails, delivered the letters, and was the executive factotum of the place. John L. Wilson also became an assistant in the summer of 1834. John Bates, Deputy Postmaster at that time, in an interview October 31, 1883, said:

"The Eastern mail was carried once a week, on horseback, by a little, short, stocky Frenchman, whom we called Louis. In 1834 or 1835 the pony mail express of Louis was abolished, and John S. Trowbridge took the contract to haul the mail between Niles and Michigan in a wagon. Trowbridge afterward 'went West,' and at one time was Mayor of Little Rock, Ark. The receipts of the post-office in 1833 were from \$15 to \$20 per quarter. I never knew him by any other name. The mail came once a week; speculation set in, and the village began to grow. During the last of it the mail used to weigh thirty to forty pounds, and was so big that Louis had to walk, and the bags on the horse's back spread out like wings, making the pony look like some kind of a queer bird. Chicago was then the central office for a sweep of a hundred miles around. People came thirty or forty miles to inquire for a letter, and, if they did not get one, they looked sick. Men from the 'Yankee settlement' on Hickory Creek, Naperville, and other outside places used to come up, with a list of all the names

* Chicago had her sectional wrangles, too. See "Bridges."

in their place, and take the mail in a lump. Letter postage was then twenty-five cents on each letter, and sometimes we had to trust for the postage."*

JOHN STEPHEN COATS HOGAN was of Irish parentage, and was born in New York City February 6, 1805. His father died while he was quite young, leaving his mother with five small children and little wherewith to support them. The subject of this sketch was, at the age of seven years, adopted by Mrs. Coats, a friend of his mother, he having been named after her only son, who had died. He remained with his foster mother until old enough to go into business for himself, and finally came to Chicago as early as 1830. Mr. Hogan here engaged in mercantile pursuits, being at one time sutler of the Fort Dearborn store, and,

John S. C. Hogan

in 1831, receiving the appointment of Postmaster. He also acted as a Lieutenant of volunteers during the Black Hawk War. Mr. Hogan's popularity and easy companionship served to elect him to the office of Alderman, when the city was incorporated in 1837. During this year, his wife, formerly Anna Maria, the eldest daughter of Jonathan N. Bailey (Postmaster), died in Chicago, leaving one son, John C. Hogan, long afterward a resident of California. Alderman Hogan's qualities, which made him successful as a local politician, did not serve to add greatly to his material possessions, and the hard times of 1837 found him with his means somewhat extended, and left him in an embarrassed condition. In March, 1848, Mr. Hogan married Mary S., the widow of John Ainslie, advocate, late of Edinburgh, Scotland. One child, Mary, subsequently the wife of Professor T. S. Noble, of Cincinnati, was born to them. During the gold fever Mr. Hogan crossed the plains and resided in Sacramento for over a year. Afterwards he lived in St. Louis and Memphis, as business man, editor and politician, returning to Boonville, Mo., in the summer of 1868. Here he died on December 2, of that year. Mr. Hogan was a kind, cheerful,

* The first mention of mail communication with Chicago and the East, after the destruction of the fort, was in 1817-18, but details are not given. There appears in Keating's "Narrative of an Expedition to the Source of St. Peter's River," published in London, 1825—(copy in Chicago Historical Collection)—the next allusion. It is there stated that in May, 1825, the exploring party met the expressman sent from Chicago for letters, at Fort Wayne, and detained him as a guide. His name was Bemis. A courier was at that time dispatched from Fort Dearborn to Fort Wayne once a month, for letters.

well-informed gentleman, and one of Chicago's most popular, enterprising and respected early citizens.

In July, 1834, the office was removed to the corner of Franklin and South Water streets, where it remained until after the expiration of Hogan's term of office. While there, the Assistant Postmaster was Thomas Watkins, who has been embalmed in history by John Wentworth and other early chroniclers, as the hero of a celebrated wedding, he being the groom, and the bride being Therese Laframboise, daughter of Joseph Laframboise, a chief of the Pottawatomies, well known as an early resident of Chicago.*

No further changes in location of the office were made until Mr. Hogan was superseded by Sydney Abell, who was appointed Postmaster March 3, 1837. In the following June the office was removed to the east side

S Abell

of Clark Street, in Bigelow's building, between Lake and South Water streets, north of the alley. The removal was announced in the American, June 3, 1837: "The post-office has been removed to Clark Street, directly opposite this office. This change will be satisfactory to a large number of our citizens." During Mr. Abell's administration the post-office was again removed to the Saloon Building. Under Mr. Abell the assistants were Ralph M. P. Abell and Charles Robert Starkweather. The latter remained in the Chicago postal service until 1860.

William Stuart, then the editor of the American, succeeded Abell as Postmaster, July 10, 1841. He removed the office to the west side of Clark Street, near the Sherman House—No. 50. Subsequently it was removed, in 1853-54, to the east side of Clark Street. Hart L. Stewart succeeded to the Postmastership, being

Hart L. Stewart

appointed by President Tyler, April 25, 1845. The succeeding Postmasters up to 1858 were: Richard L.

* John Wentworth, in his historic lecture, delivered before the Sunday Lecture Society, May 7, 1876, gives the following account of Mr. Watkins: "I remember attending the wedding of one of Laframboise's daughters. She was married to a clerk in the post-office, and is now the wife of Madore B. Beaubien, heretofore alluded to in this lecture. The clerk was the one who delivered letters, and of course well known to our citizens, and was remarkably popular. He went to the printing office and had fifty cards of invitation struck off. But when people went for their letters they politely hinted that they expected a card of invitation to the wedding. So he was compelled to go to the printing office and have fifty more struck off. These did not last long and he had too more. Then he said that tickets were of no use and everybody might come; and about everybody did come. The ceremony was performed by Rev. Isaac W. Hallam, pastor of the St. James' Episcopal Church of this city. Everything was high-toned, well worthy of an Indian chief's daughter. The house was of no particular use, as it was full and surrounded with people. This wedding made a strong impression on my mind, as it was the first time I ever saw the Indian war-dance. Some of the guests not only had their tomahawks and scalping knives, bows and arrows, but a few of them had real scalps which they pretended they had taken in the various Indian wars. Their faces were decorated with all the favorite pictures of the Indians. And some of our young white men and ladies played the part of the Indian so well that it was difficult to distinguish them from the real ones." Of Mr. Watkins, (Hurlbut, p. 539.) says: "Mr. Watkins was noted somewhat as an amateur musician, for he was an accomplished player on the guitar. He was familiar with the French language and quite likely also with the Indian dialect, common hereabout in those days, for he won the hand of the daughter of the Pottawatomie chief, Joseph Laframboise, and she became Mrs. Watkins. It was understood that the marriage was not a happy one, for it came to be dissolved. Whither and when went Mr. Watkins we cannot tell; yet the late wife of that gentleman and daughter of Chief Joseph, went to Kansas, it is understood, where she is living as third wife of Chief Madore B. Beaubien." Watkins went West with his wife when the tribe removed. The trouble in his family relations occurred after leaving Chicago.

Wilson, appointed by Taylor, April 23, 1849; George W. Dole, appointed by Fillmore, March 22, 1853;

Richard L Wilson

Isaac Cook, appointed by Fillmore, March 22, 1855; William Price, appointed March 18, 1857. Isaac Cook was

George W. Dole

re-appointed by Buchanan, March 9, 1858. During the first administration of Isaac Cook the office was removed

Isaac Cook

to the ground floor of Nos. 84 and 86 Dearborn Street, where it remained until the completion of the

William Price

Government building in 1855, when it was again removed to that structure.

The mail facilities were rapidly increased after the beginning of 1835. On September 19, 1835, Postmaster Hogan's advertisement of arrival and departure of mails was as follows:

"Eastern, via Detroit, every other day.

Southwestern, via Ottawa, arrives Mondays, Wednesdays and Thursdays; departs Tuesdays, Thursdays and Sundays.

Western, via Dixon's Ferry, arrives Wednesdays and Thursdays; departs Tuesdays and Saturdays.

Southern, via Vincennes, arrives Wednesday, departs Thursday.

Northern, via Green Bay, arrives Monday; departs Tuesday."

The notice was supplemented with the following:

"Postage must be paid for when taken. No more credit. Written orders required for the delivery of letters to friends."

From the files of the American it appears that stage-coaches were used on the principal mail routes in the beginning of 1836—probably not much earlier. At that time appear for the first time advertisements of mail-coaches as follows:

"Mail coaches between Detroit and Chicago will leave the New York House, Chicago, for Detroit, every other day, commencing Monday, January 11, at 5 A. M. Persons wishing seats will apply F. Tuttle, agent, or to Mr. Johnson at the New York House.

January 23, an opposition line was advertised—"Winter arrangements from Chicago to Detroit in three and one-half days." D. G. Jones, J. W. Brown, W. E. Boardman, R. A. Forsyth, O. Saltmarsh, and S. Spafford were the proprietors of the rival line.

August 20, F. F. Tuttle, stage agent, advertised that he had removed to Dearborn Street, one door north of

the Tremont, and that stages would leave for Detroit daily, at 4 A. M.; and for Galena at 4 A. M., on Tuesdays, Fridays, and Sundays. He also advertised, August 6, what appears to be a newly established line, to Peoria, Ottawa and Juliet.*

The following new mail routes were advertised October 29, 1836:

"From Joliet to Chicago, thirty-six miles and back, once a week: To leave Joliet every Monday at 5 A. M., and to arrive in Chicago by 7 P. M.; to leave Chicago every Sunday at 5 A. M., and arrive at Joliet the same day at 7 P. M.

"From Chicago to Galena, via Meachanis Grove, Elgin, Squaw Prairie, on the Kishwaka, and Midway on Rock River, 150 miles and back, once a week. Leave Chicago Monday at 6 A. M., and arrive at Galena every Friday by 6 P. M. Leave Galena Monday at 6 A. M., and arrive at Chicago Friday at 6 P. M.

"From Chicago to George McClure's, on Fox River, and back. To leave Chicago every Wednesday at 6 A. M., and arrive McClure's Thursday by 6 P. M. Leave McClure's every Friday at 6 A. M., and arrive at Chicago Saturday at 6 P. M."

June 11, 1836, post-office business of Chicago was advertised as follows:

"The post-office is open on week days from 7 A. M. to 8 P. M.; Sundays, from 8 to 9 A. M., 12 to 1, and 5 to 6 P. M. If mail arrives on Sundays this office will be open one and one-half hours after the mail has been distributed. Postage for letters must be paid when taken; hereafter no credit will be given. Any person calling for letters for friends must bring a written order.

"Mails arrive and depart as follows:

"Eastern, via Detroit, every other day.

"Southwestern, via Ottawa, arrives Mondays and Thursdays; departs Tuesdays and Saturdays.

"Western, via Dixon's Ferry, arrives Sundays and Thursdays, at 6 P. M.; departs Tuesdays and Saturdays, at 4 A. M.

"Southern, via Danville, arrives Thursdays; departs Saturdays at 4 P. M.

"Northern, via Green Bay, arrives Mondays at 8 P. M.; departs Tuesdays at 4 A. M."

POST-ROADS had been established, although they could hardly be said to be built, on all the stage-routes advertised. The northern, or Green Bay road, as it was called, was surveyed in 1833, stakes driven and trees blazed along the line. It was somewhat improved as far as Milwaukee in 1834, by laying rough puncheon and log bridges over the unfordable creeks and streams, and cutting out the trees to the width of two rods. No grading was done for years afterward, and as late as 1836 it was only a blazed road through the forest between Milwaukee and Green Bay. The western and southern roads were less rough, as they ran out over more open prairie. In dry weather they were fine well-beaten tracks, but in the spring and fall they became long black ditches of mud, through which the hapless travelers floundered most wearily and laboriously to their places of destination.

WHARFING PRIVILEGES.—December 4, 1833, the wharfing privileges of the town were defined at a meeting of the Trustees. Owners of lots fronting on the river, where a street ran down to the river, might use all but eighty feet of the street (Water Street then being on the bank of the river) for wharfage purposes only, on the payment of fifteen dollars per year. Stipulations were made whereby the town corporation might subsequently purchase any wharfage improvements made on lots leased from the town. Several owners of water-lots and others paid the required fifteen dollars during the succeeding month. Wharfing privileges were advertised in the Chicago American of November 15, 1835, to be sold, under a lease from the town, for 999 years, by auction, to the highest bidder. Thus the water or wharfage lots came to have a peculiar, if not fictitious value, during the speculative period. These privileges

* Joliet was first Mount Joliet, later named Juliet by one of the early proprietors, and still later changed to the old name of Joliet, in honor of the early explorer.

were sold on time, and as the notes were many of them never paid, the "privileges" went out by default in the general crash of 1837. On March 24, 1837, the Town Trustees voted to extend the time of payment on wharfing lots, "until further notice."

FIRE DEPARTMENT.—Up to September, 1835, there was nothing like an organized Fire Department, or a fire engine in the town. Prior to that time buckets put out any fire that occurred, or it burned itself out. Fire Wardens were appointed September 25, 1834, under the provisions of an ordinance passed by the Board of Town Trustees, which also defined the limits of the fire wards of the town.

The laws and ordinances were at that time quite strict, although not always enforced to the letter. No person was allowed "to endanger the public safety by pushing a red-hot stove-pipe through the board wall," and they were forbidden to carry "open-coals of fire through the streets except in a covered fire-proof vessel." The latter provision, in the absence of matches, was deemed a hardship not endurable and was repealed soon after its passage. The duty of the Wardens was defined in an ordinance adopted October, 1834. The Warden in whose ward a fire occurred was to be, for the time being, Chief Warden, and the other Wardens his assistants. They had power to summons any one to aid in the extinguishment of a fire, whether it be "to enter the ranks or lines formed for passing water or buckets, or to aid in promoting such other means as, to said wardens, may seem calculated to carry into effect the object of this ordinance." Citizens or other bystanders refusing to obey the summons of the Wardens when a fire was raging were subject to a fine of five dollars. It was incumbent on all citizens owning or occupying stores or dwellings to keep a fire bucket within their building, in a conspicuous place, and, on an alarm of fire, to promptly repair to the scene of the conflagration, equipped for service with the said bucket. This was the Fire Department and fire organization of 1834.

By the close of 1835 the town had grown to such proportions, nearly all built of combustible material, that more elaborate provisions were deemed necessary. On November 4, 1835, the Fire Department was re-organized under a most formidable ordinance. Like a most celebrated and historic confession of religious faith, it contains thirty-nine articles. In October, 1835, a hook and ladder company was formed, and the city equipped it with four ladders, four axes, and four saws. December 1, 1835, the first fire engine was purchased of Hubbard & Co. for \$894.38, and the fire company, known as Engine Company No. 1, was organized.

CEMETERIES.—No stated place for the burial of the dead was located until 1835. In early times each interment was made on or near the residence of the friends of the deceased. Later, the settlements about the forks had a common acre on the west side of the North Branch, where the dead were buried. The dead from the fort were buried generally on the north side of the main river east of Kinzie's old house, near the lake shore. There John Kinzie was buried in 1828.* The soldiers who died of cholera in 1832 were interred near the northwest corner of Lake Street and Wabash Avenue. Early interments were made all along the borders of the two branches, wherever settlements had been made and deaths had occurred. In later days the forgotten graves were often opened in excavating, which has led to much speculation as to whom the disinterred remains belonged. As late as March 12, 1849, the Daily Demo-

* His remains were taken to the North Side Cemetery in 1835, and again, in 1842, to Lincoln Park Cemetery, where they now rest.

crat records the fact that during the spring freshet, "two coffins were seen floating down the river, supposed to have been from some small burying-ground on the North Branch in the Wabansia addition." August 15, 1835, the town surveyor was ordered to lay out two tracts suitable for cemetery purposes; sixteen acres on the South Side and ten acres north of the river. These two lots, the first established cemeteries in Chicago, were located as early as August 26; on the North Side, near Chicago Avenue, east of Clark Street; on the South Side near the lake shore and what is now Twenty-third Street. These lots were fenced in September, and burials forbidden elsewhere within the town limits.

TOWN CREDIT.—The Town Trustees, in the administration of affairs were as a rule economical, even to the verge of parsimony. They did not repair either bridges or streets unless the Collector and Treasurer showed sufficient funds on hand. They voted to borrow sixty dollars—the first authorized loan on the faith of Chicago—October 2, 1834. The records do not show whether or not the money was borrowed. In 1836 there were general complaints in the newspapers as to the horrid condition of the streets, sidewalks, and bridges, and a move, endorsed by large and strong petitions from the citizens, was made for more bridges. One was specially wanted across the South Branch on Randolph Street, and a reward of twenty-five dollars was offered for the best plan for a draw-bridge at that point—the length of the draw to be forty feet. To John Brown, on February 10, 1836, was awarded the prize. February 13, "all the bridges were declared to be in an unsafe condition, and no funds on hand." In fact the town had outgrown its fiscal facilities. It had, during the past year, besides ordinary expenses, incurred some extraordinary liabilities. It had built an engine house costing \$200, paid \$29.63 for an outfit for a hose company, and agreed to pay in two yearly installments, for a fire-engine, \$894.38. It was evident that if further improvements were to be made to keep pace with the rapid strides of the town in population, that the day for trying the credit of the corporation had arrived. July 28, 1836, the Trustees resolved "that it is necessary and expedient for this board to effect a loan not exceeding \$50,000, to be expended in public improvements," and the president was instructed to apply to the State bank (Chicago branch) then the only bank in the town, for a loan of \$25,000 redeemable in two years. August 5, notice was received from the bank refusing the application. Whether the refusal showed most the poor credit of the town or the weak condition of the bank is a question. William B. Ogden was thereupon made fiscal agent for the town, to negotiate the loan, which he succeeded in doing; and credit being established the improvements began. That the town began to spend the money without any unnecessary delay appears from the records one week later, August 13, at which time Mr. Ogden was ordered to purchase two more fire-engines, and a new street was projected, from the town to the fort.

GROWTH OF THE TOWN.—The town, although in its last days it came to grief from the collapse of the speculative bubble, had a most marvelous growth, which was not entirely attributable to speculation. Its population increased in a ratio from year to year never known before in any country. In 1833 there were, perhaps, 200 *bona fide* inhabitants; in the spring and early summer of 1834 it had come to be a village of 800, and, during the fall its population was estimated at from 1,600 to 2,000. In 1835 a school census showed a population of 3,279; and in 1836 varied from 3,500 to

4,000. July 1, 1837, the first census was taken after its organization under its city charter, and was as follows:

WARDS.	Under 5 years of age.		Over 5, under 21 years.		21 and over.		Persons of Color.	
	Male.	Fem.	Male.	Fem.	Male.	Fem.	Male.	Fem.
First	57	59	109	135	444	218	10	7

 Males and females over 5 and under 21 years..... 831
 Males and females under 5 years of age..... 513

Total white..... 3,989
 Total black..... 77

Total..... 4,066
 Sailors belonging to vessels owned here..... 104

Grand total..... 4,170

There were within the city limits at that time; 4 warehouses, 398 dwellings, 29 dry-goods stores, 5 hardware stores, 3 drug stores, 19 grocery and provision stores, 10 taverns, 26 groceries, 17 lawyers' offices, and 5 churches.

In material growth the town had made no less remarkable progress. It is shown in the following excerpts from the American. On August 15, 1835, that paper said:

"There are now upward of fifty business houses, four large forwarding-houses, eight taverns, two printing offices, two book-stores, one steam saw-mill, one brewery, one furnace (just going up), and twenty-five mechanics' shops of all kinds."

Under the head of "Improvements in 1836," December 10, is the following:

"Most prominent are Steele's block of four-story brick stores on Lake Street; Harmon and Loomis' block of four-story brick stores on Water Street; the Episcopal Church of brick, which, when finished, will vie with many of the best East; some ten to twenty two to four-story brick stores in various parts of the town; about twenty large two to three-story wooden buildings; a steam flouring mill; and from one hundred to one hundred and fifty dwellings."

And on November 19, 1836:

"Chicago has 100 merchants, its many mechanics, its well employed laborers, its 30 lawyers, its 20 physicians; its stately blocks constantly rising to view, and yet, a great scarcity of money."

October 3, 1835, in reply to an inquiry as to the time for getting goods from the Atlantic cities to Chicago, the American replied, "from twenty to thirty days."

As appears from the American December 31, 1836, Chicago had become a distributing point for the whole settled country. An advertisement of unclaimed packages at Hubbard & Co.'s express office, showed the following destinations: Joliet; Elkhart, Ind.; Goshen; Mishawaka; Independence, Iowa; Terra Haute, Ind.; Galena; Clinton, Iowa; Michigan City; Danville, Milwaukee, Constantine, Otsego, Portage, Warsaw, Three Rivers, Schoolcraft, Wisconsin Territory; Frankfort, Iowa.

July 9, 1836, the American said:

"A store on Lake Street, which sold for \$8,000, rents for \$1,000. Many goods are sold to interior merchants at wholesale at good profit. The average cost of transportation from the East is \$1.50 per 100 pounds. The time on the way is generally about

one month. But the brig 'Indiana' recently arrived, bringing goods from New York in 17½ days. Store stands are generally in good demand. Sales are generally made for cash."

On December 31, 1836:

"The merchandise sold last year in Chicago would amount to \$1,000,000, and the trade is constantly increasing. The goods are bought principally in New York, and are shipped to this point via Hudson River, Erie Canal, and the lakes."

The prices current November 19, 1836, were given as follows:

"Flour, \$12 per bbl.; pork, \$25 to \$28 per bbl. and scarce; hogs, 10 to 12½; butter, good eastern, 38 to 50, very scarce; beef, fresh, sold by butchers, 8 cents per pound; corn meal, none in market; potatoes, 50 to 75 cents per bu."

The result of the first Presidential election, at which the residents of modern Chicago voted, November, 1836, showed 354 votes thrown for Harrison and Granger (Whig), and 348 votes for Van Buren and Johnson (Democrat)—a total vote of 702. This, according to the modern accepted ratio of voters to population—one to five—would give a resident population at that time of 3,510.

The strait cut was made so far that vessels could enter the river in 1834. The establishment of Chicago as a port of importance dates from then. The American, December 10, 1836, said:

"The first arrival this season was on the 18th of April. From then to December 1 the arrivals comprised 49 steamers, 10 ships, 26 brigs, 363 schooners, and 8 sloops. The 88 ships, steamers, etc., will average 250 tons; the 363 schooners, 100 tons each. In 1835 there were 250 arrivals—tonnage, 22,500; in 1833, four arrivals—tonnage, 700."

The canal project, which had been a project only for many years, was now an apparent certainty. Favorable legislation, both State and National, had placed the enterprise on a footing which warranted its ultimate success. The building of the canal had been actually begun. July 4, 1836, had witnessed the first breaking of ground at the Chicago terminus, and despite the shadow of hard times, the work was going on. The State was inaugurating a system of internal improvements which it was hoped would avert any serious calamity, and a strong faith was prevalent in the town that all would be well.

The city of Chicago superseded the town organization under a charter granted by the State Legislature, March 4, 1837, under which the citizens organized, by the election of city officials on the first Tuesday of the following May, which was the birthday of the most wonderful city that has ever appeared upon the earth.

The new city was built mostly along the south side of the main river. Lake Street was well built up from State Street to Franklin. The streets running north and south from the river were well sprinkled with buildings. A court-house, a jail, and an engine-house adorned the present square. There were seven hotels and seven churches. No church had a steeple, and, as one approached the city either from the lake, or south, out of the oak woods, no structure rose above the height of the chimneys of the town. The city lay low down on the marshy ground, many feet below the present grade, and was, altogether, to the sight of the new-comer, a most unsightly place to live, or even die in. One good bridge over the main river at Dearborn Street and a dangerous and dilapidated log structure over the South Branch, were the only means of escape to the open country on the north and west. The speculation which had been rampant for the past three years was gone, but a grim determination showed in the lineaments of each true Chicagoan's face, which meant that although fortunes had fled Chicago was still left.

Richard Jones Hamilton

RICHARD JONES HAMILTON, the first Circuit Court Clerk of Cook County, was born near Danville, Mercer Co., Ky., August 21, 1799. His parents were James L. and Sarah Jones Hamilton. James L. Hamilton was born in England, but his parents emigrated when he was only a year old, and settled on the Savannah River, on the South Carolina side. At the age of twenty he went northward into Kentucky and, having married Miss Sarah Jones, settled near Danville. In 1803 he removed to Shelby County, where Richard J. spent his childhood and youth and received his early education, chiefly at the Shelbyville Academy, then in charge of instructors of some eminence, among others the Rev. Mr. Gray, and the Rev. Mr. Cameron. At the age of seventeen young Hamilton was placed as clerk in a store at Shelbyville, and afterward in a similar position at Jefferson, devoting some fifteen months to these pursuits, which seem not to have possessed much attraction for him. In 1818, he went to Louisville, where he studied law until 1820, when he removed to Jonesboro, Union Co., Ill., in company with his friend A. E. Field. They owned a horse jointly, made the journey in alternate stages of riding and walking, and sold the animal which constituted their sole property, on their arrival. Here Hamilton taught school for some time, while continuing his law studies at intervals under the guidance of Charles Dunn, who was admitted to the Bar August 31, 1820, afterwards achieved distinction in the State, and still later became Chief Justice of Wisconsin Territory. The Second General Assembly of Illinois, at its session of 1820-21, established the old State Bank. At the first meeting of directors at Vandalia, a branch at Brownsville, Jackson County, was authorized, and Mr. Hamilton was appointed its cashier. In 1822, he was married to Miss Diana W. Buckner, of Jefferson County, Ky., but then residing near Jackson, Cape Girardeau Co., Mo. She was a daughter of Colonel Nicholas Buckner, of the historic Kentucky family of that name. Mr. Hamilton was confirmed as Justice of the Peace for Jackson County by the General Assembly January 14, 1826; and was admitted to the Bar March 31, 1827. In 1829 he is on record as one of the itinerant lawyers who rode the circuit of the southern counties, deriving a meager and precarious subsistence from the few and scattered clients who fell to his share in those early days of Illinois, when the cases were rare and fees were small. The Brownsville branch bank closed its career about this time, Mr. Hamilton retaining to the last, as far as known, his position as cashier, the duties of

which, especially in those later years, were neither exhaustive nor remunerative. He now turned his eyes toward northern Illinois, and was elected by the General Assembly as the first Probate Judge of the new county of Cook, January 29, 1831. His friend Judge Young, of the Fifth Judicial District, appointed him Clerk of Cook County Circuit Court, and Governor Reynolds, who was also specially interested in his welfare, commissioned him as notary public and Recorder. He arrived in Chicago early in March, being present at the organization of the county on the 8th; and removed his family from Brownsville in August. He had at this time two children, Richard N. and Sarah A. He was appointed commissioner of school lands in Cook County, in October; and the school fund remained in his charge until 1840. As an illustration of the backward condition of Chicago at the period of his arrival he used to refer to the limited mail facilities, saying that special care was used in reading the older papers first, that they might be properly ad-

MRS. ELLEN (HAMILTON) KEENON.

vised of events in the great world in the order of their occurrence. He resided with his family in Fort Dearborn for some time after their arrival, and there his second daughter, Ellen,* was born, in the spring of 1832. In that year he became Clerk of the County Commissioners Court, which office he held until 1837. Besides discharging the duties of his several offices, which, it is easy to see were more numerous than remunerative, he took an active part in temperance work, and in 1832 co-operated energetically with Colonel Owen, the Indian Agent, and other influential men, in keeping the Indians of this section from joining the hostile bands in the disturbances of that year. He was the first of thirty-seven volunteers who on May 2, 1832, "promised obedience to Captain Gholson Kercheval and Lieutenants George W. Dole and John S. Hogan, as commanders of the militia of Chicago, until all apprehension of danger from the Indians may have subsided." Later in the month, with Captain Jesse B. Brown and Joseph Naper and twenty-five mounted men, he scoured the Fox River country to carry succor and encouragement to the scattered settlements. Unfortunately they did not arrive at Indian Creek until the 22d, the day after the massacre, where they found thirteen dead bodies of the families of Davis, Hall, and Pettigrew, terribly mangled. The company escorted some of the flying refugees to Chicago, where a much larger number had sought refuge as early as the 10th.

* This daughter, now Mrs. E. H. Keenon, still a resident of the city, is stated to be the first child of purely American parents born in Chicago. She is certainly the oldest person living, born in the city.

Colonel* Hamilton was one of the commissaries to supply them with food and shelter; and was indefatigable in his efforts in their behalf.† He moved his family into the old agency-house about this time, the fort becoming crowded with refugees, and being occupied after July by the troops newly arrived for the Black Hawk War. In the spring of 1833, in conjunction with Colonel Owen, he employed John Watkins to teach a small school, near the old Indian agency-house, where he still resided, but which he soon abandoned for his own house, erected on what is now Michigan Street, between Cass and Rush streets, where he lived for nineteen years. He was one of the voters for the incorporation of Chicago August 5, and for its first board of trustees five days later. He was a subscribing witness to the Indian treaty of September 26, and his claim of \$500 was allowed.‡ In October as commissioner of school lands, in compliance with a petition which had "received ninety-five signatures, embracing most of the principal citizens of the town," he authorized the sale of the Chicago school section. In virtue of his office of Probate Judge he married John Bates, Jr., to Miss Harriet E. Brown, of Springfield, Mass., November 13. He was one of the original subscribers to the first Chicago newspaper, which appeared November 26. In December he advertised \$10,000 to loan, which was probably part of the net cash proceeds of the sale of school lands, two months before. In 1834 he was president of the board of school trustees, and labored with his usual energy in the interest of the early schools of Chicago. In conjunction with Hiram Pearsons he laid out 420 acres at Canalport, adjoining what is now Bridgeport, which, judging from the first preliminary survey, they supposed would be the actual terminus of the Illinois & Michigan Canal, but which the final survey passed by, and left comparatively worthless. In this year too he lost his wife, soon after the birth of her fourth child, who was named Diana B., in memory of her. Mrs. Hamilton was highly esteemed as an intelligent and zealous Christian lady, whose active interest was of recognized service to the Methodist Church of which she was a member, in its early struggles in Chicago. At this period he became largely interested in outside lands, also being probably the most extensive owner in the county and the whole Northwest. These were often purchased on joint account with non-residents, and perhaps at times with no larger interest on his part than a commission, for the transaction of the business, but usually made and recorded in his name for greater convenience in transfer and negotiation. He was married, March 25, 1835, to Miss Harriette L. Hubbard, sister of Henry G. Hubbard, of Chicago. Soon after, he became a candidate for election as Recorder, and published the following card in answer to certain cavilings about his many offices: "In 1831 I received the appointment of Clerk of Circuit Court, Judge of Probate and notary public. I then moved to Chicago, and found that no one wanted these offices. Soon after the gentleman holding the position of Clerk of the County Commissioners Court resigned, and I was appointed. The office of school commissioner was then held by Colonel T. J. V. Owen, who resigned. Up to September, 1834, that office has yielded me in all about \$200; notary fees have not exceeded \$50; probate fees have not amounted to more than \$50. I have not realized from all offices, including that of Recorder, during four years more than \$1,500. The whole number of instruments recorded, including a large number of Receiver's certificates for lands purchased at late sales, have been to July 1, 1835, about 1,300, at about seventy cents each." He was elected Recorder by 602 votes at the August election, and removed his office toward the end of October to the new building recently erected by the county on the public square. In December he became a director in the Chicago branch of the new State bank. The offices he held at this time were, Judge of Probate, Clerk of Circuit Court, Clerk of Commissioners Court, Recorder of Deeds, notary public, school commissioner, and bank commissioner. He continued to discharge the various duties of these offices, with the help of deputies and clerks in the more exacting ones, as the volume of business in each required. As Clerk of the Circuit Court, his first deputy was Henry Moore in 1834, succeeded by J. Young Scammon in 1835. Solomon Will, who had married the sister of his first wife, became his deputy in 1836, and was succeeded by George Manierre in 1837, who gave way to Thomas Hoyne in 1839. All these were lawyers, and nearly all young men, who served as his assistants until the professional business of each successively required his entire attention. Mr. Hamilton was elected a member of the new board of school inspectors for the city of Chicago May 12, 1837, in recognition of his services and interest in the early schools, and of his position as school commissioner. Pinched by the financial pressure of 1837, he weathered the storm without becoming bankrupt or failing to meet his pecuni-

* He had been identified with the militia of the State for some years, and his title of Colonel seems to have been one of courtesy, due to that fact.

† Beggs's "West and Northwest," p. 105.

‡ The claims allowed against, and paid in behalf of, the Indians aggregated \$175,000.

ary obligations. He lost an infant daughter, named Pauline, August 21, 1839, having lost another of the same name about two years before. Besides these, his only child by the second Mrs. Hamilton was Henry E., who is now (1883) familiarly known as Colonel Hamilton, as it were, by right of inheritance. In 1840 he was nominated Alderman of the Sixth Ward by the Democrats, and elected; and was chosen delegate to the State Democratic convention at Springfield the same year. He appears frequently in the contemporary notices of the Press as an active member in the public meetings of the period, on all questions of social, political, educational and religious interest; and was frequently chosen on committees of all sorts for the furtherance of public business, being apparently one of that worthy class of men who suffer themselves to be overburdened rather than shirk the responsibilities of active citizenship. He was prominent in the meeting held in memory of President Harrison in 1841, and was no less active in the reception given the same year to Governor Carlin in Chicago. Meanwhile the time had arrived for relinquishing some of his offices, the increased duties of which had now made them too unwieldy even for superintendence by one individual. In 1835 he had ceased to be Judge of Probate; in 1837 Clerk of Commissioners Court, and in 1839 Recorder of Deeds. In 1840 William H. Brown was elected School Agent, an office which entitled him to the care of the school funds of Chicago, which therefore passed out of the charge of Mr. Hamilton with the close of that year. He still retained his position as commissioner of school lands for the county, for he is found to have advertised Section 16, Township 41, for sale August 9, 1841, as such. On the re-organization of the judicial system in 1841 Cook fell within the circuit of Associate Justice Theophilus W. Smith, who appointed his son-in-law, Henry G. Hubbard, to replace Hamilton, who resumed the practice of law, his clerkship terminating March 12, 1841. February 7, 1842, he lost his second wife, who left but one surviving child, Henry E., already mentioned; and in 1843 he married Mrs. Priscilla P. Tuley, of Louisville, Ky., the mother of the present Judge Tuley of Chicago. He formed a law partnership with J. S. Chamberlaine, which was dissolved in 1845. In 1846 his firm was Hamilton & Moore, Francis C. Moore being the junior member. In 1847 Mr. Hamilton was again alone and so remained until he retired from practice in 1850. In 1849 he was elected Alderman of the Ninth Ward, upon the resignation of Samuel McKay, and in 1850 and 1851 as his own successor. He was Presidential Elector on the Democratic ticket in 1852, and removed the same year to a new residence he had erected on the West Side, "on Madison, west of Bull's Head," afterward the southwest corner of Hoyne. He devoted the remaining years of his life largely to beautifying this place, which was then regarded as a suburban home. In 1856 he was candidate for Lieutenant-Governor on the Democratic ticket, which was defeated by the new Republican party. Towards the close of 1860, he became a member of the South Presbyterian Church, the denomination with which he had most intercourse in early life, and to which his wife belonged. He died of paralysis, December 26, 1860, in his sixty-second year, leaving a widow and five children, all settled in life. He was buried with Masonic honors on the 28th, having been long connected with the order, and high in its counsels and honors. He was an officer in the first grand lodge of Illinois. At a memorial meeting of the Bar held on the 28th Judge Morris said: "There is scarcely a lawyer here now but owes much in his early life to Colonel Hamilton. He took every young practitioner who came here by the hand, and helped him to business and practice." Judge Wilson said: "Mr. Hamilton was a gentleman remarkable in many particulars; of very high notions as a gentleman, and of unusual sympathies." Judge Manierre reported a series of resolutions, from which the following sentiments are extracted: "His death has removed one of our most distinguished citizens and pioneers, and the oldest member of the legal fraternity; we take pleasure in bearing testimony to the high character of the deceased as a man and a citizen. His life was a career of active usefulness. He was foremost in all public enterprises for the advancement and prosperity of the community. We remember with pleasure the social and genial qualities of our deceased brother. He was a zealous friend; his heart was warm and his hand ready. In losing him the community have lost one of its most valuable citizens, and this Bar one of its most respected members." Twenty years after death he was characterized by Hon. Thomas Hoyne as being "of a generous and open nature, a good citizen, a kind man, and one of those men who were then shaping the destinies of the State."

AUGUSTINE DEODAT TAYLOR was born April 28, 1796, in Hartford, Conn. His father's name was Solomon Taylor, and he likewise was born in Connecticut. His mother's maiden name was Mary Hartshorn. She was of Welsh descent, but was born in Connecticut. Solomon and Mrs. Taylor lived in Hartford until he died in 1813, and Mrs. Taylor continued to live there until 1833, when the subject of this sketch came to Chicago. Augustine D. Taylor received his early education in the common schools and

grammar schools of Hartford and afterward he attended two private schools. He was then apprenticed to the trade of his father, that of carpenter and builder. When the Presbyterian Church pulled down their frame church building to replace it with a brick one, Mr. Taylor bought the old one, and converted it into a new Catholic church. This was his first experience in church building. In 1802, his father went to the West Indies, where he remained one and a half years. During this time young Taylor, who was the oldest of eight children, took charge of the family, which lived then with his grandfather Hartshorn, at Columbia, Conn. In 1813, his father was killed by falling from a building he was erecting, and young Taylor once more became head of the family, which he remained until attaining his majority in April, 1817. In August, 1814, he was drafted and served three months in the Hartford Artillery, under Captain Nathan Johnson, in New London and Saybrook. On June 7, he was married to Miss Mary Gillet, when the support of the mother devolved upon the younger children. In the fall of 1818, he went to North Carolina, and lived in Fayetteville until the next July, during which time he built a Presbyterian

A. D. Taylor

church. In the winter of 1819-20 he worked at his trade in Wilmington, N. C., when his health failed, and in the spring he returned home, and for two years was under the care of a physician. In 1825, he contracted to build the chapel for Washington College, an Episcopal institution, and he also built the bishop's house. Continuing in the carpenter business, he bought the old Episcopal church at Hartford, moved it on to another lot, put a basement under it and fitted it up for a Catholic church. This was the first Catholic church erected by him. Soon after this, in 1833, he came to Chicago, arriving here in June, and in a short time thereafter, commenced work on St. Mary's Church building, completing it in the fall of the same year. Under Rev. Maurice de St. Pallas, he commenced, and under Bishop Quarter he completed the carpenter work on St. Mary's new brick church, the first cathedral in Chicago, standing near the corner of Wabash Avenue and Madison Street. He then in 1837 built St. James' (Episcopal) church, and in 1846 built St. Patrick's, St. Peter's and St. Joseph's churches, the first on the West Side for the Irish Catholics, the others on the South and North sides respectively, for the German Catholics. In the fall of this year he built a Presbyterian church at Naperville, Ill., which was the last church erected by him.

Since that time Mr. Taylor has occupied himself with his regular trade, accumulating property, and filling such municipal offices as he has been called upon to fill. He was one of the original trustees of the town of Chicago, was an Alderman two years, and has been City Collector and County Assessor. In 1859 he built the house 398 West Taylor Street, in which he has resided since 1860.

Upon arriving in Chicago he first lodged in a loft on South Water Street, he then removed to Wolf Point, next to Lake Street, then to Desplaines Street, and finally in 1860 to West Taylor Street.

Mr. Taylor belonged to the Presbyterian Church in Hartford, Conn., over which presided Parson Strong, who was succeeded by Rev. Joel Hawes. During the latter's pastorate Mr. Taylor became acquainted with Bishop Cheverus, the first Catholic bishop of Boston, Mass., and was by him converted to Catholicism, notwithstanding the efforts and protests of Rev. Mr. Hawes, and the good deacons of the Presbyterian Church, all of whom thought him insane.

Mr. Taylor's first wife died in 1844, and in March, 1845, he was married to Mary Grovan, who died July 16, 1879. By the first marriage he had five children, two of whom died in Massachusetts, and the other three he brought with him to Chicago. But one of these, Lewis D. Taylor, is now living. By the second wife he had ten children, three of whom are living—James A., who was elected in the fall of 1882 to the Illinois Legislature; Harvey A., who is a clerk in the office of O. R. Keith & Co.; and Frank J., who is a student in Watertown College, Wisconsin.

JOHN BATES was born in Fishkill, Dutchess Co., N. Y., December 28, 1803. His father, John, was a farmer and was born on the same farm. His mother, Catharine McBride, was a native of Poughkeepsie County, N. Y. He was bred a farmer, and received such early educational advantages as the public schools of the vicinity afforded. His tastes were averse to farming, and, at the age of sixteen he went to New York City, where he entered a grocery house on Hanover Square. He remained with this house until 1832. At that time the scourge of Asiatic cholera, which visited the city in its most virulent and fatal form, completely broke up the business of the house where he had been so long employed.

He accordingly determined to emigrate to the Far West. He arrived in Chicago, coming by the land route from Detroit. He came in company with one William Winston, an English officer some fifty years of age, who remained in Chicago some three years thereafter speculating in land. Bates first stopped at Charles Taylor's hotel on the West Side (the old Wolf Point tavern, formerly kept by Elijah Wentworth). He was at the time of his arrival twenty-nine years of age, and unmarried. He was first employed

John Bates Jr.

by J. S. C. Hogan as Deputy Postmaster. He performed the duties of this office for three years, during which time he was the executive head so far as doing all the work—sorting mails, delivering letters, and answering the questions of anxious inquirers for mail matter—could make him so. His reminiscences of these early times appear elsewhere in this volume. He obtained a license as an auctioneer soon after his arrival, and, in addition to his duties as Deputy Postmaster, did a fair share of auction business during

the early years. He sold the school section, in lots and blocks in Oct. 1833, Colonel Hamilton being the commissioner, and E. W. Casey, secretary. After severing his connection with the post-office in 1835-36, he continued his business as auctioneer uninterruptedly until 1871, at which time he quit active business. During the period of his active business life, in 1852, he took the census of the city. He was, also, enrolling officer for the draft of 1863-64, under Provost Marshal James. He built his first house in Chicago, on what is now Canal Street, in the fall of 1833. The lumber for the structure was purchased in Green Bay, at a cost of \$900.

He married, November 13, 1833, Miss Harriet E. Gould. Colonel R. J. Hamilton, Justice of the Peace, performed the marriage ceremony. She was a native of Massachusetts, and was at the time of her marriage a member of the family of Lemuel Brown, having come West with them.

The young couple moved into the new house, which, owing to its close vicinity to the cabin of Chief Jo. Laframboise, did not prove a pleasant residence for the new and timid wife, owing to the frequent and unceremonious visits of the chief's many Indian friends at all times of the day and night. Mr. Bates accordingly sold out to Jo. and his wife, at a round profit, and his house was the last and most aristocratic home of Chief Jo. and his family, where they lived until their emigration to the West in 1836.

The couple have had born to them four children, two of whom survive:

Ellen, born July 24, 1834, died in infancy; Helen, born August 7, 1836; John L., born August 12, 1839; and Charlotte, born July 10, 1844, died November 10, 1844.

Mr. and Mrs. Bates are, as early settlers, the oldest couple in Chicago. They are still, after having celebrated the fiftieth anniversary of their wedding, in good health, and with promise of many earthly years of life. Preceding the celebration of their golden wedding, the Chicago Times thus alluded to the aged and respected couple:

"On Tuesday next, November 13, Mr. and Mrs. John Bates, two of the oldest settlers of Chicago, and perhaps the oldest couple now living who were married in what is now the city of Chicago, but which was a mere hamlet at the time of their marriage, will celebrate the golden anniversary of their wedding, and propose to receive calls from their friends in honor of the event at the Douglas House, corner of Cottage Grove Avenue and Thirty-fifth Street, between the hours of four and nine o'clock in the evening. Their marriage was announced in the first number of the Chicago Democrat, which was published November 26, 1833, and of which the following is a copy:

"Married—In this village, on Sunday, the 13th inst., by the Hon. R. J. Hamilton, Mr. John Bates, Jr., of New York, and Miss Harriet E. Brown, of Springfield, Mass."

"Mr. Bates was born in Fishkill, N. Y., December 28, 1803, and Mrs. Bates was born in Charlestown, Mass., February 12, 1810. Both are yet vigorous and in excellent health, and enjoy life seemingly as well as they did when the nuptials were celebrated, fifty years ago. The maiden name of Mrs. Bates was Harriet Gould, but at a very early age she was taken by Lemuel Brown and wife to bring up, and was given their name. Mr. Brown is still living in Chicago, and will be ninety-nine years old December 14. He came to Chicago in 1833, and was a blacksmith at the Government works at what was then known as the harbor of Chicago, which was certainly a very crude affair in comparison with the protection that is now afforded the shipping interests of the great lakes at this port."

The occasion was graced by a large assemblage of old settlers and newer friends, who testified by their presence and many substantial testimonials to the esteem and affection in which this aged couple are held.

GOVERNMENT APPOINTEES

POST-OFFICE AND POSTMASTER.

The first Postmaster of Chicago was an Indian trader named Jonathan N. Bailey, who was appointed March 31, 1831, and opened the post-office in a log house occupied as a store by John Stephen Coates Hogan, near the present corner of Lake and South Water streets. Mr. Hogan, subsequently the son-in-law of Mr. Bailey, assisted the appointee in the performance of the merely nominal duties of his office; gradually assuming its entire control, and was himself appointed Postmaster, November 2, 1832, after Mr. Bailey's departure, with his family, for St. Louis. In

1833. John Bates, Jr. became Deputy Postmaster; he having made an arrangement with Mr. Hogan, whereby the store was partitioned off into two parts, one of which was occupied by John Bates and the receiving, mailing, registering and delivering department of the Chicago post-office, and the other portion by Brewster, Hogan & Co. Some idea may be formed of the limited accommodations that were ample for the post-office of those days, when it is stated that the store only occupied an area of forty-five by twenty feet. In the summer of 1834, John L. Wilson became second assistant Postmaster, and about July of this year, the post-office was moved to near the corner of Franklin and South Water streets, at which place Thomas Watkins was the assistant, in which position he gave so much satisfaction that he remained in office until some time after the appointment of Mr. Abell. Thomas Watkins married the daughter of the Indian chief Joseph Laframboise during the winter of 1836-37.

March 3, 1837, Sidney Abell was appointed Postmaster, and in May of this year, to accommodate the large increase in the business, the post-office was removed to Bigelow's Building on Clark, between Lake and South Water streets, where it remained for some time and then removed to the noted Saloon Building. During the tenure of office of Sidney Abell, Ralph M. P. Abell was an assistant, but Charles Robert Starkweather was the principal assistant, and remained in that office until 1860. July 10, 1841, William Stuart—erroneously spelt Stewart in official records—the editor of the American, was appointed Postmaster, and by him the post-office was removed to the west side of Clark street, on the south side of the alley, next to the Sherman House, and is numbered 50 Clark Street in the directories of this period, and specified as being at that number in the several directories until 1852-53; when it is designated as "upon Clark, between Randolph and Lake," and in the directory of 1853-54, as on the east side of Clark Street, between Lake and Randolph. Hence the precise date of its removal from the west, to the east, side of Clark Street is undeterminable. Prior to such removal Hart L. Stewart* was nominated by

* H. L. Stewart was the first Presidential appointee, his precursors were appointed by the Postmaster-General.

President Tyler for the postmastership at Chicago on April 25, 1845, and the nomination was confirmed February 3, 1846. On April 23, 1849, Richard L. Wilson was appointed by President Taylor, and on September 25, 1850, George W. Dole was appointed to the postmastership by President Fillmore. On March 22, 1853, Isaac Cook—now of the Imperial Wine Company of St. Louis—was made Postmaster, and Charles S. Dole was his assistant, and in 1854 H. A. Wynkoop became the Assistant Postmaster. During the administration of Isaac Cook, the office was removed to the ground floor of Nos. 84 and 86 Dearborn Street, opposite the Masonic Temple. The next incumbent was William Price, appointed March 18, 1857, who retained this position until the re-appointment of Isaac Cook by Mr. Buchanan, March 9, 1858. In the spring of 1855, the Government building on Monroe Street was commenced, and to the advocacy of John Wentworth, while a member of Congress in 1853, the appropriation for its erection is due; until its occupancy, the post-office occupied the ground floor of Nos. 84 to 92 Dearborn Street.*

The earliest authentic account of mail communication with Chicago is in Keating's "Narrative of an Expedition to the Source of St. Peter's River," † etc., wherein it is stated that in May, 1823, at Fort Wayne, the exploring party met "the express sent from the latter place (Chicago) for letters, and detained him as guide. His name was Bemis." A courier appears to have been dispatched once a month from Fort Dearborn with, and for, mail matter, which service was presumptively maintained until the establishment of a regular mail with an office at Chicago, thus John Wentworth states that in 1830 ‡ Elijah Wentworth, Jr., carried the mails; and, in 1832, Doctor Harmon amputated the feet of a half-breed Canadian, § which were frozen while carrying mail from Green Bay to Chicago. In 1832 a weekly mail was established, which was carried on horseback, and in 1833 the means of transportation were improved by the employment of a one- and then a two-horse wagon. ¶ In 1834 a four-horse stage-line was established, that carried a semi-weekly mail. In 1835 the service was increased to tri-weekly, and in 1837 a daily Eastern mail was established. In the Chicago American of 1839 the arrival and departure of the mails at the post-office in Chicago are thus advertised:

ARRIVAL.

<i>Eastern.</i> Daily, by 5 P. M.	<i>Ottawa.</i> Via Juliet, daily (Sundays excepted) by 10 P. M.
<i>Galena.</i> Via Belvidere and Apple River, Wednesdays and Fridays by 6 P. M.	<i>Dixon's Ferry.</i> Once a week, Wednesdays by 5 P. M.
<i>Milwaukee.</i> Wednesday, Friday and Sunday by 9 P. M.	<i>McClure's Grove.</i> Saturdays by 6 P. M.

* A list of the Chicago Postmasters and their date of appointment was supplied by C. M. Walker, Chief Clerk, Post-Office Department, Washington.
 † London: Printed for George B. Whittaker, Ave-Maria Lane, 1825, Chicago Historical Society.
 ‡ Early Chicago, 2d paper, Fergus's Historical Series.
 § Vide chapter on Medical History.
 ¶ Dr. John Taylor Temple had the mail contract in 1833, from Chicago to Green Bay.

DEPARTURE.

<p><i>Eastern.</i> Daily at 3 A. M. <i>Galena.</i> Tuesday and Thursday at 6 A. M. <i>Milwaukee.</i> Monday, Wednesday and Friday at 4 A. M.</p>	<p><i>Ottawa.</i> Via Juliet, daily (Sundays excepted) at 2 A. M. <i>Dixon's Ferry.</i> Thursdays at 6 A. M. <i>McClure's Grove.</i> Wednesdays at 6 A. M.</p>
--	--

An advertisement of August 24, 1839, has the additional information that the Milwaukee mail travels via Southport and Racine; that there is a tri-weekly mail to and from Buffalo Grove via Geneva and Oregon City, and a weekly mail to and from Iroquois, via Thornton. Of the mail facilities of these days the following item from the Cleveland Herald and Gazette, published in the Daily American of May 31, 1839, will furnish an accurate idea:

"Distance in these days should be measured in hours not miles. Newspapers are now received here from New York in three and a half days—distance, six hundred and sixty miles. From this to Chicago one may travel in a good steamboat in four days—distance by the route about eight hundred miles; or to Green Bay in three days—distance, six hundred and thirty miles. Or the traveler may go from this place to Detroit in eight or ten hours, and thence by railroad, stages and steamboat to Chicago, and by stage to Galena, going the whole distance in six days. New York to Cleveland, distance 84 hours; Cleveland to Chicago, by lake, 96 hours; Cleveland to Green Bay, 72 hours; Cleveland to Detroit, 10 hours; Detroit to Galena, 144 hours."

With the vast augmentation of population the postal service and facilities increased* until, in 1857, there were fifty-four clerks employed; \$103,000 per quarter received for postage on letters received for distribution; amount received for stamps, \$13,060; average number of mails made up daily, two thousand; and two hundred and fifty bags of newspapers were daily received and distributed, containing an average of seven hundred papers each. The first advertised letter-list was published in the Chicago Democrat of January 7, 1834, and contained one letter addressed to Erastus Bowen; the second, two letters, for Philo Carpenter and P. Pruyn & Company, and the first extended list is as follows, published in the Democrat of January 7, 1834, showing letters remaining in the post-office January 1, 1834:

Eliphalet Atkins,	O. P. Catran,
J. W. Anderson,	D. P. Clevinger,
Constant Abbott,	E. W. Center,
William G. Austin,	George H. Clark,
Almond Axtell,	Alfred Clarke,
Myron K. Bronson,	Lamira and Laura Carrier,

UNITED STATES LAND-OFFICE.*

The location of the first United States Land-Office in Chicago was on the east side of Lake Street, between Clark and Dearborn streets; in 1839 the Register had his office in the Saloon Building and the Receiver had his office at 175 Lake Street, and in 1845 the Register and Receiver had their offices at 100 and 92 Lake streets respectively; while, in 1848, the Register occupied an office at 107 Lake Street, and the Receiver, an office at the old Bank Buildings; the office of the Registers and Receivers were usually at their private offices, but the directories fail to give specific information on the matter.

The Registers of Chicago are as follows: James Whitlock, appointed March 4, 1835; James M. Strode, commissioned July 7, 1836, to date from August 10, 1836, to the end of the next session of the Senate, and re-commissioned December 30, 1836, to date the 27th of that month; and again commissioned January 4, 1841, to date the preceding 27th of December; John H.

* Hon. N. C. McFarland, commissioner of the General Land-Office, furnished a large portion of the data elaborated in this topic, and James William Brockway, Recorder of county, also extended many courtesies to the writers in the work.

Kinzie, appointed September 27, 1841, re-appointed January 1, 1842; Eli B. Williams, appointed November 14, 1844, until the end of the next session of the Senate; William M. Jackson, commissioned March 17, 1845, to date to the 14th; Alfred Cowles, commissioned March 16, to date the 14th, 1849; James Long, commissioned March 25 to date the 21st, 1853; Richard J. Hamilton, commissioned March 7 to date the 3d, 1855; the bond of R. J. Hamilton was declined by the authorities at Washington and thereupon Samuel Ashton was temporarily appointed March 29, 1855, he continuing in office until the discontinuance of the Land-Office in Chicago, on June 9, 1855. The bond exacted from each Register was ten thousand dollars. The Receivers were E. D. Taylor, appointed March 4, 1835, at which time the bond was thirty thousand dollars; but in May, 1836, in consequence of the augmenting of the receipts of the office a new bond, in the penal sum of one hundred thousand dollars, was required. Eli S. Prescott, appointed March 4, 1839, gave bond in one hundred thousand dollars, but the act of July 4, 1840, augmented the amount of the bond to one hundred and fifty thousand dollars. September 27, 1841, Edward H. Haddock was appointed; re-appointed January 13, 1842, to date January 11; George L. Ward was appointed May 8, 1843, and the penalty being reduced from one hundred and fifty thousand, to seventy-five thousand dollars by the President, upon July 24, 1843, a new bond was filed in the latter amount; Mr. Ward was re-appointed March 12, to date the 8th, 1844; Thomas Dyer succeeding him on April 7, 1845, he, under the act of August 6, 1846, being required to give a treasury bond of one hundred and fifty thousand dol-

lars; John H. Kinzie, appointed temporarily April 12, 1849; to qualify for the office, Mr. Kinzie had to file one bond for seventy-five thousand dollars and one treasury bond for one hundred and fifty thousand dollars, which he did, and upon September 2, 1850, was re-appointed; the only bond at this time required, appears to have been one of one hundred thousand dollars to the commissioner of the General Land-Office. March 28, 1853, Eli B. Williams was appointed, and shortly after his appointment was designated disbursing agent; the bond for the faithful performance of his duties was five thousand dollars. Eli B. Williams was the last of the Receivers. May 29, 1835, when public sales commenced there were of public lands subject to entry at Chicago, 3,626,536 acres.

CHICAGO IN 1845, FROM THE WEST.

ANNALS OF CHICAGO.

MAY 2, 1837, TO JANUARY 1, 1858.

The history of Chicago since the time of its incorporation as a city (1837) has, as appears in the subsequent pages of this volume, been more elaborately treated under topical heads than before. It seems, nevertheless, appropriate, in the face of some possible repetitions, to continue, as supplemental to the continuous history which precedes, a semi-historic account, up to the close of the period treated in this volume, which shall mention the leading events in chronological order, as well as such minor occurrences, as, being irrelevant to the topics treated, might otherwise have escaped history altogether. It is believed that the few repetitions involved may be more than counterbalanced in the mind of the reader by the aid it may render in generalizing what follows.

1837. May 2, Chicago became a city, and held its first municipal election.* Hard times was at the time the general topic of conversation and the burden of the newspaper editorials, and the city was obliged to start on its infantile career by the discouraging step of running in debt. June 1 the Council ordered the issue of \$5,000 in city scrip, in denominations of \$1, \$2 and \$3. The city, thus early driven by necessity, did what most governments have, under stress of circumstances, done before and since—made its first issue of paper money, which bore interest at the rate of one per cent per month, and was receivable for taxes.

An account of a justifiable homicide in Chicago, which it quoted from its exchange, the Chicago Democrat, appeared in the Milwaukee Sentinel, August 1, 1837. It read as follows:

"On the night of the 7th of June, considerable damage was done to the working utensils and property about the canal, in consequence of a reduction of wages from \$26 to \$22. From appearances, about dark, on the contract of Mr. Dodson, a repetition of injuries of the night before was feared. Consequently, the overseers made preparation for the protection of the property. About the time of Mr. Dodson's retiring for the night, frequent whistling was heard. Soon after—some say about 10 o'clock—a heavy pounding was heard upon the pumps with a heavy sledge for the purpose of destroying them, as it afterward appeared. A young brother of Mr. Dodson's, with commendable fortitude, went to the works and demanded of an Irishman, 'Why he was there?' His reply was, 'I will let you know,' and sprang at young Dodson with the sledge he was using. Instantly a whistle was given by another who lay secreted near by, which was returned by a vast number. Mr. Dodson immediately took his one recourse, and with a musket ball shot dead the assailant. The loss of this man has, we understand, restored quiet along the whole line." "At the last term of the Municipal Court, the grand jury refused to find any indictment against Mr. Dodson. We have delayed speaking of this event until after Mr. Dodson had his trial."

June 29 or 30, Daniel Webster visited Chicago. It was a season of great rejoicing and excitement

* See Corporate History.

among the Whigs. He was escorted through and about the city by an immense cavalcade of citizens. Old settlers still tell of his triumphant entry, and of his speech of masterly eloquence and power, delivered from the Waubansia stone, within the garrison yard, and of a ball given in his honor at the Lake House. George T. Curtis, in his life of Webster, Vol. 1, p. 564, gives July 1 as the date of Webster's leaving the town. Chicago was the western terminus of his tour. From thence he returned, via Michigan City, to Toledo.

September 10, Lake Michigan was nearly two feet higher than its ordinary level at that period of the year.

December, very late in the month, the post-office at Chicago was made a distributing office. The announcement appeared in the Milwaukee Sentinel, January 2, 1838.*

1838. The year opened gloomily enough, and there was throughout but little to brighten the prospect except in the eyes of the most sanguine and hopeful, of which class Chicago happily had at that time, as she has always had, more than her full quota. Hard times still held its unrelenting grip upon the country, and especially upon this far-off western town, where the reaction of the speculative craze which had centered there was as extreme as had been the prevailing excitement of former times. Solomon Wills, in a manuscript

letter now on file in the collections of the Chicago Historical Society, wrote, under date of May 13, 1838: "The times here are rather growing worse instead of better. There is little money in circulation, and that which is good is scarce enough. Of course there is no property selling, unless by the Sheriff, and then it goes for little." Drought and a serious epidemic in the fall added to the disheartening annals of the year.

During the summer months, from June to September, the work on the canal, the most considerable source of revenue to the paralyzed town, was nearly suspended for a time by a most mysterious disease which broke out among the laborers.† It was in its symptoms sufficiently like the Asiatic cholera to give to the community an added dread of it. It seized its victims suddenly, and carried them off, if it did not abate, in a few hours. Many of the dead were brought from where they died to the vicinity of Chicago, and dead bodies lay along the road near Bridgeport, unburied, for days, so fearful were the inhabitants that the infection might be conveyed to the city.

A drought set in, in July, and from the 19th of that month until November, no rain fell. The streams dried up, the springs gave only brackish and impure water, and from the low lands and partially dried up marshes and bogs a fever-breeding miasma floated unseen to

* No copies of Chicago newspapers of this date are accessible. Few files of that date, most of which were owned by private citizens, escaped the ravages of the great fire of 1871.

† See Medical History.

pollute the air. A malarious fever broke out, which, in its ravages, brought the great grief of death's bereavement to many a sorrowing household in Chicago.

In seasons of irremediable and continuous suffering, when hope grows weaker day by day, waiting for the longed-for rest that does not come, the only great recuperative and antidotal remedy for besetting sorrows vouchsafed to man, asserts itself in his innate and irrepressible desire for recreation. So it has always happened that the healthy mind or the healthy-minded community, though traveling hand in hand with sorrow, has longingly looked askance to discover some diversion by the wayside. To all men, and in all times, pious or sacrilegious, Christian or heathen, wise or foolish, this desire has come as a specific for the ills they were forced to bear—the pious to their mosques, cathedrals, or silent altars of prayer; the foolish to their cups; and the wise to whatever gives most harmlessly surcease from present sorrow.

So it happened that Chicago successfully established her first permanent theater during this trying, sickly and generally unprosperous year. Messrs. Isherwood & McKenzie, who had had a successful opening season in 1837, at a hall in the old Sauganash Hotel, determined to establish a permanent theater in the town. Accordingly, during the spring months they fitted up as a theater the upper story of the wooden building on the west side of Dearborn Street, between Lake and South Water streets, which had been built in 1834 by John Bates, and during the intervening years occupied by him and other auctioneers as a place of business. As a resort (the most noted in Chicago), it was christened "the Rialto," by Dr. Egan, and became a theater in May. The first season, despite the gloomy times, was fairly successful. October 18, the citizens gave to Mr. Alexander McKenzie a most substantial benefit, which showed not only the high appreciation in which he was held as a citizen, but proved a financial success as well. It was the most notable society event of the year.*

During 1839 the business depression continued, and was increased by the general collapse of the Michigan banks,† which at that time had a large circulation in the city. In March, all Michigan money became uncurrent. The Chicago Democrat, as quoted in the Milwaukee Sentinel, March 12, said:

"All Michigan money is uncurrent, and the rumor that the Michigan State Bank has suspended payment has been confirmed. The Detroit Post represents the Michigan State Bank as perfectly solvent, but compelled by a constant demand for specie to take advantage of that clause in its charter which allows suspensions for thirty days. For the good of this community, which holds a large portion of its bills, we hope that the Post is correct."

April 11, it was announced in the Daily American that the canal commissioners had decided to issue from \$150,000 to \$200,000 in scrip; on the 9th of May, the same paper announced that the scrip (termed in the article "canal money") was in general circulation.

The first daily issue of the American was published April 9, it being the first daily paper issued in the city.‡

April 5, a religious revival, which continued to increase in interest during the spring months, was first noticed in the newspapers. At that date twenty-nine

persons, some of whom had not before been noted for their piety, joined the Presbyterian Church. The fruits of the revival brought large accessions to the other Protestant churches of the city. Rev. Isaac Taylor Hinton publicly baptized by immersion many converts. The work of the revival was general.*

During the spring the conflict between the vessel interests and the citizens, as to the obstructions to navigation caused by the bridges culminated.† In the Daily American of April 18, the editor sought to pour oil on the troubled waters as follows:

"We hope that our captains and sailors who have occasion to sail their vessels above the ferry crossing will be as careful as circumstances will allow, to avoid cutting or breaking the ropes. The rope of the State Street ferry was cut the other day by an axe. Our vessel owners demanded the taking down of the bridge, and it has been done. The citizens have been compelled to resort to a ferry for the absolute wants of the city, and with as much reference as possible to the accommodation of vessels. Let there be mutual forbearance on this vexed subject, and all will go smooth enough and fast enough on this highway of the country."

June 20, James H. Collins having, at the public sale, bid off a part of the homestead of J. B. Beaubien,‡ the friends of the Colonel held an indignation meeting at the Saloon Building, at which resolutions were passed denouncing Collins and requesting Judge Burchard, the Government agent in charge of the sale, to cancel the sale and again offer the lots, thereby giving Beaubien's friends an opportunity to bid against Collins, in his behalf. The request was not granted.

October 23, the State Bank of Illinois, with its numerous branches, suspended specie payments.§

October 27, the most disastrous fire occurred that had ever visited Chicago. It commenced on Lake Street, near Dearborn. The Tremont House and seventeen other buildings were burned, and one blown up to arrest the progress of the conflagration. The total loss was estimated at from \$60,000 to \$75,000. Many of the leading merchants were burned out. The statement of individual losses and insurance, which appeared in the Daily American, throws some light on the magnitude of the stocks carried by the "merchant princes" of Chicago in those early days. It was as follows:

"S. W. Goss, dry goods and groceries, carried an insurance of \$5,000 on his stock; Eddy & Co., hardware, no insurance, loss between \$2,000 and \$3,000; Ayers & Iliff, dry goods and groceries, no insurance, loss \$6,000; David Hatch, hardware, stock valued at \$8,000 to \$9,000, insured for \$8,000; O. H. Thompson, principally dry goods, insurance, \$800. The Messrs. Couch lost on the contents of the Tremont House \$3,000 to \$4,000. The highest insurance on any building destroyed was \$2,800; the lowest, \$850."

November 28, Thanksgiving Day was observed for the first time in Chicago. So stated the Daily American of the 29th.

November 30, occurred the first incipient duel. In a recent issue of the Democrat had appeared the following editorial: "It is an indisputable fact that every one of these persons who have been filching money unjustly in the shape of Indian claims are opposed to the administration, and use such illgotten gains to injure it in every possible manner. It is due to the people that all

‡ See Beaubien Claim in the preceding pages.

§ See History of Banking.

Indian treaties for the last ten years should be overhauled in the most thorough manner, and the thousand knaveries practiced by men thereby made nabobs, fully exposed to the public gaze." Captain (afterwards General) David Hunter, believing that the above was intended as a reflection upon him, came into the office of the Democrat, and then and there demanded satisfaction of John Wentworth, the editor, and laying two pistols upon the table, offered him his choice of weapons. Mr. Wentworth, as would any good and discreet citizen, peremptorily declined to fight a duel, but made the *amende honorable* by the publication of a letter in a subsequent issue, disclaiming any reference to Captain Hunter in the article which had raised the chivalrous officer's ire. The Captain soon after published a card in which he stated that the pistols were not loaded, and the affair thus ended without the spilling of gore. The pistols afterward came into the possession of Mr. Wentworth, who frequently, in his subsequent editorial career, alluded to them, when indulging in early reminiscences.

During the latter part of December, and through the following January, small-pox prevailed in a mild form in the city. It placed a quite serious embargo on country trade, as farmers feared to visit the town. The Board of Health publicly requested the vaccination of all persons hitherto unvaccinated, and ordered all physicians, under penalty of a heavy fine, to make immediate returns of all patients suffering from the disease.

1840.—The people had become used to hard times, and had adjusted themselves quite comfortably to their conditions at the opening of the new year, which will be remembered as a year of most hilarious political excitement, pending the presidential campaign, which resulted in the total defeat of the Democratic party, and the election of General Harrison as President, by an overwhelming popular vote. The Whigs of Chicago, although in a minority, made the campaign most enthusiastically noisy and lively.

January 10, the new Market House at the corner of Lake and State streets was completed. The cost of the building was stated to be \$1,500. The stalls were rented for three years at a gross aggregate rental of \$2,460.

February 10, the City Council changed the method of voting, ordering that at the next election and thereafter the votes should be given on a written or printed ballot, instead of, as heretofore *viva voce*. At the municipal election held in the following March the first ballots were handed to the judges at a city election.

May 1, John Stone was indicted for the murder of Mrs. Lucretia Thompson.* He was tried, convicted, and on Friday, July 10, hung until he was dead; the place of execution being some three miles south of the court-house, near the lake shore, between what was then the terminus of State Street, and the Cottage Grove Cattle Yards. This was the first public execution in Chicago. The following account of it appeared in the American of July 17:

"The execution took place about a quarter after three. The prisoner ascended the scaffold, dressed in a white loose gown, and with a white cap upon his head, as is usual in such cases. He evinced much firmness upon the gallows, under the circumstances, and in the presence of the spectators (among whom we regretted to see women enjoying the sight) he persisted to the last in the assertion of his innocence—which declaration was publicly made in his behalf by the Sheriff, together with his acknowledgment, as requested, of the satisfactory manner in which he was treated in the jail. He stated that he was never in the house of Mrs. Thompson, and did not see her on the day she was murdered. He also stated that he believed two individuals were engaged in the murder, but on being asked if he knew them, he replied in sub-

*See Early History and History of the Bench and Bar.

stance, that if he did he would swing before their blood should be upon him. The Rev. Mr. Hallam, Isaac R. Gavin, Sheriff, and Messrs. Davis and Lowe, deputies, attended the prisoner on the scaffold. The Sheriff seemed particularly affected, even unto tears. After the beautiful, solemn and impressive services of the Episcopal Church for such occasions had been performed by Mr. Hallam, and the appropriate admonitions bestowed, the death warrant was read by Mr. Lowe, the knot adjusted, the cap pulled over the face of the prisoner, and he was swung into another world. After he was hung until he was 'dead, dead,' a wagon containing a coffin received his body, which was delivered to Drs. Boone and Dyer, pursuant to the order of the court, for dissection. It is supposed that he died from strangulation and that his neck was not broken in the fall, which was about four feet. * * * His aged parents, also brothers and sisters, resided at the East. He lived with his parents until he was twenty-one. While a mail-carrier in Canada he was convicted, under the name of John Standish, of being an accomplice in the robbery and murder of a Government officer. He was retained as State's evidence, ran away into the State of New York, was convicted of stealing horses and wagon, and was sent to the Auburn State Prison, under the name of John Dan. He left Auburn about two years ago, and has been in this part of the country about a year, obtaining a livelihood as a wood-chopper. He was born in Ireland, had been twenty-one years in this country, and called himself in his thirty-fourth year."

May 25, the Whig delegation from Cook County to the Tippecanoe convention, to be held at Springfield, left the city. It made a most formidable procession. It was headed with a big schooner on wheels, drawn by oxen. The history of the journey and return have appeared in print so often as to have become trite.

July 17, the spirit of Know-nothingism was quite prematurely evinced by the publication in the Daily Democrat of a petition to the United States Senate, and House of Representatives, praying Congress to deprive all foreigners not already enfranchised of the right of suffrage in the United States. It was signed by two hundred and fifty residents of Cook County, a majority of whom lived in Chicago. In politics the petitioners were about equally divided, but, as a record, it proved a stumbling block in the way of success to many a political aspirant who stood in need of the foreign vote of Chicago, for years after, if his name was to be found among the signers to the petition.

November 3 was the day of the presidential election. Great excitement prevailed, and much disorder at the polling places. Many arrests were made—some being of prominent citizens—for creating disturbance at the polls.

1841.—In January a large meeting of citizens was held at the Saloon Building, at which resolutions were passed and a memorial to the Legislature signed, requesting that body to raise sufficient money by direct taxation to pay the interest of the State debt, and thereby restore its impaired credit.

February 19, the first organized meeting of the Young Men's Association was held. The organization was in answer to an appeal which appeared in the newspapers a short time previous, in which this statement was made: "There is no place of general resort where a leisure hour can be passed in quiet and rational amusement."

Through the month of April there was a great temperance revival. Within three days one hundred and forty signed a pledge of total abstinence.

May 14, day of national fasting and prayer, appointed by President Tyler in commemoration of the decease of President Harrison. In the morning appropriate religious services were held; in the afternoon George A. O. Beaumont delivered an eulogy on the deceased at the Presbyterian Church.

November 29, public dinner given to Governor Thomas Carlin to express feelings of gratitude as his interest in the Illinois & Michigan Canal.

1842.—The year was uneventful. Business had, however, begun to improve, and the city again showed an increase in population. Building was again carried on with something of the old time vigor. The Federal bankrupt law went into operation in March, and a commissioner was appointed for Chicago during that month. From the opening of the court to September 1 upward of forty Chicago merchants availed themselves of the law, thus wiping out all old scores preparatory to beginning anew. The temperance excitement which had begun the year before continued throughout the year.

January 1, the first Washingtonian Society was organized.

May 24, the works of the Chicago Hydraulic Company were in successful operation. The Daily American in making the announcement said: "Pure water is now flowing in abundance through our streets."

June 29, the progress and success of the Washingtonian Temperance movement was chronicled in the Daily American in the publication of a report to the Common Council, in which it was stated that "from the present tone of feeling, the profit arising from the sale of spirituous liquors is so much curtailed that those engaged in the trade are hardly able to meet their current expenses."

July 3, Martin Van Buren, the first ex-President who had ever visited Chicago, was given a public reception. The Mayor, B. W. Raymond, delivered the welcoming speech, to which the distinguished guest replied at length.

October 19, the first considerable movement in favor of the mother country was made by the Irish citizens of Chicago by the organization of an association for promoting the repeal of the union between England and Ireland. The officers were: President, William B. Egan; Vice-President, L. C. Kerchival; Recording Secretary, C. McDonall; Corresponding Secretary, H. L. Rucker; Treasurer, James Carney; Repeal Wardens, John McHale, Michael O'Brien, R. R. Seely, Patrick Ballingall, George Brady, John Jackson, H. Cunningham, C. H. Chapman, Maurice Prendeville and Hugh Young.

1843.—The year, like the two preceding, was uneventful. The spring was late, farmers not being able to sow until April 21, and quite insignificant events were sufficient to create excitement.

January 1, there was a public debate between John C. Bennett and a Mormon preacher named Anderson at "Chapman's Building." The question debated was: "Are the Mormon revelations to be accepted as truth?" The building was crowded, and for weeks after the question was one of excited discussion in the community and through the columns of the newspapers.

February witnessed perhaps the lowest price in Chicago for wheat and corn at which it ever sold in the Chicago market freely: white winter wheat, thirty-eight cents per bushel; corn, eighteen cents per bushel. A reaction set in before the opening of navigation, at which time prices had advanced to fifty-six cents per bushel for wheat, and thirty-eight cents per bushel for corn.

February 3, at the public land sale 600,000 acres were offered, of which only 70,000 acres were sold, bringing \$86,215.36. The failure of the sale was attributed to the scarcity of money, specie being then demanded by the Government as payment.

March 17, occurred the first celebration of St. Patrick's Day. Papers speak of the Chicago Band and the Montgomery Guards turning out for the first time on

that occasion in full uniform; also of a mass in honor of the Saint at the Catholic church, and of the orderly conduct of those in the procession.

March 30, snow fell to a considerable depth. The Democrat of the 31st said: "Judging from appearances, we shall be fortunate if navigation opens by the 1st of May. Immense quantities of snow have fallen throughout all portions of the West, and in most parts of the East."

April 3, Miller & Co. started the first tri-weekly express between Chicago and the East.

April 21, hogs were first prohibited from running at large in the streets of Chicago by ordinance of the city. Prior to that time the too numerous presence of this animal had been frequently animadverted upon in the columns of the Press, as having become an unmitigated nuisance.

October 11, a communication appeared in the Weekly Democrat, from Buffalo, severely condemning the practice of Chicago merchants of mixing the various grades of wheat shipped.

November 22, 1843, the first session of Rush Medical College was commenced.*

1844.—During this year the era of good times was again fairly established. The roads leading to the city were improved. A great interest was awakened in schools,† which resulted in the building of the Dearborn-street school-house, and in the inauguration of the present magnificent school system of the city. Over six hundred new buildings were erected during the year, and the population largely increased. The presidential election,‡ which occurred November 5, passed off with little excitement. The total vote was 2,426; estimating the ratio of voters as one to five, the resident population of the city at that time was 12,130.‡ The weather during the summer and fall was notably tempestuous.

August 9, a tornado accompanied with heavy wind and rain and terrific lightning, passed over the city and swept over the lake. The bank building and the residence of E. H. Haddock were both struck by lightning during the storm. The schooner "Daniel Whitney" was also lost on Lake Michigan, all on board perished. Another severe wind-storm is mentioned in the Democratic Journal of November 7, as having occurred on November 4, which demolished one of the walls of the First Baptist church, then being erected, the wall falling upon and crushing a dwelling house near by.

September 10, a meeting was held at the Council room for the purpose of electing delegates to attend a meeting at Elgin in the interest of building a macadamized or plank road from the Fox and Rock rivers to Chicago. It was there resolved "that the commercial prosperity of Chicago mainly depends upon the improvement of the roads leading from it to the heart of the rich agricultural regions by which it is surrounded." It was also stated at this meeting and at the Elgin convention that the roads leading from Chicago in all directions—and especially towards Elgin—were in such a condition as to be almost impassable in some parts of the year. This was the first movement for the improvement of roads or facilities of inland transportation.

The interest of the citizens of Chicago in education and schools was evinced in choosing, September 16, a large delegation to attend an educational convention to be held at Peoria on the 9th of October. Among those chosen, and who were the early friends of the Chicago

*See Medical History in this volume.

†See History of Schools.

‡See Political History.

§Colbert's History, p. 18, gives the estimated population for 1844 at 8,000. At what time in the year the estimate was made or on what basis is not mentioned.

schools, were: William H. Brown, William Jones, Richard J. Hamilton and S. W. Wright, since deceased; and Mark Skinner, Isaac N. Arnold, and J. Y. Scammon, still living.

1845.—The citizens showed great interest in the reviving of the State credit, with a view to the completion of the Illinois & Michigan canal.* They also made efforts to further improve the harbor, and, late in the year, the subject of railroads began to seriously agitate the public mind.

February 12, in pursuance to a call signed by five hundred of the leading merchants and citizens, a large meeting was held on the public square, at which resolutions were passed urging the Legislature to enact such a revenue law as would revive the credit of the State and secure the completion of the Illinois & Michigan Canal; also endorsing the recommendation of Governor Ford to the Legislature to restore the State tax to its former rate of thirty cents on \$100. Work was fully recommenced on the canal the following September.

February 21, the Governor approved an act establishing a court for Cook County.

August 5, the Common Council passed an ordinance authorizing a loan to construct a break-water on the lake shore.†

November 26, the first issue appeared of the "Chicago Volksfreund."‡ This was the first newspaper published in Chicago in a foreign language.

December 5, an enthusiastic railroad meeting was held at the court-house. Delegates were appointed to attend the conventions to be held at Rockford, to be held January 7, 1846, to devise means for prosecuting to completion the Galena & Chicago Union Railroad§ Full statistics of the trade and business of Chicago were presented to the convention by the delegates.

1846.—Recruiting for the Mexican War, which the President declared as existing, May 13, added to the excitement of a very busy year, which was nevertheless quite barren of events of more than transient interest or importance.

The most important commercial event was the creation by the Government of a new Collection District, of which Chicago was declared the port of entry. Pending the passage of the act, fifteen of the leading shippers and merchants of Chicago signed a memorial to the United States Senate, requesting that body not to pass the bill which had already passed the House of Representatives, and expressing their fears that, should the bill pass, British bottoms would on the upper lakes be thereby admitted to all the benefits of the carrying trade hitherto exclusively enjoyed by citizens of the United States. Notwithstanding the memorial, Chicago was made a port of entry July 13.¶

1846.—March 19, the German element first asserted itself as a factor in municipal affairs in a card, signed by thirty-four German citizens, which appeared in the Daily Democrat, in which they denounced the action of the Council in refusing to appoint Charles Bumgarten Street Commissioner; the place of his nativity being alleged by them as the sole cause of his rejection.

March 20, the Common Council first inaugurated the system of levying special taxes for street improvements, by the adoption of the report of Manierre, in which he had advocated the plan and asserted the right of the city to levy such special assessments for the planking or other improvement of streets.

May 1, the Daily Democrat gave an account of the suicide of Count Londogi, committed at the Lake House.

May 27, there was great public rejoicing over the news of General Taylor's victory on the Rio Grande. During the succeeding two days fifty men enlisted.*

October 28, two runaway slaves were arrested and taken before Justice Kercheval. While there the room became filled with excited negroes, who hustled the fugitives down the stairs and out of sight of Deputy Sheriffs Rhines and Daily forever.

November 13, measures were taken preparatory to the great River and Harbor Convention,† held in Chicago during the following year. At a large meeting of citizens, three committees were appointed: one, to prepare an address, and a call for the convention; another, to act as a committee of correspondence; and the third, consisting of one hundred members, to act as a committee of arrangements.

1847.—Throughout the year there was great war excitement, recruiting went on constantly, several full companies leaving for the seat of war during the spring and summer.‡

April 3, a large concourse of citizens gathered to celebrate the victory of Buena Vista. Richard L. Wilson lost an arm by the premature discharge of a cannon.

Famine prevailed in Ireland and Scotland.

February 25, the Scotch of Chicago published an appeal "in behalf of 200,000 of their starving countrymen." March 4, a subscription was started for the relief of the starving Irish. In four days \$2,600 in money was raised, besides considerable donations in corn, pork, flour, and other articles of food.

June 23, the Daily Democrat announced that the County Commissioners and Common Council, acting conjointly, were improving the roads leading from the city for a distance of ten miles out.

July 5, the great event of the year was inaugurated by the opening of the great River and Harbor Convention. It was one of the most important events in the early history of Chicago. Delegates from all parts of the country were present, and the city was crowded as never before.§

1848.—During the year occurred the first presidential campaign in which the Chicago Democrats had been divided. It was most earnestly carried on by the two opposing factions, which evinced more bitterness toward each other than toward their common enemy, the Whigs. The discussion of the free-soil question, on which the party had divided, constituted the leading excitement of the year.¶

April 1, a mass convention of the citizens was held, "of all those favoring the 'Wilmot proviso.'" July 4, the free-soil Van Buren Democrats held an immense meeting, at which they commenced their campaign, which was thereafter carried on without cessation until the day of election, and with a skill and ability seldom, if ever, surpassed in the political annals of the city.

The election which occurred November 7, resulted in a plurality vote for Van Buren, the free-soil Democratic candidate. The vote stood: Cass, 1,016; Van Buren, 1,543; Taylor, 1,283. Total, 3,842. The total vote of 1844 in the city was 2,426. The increase in the voting population as thus shown had been *sixty per cent* in four years.

Several local historic events worthy of remembrance transpired during the year.

January 15, the first message by electric telegraph was received over the line then completed from Milwaukee to Chicago.

The existing State law limiting the rate of interest to six per cent was in disfavor in Chicago. January 17, a meeting was held by the merchants of the city, at which it was resolved: "It is contrary to honor, reason, and the laws of trade to suppose that Illinois can enjoy the use of sufficient capital to transact her business and develop her resources at six per cent interest, while New York, Indiana, Wisconsin, and a number of other States offer, by their interest and collection laws, from seven to twelve per cent."

February 2, the Democrat stated: "The lake is lower at present than it has ever been in the memory of the oldest inhabitant. Some of the vessels at the dock, laid up for the winter, and consequently without loading, are fast aground."

March 4, a specific election was held to vote on the various clauses of the new State constitution, which were to be submitted to the people. The vote on the several propositions was as follows: For the adoption of the constitution, 324 majority; *against* the clause "prohibiting negroes coming into the State, or masters bringing them into Illinois for the purpose of freeing them," there was a majority of 886; *for* a two-mill tax, to be used for the payment of the State debt, 328 majority.

April 10, the first boat locked through the canal—the "General Frye"—was floating, at 7:30 P. M. in Lake Michigan.

June 27, the Democrat made the following announcement: "Chicago is at length in direct communication with the Atlantic Ocean. We noticed in the river yesterday a large and powerful English propeller, the 'Ireland,' loaded direct from Montreal to this port. This opens a new trade for this city, as goods can now be shipped from Chicago to Liverpool without transshipment."

October 25, "The locomotive, with the tender and two cars, *took its first start*, and run out a distance of about five miles upon the road—the Galena & Chicago Union road. A number of gentlemen rode upon the cars." This announcement appeared in the Democrat of October 26.

December 4, the brig "McBride" arrived with the first direct importation of salt from Turk's Island.

1849.—Early in the year the California fever broke out with great violence in Chicago. The daily papers stated that during the winter and early spring months little else was talked of. Book stores advertised guide-books; wagon-makers doubled their force of workmen and turned their efforts exclusively to the manufacture of emigrant wagons; the price of revolvers "went up fifty per cent;" there was not in March a pair of new Mackinaw blankets for sale in the city, and all kinds of salt provisions were reported as having become "lamentably scarce." The first two parties were fitted out (one of American, the other German) and started overland for California March 29. The exodus thus begun continued throughout the year, carrying off many of the early citizens, whose names thereafter did not appear in the annals of Chicago.

March 12, a most disastrous flood occurred.* The Democrat said: "Never before has Chicago been visited by so great a calamity as has been witnessed this day. About 9 o'clock this morning a compact dam of

ice, raised two or three feet above the surface of water, nearly opposite Gage & Haines' steam mill on the South Branch, suddenly gave way, sweeping down in the rapid current every vessel lying below that point. The damage to shipping alone is over \$80,000."

July 21, serious conflagrations occurred, burning over in part the ground swept by the great fire of 1839. Twenty buildings were destroyed including the Tremont House, which had been burned ten years before and rebuilt.

In the winter of 1849, the cholera, which had been prevalent on the upper Mississippi the year before, made its appearance in Chicago. May 21, the scourge had become so general that daily reports of the deaths from cholera were published in the papers. The highest number occurring in a single day was August 1, when thirty deaths were reported.

1850.—During the year there was continued an increasing anti-slavery excitement, mainly centered in intense opposition to the fugitive slave law, which, during its discussion in Congress prior to its passage, was the absorbing theme. A convention was held by those who opposed it as early as February 21, and from then to the time of its passage, September 18, little else was talked of.

October 11, a convention of colored citizens resolved to remain and defend themselves rather than to flee.*

The most important local events to Chicago were the completion and opening of the first section of the Galena & Chicago Union Railroad to Elgin, and the lighting of the city with gas. The opening of the railroad to Elgin was celebrated February 1 by a grand excursion over the line to that town.†

The early history of the gas company and the lighting of the city by that method is as follows: An act was approved February 12, 1849, authorizing the formation of the Chicago Gas Light & Coke Company, with H. L. Stewart, W. S. Bennett, F. C. Sherman, P. L. Updike and P. Page as incorporators. Under their charter, the company was given the exclusive right to supply the city with gas for ten years. In October the work was begun of laying the mains, erecting works and getting the whole system into operation. The contract for this was let to George F. Lee, of Philadelphia, and the work was completed in August, 1850. The city was lighted with gas for the first time Wednesday afternoon, September 4. From the Gem of the Prairie, bearing date the 7th of that month, the following interesting account is taken:

"Wednesday marked an era in Chicago. At about 2 o'clock P. M. the gas pipes were filled, and the humming noise made by the escaping gas, at the tops of the lamp-posts indicated that everything was all right. Shortly afterward the fire was applied and brilliant torches flamed on both sides of Lake Street as far as the eye could see, and wherever the posts were set. The lanterns not having been affixed to the posts, the bright, gaseous flame eddied and flickered in the wind, sometimes apparently disappearing, but anon shooting up as brightly as ever. The burners in Reed & Co.'s and in Keen's were lighted about the same time, presenting a steady golden flame. We believe these establishments had the honor of first lighting up with gas; others will not be much behind them. In the evening the lamps were again lighted, and for the first time in the history of Chicago; several of the streets were illuminated in regular city style. Hereafter she will not "hide her light under a bushel."

* See Political History.

† See History of Railroads.

* See Harbor and Marine.

Of the initial illumination the Journal also said: "Some of the stores on Lake Street, particularly those devoted to California ware, made a brilliant appearance, and the gas lent an additional glory to refined gold. But the City Hall with its thirty-six burners, is the brightest of all, night being transformed into mimic day."

The first gas works were situated on the south side of Monroe Street near Market. The officers of the company were H. T. Dickey, president; Jerome Beecher, secretary; James K. Burtis, treasurer; and Thomas Dyer, William Blair, J. Keen, George F. Lee, Mark Skinner, George Smith and E. B. Williams, directors. The cost of lighting the city was fixed, under the contract, at \$15 a post; but on the 13th of September, at a meeting of the Common Council, it was ordered that no street lamps be lighted until the citizens should subscribe one-half the cost, or \$7.50 for each, lamp erected on the streets. The business increased each year, and by 1855 there were nearly seventy-eight miles of service pipe laid; nearly two thousand consumers, and a total consumption of nearly forty-one million cubic feet of gas.

1851.—No outside questions disturbed the serenity of the city. It was an "off year" in politics, business was fairly prosperous, and the annals show nothing of more than passing interest. Several new railroads, intended to have their termini in the city, were negotiating for right of way and depot grounds. There was considerable conflict between the rival roads. The Michigan Southern Railroad, by prior rights granted in its charter, was claiming the exclusive use of a railway route around the head of Lake Michigan, and that through its franchises only could other roads gain an eastern outlet from Chicago. The citizens of Chicago took strong ground against the claim. January 24th, at a mass meeting, they resolved unanimously "that they would aid the city authorities in all efforts to grant admission to the city to any and all railroads seeking to obtain an entrance."

The question of making Chicago the distinct and separate terminus of the various roads then being built, instead of feeders to one grand trunk road entering the city was deemed important, and was a topic of serious discussion.

June 20th, the Michigan Central Railroad announced their decision to build a through road over an independent route to Chicago, and to ignore the claims of the Michigan Southern that all other Eastern lines should avail themselves of their charter, making connections at the Indiana State line, and running thence to Chicago over their road. About this time Senator Douglas published an opinion which, with the opposition to the claims set up on the part of the citizens of Chicago, ended all controversy. It was that neither the Illinois Central nor the Rock Island Railroad could, if they would, under the terms of their charters, make a connection at the Indiana State line as a terminus, but that both roads must have a terminus in Chicago.

The supplying of the city with water was this year undertaken by the city itself. February 15, the Chicago City Hydraulic Company was incorporated, and during the year much preliminary work was done on this newly undertaken public work, which was not however completed until two years later.*

During May, 1851, the question of "high or low license" for the sale of spirituous liquor first began to agitate the Chicago mind, and became a disturbing ele-

ment in the councils of the city fathers. The high license Aldermen insisted strenuously on raising the license tax to one hundred dollars per year; those favoring low license strove as vigorously to retain the old rate of fifty dollars. The two sides were about equally balanced numerically, and the rate decided upon was established at one hundred dollars and re-established at fifty dollars several times. It was finally settled on the low license basis of fifty dollars per year.

June 3rd 4th and 5th, there was great excitement throughout the city, occasioned by the arrest of Moses Johnson, as a fugitive slave of Crawford E. Smith, of Missouri. Johnson was finally discharged.

August 23, two large warehouses were destroyed by fire. They were those of E. H. Haddock and H. Norton.

September 12, the corner-stone of the new courthouse and city hall was laid with appropriate ceremonies.

The equinoctial storm of the year occurred September 22 and 23. The waves of the lake ran higher than had ever before been known. Many feet of the break-water were washed out and the waves bore fragments of it into Michigan Avenue—so said the Gem of the Prairie of September 27.

The question as to the route whereby the Illinois Central Railroad should enter Chicago, and at where it should connect with the Galena & Chicago Union, was the exciting theme of discussion among citizens and officials during the closing months of the year. The papers abounded in long letters and editorials on the subject. The route now in use, along the lake shore was finally adopted in January, 1852.

1852.—The annals of the year show few events of more than minor importance. The temperance element for the first time attempted a show of strength at the polls. A full temperance ticket was nominated February 6, to be voted at the coming municipal election.

January 21, the "Old Settlers" had a big ball at the Tremont House. It was under the following management: *Honorary Managers*—E. H. Haddock, George Smith, Thomas Dyer, C. Beers, Walter S. Gurnee, E. S. Wadsworth, Thomas Richmond, Thomas B. Turner, H. T. Dickey, Eli B. Williams, George W. Meeker, James H. Collins, Isaac Cook, Thomas Hoyne, John Wentworth, John Frink, E. S. Kimberly, R. L. Wilson, George Steel, J. Young Scammon, W. B. Ogden, John P. Chapin, George W. Snow, John H. Kinzie, Silas A. Cobb, F. C. Sherman, Mark Skinner, H. H. Magee, I. N. Arnold, J. C. Walters, D. Brainard, James Carney, B. S. Morris, John W. Eldridge, L. C. Kercheval, S. F. Gale, George W. Dole. *Floor Managers*—Philip Maxwell, J. P. White, P. Von Schneidam, E. I. Tinkham, T. W. Wadsworth, Charles T. Richmond, James R. Hugunin, U. P. Harris, E. L. Harris, E. L. Sherman, Charles L. Wilson, Edward Sherman.

February 20, the first through train from the east, via the Michigan Southern Railroad, entered Chicago, and was greeted with a salvo of artillery.

February 24, David Kennison, the last survivor of the "Boston Tea Party," died in Chicago at the extraordinary age of one hundred and sixteen years.

April 23, the first great loan of Chicago was effected through Duncan, Sherman & Co. The amount was \$250,000, and was applied to the development of the city system of water works.

May 21, the first construction train ran into Chicago over the Michigan Central Railroad.

The presidential campaign of the year was a quiet

* See History of Water Works

one. At the election, which occurred November , the total number of votes polled was 5,014; Pierce, 2,835; Scott, 1,765; Hale, 424.*

Throughout the year a war raged among the banks, and at the close of the year was at its height.†

1853.—The events of the year were mostly of local significance only. The bank was continued, and culminated in the disappearance of "illegal banking" during the year. Seth Payne's spiritual bank went out of sight; the other banks which had not before respected the statutes of Illinois were forced to legally organize, go into liquidation, or otherwise close up business.‡ The minor annals of the city, as gleaned from the newspapers, were as below stated:

February 7, the new court house was first occupied.

April 23, the Scandinavians of Chicago gave a great ovation to their eminent and talented countryman, Ole Bull.

April 25 occurred the first great railroad accident near Chicago. A train on the Michigan Southern collided with a train on the Michigan Central, at their crossing (at Grand Junction). Eighteen persons were killed outright, and forty of the wounded were brought to Chicago. On the 27th resolutions were passed at a meeting of the citizens, condemning the accident as owing to carelessness, and demanding that thereafter every train should come to a full stop before crossing any other railroad. This was the first time that this very essential safeguard, now universally adopted, was ever suggested.

July 22, a meeting was held at which the feasibility of connecting the North and South sides by a tunnel under the river was for the first time proposed, discussed, and recommended.

In August the first strike of laborers occurred. Their demand was for a reduction of two hours on the day's labor on each Saturday without reduction of pay. The strike lasted two weeks, during which time work was greatly interfered with, and work generally suspended. Their demands were not complied with.

August 9 Knud Iverson was drowned. His death became historic, whether rightfully or not, as a martyr in the cause of truth and honesty.§

August 25, subscriptions began to be received for the relief of yellow fever sufferers at New Orleans. Over \$4,000 was collected in one week.

September 5, an attempt was made to assassinate Allan Pinkerton, on Clark Street, near Monroe. He is still (1884) a resident of Chicago.

December 20, an indignation meeting was held to denounce the action of the citizens of Erie, Penn., who had torn up the tracks in that town, as was alleged, to prevent the establishment of a uniform gauge between the Atlantic and Chicago.

1854.—This was a most turbulent year of excitement. In politics the anti-Nebraska broil was at its height. The financial troubles culminated in the suspension or winding-up of several banks.

March 8 and 9, a marine convention was held at the rooms of the Chicago Board of Trade. There were present delegates from the Chambers of Commerce and Boards of Trade of Oswego, Buffalo, Detroit and Milwaukee. At this meeting the date at which navigation should be declared closed and marine should cease was agreed to be November 30, in each year. A committee was appointed at this meeting to memorialize Congress in favor of the improvement of the St. Clair flats, and

for national legislation which should make contracts binding between the captains or owners of vessels and their crews.

April 7 occurred a tremendous gale, during which seven vessels were wrecked in the offing of Chicago harbor.

May 17, a "Sabbath Convention" was held in the city, attended by delegates from nearly every Western State. The work of the convention culminated in the passage of resolutions asking additional legislation to enforce the observance of the Christian Sabbath.

May 18, the corner stone of the first Masonic Temple was laid, "on Dearborn Street, between Washington and Randolph streets." There was a very large Masonic demonstration on the occasion. Addresses were delivered by Dr. J. V. Z. Blaney and Dr. W. B. Herrick.

June 5, the Rock Island Railroad was completed to Chicago. The occasion was celebrated by an excursion over the road. The train bore over one thousand invited guests, including many distinguished men of the country. This marks the first railroad connection between the lakes and the Mississippi River.

From June 1 to September 1, the cholera raged so malignantly as to seriously interfere with business. The deaths from the disease during the year were reported at 1,424.*

September 1, Stephen A. Douglas attempted to speak in defense of the recently enacted Kansas-Nebraska bill. He was prevented by a howling mob, but retired from the scene of disorder undismayed, after vainly essaying to be heard for three hours.†

September 10, an ineffectual attempt was made to arrest a fugitive slave, named Turner, by three persons from Missouri. He escaped, but was fired at by his pursuers. They were arrested, tried for assault with deadly weapons before a Justice, and acquitted for want of evidence.

September 19, George W. Green, a banker, was arrested for the murder of his wife by poison. He was arrested on the complaint of his brother-in-law, F. H. Revell, tried December 19, and subsequently, having been convicted, and awaiting the decisions of the Supreme Court on appeal, committed suicide in jail by poisoning himself, February 18, 1855.

1855.—The history of the year only records occurrences of purely local interest. January 25 a most violent snow-storm set in, which, lacking the modern appliances of railroads, caused a complete embargo of railroad traffic until the 7th of February. The great fall of snow stopped the receiving of supplies from the country, and wood, coal not being as yet in use, became so scarce that the Common Council saw fit to take the furnishing of fuel to suffering citizens in charge. On February 15, the city offered wood for sale, "at cost," to families in quantity of not more than one cord at one time to any single family.

The municipal election of March resulted in the total rout of both the known political parties, and the election of the Know-nothing ticket. The new administration, as do all new administrations, started in for radical reform. The enforcement of the Sunday law, which had before been a dead letter, was attempted, and a most strenuous crusade inaugurated against the saloons.‡ Mayor Boone issued a proclamation ordering the saloons closed on Sunday. March 18, they were generally closed in compliance with the proclamation and the city ordi-

§ See Church History, First Norwegian Church.

* See Sanitary History.

† See Political History.

‡ See Political History.

nance. Such as violated the law, some twenty saloon-keepers, were arrested on the following day.

March 26, the Common Council increased the license for selling liquor to \$300 per annum—no license, even at that high rate, to run longer than to July 1.

April 4, an organization was effected of those opposed to prohibition and high license.

April 21, the day appointed for the trial of those arrested for violation of the Sabbatarian law and for violation of other temperance ordinances, occurred a serious riot, which resulted in the death of one or more of the rioters, and the wounding of several policemen. The rioters were subdued and peace restored under the law.*

April 24, a meeting of citizens was held at which resolutions were passed commending the civil authorities for their successful efforts in the interests of law and order during the "late disturbance."

May 30, the railroad to Burlington, Iowa, was opened, and trains took excursionists from Chicago to that town. June 13, a large party of excursionists from Burlington visited Chicago, and were publicly welcomed by the Mayor.

June 4, the vote on prohibition of the liquor traffic, in Chicago was: For prohibition 2,784; against, 4,093. In Cook County the vote was: For prohibition, 3,807; against, 5,182.

September 11, a committee was appointed in every ward of the city to collect donations for the yellow-fever sufferers of Portsmouth and Norfolk, Va. The amount collected and forwarded was over \$5,000.

September 18, in the equinoctial storm the brig "Tuscarora" was wrecked off the harbor. The crew were rescued by two life-boats manned by volunteers and commanded by Captain J. A. Napier.

October 9, the State Agricultural Fair was held, for the first time, in Chicago. The grounds were near Blue Island Avenue and Rucker Street, and were bordered by the canal. The principal conveyance to the grounds was by canal boats.

October 22, an Old Settlers' Society was organized. On November 3, the by-laws of the society were published. As finally adopted, persons were eligible to membership who resided in Chicago prior to January, 1837. The male children of members, born in Chicago prior to 1837, were also eligible on reaching the age of twenty-one years. Semi-annual meetings were to be held on the third Tuesdays of each November and May, and an annual festival held on the second Tuesday of December. It was also obligatory on members to attend the funerals of fellow-members, and a fund was provided for such as were indigent or distressed. The first officers, as announced in the Democratic Press of November 21, were: President, John H. Kinzie; Vice-President, Colonel R. J. Hamilton; Treasurer, J. Y. Scammon; Secretary, George T. Pearson; committee for annual festival, Gurdon S. Hubbard, John S. Wright, John C. Haines.

December 13, efforts to drive out of circulation the Georgia and Tennessee banks were noted in the papers.†

During December, the date not being known, Flavel Mosely made a public bequest of \$1,000, the interest of which was to be devoted to the purchase of school-books for indigent children attending the public schools.

1856.—The year was one of extreme business activity and political excitement.

January 7, a Kansas aid meeting was held at which

liberal donations were made to aid the free State settlers. May 31, was held on Court Square one of the most memorable and important political meetings ever held in the city.* At this meeting over \$15,000 was subscribed for Kansas. The political excitement culminated in the presidential election which occurred November 4, when the political complexion of the vote of the city was completely revolutionized, the Republicans carrying the city by a good majority. The vote was: Fremont, 6,370; Buchanan, 4,913; Fillmore, 332—total, 11,615. The vote cast was more than double than of four years before.

At this time the fact had been clearly demonstrated that Chicago was destined to become an immense city—the commercial emporium of the great Northwest. The natural level of the grade of the streets was decided to be too low for the permanence of the city or its efficient drainage. Accordingly the level had been established several feet above that of the old streets as at first laid out. This virtually involved the necessity of raising the structures of the entire city to the established level, and the filling up of many streets to the established grade. May 26, many land owners opposed to the high grade established on Lake Street, applied to Judge Caton for an injunction, which he refused to grant. The right of the city to change or establish the grade was thus established, and thenceforth the labor of raising the whole builded city began. The work was completed before 1858.†

The local annals of the city were as follows:

In May, steam-tugs first began to ply up and down the river and to tow vessels into the harbor.

June 24 the Masonic Temple was dedicated.

August 13, a most destructive fire occurred by which the freight depots of the Michigan Southern and Rock Island railroads were destroyed, together with some twenty freight cars, a large quantity of disembarked freight, and several factories and dwellings adjacent. The loss was estimated at \$150,000.

August 25, the schooner "Dean Richmond," from Chicago, left Quebec for a voyage across the Atlantic Ocean with the first cargo of grain from that far western point.

September 19, a most lamentable accident occurred. The Lake House ferry boat, overloaded with passengers, capsized, and twelve to fifteen laborers were drowned. The verdict of the coroner's jury was that the victims came to their death from the "inprudence of the people, in rushing in too great numbers upon an unseaworthy boat and taking it from the control of the man in charge of the ferry." The crowd was made up of laborers living on the North Side, hastening to their work on the other side of the river.

October 18, Hough's packing-house, with its contents, was destroyed by fire. The loss was over \$100,000.

November 21, a tornado passed over the city resulting in the death of two men and the destruction of property valued at \$50,000.

November 28, the first wooden pavement was laid on Wells Street, between Lake and South Water streets.

December 2, a severe storm occurred. The schooner "Charles Howard" was driven ashore off Lake View. The crew was rescued by a volunteer company in the yawl boat of the "Mohawk," manned by Captain Graw, N. K. Fairbanks, Isaac Walker and Captain Moore.

1857.—This year witnessed a pause in the progress of the city, the curtailment of business, and a general breaking up in common with every other commercial community in the country. Several banks suspended, and a score of the leading merchants of the city failed. The specific historic events as chronicled in the newspapers of the day, were as follows:

February 8, there was a big freshet and there were general apprehensions of another flood like that of 1849. The river overflowed its banks, and many parts of the city were submerged.

March 3, at the polls there was much disorder. At the precinct on the corner of Sedgwick and Division streets, Charles Seifurth was killed, and at another precinct George Armour was badly wounded.

April 1, a severe gale occurred in which six vessels were wrecked in the vicinity of Chicago, and fifteen seamen lost their lives.

At the April term of the Recorder's court, four negroes who had been indicted for stealing poultry, entered through their counsel, the apparently legal and logical demurrer, that under the Dred Scott decision they were not individuals, were merely chattels having no rights which white men were bound to respect, and that they were consequently not amenable to the law. The demurrer was overruled and the colored chicken stealers were obliged to submit to the penalty for their derelictions prescribed for white men.

April 20, in a moral spasm a mob tore down nine buildings, and burned six others, thereby breaking up, what were termed in the papers the "Dens on the Sands."

May 4, the "high grade" was finally established on the South Side by a city ordinance.

June 17, city orders were protested for non-payment, as is recorded in the Chicago Tribune of June 18.

June 19, William Jackson was executed on Reuben Street (now Ashland Avenue) for the murder of Ronan Morris, near Libertyville, Lake County.

July 3, the private banking house of E. R. Hinckly & Co. closed.

August 3, there was a run on Hoffman's Bank.

September 29, the banking house of R. K. Swift, Brother & Co. closed its doors.

November 7, the Cherokee Banking and Insurance Company, having a large circulation in Chicago, suspended.

November 16, Walker, Bronson & Co., one of the heaviest produce firms in the city, suspended. The announcement of their failure in the paper was accompanied with the statement that "for one hundred and eighty days previous to their failure their sales had averaged \$100,000 per day."

In November, soon after the failure of Walke., Bronson & Co., the business demoralization became general, and the year closed with no business life and only the unconquerable hope peculiar to Chicago left. As the first year of Chicago's municipal life saw her bowed down by the financial disasters of 1837, so the close of 1857 saw her again bowing to a financial storm which, sweeping the whole country, left not a shred of speculative wealth behind.

In addition to the financial and business troubles, to crown the disasters of the year there occurred a most disastrous fire on October 19. It broke out on October 19 in the large brick store 109 and 111 South Water Street. Property was destroyed on South Water and Lake streets valued at \$500,000. Thirteen persons lost their lives in the conflagration.

The end of the first two decades of Chicago's city life showed the most marvelous advance ever shown in the development of a community or the aggregation of a resident population ever known in the history of the world. In twenty years the city grew in population from an over estimate of 4,000 inhabitants to not less than 90,000.

At the close of the year 1857 Chicago was the largest city in the Northwest and the acknowledged metropolis of an area of country larger than that of the whole original thirteen States.

As closing the annals of Chicago to 1858, the following table, showing the increase in population, is an index of its growth in other departments:

POPULATION OF CHICAGO (Colbert's table).

Those marked thus * are estimates.

1829.....	30*	1844.....	8,000*
1831.....	60*	1845.....	12,088
1832.....	600	1846.....	14,169
1833.....	350*	1847.....	16,859
1834.....	1,800*	1848.....	20,023
1835.....	3,265	1849.....	23,047
1836.....	4,000*	1850.....	28,269
1837.....	4,179	1851.....	34,000*
1838.....	4,000*	1852.....	38,734
1839.....	4,200*	1853.....	60,662
1840.....	4,470	1854.....	65,872
1841.....	5,500*	1855.....	80,023
1842.....	6,590*	1856.....	86,000*
1843.....	7,580	1857.....	93,000*

There may be some discrepancies in the above table discovered by captious critics, but, leaving out all estimates of population, and considering only the statements based on actual enumeration, it is quite certain that Chicago increased in population from 4,000 in 1837 to nearly 90,000 in 1857. The Federal census of 1860 gave the city a population of 109,263.

LATE THREADS OF FORT DEARBORN HISTORY.

Subsequent to the evacuation of Fort Dearborn as a military post, in 1836, the land contained in the military reservation and the old buildings remained Government property and was in charge of the Government officers who were directing the improvement of Chicago harbor under the acts which made appropriations for that purpose. There was after the final evacuation as a military post in 1836, little moveable property left; but the buildings of the old fort, and a most valuable tract of land remained, lying along the lake front from the south side of the new mouth of the river and harbor. The title to this tract has long ago passed from the Government; how and when, is told by John Wentworth, LL. D., in his oration delivered May 21, 1881, on the occasion of unveiling of the tablet which marks the site of the old block-house, gave a most valuable history of the whole matter. He said: "On the 28th of May, 1835, Chicago had a sensation and I am sorry that I was not here to enjoy it. But many now living were here. I have enjoyed almost every one since. Chicago has ever been noted for its sensations, and that is one of the reasons why I have never liked to leave it. You can not find any other place that has so many of them. Why travel about when there is so much of interest transpiring at home? On that day, General John B. Beaubien went to the public land-office, and purchased, for ninety-four dollars and sixty-one cents, the entire Fort Dearborn Reservation. He derived his military title from an election by the people, not from any conspicuous military talents, but because he had the most friends of any one in town, and he kept them to the day of his death. The State, at that time, was divided into military districts, and the people elected the Generals. He had lived upon the reservation many years, and he had found some law which satisfied our land-officers that he was entitled to make the purchase, the same as many others have found laws under which they could purchase our lake front ever since. The news spread. Everybody was a daily paper in those days. We had but two newspapers then, and both were weeklies. The people assembled in squads and discussed the situation. The question was raised: Did General Beaubien buy the fort with the land? What were the officers to do? There was no telegraph in those days. General Beaubien was congratulated. He had an entire fort of his own. A conflict between the United States troops and the State militia might ensue. General Beaubien, himself was in command of the militia. Would he use them to dispossess the United States forces? Fancy yourselves here at that time, and remember that the men of that day were the substratum of our present society, and you can appreciate how great a day that of May 28, 1835, was. The receiver of public moneys, at that time, was Hon. Edmund D. Taylor, now residing at Mendota, in this State, and for many years a resident of this city.

"Nothing serious happened, however, as a case was agreed upon and submitted, in 1836, to Judge Thomas Ford, of the Cook County Circuit Court, at the October term, in the shape of an action of ejectment, and entitled John Jackson *ex dem.* Murray McConnell *v.* De Lafayette Wilcox.

"The first time I ever saw Thomas Ford, who after-

ward gained such a splendid reputation as our Canal-Governor, and as historian of our State, was when, in November, 1836, he called at my office and left his written opinion to be published in my Chicago Democrat. His opinion was very elaborate, and just as favorable to the plaintiff as it possibly could be, whilst he decided against him. He thought General Beaubien's purchase was entirely legal, but that his title could not be enforced until he had procured his patent from Washington; which one thing needful he was never to procure. The suit was appealed to the State Supreme Court, where Justice Theophilus W. Smith, in behalf of a majority of the court, gave a long and exhaustive opinion, very valuable to this day as a historical document, reversing the decision of the court below.* Justice Smith was a resident of this City, father-in-law of ex-Mayor Levi D. Boone. He was a warm, personal friend of General Beaubien, and his learned opinion was the work of both heart and head. I have often met him at the General's entertainments. The suit was then taken to the United States Supreme Court, where another very elaborate opinion, and one very valuable as a historical document to this day, was given; which effectually wiped out every pretense to a claim that General Beaubien had. On December 18, 1840, he was glad to call at the land-office and receive his money back, without interest.†

"Upon April 23, 1839, Hon. Joel R. Poinsett, Secretary of War, appointed Hon. Matthew Burchard, then Solicitor of the General Land-Office, the agent of the department, to come to Chicago and sell the reservation. Judge Burchard caused the land to be surveyed and platted as Fort Dearborn Addition to Chicago. His survey made the reservation contain 53¼ acres; being ¾ acres less than the quantity marked upon the original official plat, the quantity having been diminished, it was supposed, by abrasions caused by the action of the water of the lake. All was sold except what was needed for the occupants of the public buildings, and there was realized from the sale what was considered at that time the great sum of \$106,042.‡

"At this time Chicago had another sensation. General Beaubien had subdivided the land and sold, or given away his interest in a great many lots. The owners of such rights undertook to shape a public sentiment so as to prevent any one from bidding against them at the time of the sale. The very numerous friends of General Beaubien and his family sympathized with such a movement. It would be difficult to mention any man of any official prominence or aspirations, from the Judge of our Supreme Court to the humblest citizen, who did not favor non-intervention. Politics also were running very high. The next year President Martin VanBuren would seek a re-election, and many interested and sympathizing were his political supporters, and they argued that it would injure the party if the poor people of the West were to be outbid by Eastern speculators. Threats of personal violence were not unfrequently made. Out of the party clamor grew the dedication of Dearborn Park. It was thought a great thing to give so large a

* See Scammon's Reports, Vol. i.

† See Peters's United States Reports, Vol. viii.

‡ A detailed account of this sale, with names of purchasers, may be found in No. 2 of Fergus's Historical Series—Chicago Directory for 1839, page 47.

tract for a public park. We had nothing of the kind then. It was thought, by the Democratic party-leaders, a measure that would greatly benefit the administration in this region. Yet Judge Burchard dared not have an open sale; and resolved to advertise for sealed bids for a portion of the lots daily, with a determination to reject bids which he thought too low, and stop the sale if he found the people were influenced by intimidation. Everything proceeded satisfactorily until the lots upon which General Beaubien lived were to be offered. He was expected to procure his homestead for a nominal sum merely, and violent threats were made against any man who dared bid against him. But there was one man, James H. Collins, and I think the only man in the city who dared do this; who had denounced the whole transaction from the beginning in every place he had an opportunity. He had denounced the land-officers and the Judges of the Courts. He was one of the earliest abolitionists in our State, and would shelter fugitive slaves, and would travel any distance to defend one when captured, or defend a man who was arrested for assisting one to his freedom. He was a man of ability and integrity, and took great delight in defying popular clamor. He took an average of the price at previous sales and put in his sealed bid, thereby securing all the land which General Beaubien desired, being the land upon the east side of Michigan Avenue, in Block 5, between South Water Street and the lots reserved, where the Marine Hospital afterward was, except the corner lot, known as Lot 11, for which General Beaubien paid \$225. Mr. Collins bid \$1,049 for the next five lots, 10, 9, 8, 7, and 6, where Beaubien's house, out-buildings, and garden were. His life was threatened. He was burnt in effigy. Many indignities were put upon him. To all this he bid defiance, asserting that the friends of General Beaubien might possibly take his life, but they could never have his land. He was one of Chicago's ablest lawyers, the candidate of the early abolitionists for Congress, and far the ablest man in their organization. Had he lived a few years longer, he, unquestionably, would have been assigned to some one of the highest positions in the country. Thus General Beaubien lost his old homestead, except this one lot which he soon sold as insufficient for him; and not one who claimed under him was successful in procuring a lot. If you wish to find the traditional residence of General Jean Baptiste Beaubien, after he moved from what was before known as the John-Dean house, go east upon South Water Street until you come to the northeast corner of South Water Street and Michigan Avenue, and you will find it. General Beaubien subsequently moved to near what is now River Park, on the Desplaines River, in this county, near the reservation of Alex. Robinson, the Indian chief. The General died at Naperville, DuPage County, January 5, 1863.

"At the session of Congress, in 1848, I succeeded in procuring an amendment to the Naval appropriation bill, appropriating \$10,000 for the construction of a Marine Hospital on such site as should be selected by the Secretary of the Treasury on the lands owned by the United States. It was one of my best arguments, for the appropriation, that the Government already owned the land for the site. This took up another portion of the Reservation, it being upon the northern portion of Block 5, fronting Michigan Avenue, and being upon the east side thereof, and adjoining the north of the lots Mr. Collins bought. It was not until September 17, 1850, that I was enabled to telegraph to you, from Congress, that we had secured the Illinois Central Railroad grant. And it was not until the 14th day of October, 1852,

that Hon. Charles M. Conrad, Secretary of War, in consideration of \$45,000, made the deed of what was unoccupied of the Reservation to that company, in which was the following preamble: 'Whereas the military site of Fort Dearborn, commonly known as the Fort Dearborn Reservation, at Chicago, Ill., has become useless for military purposes, and the tract thereof not being used or necessary for the site of a fort or for any other authorized purposes, has been sold,' etc., etc. The railroad company, complaining that it paid this sum of \$45,000 from necessity and under protest in order to expedite their road into the city and insisting that the land was included in the grant made by Congress, which I, who took an active part in framing and passing the law, could not indorse, brought suit in the Court of Claims, at Washington, for refunding the money. The court decided against the claim.

"I have thus shown you how the entire Reservation was disposed of, except what would make about eight full lots, upon which the old light-house was located, or near it. They were not needed for light-house purposes; and were Lots 1 to 6 in Block 4, fractional Lots 8 and 9 in Block 2, and the north thirty-four feet of Lot 1 in Block 5, all near the Rush-street bridge. James F. Joy bought for the railroad company (Michigan Central or Illinois Central, or both jointly) the land occupied by the Marine Hospital building, being the south ten feet of Lot 1 and Lots 2, 3, 4 and 5 in Block 5. The hospital was burned in the great fire of 1871.

"The Government had erected a new light-house at the end of the North Pier. I was in Congress, and the thought occurred to me that the best way to dispose of the remaining land upon which the old light-house and other necessary Government buildings had been located was to present it to that kind-hearted and popular old pioneer, General Jean Baptiste Beaubien. And it was so done by an act approved August 1, 1854. And there was not a citizen of Chicago who knew him who ever questioned its propriety, to my knowledge."

In addition to the authenticated statements made by Hon. John Wentworth, are the following letters published in the Chicago Tribune of February 2, 1884, sent from Washington to Mr. Wentworth:

FORT DEARBORN, CHICAGO, Sept. 2, 1824.—*The Hon. J. C. Calhoun, Secretary of War*—SIR: I have the honor to suggest to your consideration the propriety of making a reservation of this post and the fraction on which it is situated for the use of this agency. It is very convenient for that purpose, as the quarters afford sufficient accommodations for all the persons in the employ of the agency, and the storehouses are safe and commodious places for the provisions and other property that may be in charge of the agent. The buildings and other property, by being in possession of a public officer, will be preserved for public use, should it ever be necessary to occupy them again with a military force.

As to the size of the fraction I am not certain, but I think it contains about sixty acres. A considerably greater tract than that is under fence, but that would be abundantly sufficient for the use of the agency, and contains all the buildings attached to the fort—such as a mill, barn, stable, etc.—which it would be desirable to preserve. I have the honor to be

ALEXANDER WOLCOTT,
Indian Agent.

DEPARTMENT OF WAR, Sept. 30, 1824.—*George Graham, Esq., Commissioner of the General Land Office, Treasury Department*—SIR: I inclose herewith a copy of a letter from Dr. Wolcott, Indian Agent at Chicago, and request that you will direct a reservation to be made for the use of the Indian Department at that post agreeably to his suggestions. I have the honor to be, etc.,
J. C. CALHOUN.

GENERAL LAND-OFFICE, Oct. 21, 1824.—*The Hon. J. C. Calhoun, Secretary of War*—SIR: In compliance with your request,

I have directed that the Fractional Section 10, Township 39 North, Range 14 East, containing 57.50 acres, and within which Fort Dearborn is situated, should be reserved from sale for military purposes. I am, etc.,
 GEORGE GRAHAM.

DEPARTMENT OF WAR, July 28, 1831.—*The Commissioner of the Land-Office*.—SIR: I transmit to you herewith a letter from Thomas J. V. Owen, Indian Agent, stating that an attempt has been made by an individual to obtain the right of pre-emption to the fraction of land on which Fort Dearborn, near Chicago, is erected. As this piece of ground is the public reservation, you are requested to take such measures as will secure the interest of the United States in reference thereto.
 R. B. T.

[ROGER B. TANEY.]

“DEPARTMENT OF WAR—July 13, 1832.—*The Hon. William R. King, United States Senate*.—SIR: In answer to your letter of the 9th inst., which has just reached me, I beg leave to inform you that until the Northwestern Indians shall permanently remove beyond the Mississippi, or our settlements in the northern part of Illinois shall be much increased, I consider the position of Fort Dearborn an important one in a military point of view—so much so that it is in contemplation to occupy it as soon as the spring opens. Of course, I shall consider the disposition of the reservation injurious to the public interest.
 LEWIS CASS.”

“BUREAU OF TOPOGRAPHICAL ENGINEERS, WASHINGTON CITY, July 10, 1852.—*Colonel J. J. Abert, Topographical Engineer*.—COLONEL: In answer to your inquiry of the origin and history of the reservation at Chicago I have the honor to state that I have called upon the officers of the Quartermaster-General, the Commissioners of the General Land-Office, and that of the Secretary of War, but that I have failed to find in any of them any history of the origin of this reservation. In looking over the reports of the Supreme Court of the United States I find that this military site has been the subject of litigation from which I get the following facts: That it was first occupied as a military post in 1804, and continued in that use until the 16th of August, 1812. The Government held it by the cession of the Northwestern Territory, and it was occupied for military purposes by the direction of the President under authority of these several acts of Congress: First, the Act of May 3, 1798 (United States Statutes at large, p. 555); second, the act of April 21, 1806 (Vol. 3, Laws of the United States), authorizing trading-houses and posts at the discretion of the President, and by Act of June 14, 1809, he could continue possession as being necessary for frontier defense.

The post was not occupied after the massacre of 1812 until 1816, when troops again garrisoned it and continued in occupancy until 1823, when it was evacuated, but left in charge of Dr. Alexander Wolcott, Indian Agent. In 1828 it was again garrisoned for military purposes and occupied until 1831, when the troops were withdrawn and it was left in charge of another agent, Mr. Oliver Newberry. In 1832 Major Whistler, of the army, once more took possession of it as a military station, and it has been continued in the occupancy of troops or authorized agents for military and other public purposes up to the present date. Up to 1824 it appears to have been occupied by virtue of the authority in the three acts of Congress above recited. In that year the Indian Agent then in charge of it applied to the Secretary of War for a special reservation for military purposes (see his letter with papers), and, in conformity with his request, Mr. Calhoun, then Secretary of War, applied to the Commissioner of the General Land-Office for the reservation. That officer, in conformity with the request of the Secretary of War, ordered the post to be reserved from sale (see their letters herewith). The land reserved was fractional Section 10, Township 39 north, Range 14 east, containing 57.50 acres. In April, 1839, the Secretary of War, J. R. Poinsett, by an act of authority March 3, 1819, appointed Matthew Birchard, Esq., agent for the War Office under special instructions to sell a portion of the military reservation at Fort Dearborn. This agent, in conformity with instructions, surveyed the entire fractional section, styling it Fort Dearborn Addition to Chicago, laying it off into lots and streets, and filing the map in the proper office in Cook County. He proceeded to sell part only of these lots, reserving from sale that portion now used for convenience of light-house and marking it upon his map in dotted lines.

* * * * *
 B. S. ROBERTS, Colonel U. S. A.

The property platted and subdivided as Fort Dearborn addition to Chicago was east of State Street, north of Madison Street, south of the main river of that time,

and west of the shore line of that period. The subdivision was made June 6, 1839, as per surveyor's certificate; was acknowledged by Matthew Birchard “of the General Land-Office, and Agent of the War Department of the United States,” for J. R. Poinsett, Secretary of War, and was recorded June 17, 1839, in Book H, of Maps, page 120. The land was laid off into lots and blocks, with streets, except the Dearborn Park, of which the following remark is authentic: “On the original record of Fort Dearborn addition, in Book H page 322, no boundary line was fixed for what is called hereon “Dearborn Park” (the plot now bounded by Dearborn Place, Michigan Avenue, Washington and Randolph streets—the eastern boundary, in common with the remainder of the Fort Dearborn addition, being the lake shore meander line). All the area east of the east line of Block 12; south of the south line of Blocks 10 and 11; north of the north line of Block 15, and east to the water-line of Lake Michigan was marked ‘Public Ground; forever to remain vacant of buildings.’ The certificate of acknowledgement by the Secretary of War sets forth the same thing.”* This plot, to remain in its integral emptiness, was from the west line of Dearborn Place, south of the north line of Randolph Street; north of the south line of Washington Street and west of the shore line of Lake Michigan. Upon the original plat Blocks 11 and 6 were not subdivided, their eastern portions being submerged. As stated by Mr. Wentworth, the land whereon the block-house stood, and the northern half of Block 5, was not parted with at that time, but the title was vested in the Treasury Department, and the Marine Hospital was subsequently erected on the part of Block 5 reserved. The eastern portion of the lots, 1, 2, 3, 4 and 5, forming the northern half of Block 5, were submerged at the time of the subdivision; on October 14, 1842, a deed was recorded in Book 133, page 271, whereby these formerly submerged parts of lots were conveyed by the Secretary of War to the Illinois Central Railroad. By an act passed June 14, 1852, the right of way for the Illinois Central Railroad was granted, and the city of Chicago likewise provided therefor by law,† also for the maintenance of the park in its exempted condition. By this right-of-way the eastern boundary of the exempted property became, necessarily, located at four hundred feet east of the west line of Michigan Avenue; such line being the west line of the right-of-way; a line seven hundred feet east of the west line of Michigan Avenue being the east line of the right-of-way. The east line of Michigan Avenue became subsequently fixed by legislative enactment. The land taken in straightening the river channel of the Chicago River, east of Michigan Avenue, was donated by the president of the Illinois Central Railroad Company, the Mayor of Chicago, Jean Baptiste Beaubien and the United States, per J. D. Graham, in September, 1855, the deed being recorded in Book 133, page 271; the remainder of the land taken being purchased of the owners. These various transactions, with those cited in Mr. Wentworth's speech, passed the title from the United States to numberless individuals, and the real estate of Fort Dearborn became absorbed by the city of Chicago—all but Dearborn Park, the legal disposition of which is at present in controversy.

* Otto Peltzer's Atlas of Chicago, 1872; compiled by him while in charge of the Map Department of the Board of Public Works.

OFFICERS SERVING AT THE POST.

In the appendix to the address as published in Fergus's Historical Series, No. 16, are several rosters of officers and soldiers who served at different times at Fort Dearborn, and other matter deemed invaluable as the source from which they are derived may be deemed authentic. From the appendix the following are extracted:

The following statement shows the companies composing the garrison of the post, at different periods, after October 3, 1828, until its abandonment; also, the commanding officers and other officers on duty at the post, from time to time:

Garrison.	Officers.	Rank.	On duty from	To	Remarks.
Companies "A" and "I" (5th Infantry) from October 3, 1828, to May 20, 1831. Troops withdrawn, May 20, 1831. Re-occupied, June 17, 1832.	John Fowler, Jr.	Capt. and Bvt.-Maj., 5th Infantry	October 3, 1828	December 14, 1830	Commanding Post. [May 20, 1831. Commanding Post from December 14, 1830, to A. A. C. S. and A. A. Q. M., d. THE LALIME HOMICIDE.

One of the lamentable and exciting incidents connected with the early history of the fort was the tragical death of J. Lalime, who had been an agent and interpreter at the fort for many years prior to his death. He was an educated man, of quite violent temper, and perhaps more respected than beloved. In a rencounter with John Kinzie, between whom and himself there had previously been serious disagreements, he lost his life. The narrative of Mrs. Victoire Porthier (see page 105), who claims to have witnessed the tragedy, fully exonerates Mr. Kinzie of murderous intent. The following letter, written by the old-time friend of the family, although differing in minor details from the testimony of Mrs. Porthier, goes to corroborate the most essential points which establishes the innocence of John Kinzie as to any murderous intent at the time of the unfortunate encounter. The letter reads as follows :

"CHICAGO, June 25, 1881.

"HON. JOHN WENTWORTH,—*Dear Sir:* Your note of the 22d inst. I received yesterday. Thanks for the slip you inclosed.

"In reply to your inquiries, I have to say that I think Matthew Irwin was not sub-agent at Fort Dearborn, but that he was United States factor, acting also as Indian Agent. His duties were confined principally to Indian affairs, under the direction of the commanding officer, when he was not specially instructed by the Department at Washington.

"As regards the unfortunate killing of Mr. Lalime by Mr. John Kinzie, I have heard the account of it related by Mrs. Kinzie and her daughter, Mrs. Helm. Mr. Kinzie never, in my

hearing, alluded to or spoke of it. He deeply regretted the act. Knowing his aversion to converse on the subject, I never spoke to him about it.

"Mrs. Kinzie said that her husband and Lalime had been for several years on unfriendly terms, and had had frequent altercations; that at the time of the encounter, Mr. Kinzie had crossed the river alone, in a canoe, going to the fort; and that Lalime met him outside of the garrison and shot him, the ball cutting the side of his neck. She supposed Lalime saw her husband crossing, and, taking his pistol, went through the gate purposely to meet him. Mr. Kinzie closing with Lalime, stabbed him, and retreated to his house covered with blood. He told his wife what he had done, that he feared he had killed Lalime, that probably a squad would be sent for him, and that he must hide. She, in haste, took bandages, and with him retreated to the woods, where, as soon as possible, she dressed his wounds, returning just in time to meet an officer with a squad, with orders to seize her husband. He could not be found. For some days he was hid in the bush and cared for by his wife.

"Lalime was, I understood, an educated man, and quite a favorite with the officers, who were greatly excited. They decided he should be buried near Mr. Kinzie's house, and he was buried near the bank of the river, about the present terminus of Rush Street, and within about two hundred yards of Mr. Kinzie's house, in plain view from his front door and piazza. The grave was inclosed by a picket fence, which Mr. Kinzie, in his life-time kept in perfect order. My impression has ever been that Mr. Kinzie acted, as he told his wife, in self-defense. This is borne out by the fact that, after a full investigation by the officers, whose friend he was, they acquitted Mr. Kinzie, who then returned to his family.

"In some of these details I may be in error, but the fact has ever been firm in my mind that Lalime made the attack, provoking the killing in self-defense. Most certainly Mr. Kinzie deeply regretted the result, and avoided any reference to it.

"Yours,

G. S. HUBBARD."

CHICAGO IN 1830. FROM THE LAKE

THE ILLINOIS & MICHIGAN CANAL.

From the earliest period in the discovery and colonization of the Great West, it was the dream of French explorers, and, later, of English traders, to connect the waters of the Great Lakes with the waters of the Great River; thereby joining the fur-producing provinces of the North with what were to become the exhaustless grain and cotton fields of the West and South. The mighty Father of Waters stretched two long arms toward the northeast and the Lake of the Illinois, now called Lake Michigan. More than one hundred and sixty years before, the public sentiment of the new Northwest was aroused to the necessity of establishing a grand water-way. French voyageurs and priests had explored the only two courses which were open to future enterprise. One was by way of Green Bay, the Fox River, and the narrow portage which separated that river from the Wisconsin and the Mississippi; the other was from the extremity of the Lake of the Illinois, at a point far to the south of Green Bay, and thence over a few miles of swamp to the Desplaines, a branch of the Illinois. It seemed to be foreordained from the configuration of the country, however, that the main artery of the water communication between the Atlantic Ocean and the Gulf of Mexico could never be fixed at a point so far north of the central territory of the land as by way of the Fox and Wisconsin rivers.

Thus, although for many years the Fox and Wisconsin rivers improvement commanded the attention of the people throughout the great regions of the Northwest, from the time of Joliet in 1673, to the period when the State of Illinois actually commenced to construct a canal, the Illinois and Michigan project was looked upon as an enterprise having the elements of grandeur in it; as something to appeal to the daring and imagination of those far-seeing French explorers—a short link by which the magnificent territory of France, extending from Canada to the Gulf of Mexico, was to be bound in a continuous chain; and, finally, it was viewed by the United States as a work of national importance, to be conducted in a spirit of national pride. To the mind of Joliet the grand idea seemed to be converted into the fact, through a very meagre array of difficulties. Only a few miles of marshy land near the shores of Lake Michigan to be cut through, and the waters of the Atlantic from the north, by way of the Great Lakes, would become united at the south, by way of the Mississippi and the Gulf! The great ocean, freshened along half its course, would wash the shores of a grand continent, bounded by the lakes, the river and the Gulf of St. Lawrence on the north, the Atlantic Ocean on the east, the Gulf of Mexico on the south, and the Mississippi River on the west. One hundred and sixty years is a long time to wait for accomplishment, and, during all this period, the idea which had been conceived by Joliet was being nurtured into active life as much through a realization of the character of the work and its results as from motives of individual gain and public utility. The mind of Joliet seems to have been charged with both of these forces. But before the first spade was struck into the earth at Bridgeport, Joliet's little

"ditch" had grown, in the minds of the new civilization, to a grand artificial water-way, nearly one hundred miles in length.

History records the fact* that M. Louis Joliet first suggested the canal idea to Father Claudius Dablon, superior of the missions of the Jesuits in Canada, in the fall of 1673. Father Marquette had accompanied Joliet in his voyage toward the mouth of the Mississippi, by way of the Fox and Wisconsin rivers. Having progressed south far enough to ascertain, from its general direction, that it flowed into the Gulf of Mexico, and not into the Pacific Ocean, after a month's absence from the mouth of the Wisconsin River, they turned back and, reaching the Illinois, ascended it, and, passing over the portage, half a league in length, reached Lake Michigan. The eager Joliet hastened at once to Montreal with his maps and papers, to report the result of his discoveries to the Count de Frontenac, Governor of Canada, with whom the expedition originated; but while shooting the rapids above that city his canoe was overturned, his companion drowned, and all his documents lost. Joliet was therefore obliged to content himself, for the time, with making merely a verbal report to his superior, but his views on the necessity of a continuous water-way between Lake Michigan and the Illinois River are ascertained from the report of his conversation with Father Dablon, recorded by the reliable pen of that writer about a year afterward. He says:

"The fourth remark concerns a very important advantage and which some will, perhaps, find it hard to credit; it is that we can quite easily go to Florida in boats, and by a very good navigation. There would be only one canal to make by cutting only half a league of prairie, to pass from the lake of Illinois, (Lake Michigan) into the St. Louis River, (the Desplaines and Illinois). The route to be taken is this: the bark should be built on Lake Erie, which is near Lake Ontario; it would pass easily from Lake Erie to Lake Huron, from which it would enter the lake of Illinois. At the extremity of this would be the cut, or canal, of which I have spoken, to have a passage to the St. Louis River, which empties into the Mississippi. The bark having entered this river would easily sail to the Gulf of Mexico. Fort Catarokoni, which the Count de Frontenac has erected on Lake Ontario, would greatly favor this enterprise, because it would facilitate the communication from Quebec and Lake Erie, from which this fort is not very far distant; and but for a water-fall which separates Lake Erie from Lake Ontario, a bark built at Catarokoni could go to Florida by the routes of which I have spoken. The fifth remark regards the great advantages there would be in founding new colonies to such beautiful countries and such fertile soil."

Further Joliet says:

"The river to which we have given the name of St. Louis and which has its source not far from the extremity of the lake of the Illinois, seemed to me to offer on its banks very fine lands, well suited to receive settlements. The place by which, after leaving the river, you enter the lake, is a very convenient bay to hold vessels and protect them from the wind."

For more than one hundred and thirty years after Joliet, among other things, vainly called the attention of the French Government to the importance of obtaining communication between the lake of Illinois and the Mississippi River, the idea disappeared. But it was not lost; for when the country began to experience

* "Relations" of Father Dablon, *Historical Magazine*, p. 237.

the force of advancing civilization, the idea took shape in the halls of legislation, and was recorded, in various forms, in the public prints. In 1810, Peter B. Porter, member of Congress from New York, and naturally interested in canal schemes, drew the attention of the Government to the question. There the matter rested for four years, when President Madison, in his inaugural of 1814, adverted to its importance. The *Niles Register* of August 6, 1814, said :

"By the Illinois River it is probable that Buffalo, in New York, may be united with New Orleans by inland navigation, through Lakes Erie, Huron and Michigan, and down that river to the Mississippi. What a route! How stupendous the idea! How dwindles the importance of the artificial canals of Europe compared to *this* water communication. If it should ever take place—and it is said the opening may be easily made—the Territory (of Illinois) will become the seat of an immense commerce, and a market for the commodities of all regions."

Then the idea slumbered for two years longer. With the exception of a few river towns and settlements, the West and Southwest was still a wild, undeveloped country. But if there is anything which marks the pioneer of the West, and particularly of the Northwest, as a peculiar people it is the prematureness of their enterprise in all public works. Therefore it was that, in 1816, the first step was taken toward the construction of the Illinois & Michigan Canal. By the treaty held at St. Louis, August 24, of that year, the Pottawatomies relinquished their title to the strip of land from Ottawa to Chicago, covering in a breadth of twenty miles, the navigable route to the Illinois and Desplaines rivers and the portage of the Chicago River.

Soon afterward Major S. H. Long, U. S. E., passed over this route, "leading," as he says in his narrative, "through a savage and roadless wilderness, via Fort Clark, and the valley of the Illinois River, to Lake Michigan." In September, he and his party ascended the Illinois to the head of Lake Peoria in a small keel boat, and passed through extensive fields of wild rice springing from the river-bed and rising several feet above the water's surface. The current was so sluggish as to weigh down the straws, and the river continued in a similar condition until, in later years, the frequent passage of steamboats prevented the upward growth of the rice.

Reaching Chicago it was found that the river by that name "discharged itself into the lake over a bar of sand and gravel, in a rippling stream, ten to fifteen yards wide, and only a few inches deep." The little Calumet, about fifteen miles south of Chicago, entered the lake, but at that time it was effectually blocked up by a high and dry sand bar. Major Long's may be called the first scientific exploration of the future route of the Illinois & Michigan Canal, and among the measures which took up the attention of Illinois, the moment it became a State, was the proposal, from Governor Bond, for a regular preliminary survey along the route of the lands obtained from the Indians. Congress by act of March 30, 1822, granted the State permission to cut a canal through these public lands, donating ninety feet on each side of it. It also appropriated \$10,000 for the surveys. The proviso attaching to these acts of liberality was merely that "the State shall permit all articles belonging to the United States, or to any person in their employ, to pass toll-free forever." This action of the National Government was most gratifying to Governor Cole, the successor of Governor Bond. He was an earnest advocate of a judicious system of internal improvements, and proposed various plans for the accumulation of funds to carry on the work; such as a revenue from taxes on the mili-

tary bounty lands, fines and forfeitures, etc. He even urged the importance of opening communication with Lake Erie by the Wabash River, through Indiana, and the Maumee, in Ohio; and the building of the Illinois & Michigan Canal with all other proposed improvements in the borders of his own State, found in him one of their ablest supporters. Early in the legislative session of 1822-23, resolutions were adopted in the House authorizing the committee on internal improvements to enquire into the practicability of a canal, empowering the Governor to employ engineers to examine the portage between Lake Michigan and the Illinois River, and estimate the cost of making a communication between its waters. From them originated a bill, embodying the Governor's views, as well as those of many other champions of internal improvement, and approved February 14, 1823. It provided for the appointment of commissioners to survey the canal route, estimate the cost of the improvement and report to the next Legislature. They were also to invite the attention of the Governors of Indiana and Ohio, and through them the legislatures of those States, to the Governor's plan to obtain communication with Lake Erie. The commissioners named were Thomas Sloo, Jr., of Hamilton County, and Theophilus W. Smith, Emanuel J. West, Erastus Brown, and Samuel Alexander.

In June, 1823, Major Long, while his expedition was on its way to explore the source of the St. Peter's River, Minnesota, again visited various localities on the route of the canal.*

He thus describes his visit to the famous portage between Chicago and Desplaines rivers:

"The south fork of the Chicago River takes its rise about six miles from the fort, in a swamp which communicates also with the Desplaines, one of the head branches of the Illinois. Having been informed that this route was frequently traveled by traders, and that it had been used by one of the officers of the garrison, who returned with provisions from St. Louis a few days before our arrival at the fort, we determined to ascend the Chicago River in order to observe this interesting division of waters. We accordingly left the fort on the 7th of June, in a boat which, after having ascended the river about four miles we exchanged for a narrow pirogue that drew less water; the stream we were a scending was very narrow, rapid, and crooked, presenting a great fall; it continued so for about three miles, when we reached a sort of swamp, designated by the Canadian voyagers under the name of *le petit lac*. Our course through this swamp, which extended for three miles, was very much impeded by the high grass, weeds, etc., through which our pirogue passed with difficulty. Observing that our progress through the fen was very slow, and the day being considerably advanced, we landed on the north bank, and continued our course along the edge of the swamp for about three miles, until we reached the place where the old portage road meets the current, which was here very distinct toward the south. We were delighted at beholding for the first time, a feature so interesting in itself, but which afterward we had an opportunity of observing frequently on the route; viz.: the division of waters starting from the same source, and running in two different directions, so as to become the feeders of streams that discharge themselves into the ocean an immense distance apart. Although at the time we visited it, there was scarcely water enough to permit our pirogue to pass, we could not doubt that in the spring of the year the route must be a very eligible one. Lieutenant Hopson, who accompanied us to the Desplaines, told us that he had traveled it with ease, in a boat loaded with lead and flour. The distance from the fort to the intersection of the portage road and the Desplaines is supposed to be about twelve or thirteen miles; the elevation of the feeding lake above Chicago River is estimated at five or six feet; and it is probable that the descent to the Desplaines is less considerable. The portage road is about eleven miles long; the usual distance traveled by land seldom, however, exceeds from four to nine miles; in very dry seasons it has been said to amount to thirty miles, as the portage then extends to Mount Juliet, near the confluence of Kankakee. When we consider the facts above stated, we are irresistibly led to the conclusion that an elevation of the lakes of a few feet (not exceeding ten or twelve,) above their present level would cause them to discharge their waters, partly, at least, into the Gulf of Mexico; that such a

* Major Long's Expedition, p. 165 and 167.

discharge has at one time existed, every one conversant with the nature of the country must admit; and it is equally apparent that an expenditure, trifling in comparison with the importance of the object, would again render Lake Michigan a tributary to the Mexican Gulf. Impressed with the importance of this object, the Legislature of Illinois has already caused some observations to be made upon the possibility of establishing this communication; the commissioners appointed to that effect visited Chicago after we left it, and we know not what results they obtained, as their report has not reached us; but we have been informed that they had considered the elevation of the *p. til lac* above Chicago to be somewhat greater than we had estimated it. It is the opinion of those best acquainted with the nature of the country, that the easiest communication would be between the little Calamick and some point of the Desplaines, probably below the portage road; between these two points, there is in wet seasons, we understand, a water communication of ten or twelve miles. Of the practicability of the work, and of the sufficiency of a supply of water no doubt can exist. The only difficulty will, we apprehend, be in keeping the communication open after it is once made, as the soil is swampy, and probably will require particular care to oppose the return of the soft mud into the excavations."

In the autumn of 1823 Colonel Justus Post, of Missouri, chief engineer, accompanied by several of the commissioners, made a tour of exploration along the route of the canal, but nothing definite was accomplished until the next year. During the fall of 1824 Colonel Rene Paul, of St. Louis, an able engineer, was also employed, with a necessary corps of men, and accompanied by one commissioner, attempted to complete the proposed survey. The party was divided into two companies. Five different routes were surveyed, and an estimate made on each. The plan of construction was on the scale of the New York & Erie Canal, the highest estimate being \$716,110, and the lowest \$639,946. In January, 1825, the commissioners made their report to the Legislature, sending also a copy to President Adams, that the subject might be kept before the country as a national measure of utility. A few days later, on the 17th of January, the act was passed to incorporate the "Illinois & Michigan Canal Company." Edward Coles, Shadrack Bond, Justus Post, Erastus Brown, William S. Hamilton, Joseph Duncan, John Warnock, et al., were constituted its president and directors. The capital stock was placed at \$1,000,000, and the dimensions of the canal were to be such as would admit of the passage of boats thirteen and a half feet wide, drawing three feet of water. The toll was placed at half a cent per mile per ton. But the canal association did not succeed in organizing a working company; so that the Legislature of 1826 deemed it proper to annul the act of the previous year. This action, however, was not understood to be an abandonment of the canal project, but merely a measure which should cut away all "entangling alliances," and enable any future management of the enterprise to build their work upon a new basis. In January, 1826, a memorial was reported to Congress for another grant of land. As remarked by Governor Coles, in his address of December, 1826, in the then fluctuating condition of the money market it was impossible to obtain a loan on long time. A liberal land grant from Congress was what was required and expected. The Governor even suggested, "considering the favorable manner in which our application for a grant of land was received by Congress at its last session," that the Legislature should "commence this great work of improvement, predicated on a liberal grant of land being made by Congress, previous to the meeting of the next General Assembly." Through the persistent efforts of Daniel P. Cook, Representative in Congress, assisted, for several years, by United States Senators J. B. Thomas, Ninian Edwards and Elias K. Kane, an act was passed March 2, 1827, granting to the

State for canal purposes "a quantity of land equal to one-half of five sections in width, on each side of the proposed route, each alternate section being reserved to the United States. This splendid gift of Congress* amounted to about 284,000 acres, of which over 113,000 acres were fertile prairie land. The obtaining of this magnificent land grant made the building of the canal a certainty, and in after time was the means of lifting the State from the slough of financial despair. It made possible and necessary the survey of Chicago Town, and flourishing villages were eventually born along the route of the proposed improvement. In 1828 another law was passed providing for the sale of lots and lands, for the appointment of a board of canal commissioners and for the commencement of the work.† Nothing was done under this law except the sale of some land and lots, and a new survey of the route and estimate of cost, by the new engineer, Mr. Bucklin. The granting of this domain in 1827 may be said to have been the first general recognition of the growing importance of the Northwest. Owing to the evident lack of home capital, however, the Legislature attempted nothing further to aid in the construction of the canal for two years after obtaining the congressional grant. In January, 1829, an act was passed for the appointment, by the Governor, of three commissioners who were to serve two years, and were to be granted, in addition to their usual powers, the right to establish towns along the surveyed route. The dimensions of this canal were also fixed. The commissioners selected were Dr. Jayne, of Springfield, Edmund Roberts, of Kaskaskia, and Charles Dunn. They proceeded at once to lay out towns at each end of the route. They first platted the town of Ottawa, at the junction of the Fox River with the Illinois, and in the autumn of 1829, ordered James Thompson, one of their surveyors, to lay out the town of Chicago, at the lake terminus of the canal. The commissioners thus having stuck their first stakes, in providing for towns at each end of their line, found it necessary to revise their surveys.§ Those of 1830-31, under Dr. William Howard, chief engineer of the topographical bureau, established the fact that the greatest elevation of ground on the plane along the proposed canal route, between the Chicago and Desplaines rivers, was only fourteen feet above the surface of the lake, the average height being ten feet; that at a distance of thirty-four miles from the lake, the surface of the Desplaines is on a level with Lake Michigan, and then begins to gradually fall, the descent between a point at the junction of the Kankakee River and the Illinois to LaSalle being at the rate of two feet per mile. From LaSalle to the mouth of the Illinois the fall was ascertained to be only one and a half inches per mile; hence it was argued that a moderate supply of water from the lake in low stages would render this portion of the river as navigable as the Mississippi. The country between the lake and the river is a level prairie, the soil a stiff blue clay, with a substratum of "hard pan." The plan was, by means of a deep cut over thirty miles in length, to bring the waters of Lake Michigan directly to that point in the Desplaines where the levels coincide. This was to constitute the summit level. At that locality, however, the rock appeared so near the surface, it became evident that the cost would be great, and discouragement was thrown upon the whole plan, although all the

† Ford's Illinois.

‡ The only statement to the contrary is found in a letter of James M. Bucklin, chief engineer, in 1830, who says that when he arrived at Chicago, "Capt. Pope" had laid out the town.

§ Major Long's letter to Chicago Canal Convention of 1863.

investigations of engineers up to that time and in later years went to establish the fact that, albeit an expensive work, it would prove the most effective. But these considerations of economy induced the Legislature in February, 1831, to pass an act for appointment of other commissioners who were to find out if the Calamic (Calumet) would not do for a feeder, and to improve the mouth of the Fox River at Ottawa. They were also to report whether a railroad would not be preferable to a canal between the Chicago and Desplaines rivers. Upon second thought the State decided to build neither railroad nor canal, at present, and in March, 1833, repealed the acts of 1829 and 1831. For the next two years nothing was done towards building the canal. The discouraging discovery had been made in 1833 that it would require \$4,043,000* to construct the canal; consequently, as there was little money and less credit in the State, all public improvements languished for a time.† Finally, however, on February 10, 1835, an act was approved authorizing the Governor to negotiate a \$500,000 loan for the construction of the canal; to cause certificates of stock to be used and to appoint another board of commissioners. The dimensions of the canal were to be forty-five feet wide at the surface, thirty feet at the base, and deep enough to float boats of at least four feet draft. The Governor was also authorized to negotiate bonds for the prosecution of the work, pledging the canal lands as security for their redemption. But owing to the small value then attaching to these lands the bonds were not easily negotiated. In 1835, therefore, Colonel Strode, of Galena, suggested an amendatory act, pledging the faith of the State to the redemption of the bonds. This pledge was given in 1836, under Governor Duncan's administration, another canal bill being approved on the 9th of January. Gurdon S. Hubbard, William F. Thornton and William B. Archer, and subsequently J. B. Fry, were appointed commissioners. William Gooding became chief engineer. Upon the day of the passage of the bill the citizens of Chicago assembled and resolved that twelve guns should be fired for each man that voted for the measure, and that the two weekly newspapers should publish their names in "large capitals," while the names of the opponents of the bill were to be printed only in "italics." The work was to be constructed on the plan of the "deep-cut," or direct supply of the canal from Lake Michigan through the Chicago River and its South Branch. Further and more minute surveys were instituted and estimates in detail were furnished of the probable cost of the work upon an enlarged scale, viz., for a canal sixty feet wide at the surface, thirty-six feet at the base, and six feet deep. The estimate of the entire cost of such a canal was \$8,654,000. To facilitate its construction, "Archer's Road" was at once laid out from Chicago to Lockport, at a cost of \$40,000, that amount being raised from the sale of lands. The justness of this expenditure was questioned, since Colonel Archer had an extensive property in Lockport which the road seemed designed to benefit. At length, however, all was ready for the formal inauguration of the work.

Thus after nearly twenty years from the time "the right of way" was obtained from the Pottawatomies, by repeated assaults upon the Legislature and Congress, upon the public treasury and private purse, the advocates of the Illinois & Michigan Canal saw their labors about to be commenced, and considered that result a sufficient reward for all their trials. On July 4, 1836,

* Report of the Illinois & Michigan Canal, 1844.

† Report suggesting the bill prepared by George Forquer, Senator from Sangamon County.

the commissioners ordered the work to be inaugurated at Bridgeport. Upon the appointed day Chicago was in a great state of excitement. The citizens and invited guests assembled in the public square, at the signal given by three cannons from the fort. Part were to go by boat, and part were to form in procession and move, by the Archer road, to the head of the proposed canal. The officers of the day were: J. B. F. Russell, marshal; aides, E. D. Taylor, Robert Kinzie, G. W. Snow, J. S. C. Hogan, H. Hubbard, and W. Kimball. At 11 o'clock A. M., the steamer "Chicago" started from Dearborn Street, her decks being crowded. The schooners "Sea Serpent," "Llewellyn" and other craft, towed by horses, followed in her wake. On foot, in carriages, or on horseback, the procession also moved to the appointed place, by the land route. Early in the afternoon a large assembly was present at the "new house," on Canal-Port. There Judge Smith, a true friend of the enterprise, read the Declaration of Independence, which was followed by an eloquent address delivered by Dr. W. B. Egan. Gurdon S. Hubbard also spoke, contrasting the condition of the settlement with what it was eighteen years before, when he first ascended the river in a canoe. After these addresses the people moved to the spot where excavation was to be commenced. Colonel Archer, acting commissioner, made a brief address and broke the first ground. Judges Smith and Brown, of the Supreme Court, and Commissioner G. S. Hubbard delivered the closing addresses. The crowd then dispersed; and the actual work of construction was soon to commence.

Following closely upon this auspicious event was the famous "Internal Improvement" act of 1837. In addition to the task of supplying a thinly-settled Western State with a railroad system sufficient to meet the requirements of a populous Eastern commonwealth, the act authorized the granting of a \$4,000,000 loan for the further prosecution of the canal. Extravagant expectations were thus raised that could not have been realized in the palmiest days of the State's financial health. Though as a matter of convenience, the canal loans were kept distinct from the internal improvement funds, they all failed with the temporary loss of the State's credit and the repeal of the act. In 1837 the commissioners were authorized to sell lands, and the Governor was authorized to negotiate a loan of \$300,000 to carry on the work for 1837 and 1838, provided "said loan shall not be made until the whole of the means available under existing laws shall have been exhausted." But the "deep-cut" was going on, and by 1839 over one and a quarter million of dollars had been expended. Every available means were required to supply the enterprise with the alarming amount of funds demanded. This proviso of 1837 being considered somewhat "cramping" in its nature, was repealed in January, 1839, and a few days thereafter the fund commissioners of Illinois (who disbursed the internal improvement fund) turned over the \$300,000 to the canal fund. And still the hungry enterprise called for more money to keep it alive; so that April 11, 1839, the commissioners of the canal concluded to issue a large amount of checks, or scrip, payable in ninety days, out of the canal fund. The lesser denominations of scrip, or the "at-sight" checks, were used principally by the contractors to pay off their workmen. Those of larger denominations, such as \$50 and \$100, were used chiefly in the dealings between the commissioners and contractors. What were termed "irregular" checks, in contradistinction to the "regular" issues of May and August, 1839, were also thrown upon the money market. If a contractor wished the commissioners to pay him a specified amount, or

amounts, he was favored with one or more of these irregular "checks," on the spot. If it was found that there was more coming to him, the balance was paid in one or more "regular" checks. The regular checks of the two issues were in denominations of \$1, \$2, \$5, \$10, \$50 and \$100, the August issue being confined to the latter denomination. The total amount of the issue dated May 1 was \$266,237: of that dated August 1, \$128,317.* These checks were put in circulation, for a temporary purpose, from the canal office at Lockport, and were in part redeemed at the Branch of the State Bank of Illinois, at Chicago, and a part were received for dues. As these checks were only intended for temporary use, it appears from the reports of the canal officers to the Legislature, in the year 1840, that they had redeemed and taken up all of both issues, except \$822. From similar reports made in 1842-43, it appears that only \$323 was then in circulation, and, from various subsequent reports, that this amount was reduced to \$315, which it was supposed was lost or destroyed.

Although it was supposed that this scrip had been permanently retired, it would seem that the \$50 and \$100 checks presented at the Illinois bank for redemption, although they were not again put in circulation, were not cancelled. Certain it is (as will be hereafter noticed), that eighteen years subsequently, after this temporary currency was supposed to have served its purpose, it appeared again to vex the State.

A new Legislature was elected in 1840, and the Fund Commissioners laid before that body the difficulties of meeting the interest on the public debt due in January, 1841. Work upon the railroads had been suspended a year, but the canal enterprise was still progressing. The canal scrip of 1839 having served its purpose, the canal contractors had combined to raise a loan for the further prosecution of the work. They had made their contracts when the prices of material and labor were high.† By their subsequent fall work could now be prosecuted at such cheaper rates that the contractors could well afford to take State bonds at par and sell them at considerable of a discount. They therefore had agreed to take a million of State bonds at par, in payment for their estimates, and to meet the discount, even to twenty-five per cent if necessary. General Thornton had therefore been sent to Europe and negotiated the loan. But it was now necessary that something further be done. The credit of the State was endangered; and upon the credit of the State rested the existence of the canal. The canal debt was the most important element of the State debt, and any efforts put forth to meet the interest on the State debt were so many steps taken to save the canal. At length, after much excitement and discussion, which it is impossible to notice here, a bill was passed authorizing the fund commissioner to hypothecate internal improvement bonds, to the amount of \$300,000, and apply the proceeds to the interest "legally" due. The act also provided for the issue of interest bonds (which were to be sold for what they would bring), and an additional tax of ten cents on the hundred dollars. Upon the \$800,000 interest bonds issued, the State eventually realized only about thirty per cent, so low had its credit fallen. But through these desperate measures the State debt interest and the canal debt interest was paid up to, and including 1841. But the estimate of expenditures for 1842 could not be met, and in March, 1843, work was entirely suspended, after an outlay of over \$5,000,-

000. The collapse of the State finances in February and June, 1842, and the withdrawing of the State bank from its former position of disbursing of the canal funds, destroyed the value of all the circulating paper which had sustained the enterprise and left the canal not only without a circulation but without a circulator. Nothing but a complete suspension could result. Over one hundred contractors along the line of the canal stopped their work, and bills commenced to pour in against the State. Up to the suspension of work over \$4,600,000 had been expended upon its construction and large amounts were yet due on account of superintendents' and contractors' claims. In 1843 a law was passed to settle the claims of the latter upon a basis not to exceed \$250,000. They were finally compromised for \$230,000. The expenses had been as follows:

1836	\$ 39,260 58
1837	350,649 90
1838	911,902 40
1839	1,479,907 58
1840	1,117,702 30
1841	644,875 94
1842	155,193 33
Superintendents	210,000 00
Contractors' damages	230,000 00
Total	\$5,139,492 03

This great enterprise, however, after six years of activity, was not to be abandoned. Like other public works, it was to be taken up by the wise men of the East, who possessed that requisite to material development which all new countries lack—an abundance of capital. The old lesson containing as its moral the hopelessness of premature enterprise was being taught to the young State by that stern master experience. But the projectors of the Illinois & Michigan Canal were determined to try another "tack," in order to enter the harbor of financial prosperity. This was determined upon even before they had cleared away the wrecks of 1842. As if by magic the right man seemed to spring up at the right time; for it was in June of that year that Arthur Bronson, of New York, and a large owner of real estate in Chicago, came West to look after his property. As early as 1833, when he purchased a portion of Kinzie's and Wolcott's additions, he had taken a deep interest in the enterprise. While Mr. Bronson was being interviewed by leading citizens as to the best means to procure funds for the completion of the canal, various plans were being proposed. Such men as William B. Ogden, Justin Butterfield, Michael Ryan, Senator from the LaSalle District, and Hon. Isaac N. Arnold,* favored a plan by which the bondholders should loan a sufficient sum for the completion of the canal, its payment being secured by the revenues of the canal, and the proceeds derived from the sale of canal lands and lots. The works and this income were to be placed in the hands of trustees, two of whom were to be chosen by the aforesaid bondholders, and the third appointed by the State. Mr. Bronson approved of this and when, in the fall of 1842, he returned to New York, he drafted the outline of a contract which would be acceptable to the State and to the holders of bonds. Mr. Ryan visited the East, to dissipate the idea which had gained grounds in some quarters, that the State intended to repudiate its bonds. Mr. Arnold and Mr. Bronson also maintained a continued correspondence in regard to this foreign loan. The former also laid the matter directly before the people, in a forcible address which he delivered in November, 1842, before the

Mechanics' Institute of Chicago. Mr. Arnold's action in the matter no doubt went far toward inducing foreign and Eastern capitalists to look favorably upon the project and also to assist in the passage of the bill during the legislative session of 1842-43, which embodied the ideas advanced by him and his co-laborers. Justin Butterfield drafted the bill which was introduced into the House, and it became a law February 21, 1843. Mr. Arnold was at the time chairman of the committee on finance, and rendered most efficient service in the passage of the bill. The Governor was authorized to negotiate a loan of \$1,600,000, for a term not exceeding six years, and at a rate of not more than six per cent. For its payment he pledged the revenues and lands of the canal, which were to be placed in the hands of three trustees, when the loan should be negotiated. In case the bond-holders would not subscribe to the loan, the Governor was empowered to enter into a contract with them, making no further pledge of the faith of the State than to agree that the canal and its revenues should be placed in their hands, through their chosen trustees. The act also agreed that nothing should be done to interfere with the rights then secured to the holders of canal bonds; provided that \$400,000 of the loan should be paid in the first year, after the execution of the trust deeds; and authorized the board of trustees to make "such changes and alterations in the original plan of said canal as they may deem advisable, having due regard to economy, etc." In March Governor Ford appointed Michael Ryan and Charles Oakley commissioners to negotiate the loan. They proceeded at once to New York, where they succeeded in obtaining a subscription to a portion of the loan, at least. Subsequently they visited London, and laid their plan before prominent European capitalists. They represented that the whole canal debt did not exceed \$5,000,000, that the work could be completed for \$1,600,000 in three years; that its income, with the proceeds derived from the sale of canal lands, would be sufficient to pay off the loan, and that holders of canal stock in this country had agreed to advance their proportion of the loan on one million stock. Although pleading her present inability to meet her debts, the commissioners protested that the State of Illinois had no intention of repudiating any portion of them by the passage of the canal act. The bond-holders, however, replied that the canal bonds were issued on the faith of the State and that she was bound to provide for the payment of the interest. They were unwilling to subscribe under the provisions of the legislative act, but that if the statements made by the commissioners could be verified to the satisfaction of Messrs. Baring Brothers & Co., and Magniac, Jardine & Co., bankers, and if Governor Ford would enter into the contract, authorized by the twenty-first section of the act, with several minor conditions, they would subscribe to the loan—provided they should be entitled to register canal bonds held by them to the extent of eight times the amount of such subscription. A committee of well-known Boston men were therefore appointed, consisting of William Sturgis, T. W. Ward, and Abbott Lawrence. In the early part of November, 1843, Captain W. H. Swift, a United States Engineer, and ex-Governor John Davis, of Massachusetts, having been appointed agents of the Boston committee, came to Illinois to make an examination of the canal and its finances. Captain Swift traveled over the route of the canal from Chicago to La-Salle, where Mr. Davis met him, having ascended the Illinois River. Together they ascended the valley of the Fox River, from Ottawa, and having, with the as-

sistance of Engineer Gooding, thoroughly examined the condition of the canal work, instituted an examination of the finances of the canal management. Mr. Ryan, the commissioner, Governor Ford and General Fry, the acting commissioner, gave them every possible assistance. As a result Messrs. Swift and Davis in their report to Messrs. Baring Brothers, et al., fiscal agents of the bond-holders, sustained the statements made by Messrs. Ryan and Oakley, commissioners of the State. They reported that the canal liabilities were \$4,846,756, and that the securities for the redemption of the \$1,600,000 were satisfactory. Governor Ford then drafted the contract with the bond-holders and trust deed to them, containing the guarantees of the defective legislative act, and after many trials and tribulations the work of obtaining subscriptions to the loan was finished. The loan was negotiated by W. H. Swift and David Leavitt, trustees on the part of the bond-holders, and Jacob Fry, State trustee; and as the reader has been informed, the \$1,600,000 was to be expended in prosecuting the "shallow-cut," or cheap plan, the surface waters of the Desplaines and Calumet being relied upon as feeders for the upper end of the canal. Undoubtedly the father of the "shallow-cut" plan was Russel E. Heacock, a pioneer lawyer and an able man. His early residence was near the outlet of the proposed canal, and he had interested himself deeply in the progress of the work; so that when there seemed a probability that, on account of the expense of the undertaking, the State would abandon the canal altogether, Mr. Heacock threw his energies into the determination to have a canal, even if a cheap one. He argued, he pleaded, he talked, he wrote, and at last became known in person as "shallow cut." No doubt, in view of his success in the matter, he was perfectly willing to have the name attached to him.

But although the Legislature had "authorized" the finishing of the canal on the "shallow-cut" plan, it could not decree that water should run up hill, and it was yet an unsolved problem, notwithstanding all figures and reports, whether a sufficient supply of water could be obtained to operate the canal on this high level. Experience has shown that, without another "idea," this scheme would have been a failure. During the dry portion of the season the water from Mud Lake and the Desplaines River is inadequate to the demands of navigation at the lower level, where the other feeders are obtained. The happy thought which finally developed into a plan to overcome this objection, came from the practical men connected with the Chicago Mechanics' Institute. In the fall of 1843 a committee from that institution, consisting of John Gage, Ira Miltimore, and H. L. Fulton, prepared a plan for raising water, by steam pumps, from the Chicago River, and supplying it to the canal on the summit level, above the Desplaines and other feeders. Governor Ford gave them little encouragement, but Governor Davis was so impressed with the feasibility of the project that he presented it to the consideration of his principals, and the plan was finally adopted. The "idea" was conceived by Ira Miltimore, who constructed Chicago's first water works, and was one of her most talented engineers.

By July, 1845, Mr. Gooding, the canal engineer, had perfected his department, with Edward B. Talcott as principal assistant. The force, in addition, consisted of two resident engineers, six assistants, rodmen, draughtsmen, etc. Operations on the canal were first begun in September, 1843, but on account of the great prevalence of sickness in the valley of the Illinois, little progress was made until after Engineer Gooding had com-

pleted his first estimate of the cost of the work, in October, 1845. Up to November 30, 1845, the payments on the subscriptions to the \$1,600,000 loan had amounted to \$308,000. In April of the next year the European subscribers paid their first installment upon a basis of thirty-two per cent. The American subscribers had paid on a basis of forty per cent. By a subsequent vote of the board the payments were equalized, so that, according to the amount subscribed, each could register the same percentage of indebtedness against the canal. Previous to this equalization, the total amount subscribed in Illinois was \$160,852; from the date of the organization of the canal board in June, 1845, to November 30, 1846, Illinois subscribers paid in \$94,810; New York, \$273,841; French and English, \$721,000, of which the French contributed about one-quarter. The total receipts from all sources during that time amounted to \$1,105,358. This was a very important year in the history of the canal. There never was more of a certainty that the enterprise would be completed, in one shape or another. Several points yet remained undecided. Among the most important were those involved in the consideration of the plan submitted by the Mechanics' Institute to pump a water supply into the Desplaines through the Chicago River. The commissioners had determined that it was necessary to obtain a supply of about six thousand feet per minute more than could be furnished by the Calumet and Desplaines at low water. To accomplish this, two plans had been suggested; one was to construct a feeder, over thirty miles in length, from the Fox River; the other was the plan proposed by the Mechanics' Institute. The pumping plan was adopted, both as the cheapest and most effective. It was during 1845-46, also, that the Illinois & Michigan Canal was not only coming clearly into light as the foundation of Chicago's prosperity, but it was discovered that the firm establishment of the enterprise saved this city to the State of Illinois. To explain the matter it is necessary to remind the reader that the ordinance of 1787 authorized the organization of three states south of a line drawn due east and west from the most southerly bend of Lake Michigan to the Mississippi River, and two States north of such a line might be formed. It is clearly set forth in John Wentworth's reminiscences that many settlements north of this line were unanimously in favor of being attached to Wisconsin. Within the limits of the disputed tract resided the two Illinois Congressmen, and upon them many citizens residing north of 42° 30' lavished promise after promise, in case they would support the annexation. Mr. Wentworth says:

"The disputed tract had two Congressmen, the Hon. Joseph P. Hoge, of Galena, now an eminent lawyer in San Francisco, and myself. And Wisconsin, offered to make us the first two Senators, and also offered to give the disputed tract the first Governor. It was proposed to enact a law submitting the binding force of the ordinance of 1787 to the Supreme Court of the United States. Our Chicago people were much divided upon the question, and I really believe serious consequences would have grown out of it *but for the embarrassments that would be caused by having the Illinois & Michigan Canal owned by two states.* As an original question, all the five states being out of the Union, there is no doubt but Congress would have enforced the provisions of the ordinance, and Illinois been cut off from the lakes, and her Legislature saved from the annoyance of Chicago lobbyists. But might made right. Wisconsin being out of the Union, she could only come into it with boundaries prescribed by a majority of the states in it, and I lost the honor of being a Wisconsin United States Senator."

One of the first acts of the board of 1847 was to take the unfinished work on the summit-level of the canal into its own hands, so as to complete the main line by the spring of 1848. During the year the third European

and the fourth American installments on the loan were called in, the receipts, inclusive of November, amounting to \$1,577,000, or nearly \$400,000 more than the expenditures. Of course there were drawbacks to the progress of the work, and during 1847 and 1848 a feeling of dissatisfaction found expression through Colonel Oakley, the State trustee. He brought grave charges of mismanagement and favoritism against Mr. Gooding, the engineer. Testimony was taken on the charges, which were denied in a very conclusive letter written by that gentleman. Certain it was that the charges were not proven. Neither were those brought against Messrs. Swift and Leavitt, the bond-holders' trustees, to the effect that they were delaying the completion of the canal, in order that they might retain profitable offices. Notwithstanding an investigation, they retained their offices, and went on vigorously prosecuting the work. The severe sickness experienced in the valley of the Illinois in 1846, the strike of the canal laborers on the summit-level in 1847, and the disagreements between the State trustee, the bondholders' trustees, the engineer, the Governor and the public, no doubt did delay the progress of the work.

By April, 1848, all was ready for the passage of the first boat. On the 10th of that month the "General Fry" arrived from Lockport, and passed over the summit-level to Chicago, being towed by the Propeller "A. Rossiter."

As the boat passed through the city it was greeted with cheering, which was renewed at the different bridges. Upon its entrance into the river, Mayor Woodworth welcomed the delegation from Lockport, and an eloquent speech was delivered by Charles Walker. The formal opening of the canal, on April 16, was the occasion of a fete, even more enthusiastic than that of July 4, 1836. Boats started from LaSalle and Chicago at the same moment. That from Chicago, bearing canal officials and prominent citizens, arrived at Lockport, at noon of the fete day. Mayor Woodworth delivered the address of welcome and G. A. Parks the oration. Upon the 24th of the month the "General Thornton" arrived at Chicago, from LaSalle, laden with sugar and other goods, from New Orleans and en route to Buffalo. The freight was transferred to the steamer "Louisiana," and arrived at Buffalo, April 30, two weeks before the first boat by the Erie Canal had reached that port. The canal was at length completed.

Having thus been able to witness the completion of a work upon which he had been actively engaged for twelve years, Mr. Gooding, soon after the passage of the first boats through the canal, was removed by the Governor, and Edward B. Talcott, his former assistant,

was appointed in his place. In October, however, upon the death of Robert Stuart, the secretary of the board, Mr. Gooding, was appointed to that position. During the fall a large sale of lots took place at Chicago, and a dividend of six per cent was authorized on the principal of the \$1,600,000 loan. The amount of canal property was now vested in the board of trustees was 224,965 acres of land and 5,927 town lots, appraised at \$2,126,355. The main canal from Bridgeport to LaSalle, not including the four miles of river from Bridgeport to Chicago harbor, was ninety-six miles in length, sixty feet wide at the surface, thirty-six feet at the bottom,

and six feet deep. At this time, in fair weather, the waters of the lake were about eight feet below the summit-level of the canal. The pumping engines therefore proved to be most necessary auxiliaries for the successful working of the canal. They were two in number, of about 160-horse power each, and pumped seven thousand cubic feet of water per minute. The cost of the extensive engine-house and the machinery was \$54,000. The engines were first put in motion on February 10, 1848. Along the line of the canal were seventeen locks, four aqueducts, culverts, bridges, dams, canal basins, lock-houses, waste wiers, the inevitable tow paths, and all the usual accompaniments of such an institution. The rates of toll ranged from three and a half cents on common freight boats per mile to six cents on passenger boats; and for each passenger over eight years old four mills per mile, sixty pounds of baggage being transported free. The toll on articles of commerce varied from three to twenty-five cents per thousand pounds.

When the work was completed, the sturdy men, the day laborers, became homesteaders, squatters, or purchasers of town lots. Almost all became settlers along the line between Chicago and LaSalle; the remainder were nomadic and are perhaps following the directors of internal improvements up to these times. They, and the more pretentious workers upon the canal, were no doubt gratified at the life which even the first season of navigation presented. The waters of the canal were covered with craft of every kind, and the locks were in constant motion. The canal was closed by ice on the night of November 29, 1848, but during the two hundred and twenty-four days of navigation that season the tolls collected at Chicago amounted to \$52,000, and \$35,000 at LaSalle. The sale of canal lots in Chicago for the season amounted to \$400,000. Money circulated freely. Business of all kinds was encouraged to a remarkable activity. A new era of financial prosperity was not only inaugurated by the completion of the canal, but by the rapid advance in value of lands; and, by virtue of the provision of the new constitution, levying a special tax of two mills for the purpose, the burdensome debt of \$1,600,000, which clung to the enterprise, was, in a few years, completely extinguished. Thus, it would seem, after many years, that the bread which had been cast upon the troubled financial waters, was returning to bless the people of the State.

The expenditures on this great public work from the organization of the board of trustees, in May, 1845, to November 30, 1848, or the date of closing of the first season of navigation, was \$1,719,859.32; receipts, \$1,949,042.09. This balance was charged with the sum of \$128,300 prior to the opening of navigation in 1849, including interest and principal of loan, construction of Calumet feeders, repairs and incidental expenses.

But as difficulties precede the accomplishment of any great undertaking, so they seem to have a faculty of following ever in its wake. Navigation through the canal was seriously impeded during the early part of the season by the paucity of the water supply. The Calumet feeder, seventeen miles in length, was not completed until the fall of 1849; consequently the supply for the upper end of the canal was obtained from the lake, by means of the pumping works at Bridgeport, from the Desplaines and DuPage rivers. The eleven miles of canal from Joliet to the DuPage proved leaky, also, owing to the porous nature of the soil, and upon this division, in spite of the utmost exertions on the part of the engines, the level could only be raised at the rate of one inch in twenty-four hours. Then, during the winter

of 1848 and spring following came the disastrous freshets and ice jams, which injured the works quite seriously. Many claims for pre-emptions under the act of 1843 were also being pressed against the board of trustees for settlement. Among them were several for lands and town lots in Chicago and neighborhood, for quite extensive amounts. The trustees were the judges or commissioners on these claims, and according to their interpretation of the law, they awarded to each claimant in the proportion of two blocks for each 160 acres. Many of the claimants were dissatisfied and sought relief through the courts, but the action of the trustees was sustained in 1851. The trustees had scarcely unburdened the canal of these vexatious suits before the Illinois River took it upon itself to fall so low as to refuse the passage of first-class boats to LaSalle. Second and third class craft only could navigate its waters. In August, 1852, Congress applied \$30,000 toward the work of dredging its channel. The next year the passenger traffic of the canal showed so marked a falling off, because of the building of the Rock Island Railroad, and the running of a daily line of boats, in connection with it, between St. Louis and LaSalle, that, during the early part of 1854 the canal management were obliged to reduce their tolls. Another season of remarkably low water in the Illinois River, during 1856, suspended navigation for some time, and reduced the canal revenue nearly \$60,000. The feeders failed to supply sufficient water and the pumps of Bridgeport were worked vigorously for nearly four months. It was becoming evident that, even with their aid, the "shallow-cut" plan had, unfortunately, been forced upon the State by considerations of economy.

These checks, however, seemed but slight drawbacks when compared with the really grand results which had followed the completion of the canal. The semi-annual sale of lands had been prodigious, bringing large sums of money into circulation, and lifting the whole State into financial prosperity. Of the seven millions of dollars which the trustees had received during the decade following the opening of the canal, about half of that amount was derived from the sale of lands. Chicago, especially, profited by this new order of things. Annual land sales were held in that city, and immigration poured into her borders. Thousands of dollars were put into circulation, outside of what was thrown into the channels of trade from the sale and transfer of real estate. The canal tolls at this point alone, aggregated over a million dollars in ten years. More than five and a half million bushels of wheat, twenty-six million bushels of corn, twenty-seven million pounds of pork, five hundred and sixty-three million feet of lumber and fifty thousand tons of coal were sent through the canal during the same period. This was certainly a good record for an enterprise of ten years' standing.

During this decade there had been several changes in the management. Charles Oakley, the State trustee, died January 1, 1849. His successor was J. B. Wells. W. H. Swift and David Leavitt were again chosen trustees for the bond-holders, in May, 1849. In February, 1852, Josiah McRoberts was appointed State trustee by the Governor, and the election by the bond-holders in May resulted in retaining Messrs. Swift and Leavitt in office for another term. The loan of \$1,600,000, with interest, was paid in 1853. As stated, Captain Swift and David Leavitt were appointed trustees by the bond-holders under the provisions of the act of 1842-43, and held their office from that time until the canal was completed and the entire debt paid off in 1853. They then

surrendered the works and the unsold lands to the State of Illinois. Soon after they went into office Isaac N. Arnold was appointed the attorney of the board of trustees, and acted in that capacity until the trust was executed.

From 1848 to 1853 the subscribers to the \$1,600,000 loan had received no less than \$2,111,794.78. In April, 1854, E. B. Talcott, general superintendent of the canal, resigned his position, after a connection with the enterprise of eighteen years. William Gooding, engineer (and later secretary), for the same length of time was chosen for that position. John B. Preston was appointed general superintendent in April, 1855. In 1857 Charles H. Ray, of Chicago, was appointed State trustee, and Messrs. Swift and Leavitt were continued in office.

During February and March of 1857, under the provisions of the act of 1847, a large amount of canal indebtedness or scrip was funded. It will be remembered that all except a few hundred dollars of these canal checks had been paid and retired from circulation. But large numbers of them appeared again, sometimes being presented to the secretary of the fund commission under different names, but all apparently by the same hand—that of Governor Joel A. Matteson, whilom contractor of the Illinois & Michigan Canal. Mr. Matteson was the principal stockholder in the Illinois State Bank, and it was alleged that, having converted these checks into bonds, he presented them to the Auditor of State, as security for his bank circulation. During the next session of the Legislature it came to the knowledge of General Thornton, General Fry and Mr. Manning (the two first named having acted as State trustees, and the latter as secretary of the board of canal commissioners), that \$50 and \$100 checks, which had been paid by the bank in 1839 but not canceled, were again afloat, and were being funded by Governor Matteson. An investigation was at once commenced, and in February, 1859, a law was passed to “indemnify the State against loss by reason of unlawful funding of canal indebtedness.” Under its provisions Governor Matteson executed a mortgage and

an indemnifying bond to the State, to cover specified bonds into which the scrip had been funded by him. The legislative finance committee charged that the State Treasurer had paid him an amount of money equal to \$223,182.66, on account of these canal checks. The indemnifying act passed, upon the recommendation of the finance committee, authorized him to give security for the repayment of this sum within five years from the date of its approval, which resulted in the execution of the mortgage and the bond. The testimony deduced by the finance committee seemed to conclusively prove that the uncanceled checks of the \$50 and \$100 denominations passed from the hands of the State trustee to Governor Matteson. The Grand Jury of Sangamon County, however, which sat in May, 1859, failed to bring in a true bill for larceny, although their first vote favored such a finding.

In the foregoing narrative it has been shown what twenty-one years of persistent endeavor was able to accomplish. From the commencement of work in 1836 to its suspension in 1843, its final completion in 1848, and to the gathering of the financial harvest of 1848-57, the canal enterprise presented many new phases to the public. Intermixed with much honest endeavor must, of necessity, have been found some dishonesty and attempt at self-aggrandizement and purely selfish gain. Yet the men who carried forward the great work to a successful completion, and then conducted it with such remarkable profit to themselves, the bond-holders and the State, were not certainly the intellectual superiors of the men of 1835-39, who failed so signally in their efforts to give the new West a great water-way. The successful ones had the revival spirit of the times to help them on, the use of money which that spirit drew forth from its resting places at home and abroad to aid them, and the requirements of the immigration epoch to support their enterprise. It shared the fortunes of Chicago—or rather Chicago shared its fortunes—and they both became great and prosperous. The canal even retained its prestige during the season of depression in 1857. Reference to subsequent volumes of this History is here made for the work done since 1857.

CORPORATE HISTORY.

CREATION OF THE TOWN.

The few families who reposed within the shadows of Fort Dearborn first realized that civic authority extended to their cabin doors in 1823. It was then that the officials of Fulton County, to which this unorganized region was attached, levied a tax of five mills to the dollar upon all personal property in the settlement, exempting only household furniture, as provided by law. Amherst C. Ransom, Justice of the Peace, served as Collector, and enriched the treasury by the sum of \$11.42, thereby demonstrating that the total valuation of embryo Chicago was but \$2,284. When Peoria County was created in 1825, Chicago came within its jurisdiction. Even at this time Chicago had but a mythical existence, the name applying sometimes to the river and again to a cluster of cabins on its marshy shores or sandy banks. But the Illinois & Michigan Canal having at length obtained its coveted and magnificent land grant, the commissioners were authorized to lay out towns upon the sections which fell to them. Chicago was accordingly surveyed, and a plat of it published by James Thompson, a canal surveyor, on August 4, 1830. This date marks the birthday of Chicago as a town, and the "Fort Dearborn settlement" disappeared. The section falling to the canal interest, upon which Chicago was platted, was No. 9, situated immediately north of School Section No. 16. The line between the two sections was Madison, and their eastern boundary State Street.

East of State Street, extending from Madison Street north one mile, was the tract included in the Fort Dearborn Reservation and the Kinzie pre-emption, which afterward became additions to the town. The portion north of the river had been pre-empted by Robert Kinzie, for the family, and the portion south comprised the Reservation. Section 15 was a canal section and was not surveyed for some years afterward. Section 9, "the original town," and to which all other surveys are additions, fortunately covered the ground along the main channel of the river and at the junction of its two branches. The original limits of Chicago were Madison, Desplaines, Kinzie and State streets, embracing an area of about three-eighths of a square mile. The public thoroughfares running east and west were, as recorded on Thompson's map, "Kenzie," Carroll, Fulton, (on the West Side), South Water, Lake, Randolph and Washington streets, naming them in their order from the north; while those lying north and south were Jefferson, Clinton, Canal, West and East Water, Market, Franklin, Wells, "La Selles," Clark and Dearborn streets, naming them in their order from the west. Included within these brief limits were the hitherto independent settlements of Wolf Point, west of the river's fork, and the "lower village," on the South Side. Thus Chicago was no longer a "settlement" merely, and during the year succeeding its survey the young town received increased distinction by being designated as the seat of justice of the newly organized county of Cook. In June, 1831, the State granted to the county twenty-four

canal lots, which were not in one body, however, but the proceeds of which were to be used in the erection of public buildings. Sixteen lots were sold to pay current expenses. The eight remaining constituted the public square. The result of this generosity on the part of the State was seen in March, 1832, when, through the architectural skill of Samuel Miller, contractor,

there arose upon the southwest corner of the square, the so-called "estray-pen." Although sometimes designated and dignified as "the first public building ever erected in Chicago," the "pen" was a small wooden enclosure and quite roofless. Mr. Miller's bid for the work was \$20, but he accepted \$12 from the commissioners; thereby admitting, as charged by the county authorities, that he did not do his work according to contract. During this year and the next, (1833,) general attention was called to Chicago by the valiant efforts which her citizens were making to obtain a harbor appropriation; and in addition to this mode of advertising the "canal enthusiasm" was spreading from Chicago all over the country. Many accessions were, therefore, made to her population, and some of the new arrivals were of that permanent character so valuable to a young community. The summer of 1833 saw Chicago with a population of about three hundred and fifty, and her citizens prepared to organize, under the general legislative act, for the incorporation of towns, passed February 12, 1831. By its provisions citizens of any town containing over one hundred and fifty inhabitants were authorized to hold a meeting, and decide whether they wished to become incorporated. If the aforesaid citizens favored the assumption of corporate dignity, then the clerk of the convention or meeting, was to give at least five days' notice that an election would be held to choose five Town Trustees, who were to hold office for one year. The Board of Trustees were endowed with the usual powers—to abate nuisances, gambling, disorderly conduct; to prevent fast driving and enforce police regulations; to license shows, control markets, take charge of the streets and sidewalks, and to provide the means for protecting the town against fire. The limits of the town were not to exceed one square mile, within which limits the Trustees were to have jurisdiction. They could call out any citizen to work on the public roads for three days in every year. The tax-levy was fixed at fifty cents on every hundred dollars of assessed valuation. The Trustees were denied the right to impose a fine of more than \$5 for breach of any of their ordinances, and two-thirds of the qualified voters of the town, at any annual election, could dissolve the corporation.

Late in July, 1833,* a public meeting was held to decide whether incorporation should or should not be

* Bross's "History of Chicago," p. 28. Colbert gives the date August 5, which is the date of the election notice now on file with the City Clerk.

effected. The record of that meeting stands as follows:

"At a meeting of the citizens of Chicago, convened pursuant to public notice given according to the statute for incorporating towns, T. J. V. Owen was chosen President, and E. S. Kimberly was chosen Clerk. The oaths were then administered by Russel E. Heacock, a Justice of the Peace for Cook County, when the following vote was taken on the propriety of incorporating the Town of Chicago, County of Cook, State of Illinois:

"For incorporation—John S. C. Hogan, C. A. Ballard, G. W. Snow, R. J. Hamilton, J. T. Temple, John W. Wright, G. W. Dole, Hiram Pearsons, Alanson Sweet, E. S. Kimberly, T. J. V. Owen, Mark Beaubien—12.

"Against incorporation—Russel E. Heacock.

"We certify the above poll to be correct.

"Signed, T. J. V. OWEN, *President*.

"ED. S. KIMBERLY, *Clerk*."

In pursuance with the requirements of law, Dr. Kimberly, acting in his official capacity of Clerk, issued an election notice, which read thus:

"Public notice is hereby given that an election will be holden at the house of Mark Beaubien, on Saturday, the 10th day of August, at 11 o'clock in the forenoon of that day, for the purpose of choosing five trustees of the Town of Chicago.

"Chicago, August 5, 1833.

"E. S. KIMBERLY, *Town Clerk*."

"N. B.—The poll will close at one o'clock."

An election was held at the time and place designated. Twenty-eight electors were legally entitled to exercise their privilege as freemen, and of that number

no less than thirteen consented to assume the role of candidates for office. The enrollment recorded the names of E. S. Kimberly, J. B. Beaubien, Mark Beaubien, T. J. V. Owen, William Ninson, Hiram Pearsons, Philo Carpenter, George Chapman, John W. Wright, John T. Temple, Mathias Smith, David Carver, James Kinzie, Charles Taylor, John S. C. Hogan, Eli A. Rider,

Dexter J. Hapgood, George W. Snow, Madore B. Beaubien, Gholson Kercheval, George W. Dole, R. J. Hamilton, Stephen F. Gale, Enoch Darling, W. H. Adams, C. A. Ballard, John Watkins and James Gilbert. There were twenty-eight ballots cast. John Miller, being a candidate himself, refrained from voting.

The list of the candidates included the names of T. J. V. Owen, George W. Dole, Madore B. Beaubien, John Miller, E. S. Kimberly, R. J. Hamilton, James Kinzie, J. T. Temple, J. B. Beaubien, Philo Carpenter, John W. Wright, Robert A. Kinzie, and John S. C. Hogan.

The successful candidates were:

T. J. V. Owen	26
George W. Dole	26
Madore B. Beaubien	13
John Miller	20
E. S. Kimberly	20

The scattering vote was distributed as follows: Philo Carpenter, 1; John Wright, 2; R. J. Hamilton, 4; James Kinzie, 5; John T. Temple, 5; J. B. Beaubien, 6; Robert A. Kinzie, 9; John S. C. Hogan, 3.

The first meeting of the Board was held two days subsequent to the election, and no record-book having been provided, the original proceedings were transcribed

upon a large sheet of paper, by Mr. Hamilton, the Clerk *pro tem*. All the members were present, and received the oath of office from Mr. Hamilton, a notary public, and an organization was effected by the election of Thomas J. V. Owen President and Isaac Harmon Clerk. It was ordered by the Board that meetings should be held at the house of Mark Beaubien, on the first Wednesday in each month, at seven o'clock P. M., beginning with Wednesday, September 4, 1833.

At the first regular business meeting held by the Board, on that date, a free ferry was established across the river at Dearborn Street. George W. Dole was chosen Town Treasurer for one year.

At the time of the organization of the town its limits were defined as follows: Beginning at the intersection of Jackson and Jefferson streets; thence north to Cook Street, and through that street to its eastern extremity in Wabansia; thence on a direct line to Ohio Street in Kinzie's addition; thence eastwardly to the lake shore; thence south with the line of beach to the northern United States pier; thence northwardly along said pier to its termination; thence to the channel of the Chicago River; thence along said channel until it intersects the eastern boundary line of the town of Chicago, as laid out by the canal commissioners; thence southwardly with said line until it meets Jackson Street; thence westwardly along Jackson Street until it reaches the place of beginning.

During the fall of 1833, the citizens felt that something more metropolitan was required than the "estray pen." The log jail was therefore built on the northwest corner of the square. One set of contractors failed to build the jail, but the structure was finally completed, and Officer Beach, father of Dr. J. S. Beach, possessed the keys of authority. As offenders against the laws increased, an addition, in the form of an oaken cell, or jail, was built, separate from the first structure. Dr. Beach, then a boy, states that he had known this small building to contain as many as twenty-eight prisoners at one time. It was during these days that Benjamin Jones was appointed Street Commissioner, but on account of ill-health resigned before his term expired, and was succeeded by O. Morrison and Silas W. Sherman. Isaac Harmon was chosen Collector. On December 4, George W. Snow became Assessor and Surveyor, and John Dean Caton, Corporation Counsel.

A code of local laws was adopted in November, 1833, regulating the ordinary affairs of the town. The Democrat, which made its first appearance November 26, was designated the official newspaper of the town.

During this month also the limits of the town were extended to embrace the tract bounded by the lake on the east and State Street on the west, Ohio Street on the north and Jackson Street on the south.

The corporate limits were again extended, by virtue of an act adopted February 11, 1834, so as to include all land lying east of State Street to the lake shore, from Chicago Avenue and Twelfth Street, except the military reservation, which lay from the river south to Madison Street.

The second election was held August 11, 1834, at which time J. H. Kinzie, G. S. Hubbard, E. Goodrich, J. K. Boyer, and John S. C. Hogan were chosen Trustees. The official roster for that year is: J. H. Kinzie, President; Isaac Harmon, Clerk and Collector; J. S. C. Hogan, Treasurer, resigned in June and succeeded by Charles M. Pettit; James W. Reed, Supervisor of Roads and Bridges, resigned in November, and succeeded by E. E. Hunter, who in turn was succeeded by J. K. Boyer; N. G. Wright, Fire Warden; Edwards

W. Casey, Corporation Counsel, and, from November, Clerk and Collector.

The first financial obligation incurred by the town was for \$60, borrowed in October, 1834, to drain State Street and redeem a large slough.

Several important measures were instituted during 1835. Among them were the establishment, in June, of a permanent Board of Health; the creation, in November, of a Fire Department; the borrowing, in June, of \$2,000, with which to improve the sanitary condition of the place, as a preventive against the threatened invasion of cholera; and the adoption, in August, of a lengthy and comprehensive code of local laws. November 21, a seal was adopted by the Board, but neither the instrument itself, nor any impression made thereby remains; the few documents which survived the fire of 1871 being without a copy from which a reproduction can be made for use here.

The increase of population and extension of corporate limits suggested the enlargement of the Board of Trustees, and a vote was passed by the Legislature, fixing the number of members at nine.

The third election was held in July, 1835, and resulted as follows: H. Hugunin, President; W. Kimball,

B. King, S. Jackson, E. B. Williams, F. C. Sherman, A. Loyd and George W. Dole, Trustees; A. N. Fullerton, Clerk, who was succeeded by Ebenezer Peck, who also acted as Counsel; George W. Dole, Treasurer; John K. Boyer, Street Commissioner; O. Morrison, Collector and Constable; E. B. Talcott, Surveyor; A. Stole, Assessor; J. Bates and J. Haight, Measurers of Wood and Lumber. Minor changes occurred during the year in these offices.

During the fall of the year (1835,) a one-story and basement brick court-house was erected on the north-east corner of the square, on Clark and Randolph streets. The county offices were in the lower story; the court-room, which was above, being one oblong apartment, capable of seating two hundred persons.

The fourth and last election under the town system was held at the Tremont House June 6, 1836. E. B.

Williams was chosen to preside over the deliberations of the Board, the members of which were S. G. Trowbridge, Peter Bolles, L. P. Updike, A. D. Taylor, William B. Ogden, A. Pierce, T. G. Wright and J. Jackson. C. V. Dyer was elected Clerk, but resigned at once, Ebenezer Peck assuming the duties of office, but he in turn was succeeded in September by James Curtiss. The official list comprised W. McClintock, Street Commissioner; O. Morrison, Constable; N. H. Bolles, Assessor and Collector; George W. Dole, Treasurer, and James H. Rees, Surveyor.

The era of internal improvement upon which this region had entered accelerated immigration, and inspired with hopes of prosperity those who had made

Chicago their abiding-place. The canal was advancing along the line of completion; a system of water-works was already inaugurated under the title of the Hydraulic Company, and, above all else, the hearts of the community beat high with firm faith in the ultimate fulfillment of a lofty destiny for Chicago. Actuated by a spirit of unequalled courage, the leading citizens of the town determined upon its incorporation as a city. On the 18th of November, 1836, the Trustees ordered that "the President, E. B. Williams, invite the citizens of the three districts of the town to meet in their respective districts and select three suitable persons to meet with the Board of Trustees on Thursday next (November 24,) and consult on the expediency of applying to the Legislature of the State for a city charter, and adopt a draft to accompany such application."

The meeting was held and a delegation selected as follows: District No. 1—Ebenezer Peck, William Stuart, E. W. Casey; District No. 2—J. Dean Caton, J. W. Chadwick, William Forsythe; District No. 3—J. H. Kinzie, W. L. Newberry, T. W. Smith. The result of the union conference was the appointment of a committee, consisting of two members of the Board and one citizen from each of the divisions of the city, to draft a charter. That committee comprised Messrs. Peck, Caton, and Smith, for the people, and Messrs. Peter Bolles and

William B. Ogden for the Board. A charter was prepared and submitted to the people for approval, at a meeting held in the Saloon Building. A large majority of those in attendance voted for adoption of the document without amendment; but that vote was speedily reconsidered, and an animated discussion of the sixty-second section ensued, relative to the assumption of indebtedness by the proposed city authorities. Some of the more sanguine residents were so imbued with the progressive tendencies of the times that they favored the unlimited extension of power in that direction. A more prudent counsel prevailed, however, and the capacity of the corporation to incur debt was limited to \$100,000 per year. With this alteration in the original draft, the people endorsed the proposition to change the corporate character of Chicago. Mr. Stuart, secretary of the public meeting, observes that "in the opinion of the chairman, nearly four-fifths of the citizens assembled favored the charter."

CREATION OF THE CITY.

On the 4th of March, 1837, the charter was passed and approved by the Legislature, and Chicago became a city. The corporate limits were defined in Section 1 as follows:

"That the district of country in the county of Cook, in the State aforesaid, known as the east half of the southeast quarter of section thirty-three in township forty, and fractional section thirty-four in the same township, the east fourth part of sections six, seven, eighteen and nineteen in the same township; also fractional section three, section four, section five, section eight, section nine and fractional section ten, except the southwest fractional quarter of section ten, occupied as a military post until the same shall be private property; fractional section fifteen, section sixteen, section seventeen, section twenty, section twenty-one and fractional section

THE FIRST COURT-HOUSE.

city; all that part of said city which lies north of the Chicago River and east of the North Branch thereof, and west of the center of Clark Street, to the center of Chicago Avenue, and lying south of the center of Chicago Avenue, to the center of Franklin Street, and lying west of Franklin Street, and a line parallel with the center thereof to the northern boundary of said city, shall be denominated the Fifth Ward; and all that part of said city lying north of the Chicago River, and east of the Fifth Ward, shall be denominated the Sixth Ward."

FIRST CITY ELECTION.—At a meeting held by the Board on March 31 it was resolved to hold an election for city officers on the first Tuesday of May, the polling places being designated as follows: First Ward, Eagle Hotel; Second Ward, Lincoln's Coffee House; Third Ward, house of Charles Taylor; Fourth Ward, Chicago Hotel (Cox's); Fifth Ward, Canal Office; Sixth Ward, Franklin House. The Board also appointed three inspectors for each polling place. Accordingly the election took place upon the day named (May 2), and the following gentlemen cast their ballots:*

FIRST WARD.—*For William B. Ogden:* Sidney Abell, Isaac N. Arnold, Bennett Bailey, H. Bailey, sworn, Patrick Ballingall, Madore B. Beaubien, Samuel C. Bennett, Nathan H. Bolles, John Calhoun, Henry B. Clarke, J. H. Coffin, Peter Cohen, F. G.

* Fergus's Hist. Series. Directory of 1839. Corrected from polling-list of 1837, and by old settlers.

Spafford, Francis C. Sherman, John Boyd, Hiram B. Smith, M. O'Connor, J. F. Brown, A. J. Luce, David Carver, J. M. Smith, L. F. Lewis, John R. Livingston, B. F. Monroe, John Patterson, Colon Ware.

For John H. Kinzie: L. C. P. Freer, T. O. Davis, Alvin Calhoun, Hiram Mallory, J. Young Scammon, Joseph L. Hanson, John F. Spalding, Oliver H. Thompson, Levi D. Boone, C. B. Ware, Joseph Meeker, J. B. Wetherell, George W. Snow, James H. Rees, H. Markoe, William Bond, Robert Truman, James Spence, Heman Bond, P. Balcom, J. Sharp, W. Finney, Thomas A. Clark, Royal A. Stewart, Isaac D. Harmon, Jabez K. Botsford, Parker M. Cole, Tyler K. Blodgett, Curtis Havens, Elijah K. Hubbard, Ezekiel Morrison, David Gelland, James A. Smith, Lorin Graves, David Hatch, Cyrenus Beers, Simeon Loveland, Seth Paine, Samuel C. Dennis, Erastus Bowen, W. K. Marchal, John L. Wilson, Thomas Wright, M. Ayres, F. A. Harding, Thomas T. Durant, Edward Casey, George W. Merrill, John W. Hooker, Charles C. Smith, Giles Spring, L. B. Goodsell, William Stuart, H. Terrill, Charles Adams, J. Gardner, Alva V. Frasier, Edward H. Haddock, Frederick A. Howe, A. Nobles, E. S. Hopkins, Charles McClure, S. Willis Grannis, Dexter Graves, Edward Colvin.

SECOND WARD.—*For William B. Ogden:* Solomon Lincoln, Henry Rhines, Samuel J. Lowe, Thomas Marr, Russell Wheeler, Peter Bolles, C. McWhorter, S. S. Bradley, Daniel B. Heartt, Charles P. Hogan, P. Higgins, J. C. Hibson, W. Devere, J. Spencer, Michael Glen, Silas W. Sherman, Richard Murphy, F. C. Bold, John Larry, J. Outhet, J. O'Rourke, T. Watkins, J. McCormick, J. J. Kinnon, McKelley, John Sarlney, John Campton,

West Side.....	97
North Side.....	204
Total.....	709

The ticket elected was as follows: Mayor—William B. Ogden; Aldermen—J. C. Goodhue, Francis C. Sherman, First Ward; John S. C. Hogan, Peter Bolles, Second Ward; J. D. Caton, Third Ward; A. Pierce, Francis H. Taylor, Fourth Ward; B. Ward, Fifth Ward; S. Jackson, Hiram Pearsons, Sixth Ward.

THE MUNICIPALITY.—By the charter of March 4, 1837, under which Chicago was first organized as a city, the elective officers were a mayor, board of aldermen, one clerk, one treasurer and six assessors. The annual election was fixed for the first Tuesday in March. The royalty of power was fixed in a common council, who were authorized to appoint constables, street commissioners, the city surveyor, organized fire companies, a board of health and an educational department. In fact all the departments were but tools in their hands and were expected to obey their orders. The Municipal Court, established by the charter of 1837, was abolished by the act of February 15, 1839, and the actions then pending transferred to the Circuit Court of Cook County. Among other amendments to the charter, ap-

proved February 27, 1841, was that which created the office of city marshal and made it elective. By the act approved February 16, 1847, the city was divided into nine wards and the aldermen therefrom into two classes, so that one alderman should be elected annually from each ward, and hold his office two years. The offices of attorney, treasurer, collector, and surveyor were made elective. One street commissioner and one assessor from the First, Second, Third, and Fourth wards, and a commissioner and an assessor from the Fifth and Sixth, and two other like officers from the remaining wards were provided for.

The Legislature passed an act on February 14, 1851, reducing the charter into smaller compass and creating a board of health. It also authorized the Council to establish a house of refuge and correction for juvenile offenders. The Chicago City Hydraulic Company was incorporated, and a board of water commissioners created by an act of February 15, 1851. An annual election was appointed for the first Tuesday of April, 1854. An act amendatory of the act of February 14, 1851, was approved February 28, 1854, which provided that a city marshal should be elected biennially, and also authorized the Council to elect a superintendent of special assessments. The office of superintendent of schools was created by ordinance of June 23, 1854. In June, 1854, the city adopted a new seal—two circles, under which were the words "City of Chicago, incorporated March 4, 1837." Within the inner circle is a shield emblazoned with a sheaf of grain. Over the shield an infant reposes on a sea shell; at the left is an Indian, with a bow and arrow; on the right a ship in full sail; beneath a scroll inscribed, "Urbs in Horto."

The Board of Sewerage Commissioners was incorporated by legislative enactment February 14, 1855. By an act of February 14, 1857, rules were laid down for the government of the Reform School, and taxation authorized for its maintenance. The revision of the charter was approved February 18, 1857. By its provisions the appointive power was taken from the Council and conferred upon the Mayor. The change was made necessary as there was a general dissatisfaction over the appointments made by the Council, and it was thought, also, that by this plan, responsibility would be fixed. A treasury department, which had heretofore been merged in the Council, was established, with the City Comptroller at its head. A police court was created, consisting of the justices of the peace already provided for. The Board of Education was made to consist of fifteen School Inspectors, divided into three classes, instead of seven members appointed annually by the Council.

In the foregoing the more important changes in the municipal government have been noticed. For those in detail the reader is referred to the histories of the several departments which follow.

CHANGES IN CORPORATE LIMITS.—By the charter of March 4, 1837, Chicago was divided into six wards, and its limits fixed as follows: "That district of country in the county of Cook, known as the east half of Section 33, in Township 40, and fractional Section 34, in the same township, the east quarter of Sections 6, 7, 8, 9, and fractional Section 10, excepting the southwest fractional quarter of Section 10, occupied as a military post, until the same shall have become private property, fractional Section 15, Sections 16, 17, 20, 21, and fractional Section 22, in Township 39 north, Range 14 east, of the third principal meridian." These limits include the territory bounded on the south by Twenty-second Street, on the west by Wood Street, north by North Avenue,

and east by the lake, except a fraction of Section 10, as noted above; also the ground on the lake shore lying east of Clark Street, extending one-half mile north of North Avenue, since occupied as the old City Cemetery. The city covered about ten square miles of territory. By the act of March 3, 1843, the southeast quarter and the northeast quarter of the southwest quarter, southwest quarter and northwest quarter of the southeast quarter of Section 5, Township 39, Range 14 east, and the west half of the northeast quarter of Section 8, Township 39, Range 14 east, of the third principal meridian, were stricken out of the corporate limits of the city.

February 16, 1847, the city was divided into nine wards and the corporate limits established as follows: "All that part of Township 39 north, Range 14 east of the third principal meridian, which lies north of the north line of Sections 27, 28, 29, and 30 of said township, and the east half of Section 33, in Township 40 north, Range 14, and fractional Section 34, in said Township 40." By this act the limits were extended to Western Avenue, taking in all east of Sedgwick Street, between North Avenue and Fullerton Avenue. About three and a half miles were added to the area. The First, Second, Third and Fourth wards were made to extend from the river to the limits of the city, and the Seventh, Eighth and Ninth from the river north to the extent of the city. February 12, 1853, the city limits were extended north to Fullerton Avenue, south to Thirty-first Street, and from the lake to Halsted Street. This excepted the tract lying west of the North Branch and north of North Avenue (Holstein), and the tract lying west of Halsted and south of the South Branch (Bridgeport). By the above act the city was divided into three divisions, called North, South and West. The territory annexed was added to the First, Second, Third, Fourth, Fifth and Seventh wards. The corporate limits of Chicago were extended to Lake Michigan, and one mile from shore by the act of February 28, 1854. February 15, 1857, the city was divided into ten wards, the additional one being taken from the West Division.

THE FIRST CENSUS of the city, taken after its incorporation, was that of July 1, 1837. It is as follows:

WARDS.	Under 5 Years of Age.		Over 5, under 21 Years.		21 and over.		Persons of Color.	
	Male.	Fem.	Male.	Fem.	Male.	Fem.	Male.	Fem.
First	57	59	109	135	444	218	10	7
Second	76	77	120	148	630	262	13	18
Third	11	16	33	19	70	46
Fourth	15	15	31	27	101	42	5	2
Fifth	32	37	26	20	135	70
Sixth	53	65	72	101	420	207	13	9
	244	269	381	450	1,800	845	41	36
	244	244		381		1,800		41
Totals		513		831		2,645		77

Males and females, 21 and over 2,645
 Males and females over 5 and under 21 years 831
 Males and females under 5 years of age 513

Total white 3,989
 Total black 77

Total 4,066
 Sailors belonging to vessels owned here 104

Grand Total 4,170
 Town census of 1835 3,265

The census shows that there were: Four warehouses; 398

dwellings; 29 dry goods stores; 5 hardware stores; 3 drug stores; 19 grocery and provision stores; 10 taverns; 26 groceries; 17 lawyers' offices; 5 churches.

THE SALOON BUILDING HALL.—Before referring to those early corporate homes, styled by courtesy "City halls" in former days, a description of a noted edifice is given, because it was used as the first city hall. The structure stood on the southeast corner of Lake and Clark streets, and was erected in 1836 by Captain J. B. F. Russell and G. W. Doan. At that time it was not only the finest hall in Chicago, but was not eclipsed by anything of the kind in the West. In this hall on Monday evening, January 23, 1837, the meeting of a few of the leading citizens of the town was held, for the purpose of preliminary action in procuring a city charter. It was also devoted to public entertainments of various kinds, political and religious meetings, concerts, traveling shows, etc. The name of this hall would,

THE SALOON BUILDING.

to the casual reader, appear to connect it with a house of no very good repute; but such an impression would be erroneous. The word "saloon" as applied to this edifice had a very different meaning from what it now has. Its use was synonymous with the French *salon*, which means literally a grand and spacious hall. Hon. John Wentworth says, in his reminiscences, that when first completed it was the largest and most beautiful hall west of Buffalo. "Here it was," says Mr. Wentworth, "that Stephen A. Douglas made his first speech in Chicago. It was in this hall that the first joint political discussion was ever had in northern Illinois, in 1838, between Mr. Douglas and his competitor for Congress, John T. Stuart." It was at this meeting that one of the citizens, in a speech, became so enthusiastic over the future which, with prophetic vision, he saw in store for the young and growing city, that he made the startling prediction that the child was already born who would live to see Chicago with a population of fifty thousand souls. At once the speaker was greeted with sarcastic, yet good-natured, calls of "Town Lots;" an implication that the orator was interested in Chicago real estate. The first Swedenborgian society organized in Chicago, by J. Y. Scammon, held its meetings in this hall, and in 1839 the congregation of the First Unitarian Church, worshiped there, with the Rev. Joseph Harrington as pastor.* The Chicago Lyceum (q. v.), the first literary and debating society of the city, also met there for a number of years. It was also used, in addition to all these purposes, as a court-room, Judge Drummond holding court in it for a number of years.

* See Religious History.

J. Y. Scammon obtained control of the building in 1842, at which time it was rebuilt or remodeled, and from that period on, underwent frequent changes. A handsome block, modern in style, now stands on its former site. The building was, in 1857, a square three-story frame, the first floor occupied as stores, the second as offices, and the third as the "hall," so rich in historic lore. But with the rapid growth of the city in size and population came the advent of theatres, halls, churches and court-rooms; and the "old Saloon Hall," having served its day and generation, was forced from its long-held prominence before the eyes of Chicago's citizens, and soon existed only in the memories of those to whom a simple mention of its name awakens a flood-tide of recollections.

CITY HALL.—In May, 1837, the Common Council leased a room in the Saloon Building, for their own use and for the accommodation of the Municipal Court. At the expiration of their five years' lease the city fathers moved to Mrs. Nancy Chapman's building, opposite the jail, corner of LaSalle and Randolph streets. The public square at this time, 1842, was fenceless, and presented such a dilapidated and barren appearance that citizens were urged to improve the park by individual exertion. In April a number of citizens did turn out with shovels, mattocks, etc., and planted a few trees and built a fence. Henry Brown directed the work. But the public ardor seems to have cooled, although hot for a time, the Democrat, in May, noticing that "the fence around the public square, on Clark Street, stands like a good many politicians we wot of—but half whitewashed." J. Young Scammon and William H. Darris did much, about this time, to improve the appearance of the square.

In January, 1848, the Market Building on State Street was erected by the city, and was the first municipal structure, the Common Council having heretofore rented their accommodations. The building was situated in the center of State Street, fronting forty feet on Randolph and running north toward Lake Street one hundred and eighty feet. It was built of brick and stone, two stories in height. The first floor was laid out into thirty-two stalls. The second story was divided into four rooms, the one in the north end (twenty by forty feet,) arranged for a library, and the south room for the City Clerk's office. The center rooms, divided by a partition, with folding doors, one forty by seventy-two feet, the other forty by sixty-eight feet, were used by the Common Council and for other public purposes. The entire cost was \$11,070. J. M. Van Osdel was the architect and superintendent. The Common Council occupied their new rooms for the first time November 13, 1848.

In 1850 the county and the city commenced to agitate the project of erecting a court-house, to be occupied jointly by them. In December of that year a resolution was adopted that the county pay three-quarters and the city one-quarter of the expense to be incurred in the purchase of grounds and the erection of a court house and jail. There was some disagreement as to where the buildings should be erected. In June, 1851, it was decided that one structure was to be erected, a combined court-house and jail, in the center of the square, the latter to be in the basement of the building. The Common Council agreed to unite with them in its construction. On September 12, 1851, occurred the impressive ceremonies of laying the corner-stone of the structure. The military and fire companies, Free Masons, Odd Fellows and members of the Mechanics' Institute assembled at Dearborn Park, under command

of Colonel J. B. F. Russell, Chief Marshal. The procession was half a mile in length. The ceremonies of laying the corner-stone were conducted by Prof. J. V. Z. Blaney, Acting Grand Master of the Grand Lodge of

THE SECOND COURT-HOUSE.

Illinois Freemasons. After they had been concluded, a salute was fired by Captain Swift's artillery company. The splendid edifice was completed during the year 1853. The \$1,111,000 expended upon it was borrowed upon the bonds of the county, having from seven to eighteen years to run, at ten per cent interest, payable semi-annually. Of this sum \$60,000 was taken by R. K. Swift, of Chicago, the balance being furnished by Eastern capitalists. The walls of the structure were faced with gray marble, taken from the Lockport quarries, at a cost of \$32,000. The building was three stories in height, with two domes and a cupola, the main part being one hundred feet square. There were projections from the north and south fronts, fifty by sixty feet each; also on the east and west fronts thirty-two by sixty feet each. As these projections were carried up the entire height of the building, its dimensions were one hundred and thirty feet north and south, and one hundred and sixty-four feet east and west. The stone steps at the north and south ends also added to the imposing appearance of the court-house, which covered an area of 17,000 square feet. In the basement of the building was the jail, and the jailor's dwelling rooms, the Sheriff's office, and the city watch-house. In the second story of the north and west corridors, were most of the city offices; the armory being in the east wing. The Common Council room was in the third story, opposite the court-room. Its dimensions were fifty-six by sixty feet. The city arms surmounted the Mayor's chair. The Court of Common Pleas first occupied the edifice in February. John M. Van Osdel was the architect and superintendent. This structure served the city until it was swept away by the great fire of 1871.

FINANCIAL AFFAIRS.—Before Chicago had become a city, when any proposition was made to borrow money, the utmost consternation seems to have been

created. Several town officials had even resigned rather than sanction such recklessness. John S. C. Hogan voluntarily ceased to act as Treasurer, in June, 1835, because the corporation was determined, as a sanitary measure, to borrow \$2,000 in order to have the streets cleared up and the town otherwise made presentable and inhabitable. After the town people had fairly entered into the spirit of becoming a city, however, their old apprehensions gradually wore off because of the constant repetition of those financial propositions from the authorities. After a time such measures were urged with general enthusiasm. The Chicago of that day commenced to draw confidently upon the Chicago of the future—and that confidence was her largest bank account in 1837. In January of that year W. Stuart, the Town Clerk, was ordered to draft a memorial to the General Assembly for the passage of an act authorizing the Trustees to borrow the sum of \$50,000, to be used in permanent improvements. This, however, came to naught, and in March Chicago was incorporated as a city. As a city, just previous to the depressing times of 1837, Chicago commenced active operations with \$1,993 in the treasury.

The City Treasurer received from the town, \$2,814.29.

With many permanent improvements to be accomplished, this was not a remarkably brilliant outlook for the young city of four thousand inhabitants. Among other things it was absolutely necessary that more effective provision should be made to guard the city against fire. Two more engines were needed. The streets required improvement, and their drainage demanded attention. Mayor Ogden was chosen agent of the corporation, and the Common Council appointed a finance committee, of which Peter Bolles was chairman. It was resolved to borrow \$25,000, but to resolve is not always to accomplish. The city promised to redeem its pledge to the Branch Bank of the State of Illinois in five years. The proposition was not accepted, as witness the following note of "regret":

"STATE BANK OF ILLINOIS, SPRINGFIELD, May 31, 1837.

PETER BOLLES, ESQ.,

"Dear Sir: Your letter of the 18th, addressed to the president of this bank and proposing on behalf of the city of Chicago a loan from this bank of the sum of \$25,000, has been laid before the directors of the bank, and, I regret to have to state, declined.

"I am very respectfully, your ob't serv't,

"A. H. RIDGELY, Cashier."

It was evident that the State Bank of Illinois considered the burden of carrying the "internal improvements" of the State of Illinois, already heavy enough, without taking it upon herself to foster the internal improvements of the city of Chicago. Nevertheless, as this very respectful letter did not ease the municipal treasury by so much as a feather's weight, in June, 1837, city scrip was issued, of \$1, \$2 and \$3 denominations, bearing one per cent interest, which was to be received for taxes not exceeding \$5,000. At this time the Treasurer's office was kept in the warehouse of Ex-Town Treasurer Dole.

The city authorities were not acting in harmony with the County Commissioners. The city was paying about \$5,000 annually for sustaining the Municipal Court, whose benefits were shared by the county, and until this arrangement was changed it was claimed that the Commissioners ought to take care of the city paupers. Chicago was receiving only about \$1,000 from tavern and grocery licenses, supporting a \$5,000 court, and now the county refused to take care of her paupers! This was one of the obstacles which had to be surmounted during the hard times of 1837. City and

county, however, soon came to an amicable settlement of their difficulties, so that each bore a just proportion of the legal and eleemosynary burdens.

The finances of the city by the first charter were entirely in the hands of the Common Council, the Treasurer and Collectors being merely its clerks. The six Assessors were elected, but the Treasurer and Collector were appointed by the Common Council. The supplementary act of February 16, 1847, made the Treasurer and Collector elective officers. These provisions remained in force until February 18, 1857, when the treasury department was created, embracing, in addition to the above officers, the City Comptroller (appointed annually by the Mayor), and the head of the new department.

FISCAL POWERS.—By the first city charter the Common Council had authority to raise a sufficient sum by tax on real and personal property, not exceeding one-half of one per cent upon the assessed value thereof, to defray the expenses of "lighting the city streets, supporting a night watch, making and repairing streets and bridges, and paying the operating expenses" of the city. The Common Council were given the usual powers with regard to making and assessing of streets and condemning property; and could not remove a building exceeding \$1,500 in value without the owner's consent. When property was to be condemned five commissioners were appointed to assess it and determine the damages and benefits. All taxes and assessments were to be considered a lien upon real estate, and in case of non-payment the premises could be sold at any time within the year from the time of filing the assessment roll with the Clerk. If the Common Council should direct the laying of sidewalks in front of any property, and the owner neglected to make them or keep them in repair, the city had authority to construct or repair them and assess the expenses against the lots. By the act approved February 14, 1851, reducing the law incorporating the city, the Common Council was vested with the power to collect taxes not exceeding three and one-half mills on the dollar to defray the contingent and other municipal expenses; one-half mill to meet the interest on the bonded debt; to levy and collect taxes, when required, to erect a city hall, markets, hospital and bridewell; to lay out public parks or any other public improvements, and to defray three-quarters of the expenses of erecting street lamps and lighting the city. Improvements on canal and school lots and the wharfing privileges were to be subject to taxation, the same as other real estate. In the processes of condemning private property for the opening of streets and alleys, and of improving the thoroughfares of the city, the Common Council were to appoint three commissioners to assess benefits and damages. In case of the non-payment of taxes or assessments the premises could be sold at any time within two years from the confirmation of the assessment by the Common Council, the right of redemption depending upon the payment in specie of double the amount for which the property was sold and all taxes accruing subsequent to the sale, with interest. In February, 1851, the Chicago City Hydraulic Company was incorporated, and to meet the exigencies of the occasion in February, 1854, an act was passed to enable the city to borrow \$100,000 for the use of the water works and appointing a superintendent of special assessments. It authorized the levying of a tax equal to one mill on the dollar of real and personal estate to meet the interest on the bonded debt.

By the act amendatory of that of February 14, 1851,

passed February 18, 1857, the office of City Collector was created, who was to be one of the officials constituting a treasury department. All orders for the collection of annual taxes and warrants for the collection of special assessments were to pass through his hands, and there were to be no more special collectors appointed by the Common Council. The City Collector was to be elected by the people and appoint his own assistants.

REAL ESTATE.—The two years preceding the panic of 1837 were noted for the wide-spread fever, which attacked the coolest blood, to speculate in real estate. The rise in values was tremendous. Fortunes were made almost in a day, and when the reaction came they were lost even more suddenly. It would be impossible to give anything like a clear picture of this portion of the city's history, since all was confusion and excitement. The most that can be done is to jot down items as they have been gathered from the files of the American, and other sources, showing the business transacted at the land-office, and, in some cases, the comparison of prices of lots before the excitement, when the fever was at its height, and after the reaction had set in. The general reader can easily draw his conclusions from the details here presented.

In 1830 Jedediah Woolsey, Jr., bought of the canal commissioners Lot 9, Block 44, for \$50. Alexander Wolcott purchased eight lots in Block 1, during the same year, paying \$692; also the east one-half, north-east quarter Section 9, Township 39, Range 14, (eighty acres), at \$1.12½ per acre. John S. Wilburn bought Lot 1, Block 1, in 1830 for \$60. John S. C. Hogan paid for Lots 1, 2, 5, and 6, \$116, and in 1836 bought Lot 7, paying \$12,000 for it with the greatest of alacrity. The above are specimens of some of the earliest purchases. In May, 1835, the land-office was opened. To the close of the sale the receipts amounted to \$386,500, of which about \$353,500 were for lands sold at auction and the balance under the pre-emption law. During the next month E. K. Hubbard and W. L. Newberry advertised sales of valuable lots, the former having three hundred and fifty to dispose of. In October, A. Garrett announces in the American that from January 4 to the 27th of that month he has sold \$1,800,000 worth of real and personal property. He had fitted up a large room on Dearborn Street and had an "auction room equal to any in New York or Philadelphia."

In November the rate of assessment for the coming year was fixed by the town at one-half of one per cent.

A lot fronting eighty feet on the water by one hundred and fifty feet on Dearborn, purchased for \$9,000 in the spring of 1835, brought \$25,000 in the succeeding winter. Says the American in April, 1836: "There is a piece of land in Chicago, costing \$62 in 1830, which has risen in value one hundred per cent per day. It sold last week for \$96,700—one-quarter down and the remainder in six, twelve and eighteen months, at ten per cent." Charles Butler, of New York states, in a later issue, that "in 1833 one-quarter of Kinzie's addition was offered for \$5,500—worth then \$100,000. In 1833 forty acres of land worth \$400 could not be purchased in 1836 for less than \$200,000. In 1834 the 'Hunter property' was purchased for \$20,000. In the spring of 1835 it was resold for \$100,000. It is now (September, 1836) worth \$500,000."

Notwithstanding which tremendous rise in values of real estate, in pursuance of a notice issued by N. H. Bolles, Town Collector, that all property would be sold upon which the corporation tax of 1835 remained un-

paid, September 10, 1836, a great number of lots were advertised. Of those which appear in the American of October 1, one hundred and fifty-five were taxed less than \$1; forty-two from \$1 to \$5; ten from \$5 to

N. H. Bolly

\$10; twenty-two between \$10 and \$25, and one at \$39. In Wolcott's addition one was taxed \$10.50; three being \$7.50 and \$10; the remainder less than \$7. In the North Branch addition no tax reached \$1. In Wabansia addition three lots which were advertised were assessed \$2.50, \$3.50, \$7.50; in the "original town" one for \$50.50; two for \$30 each; one for \$19, seventeen for \$10, and eighteen less than \$10.

The reaction from the inflation of 1835-36 was setting in. In January, 1837, the town passed an ordinance relating to the sale of lots for taxes. It provided that the assessment on all taxable lots should be made annually, and the roll returned to the Board previous to October 1. The Town Collector was to notify the public by the 15th of that month that he would advertise all lots for sale upon which the tax remained unpaid on February 1. If not redeemed, the purchaser at the tax sale was entitled to the deed. In March, 1837, another lot of "delinquents" appeared to have forgotten the value of Chicago real estate. In the "old town" most of the lots advertised for sale were taxed at \$2.50 apiece—the highest \$45. The highest tax upon a water lot in Kinzie's addition was \$20; a dry lot \$47.50. The majority of lots in Wolcott's addition were assessed at \$2.50, the highest one at \$10; in Wabansia addition, the highest \$5, the majority at \$1.25; in School Section 21 the highest \$21, the majority at \$1. In North Branch addition out of three hundred and eight lots advertised for sale the tax of only twenty-four reached \$1.25, most of them being assessed at thirty-seven cents per lot. The taxes collected during the year ending May 1, 1837, amounted to \$11,659.54, of which \$2,661.26 was the balance assessed during 1835, and \$8,998.27 the corporation taxes on real estate for 1836.

The panic of 1837 brought great distress to this community, and delayed the growth of Chicago as a city. Its reaction here was principally felt in real estate circles, it being almost impossible to dispose of land, at any price, during 1838. The canal improvement was really about all that sustained and encouraged Chicago for nearly ten years. Many people left the city in 1840. Although the hard times of 1837 and 1838 affected the sales at the land-office, as a "business institution," it was as persistently prosperous as any that can be named, from May 28, 1835, when it opened, to May 1, 1846, when it closed. Witness the figures:

1835.....	370,043.38	acres.
1836.....	202,315.96	"
1837.....	15,697.87	"

TOTAL.....2,054,592.16

The growth of Chicago from 1842 to 1850 was slow.

In April, 1852, the city negotiated its first great loan—\$250,000, payable in twenty years, through Duncan, Sherman & Co., of New York City. This was on account of the inauguration of the new system of water works.

The growth of the city from 1850 to 1855 was marvelous, and the confession is said to have been made by certain real estate men that though they "did their best" at representing the rise in land, the facts outstripped their stories. It was during this period that Chicago inaugurated her grand system of water-works and drainage. Then, unfortunately, she experienced her great set-back, the panic of 1857. The city was so embarrassed that in September the Council ordered the issuing of \$100,000 bonds. It was done and Comptroller Hayes went to New York to negotiate them. After using his powers of persuasion for a week he returned, entirely unsuccessful in his mission.

By the winter of 1857 a large number of laboring men were out of employment, and the city authorities were called upon, in the midst of the most depressing times, to inaugurate public improvements and thus assist them financially. Special committees of the Common Council were appointed, who found it impossible to appropriate money from the city treasury for charitable objects, without express permission from the Legislature, and especially when the whole available means of the city were required to pay her current expenses and honorably meet her maturing indebtedness. Furthermore, the city could not, as suggested, make advances through her credit to carry on public improvements then pending, for which assessments had not been collected, because all taxes had been collected to their full extent and were paid in so slowly that the Comptroller found it difficult to provide for the most necessary expenses. In the then state of the money market it was impossible to raise money by a loan. The filling of Washington Park, however, had been contracted for and would provide employment for a great number. Most of the improvements which could be ordered at that time would have to be made upon remote streets, and the assessments upon adjoining property would fall upon the poorer people. All that could be done, therefore, was for the city to hasten the construction of works for which orders had been passed and warrants issued.

The following table exhibits, in condensed form, the standing of the city, financially and otherwise, from 1837 to 1857, inclusive:

YEAR	PROPERTY VALUATION.	LIABILITIES OR BONDED DEBT.	TAXES COLLECTED.	POPULATION.	CENSUS.
1837	\$ 236,842	\$ 5,905 15	4,170	City
1838	*235,936	\$ 9,996 54	8,849 86	4,000	Estimate
1839	*94,803	7,182 25	4,664 55	4 200	Estimate
1840	*94,437	6,559 63	4,721 85	4,479	U. S.
1841	*166,744	12,387 67	10,004 67	5,500	Estimate
1842	*151,342	16,372 01	9,181 27	6,590	Estimate
1843	1,441,314	12,655 40	8,647 89	7,580	City

ROSTER OF CITY OFFICERS.—Following is a roster of the principal city officers up to and including 1857. For the officers of the different city departments, see their history, given elsewhere:

1837—Mayor, William B. Ogden, elected May 2; City Clerk, I. N. Arnold; George Davis appointed in October; City Attorney, N. B. Judd; City Treasurer, Hiram Pearsons; Aldermen—(1) J. C. Goodhue, Francis C. Sherman; (2) J. S. C. Hogan, Peter Bolles; (3) John D. Caton (entitled to only one Alderman until 1839); (4)

Asahel Pierce, Francis H. Taylor; (5) Bernard Ward (entitled to only one until 1839); (6) Samuel Jackson, Hiram Pearsons.

1838—Mayor, Buckner S. Morris, elected March 6; Clerk, George Davis; Attorney, N. B. Judd; Treasurer, Hiram Pearsons; Aldermen—(1) Eli B. Williams, E. H. Haddock; (2) John S. C. Hogan, James Curtiss; (3) John D. Caton; (4) Francis H. Taylor, Asahel Pierce; (5) Henry L. Rucker; (6) George W. Dole, Grant Goodrich.

1839—Mayor, Benjamin W. Raymond, elected March 5; Clerk, William H. Brackett; Attorney, Samuel L. Smith; Treasurer, George W. Dole; Aldermen—(1) James A. Smith, Oliver H. Thompson; (2) Eli S. Prescott, Clement C. Stose; (3) William H. Stow, Ira Miltimore; (4) A. Pierce, John Murphy, Jr.; (5) H. L. Rucker, John C. Wilson; (6) John H. Kinzie, Buckner S. Morris.

1840—Mayor, Alexander Loyd, elected March 3; Clerk, Thomas Hoyne; Attorney, Mark Skinner; Treasurer, Walter S. Gurnee; N. H. Bolles appointed to fill the office in April; Aldermen—(1) Julius Wadsworth, Orsemus Morrison; (2) Augustus Garrett, James Carney; (3) John Gage, Ira Miltimore; (4) Seth Johnson, William O. Snell; (5) H. L. Rucker, William Allen; (6) William B. Ogden, R. J. Hamilton.

1841—Mayor, Francis C. Sherman, elected March 5; Clerk, Thomas Hoyne; Attorney, George Manierre; Treasurer, N. H. Bolles; Aldermen—(1) Charles Follansbee, John Davlin; (2) Peter Page, Jason McCord; (3) Ira Miltimore, William H. Stow; (4) William O. Snell, G. W. Rogers; (5) H. L. Rucker, Samuel Greer; (6) George F. Foster, James L. Howe.

1842—Mayor, Benjamin W. Raymond, elected March 7; Clerk, J. Curtiss; Attorney, Henry Brown; Treasurer, F. C. Sherman; Aldermen—(1) Norman B. Judd, John Calhoun; (2) Caleb Morgan, Charles McDonald; (3) Hamilton Barnes, Alton S. Sherman; (4) Daniel Elston; Eben C. Chaloner; (5) George Brady, Edward Carroll; (6) George O. Bryan, George W. Dole.

1843—Mayor, Augustus Garrett, elected March 7; Clerk, James M. Lowe; Attorney, George Manierre—Henry Brown appointed to fill vacancy caused by Mr. Manierre's resignation, in July; Treasurer, W. S. Gurnee; Aldermen—(1) Hugh T. Dickey, Cyrenus Beers; (2) Charles Sauter, Jason McCord; (3) Azel Peck, Charles Taylor; (4) John Murphy, Jr., William S. Warner; (5) John Cruver, Samuel Greer; (6) Joseph Marbach, George W. Dole.

1844—* Mayor, Augustus Garrett, elected March 7; Alton S. Sherman chosen at the new election in April; Clerk, E. A. Rucker; Attorney, Henry W. Clarke; Treasurer, W. S. Gurnee; Aldermen—(1) John P. Chapin, Asher Rossiter; (2) Samuel W. Tallmadge, William Wheeler; (3) George Davis, Ira Miltimore, Hamilton Barnes; (4) John Murphy, Jr., James Poussard, Asahel Pierce; (5) Thomas Brown, Elihu Granger, Patrick Kain; (6) B. S. Morris, Michael Diversey, † J. H. Rees.

1845—Mayor, Augustus Garrett; elected March 5; Clerk, Edward A. Rucker—Wm. S. Brown appointed to fill vacancy caused by Mr. Rucker's resignation; Attorney, Henry W. Clarke; Treasurer, William L. Church; Aldermen—(1) J. Young Scammon, Thomas Church; (2) Robert P. Hamilton, James H. Woodworth; (3) Francis Edwards, Francis H. Taylor; (4) Asahel Pierce, Thomas McDonough; (5) Elihu Granger, Samuel Greer; (6) Mahlon D. Ogden, Richard C. Ross.

1846—Mayor, John P. Chapin, elected March 3; Clerk, Henry B. Clarke; Attorney, Charles H. Larrabee; Treasurer, William L. Church; Aldermen—(1) Geo. Manierre, Levi D. Boone; (2) N. H. Bolles, Andrew Smith; (3) Michael Kehoe, James Curtiss; (4) Henry H. Magie, Joseph Wilson; (5) Samuel Greer, Elihu Granger; (6) Richard C. Ross, William M. Larrabee.

1847—Mayor, James Curtiss, elected March 2; Clerk, Henry B. Clarke; Attorney, Patrick Ballingall; Treasurer, Andrew Getzler; Aldermen—(1) James H. Woodworth, Peter L. Updike; (2) Levi D. Boone, Isaac Speer; (3) B. W. Raymond, J. Brinkerhoff; (4) Robert H. Foss, Charles McDonnell; (5) Thomas James, John Sheriff, Jr.; (6) A. Pierce, A. Smith; (7) Elihu Granger, Charles Sloan; (8) William B. Snowhook, James Lane; (9) William B. Ogden, Michael McDonald.

(The act of 1847 created three more wards, and provided that two aldermen should be elected from each, who were divided into two classes by lot. The second class held over, and thereafter one alderman was annually elected from each ward and held his office for two years.)

1848—Mayor, James H. Woodworth, elected March 7; Clerk, Sidney Abell; Attorney, Giles Spring; Treasurer, William L. Church; Aldermen—(1) Edward Manierre, Peter L. Updike; (2) Henry L. Rucker, Isaac Speer; (3) William Jones, J. Brinkerhoff;

* Election of Mayor and aldermen of Third, Fourth and Fifth wards declared illegal. At the new election, held April 2, A. S. Sherman was chosen Mayor vice Aug. Garrett; (3) Ira Miltimore and Hamilton Barnes, vice George Davis and I. Miltimore; (4) John Murphy, Jr., and Asahel Pierce, vice John Murphy, Jr., and James Poussard, and (5) Thomas Brown and Patrick Kain, vice Thomas Brown and Elihu Granger.

† Elected to fill vacancy caused by resignation of B. S. Morris.

(4) Robert H. Foss, Charles McDonnell; (5) John C. Haines, Thomas James; (6) Asahel Pierce, Henry Smith; (7) Peter Turbot, Charles Sloan; (8) William B. Herrick, James Lane; (9) Samuel McKay, Michael McDonald.

1849—Mayor, James H. Woodworth, elected March 6; Clerk, Sidney Abell; Attorney, O. R. W. Lull; Treasurer, William L. Church; Aldermen—(1) Peter Page, R. C. Bristol—(James Carney elected to fill vacancy caused by resignation of Mr. Bristol); (2) George W. Snow, H. L. Rucker; (3) William H. Adams, William Jones; (4) A. G. Throop, R. H. Foss; (5) E. H. Chapin, John C. Haines—(A. S. Sherman elected to fill vacancy caused by resignation of Mr. Chapin); (6) Daniel Richards, Asahel Pierce—(G. W. Wentworth elected to fill vacancy caused by Mr. Pierce's resignation); (7) George Brady, Peter Turbot—(Elihu Granger elected to fill vacancy caused by resignation of Mr. Turbot); (8) H. R. Payson, William B. Herrick; (9) F. C. Hagemann, Samuel McKay—(R. J. Hamilton elected to fill vacancy caused by resignation of Mr. McKay).

1850—Mayor, James Curtiss, elected March 6; Clerk, Sidney Abell; Attorney, Henry H. Clark; Treasurer, Edward Manierre; Aldermen—(1) Peter Page, James Carney—(E. B. Williams elected to fill vacancy caused by resignation of Mr. Carney); (2) I. L. Milliken, G. W. Snow (A. Loyd elected to fill vacancy caused by Mr. Snow's resignation); (3) S. J. Sherwood, W. H. Adams; (4) R. H. Foss, A. G. Throop; (5) John C. Haines, A. S. Sherman; (6) G. W. Wentworth, Daniel Richards—(E. G. Meek elected to fill vacancy caused by the death of G. W. Wentworth); (7) Elihu Granger, George Brady; (8) John C. Dodge, George F. Foster; (9) R. J. Hamilton, F. C. Hagemann.

1851—Mayor, Walter S. Gurnee, elected March 4; Clerk, Henry W. Zimmerman; Attorney, Henry H. Clark; Treasurer, Edward Manierre; Aldermen—(1) John Sears, Jr., Peter Page; (2) Hugh Maher, I. L. Milliken; (3) William Wheeler, S. J. Sherwood; (4) A. G. Throop, R. H. Foss; (5) J. L. James, John C. Haines; (6) Daniel Elston—(James M. Hannah elected to fill vacancy caused by ineligibility of Daniel Elston; James M. Hannah resigned, and Henry Smith was elected to fill vacancy), Read A. Williams; (7) Charles E. Moore, Elihu Granger; (8) Robert Malcolm, John C. Dodge; (9) F. C. Hagemann, W. L. Newberry.

1852—Mayor, Walter S. Gurnee, elected March 2; Clerk, H. W. Zimmerman; Attorney, Arno Voss; Treasurer, Edward Manierre; Aldermen—(1) Eli B. Williams, John Sears, Jr.; (2) I. L. Milliken, Hugh Maher; (3) O. J. Rose, William Wheeler; (4) Charles McDonnell, A. G. Throop; (5) John C. Haines, J. L. James; (6) A. C. Ellithorpe—(Mr. Ellithorpe's election contested and T. B. Dwyer elected), Henry Smith; (7) Ezra Taylor, Charles E. Moore; (8) Andrew J. Brown, Robert Malcolm; (9) John H. Kinzie, W. L. Newberry—(Henry A. Mitchell elected to fill vacancy caused by resignation of Mr. Newberry).

1853—Mayor, Charles M. Gray, elected March 14; Clerk, H. W. Zimmerman; Attorney, Arno Voss; Treasurer, Edward Manierre; Aldermen—(1) A. D. Taylor, Eli B. Williams; (2) John Evans, I. L. Milliken; (3) J. H. Gray, O. J. Rose; (4) William Kennedy, Charles McDonnell; (5) William H. Scoville, John C. Haines; (6) William Carpenter, Thomas B. Dwyer; (7) Michael O'Neil, Ezra Taylor, (Maurice Evans elected to fill vacancy caused by Mr. Taylor's resignation); (8) Francis A. Hoffman, Andrew J. Brown; (9) Henry A. Mitchell, John H. Kinzie.

1854—Mayor, Ira L. Milliken, elected March 13; Clerk, H. W. Zimmerman; Attorney, Patrick Ballingall; Treasurer, Uriah, P. Harris; Aldermen—(1) Eli B. Williams, A. D. Taylor; (2) L. D. Boone, John Evans; (3) William L. Church, J. H. Gray; (4) J. C. Outhet, William Kennedy—(Robert H. Foss elected to fill vacancy caused by death of Mr. Kennedy); (5) J. D. Ward, William H. Scoville; (6) William Wayman, William Carpenter; (7) Elihu Granger, Michael O'Neil; (8) W. H. Stickney, Francis A. Hoffman—(B. W. Thomas elected to fill vacancy caused by resignation of Mr. Hoffman); (9) Morgan L. Keith, Henry A. Mitchell.

1855—Mayor, Levi D. Boone, elected March 8; Clerk, H. W. Zimmerman; Attorney, J. A. Thompson; Treasurer, William F. De Wolf; Aldermen—(1) Sylvester Sexton, Eli B. Williams—(James Long, elected to fill vacancy caused by Mr. Williams's resignation); (2) R. M. Hough, Thomas Allen; (3) Lorenzo Fletcher, William L. Church; (4) William Colby, J. C. Outhet; (5) C. N. Holden, J. D. Ward; (6) A. C. Ellithorpe, William Wayman; (7) James L. Howe, Elihu Granger; (8) Samuel Ashton, William H. Stickney—(Stephen D. LaRue elected to fill vacancy caused by Mr. Stickney's resignation); (9) Samuel McKay, Morgan L. Keith.

1856—Mayor, Thomas Dyer, elected March 10; Clerk, H. W. Zimmerman; Attorney, J. L. Marsh; Treasurer, O. J. Rose; Aldermen—(1) James Long, Sylvester Sexton; (2) Lucius A. Willard, Thomas Allen—(Owen Kendall, elected to fill vacancy caused by Mr. Allen's resignation); (3) Calvin DeWolf, Lorenzo Fletcher; (4) Samuel Myers, William Colby; (5) Russell Green, C. N. Holden; (6) Henry Greenebaum, A. C. Ellithorpe; (7) John Dempsey,

James L. Howe; (8) S. D. LaRue, Samue. Ashton—(Conrad L. Nichoff elected to fill vacancy caused by Mr. Ashton's resignation); (9) Michael Diversey, Samuel McKay.

1857—Mayor, John Wentworth, elected March 3; Clerk, H. Kreismann; Attorney, John C. Miller; Comptroller, Samuel D. Ward, appointed March 19; Treasurer, C. N. Holden; Aldermen—(1) William Bross, James Long; (2) O. Kendall, L. A. Willard—(Jacob Harris elected to fill vacancy caused by Mr. Willard's resignation); (3) Hiram Joy, Calvin DeWolf; (4) J. M. Kennedy, Samuel Myers; (5) Artemus Carter, Russell Green; (6) George Sitts, Henry Greenebaum; (7) John Dunlap, John Demsey; (8) Christian Wahl, S. D. LaRue; (9) Philip Conley, Michael Diversey; (10) Dennis Coughlin, J. Schmidt.

WATER WORKS.—The first public effort made by Chicago to assist her inhabitants to a supply of fresh water, dates from November 10, 1834, when the Board of Trustees paid \$95.50 for the digging of a well in Kinzie's addition. But the settlers early cast longing eyes towards the lake, realizing that that source of water supply was the true one and not to be compared to the sluggish and unprepossessing river. For some years private enterprise reaped a comfortable little financial harvest in the operation of water carts, which ran to and from the lake. These carts were two wheeled vehicles, upon which hogsheads were mounted. Having driven into the lake, generally at the foot of Randolph Street, the watermen loaded up their reservoirs by means of pails, and then commenced their journeys "around town." Backing their carts up to the doors of their customers' houses, with a short leathern hose they filled the barrels or other receptacles placed there for the purpose. The price per barrel varied, according to competition, from five to ten cents. But there came a time when water-carts, tin cans, wooden pails and barrels were deemed too crude as "water works," and when even such persuasive and enterprising carriers as Peter Wolfe were thought to be behind the times. January 18, 1836, the State Legislature passed a law incorporating the Chicago Hydraulic Company. On March 19, an organization was effected as follows: George W. Dole, president; Gurdon S. Hubbard, David Hunter, Gholson Kercheval, William Forsythe, directors; and Edward W. Casey, secretary. The other incorporators were James H. Campbell, R. A. Kinzie and Solomon Wells. The capital stock was limited to \$250,000. The charter was to continue in force seventy years. The company was allowed four years from the passage of the act in which to commence the construction of the necessary works. Although incorporated, the panic of 1837 so disarranged the affairs of the new company that it did not get fairly to work until 1840, when the four years had nearly expired. Ira Miltimore was then appointed machinist and superintendent of the works, and commenced at once to build a reservoir at the corner of Lake Street and Michigan Avenue, on the ground afterward occupied by the Adams House. Not until the spring of 1842 was this first water works system completed. The American of May 24 speaks in glowing terms of the purity of the supply. The same paper of June 10 gives the following interesting facts in regard to the completion of the great undertaking:

"The whole outlay of the company has been about \$24,000. A large two-story brick building has been erected with a pier running into the lake. The steam engine is of 25-horse power. The working-barrel of the pump is fourteen inches in diameter and forty-four inches stroke—double action. The suction pipe by which the water is drawn from the lake, is also fourteen inches in diameter, and three hundred and twenty feet in length. The pump raises upward of twenty-five barrels of water per minute, thirty-five feet above the level of the lake. There are two reservoirs, each of the capacity of one thousand two hundred and fifty barrels, one only of which is complete. A space of about fifty minutes is required to fill each of the reservoirs, equivalent, of course, to raising one thousand two hundred and fifty barrels in fifty minutes. The

reservoir is of sufficient elevation to throw the water into the second story of any building in the city. About two miles in length of pipe are now laid down. The machinist under whose direction these works have been put into such complete and successful operation is Mr. Ira Miltimore. We allude to this gentleman with the more pleasure that it was for a long time confidently predicted that his undertaking would prove an entire failure. We know that though he had perfect confidence in his ability to accomplish his task, these predictions were to him a source of constant and harassing anxiety. It can scarcely be imagined how keenly intent were his feelings when the works were upon the point of being put into operation. The triumph, or it might be the disgrace, of the machinist was at hand. His feelings at that moment were assuredly not to be envied. They were to be envied when the regular evolution, the easy play, the harmonious action of every part of the machinery, announced the complete triumph of skill.*

Elsewhere, and officially, the old hydraulic works have been described as consisting of an 18-inch inlet nearly seven hundred feet long, extending from a crib in the lake to a well fifteen feet deep, the inlet bending down nearly to the bottom; of pumping works on the lake shore at the foot of Lake Street; and of wooden supply pipes, of which latter, before the abandonment of the works, there were several miles, none of which exceeded six inches in diameter. The wooden pipes were frequently dug up, in excavating for the laying of sewers and iron water pipes, and appeared to be perfectly sound, twenty-five years after they were laid.

The Common Council in December, 1841, contracted with the Hydraulic Company to supply the city with water for the extinguishment of fires. The schedule of rates for domestic and manufacturing supply was published in April, 1842, and ranged from \$10 per annum for a family of five persons, to \$500 for large services in manufactories. The pipes from the mains to buildings were furnished at private expense.

In 1842 James Long entered into arrangements with the Hydraulic Company to do their pumping for supplying the city with water for ten years, without cost to the company, in return for the free use of the surplus power of their engine. Subsequently Mr. Long referred to the difficulties of his post in the following words: "In winter the pipes would be disarranged by the heaving of the frost, and I had frequently to spend hours at a time to caulk up the joints by throwing on water and thus freezing up the cracks before we could make the pumps available. When the end of this pipe from the pier was first put down it was three or four feet below the surface of the lake, but in 1842-43 the lake had receded so far as frequently to leave the end out of water, particularly when the wind blew from the south." In addition to the work which he accomplished for the city, Mr. Long erected the "Hydraulic Mills," corner of Lake Street and Michigan Avenue, which he operated with the "surplus power of the twenty-five horse engine." The building cost about \$12,000, was of three run of stone, and the mill did good business until the second water works were constructed, in 1853, when the enterprise was abandoned.

The great expectations entertained regarding the blessing which was to be brought to the homes of the people of Chicago were not realized, even within the next decade. During the fall of 1847, especially, the water supply was of a quality which called for purification. In August, ex-Street Commissioner Phillip Dean cleaned the works and repaired them. He was then acting as agent. But citizens were already putting the pertinent inquiry, "What good can Mr. Dean do, unless the pipe is extended out into pure water?"

The matter was so serious that everyone took part in the discussion. In the spring of 1848, at the season

* Captain Miltimore, to whose judgment and engineering skill early Chicago is greatly indebted, died in Janesville, Wis., June 9, 1879.

when little fishes were generally pumped into the reservoirs and thus distributed over the city, to the horror of the clean and fastidious housewife, the public prints were full of "water works," and many shafts of ridicule were leveled against the primitive system of supply under which the city was suffering. A committee was appointed by the Chicago Mechanics' Institute, consisting of S. D. Childs, A. F. Bradley and W. H. Kennicott, to suggest a plan for getting water from the lake. They reported in May with a diagram, and proposed to lay down a pipe three feet below low-water mark; to extend it out into the lake at a point opposite First Street to a sufficient distance to pass the muddy water, and then to continue the pipe down the center of said street, crossing the Chicago River near Mr. Gage's steam mill, and continuing it to the western boundary of the city. At the crossing of each alternate street lateral branches might be taken; the pipes to be of wood and to cost about \$2,000 per mile. By carrying the pipes into twenty feet of water and attaching an elbow to that end, at least ten feet from the bottom, the water so drawn would be equally free from the floating impurities and the disturbances of the bottom; the water thus drawn to be introduced into two reservoirs, to be erected at the margin of the lake, each capable of holding twenty thousand cubic feet of water. Into the one nearest the lake the water should be first introduced, drawn off from the top and carried by an elbow to the bottom of the second reservoir, from which it should be drawn off again near the top, to be carried through the city by wooden pipes running down First Street. The works then in operation (so it was computed) were throwing into the reservoirs a column of water equal to twenty-eight thousand cubic feet every twelve hours. This was drawn from the bottom of the lake, poured into the top of the reservoir and taken out at the bottom where the sediment must, of necessity, have been thrown.

Another influence, besides the quality of the water-supply, was at work to bring the life of the old Hydraulic Company to an end. A portion of the South Side, and a very small part of the West Side, were well supplied with water, while the whole of the North Side, and large districts of the other territory, were obliged to depend upon wells and the watermen, a number of whom were still kept busy bringing water from the lake. Many poor people, who were not able to take advantage even of these necessities to health, drew their supply from the filthy river. During 1850 the company laid one mile of pipe, making in all nine and a quarter miles in use. Of one thousand hydrants, eight hundred were used by families, the remainder by stores, public houses, livery stables, etc. It was estimated that not over one-fifth of the city was being supplied by the company. For a large and rapidly growing city this state of affairs was alarming, especially as the general health was perceptibly suffering. In April, 1850, a meeting of citizens was held at the city hall for the purpose of devising means of supplying the city with pure and wholesome water. The following gentlemen, with the chairman of the meeting, Peter Page, were appointed to obtain facts and suggest remedies: South Division, R. H. Foss and T. M. Moody; West Division, A. S. Sherman and Luther Marsh; North Division, R. J. Hamilton and William E. Jones. It was through the efforts of these gentlemen, sustained by the general public sentiment, that a company was incorporated by the city during the succeeding session of the Legislature. The act approved February 15, 1851, to incorporate the Chicago City Hydraulic Company, provided for the organization of a board of water commissioners,

comprising John B. Turner, Horatio G. Loomis and Alson S. Sherman. This board entered on their duties of office June 16, 1851, and ten days later William McAlpine was appointed chief engineer. Under his directions the second water-works of Chicago were constructed. To point out distinctly the reason which the city assigned for the construction of such expensive works, an enumeration of buildings, etc., in which water-pipe were proposed to be first laid, was made in July, 1851. The total amount estimated to accrue from water-rates for the year succeeding the completion of the water-works was \$37,366.

"The commissioners stated that the water will be taken from the lake north of the pier, at or near the termination of Chicago Avenue. There will ultimately be required in the carrying out of this plan three reservoirs, one of which will be located in each division of the city. The water will be taken from the lake at a distance of about six hundred feet from the shore, and conducted by an inlet pipe to a well, which will be within the engine-house, on or near the beach. From this well the water will be forced into the reservoirs, to a height of eighty-five feet above the surface of the lake and about seventy-five feet above the surface of the general level of the city, by a non-condensing engine of about 170-horse power. The pipes used will be of iron. Iron tanks will be used for the reservoirs. The estimated cost of constructing the work upon this plan, including the cost of about forty-eight lineal miles of distribution pipe, which it is supposed will be adequate to supply the inhabitants of the city, when its population will be one hundred thousand souls, is \$570,000."

Engineer McAlpine made his report September 26, 1851. His assistant, E. W. Smith, had remained in Chicago for over a month, to take soundings in the lake at the several places suggested by the board of commissioners, and also to examine the branches of the river where the water pipes were proposed to be carried. Mr. McAlpine submitted four plans, with estimates for the cost of carrying them out. The plan substantially adopted was the fourth. An estimate was made that the total cost of constructing the works would be \$335,439.59 and that the annual expenses would amount to \$18,000. The whole plan was submitted, as applying to a city which should number one hundred and sixty-two thousand souls in 1875! The system was considered as amply sufficient to cover any possible growth of the future, and the estimate was considered by many to be quite extravagant.

It would not be in human nature for the old Hydraulic Company to allow the new corporation to prosecute their enterprise without bitterly opposing it. The former claimed exclusive rights, and held that before the commissioners could proceed a step they must first purchase the old company's property and franchise, or its franchise alone. The Hydraulic Company claimed, without the income which was then being derived from water rents, that the tables of the new commissioners would be \$15,000 less yearly than they calculated. As to the paucity of the water supply they stated,* that a "charter was obtained for supplying the North Division of the city with water, but excepting such preliminary steps as were thought necessary to secure their charter, we believe they have advanced no farther. In 1850-51, the charter was extended, and calculating to supply the whole city, the company finding the limit of \$250,000 in their charter too small, they are seeking power to borrow at once \$350,000." After showing the advantages which the city would gain by purchasing their works, and that it was impossible for them to levy taxes upon the territory now occupied by them, the directors of the company intimated that unless the matters were settled, an injunction would be brought to prevent the building of the new works. The directors of the old

Hydraulic Company, at this time were B. S. Morris, William Wheeler, B. W. Raymond, J. H. Foster and M. Lavin.

On March 2, at the regular municipal election, only five hundred and thirteen votes were cast against the adoption of the system proposed by the Chicago City Hydraulic Company. Of the four thousand four hundred and forty-five persons voting at that time, one thousand two hundred and forty-four did not signify whether they cared for the works or not.

In compliance with a request from the old Hydraulic Company a special committee of the Common Council suggested that the water commissioners purchase their entire interests for \$30,000, or their franchises for \$15,000, the Hydraulic Company to retain their property and income of works until July 4, 1853. The paper, however, was laid on the table and could not therefore be considered as having received a municipal indorsement. The water commissioners then went on to negotiate their \$400,000 bonds with Duncan, Sherman & Co., of New York City. The first loan was made in April—\$250,000, payable in twenty years. In June the New York Tribune reports: "Under the active demands for the Chicago City Six's, which was fast exhausting the supply, Messrs. Duncan, Sherman & Co. have advanced the rate to ninety-seven and one-half and accrued interest. They are selling faster than the city officers execute and forward them."

The Hydraulic Company got out an injunction, but the two rivals compromised their difficulties under the 19th section of the act of incorporation of the new water company, which reads as follows

"Said commissioners may purchase the corporate rights and real and personal property, fixtures and stock of every name and description of the Chicago Hydraulic Company, and when such purchase shall be made, the said commissioners shall succeed to and become invested with all the powers, rights, privileges and immunities exercised and enjoyed by the Chicago Hydraulic Company, under their charter, and shall continue to supply water to the citizens of Chicago, under the same, and collect the money and rents therefor, in all respects as fully and effectually as the Chicago Hydraulic Company can or may do, until the said commissioners, acting under the provisions of this act, shall have completed their arrangements, machinery, engines, pipes, buildings and other things provided for in this act for the purpose of providing the said city with pure and wholesome water; after which time the said Chicago Hydraulic Company, and their said charter, shall become extinct and null: Provided, always, that if the said commissioners cannot agree with the said Chicago Hydraulic Company as to what sum shall be paid the said Chicago Hydraulic Company for their property, rights and privileges, then the said company shall have the right to establish, by satisfactory proof, the actual cost of their said property, before the Judge of the Circuit Court of Cook County, upon petition to him in term time or vacation, and no greater sum shall be paid for the same than the Judge shall decide the actual cost to have been."

In April and August two loans were effected with the above-named banking-house. The net amount realized from the sale of the \$400,000 bonds—six per cent, twenty-five years—was \$361,280. The difficulties between the two companies having been amicably adjusted, the water commissioners pushed their work along with commendable energy.*

The works were commenced in the summer of 1852, and were situated near the lake, at the foot of Chicago Avenue. The pump-well was built, and a portion of the thirty-inch inlet pipe was laid towards the lake, and the foundations of the building and tower were put in, which closed the work for the season. During the spring and summer of 1853 the buildings and tower were finished, and several attempts made to put in place the thirty-inch wooden inlet pipe, which was designed to

* See report of February, 1852, made by Hydraulic Company directors, filed in City Clerk's office.

* For many of the facts in regard to the Chicago City Hydraulic Works, see official reports of De Witt C. Cregier, present superintendent of the Department of Public Works.

extend six hundred feet into the lake, and terminate in a crib of timber. The efforts to complete this were unsuccessful. The boisterous condition of the lake rendered it difficult to secure the crib in place, so the work was abandoned and the water received in a pipe, close to the shore. During the fall of 1853 the stand-pipe was put up, and the condensing and non-condensing engines were erected. The former was started December 16, 1853, and the supply of water for the city commenced in February, 1854. The original

Iron Works, New York, as were also the engines erected in 1857 and in 1867. The non-condensing engine, erected in 1853, was horizontal. It was located on the south side of the main building, having a steam cylinder of eighteen inches, and six feet stroke, with one double-acting pump of the same dimensions. This engine was built by H. Moses, of Chicago. It was removed in the latter part of 1856 and a larger one substituted.

During the first four months water was supplied but nine hours per day, and none on Sunday except in case

WATER WORKS.

pump-well was rectangular, twenty by thirty feet, and twenty-five feet deep from floor of engine-house to bottom. The walls were of stone, six to seven feet thick. Upon those walls the engines were located; the buildings were of brick, forty by fifty feet in the clear, and two wings for boiler-rooms, each thirty and one-half by forty and one-half feet in the clear. The water tower was square, composed of brick fourteen feet at the base, eleven feet at the top and one hundred and thirty-six feet high. The interior was divided by a wall, one part designed for a smoke chimney, the other for the iron stand-pipe. The foundation rested upon a bed of sand, some six feet below the surface, and at one time the tower leaned fourteen inches from a vertical line. It was, however, by an ingenious method made plumb, and remained so until its demolition. The original pumping-machine consisted of a vertical beam engine, located on the north side of the building, having a steam cylinder of forty-four inches diameter and a stroke of nine feet, with two single-action pumps of thirty-four inches in diameter and five and one-half feet stroke. This engine was in use sixteen years, and continued through 1869. It was built at the Morgan

of fire; after that the supply was continued regularly throughout the twenty-four hours. At this time there were but few water-takers, and having no reservoir, the water was allowed to run to waste through the fire-hydrants, in order to keep the small engine running. In the early part of 1854 the twelve-inch river pipe at State Street was broken by an anchor dragging from a vessel. This accident required the supply for the West Division to be forced through an eight-inch pipe across the river at Kinzie; and thence by a twelve-inch pipe across the river at Adams Street for the South Division. As a temporary resort a large rubber pipe, manufactured at Boston, was procured. On its arrival its strength was found inadequate to the pressure. A new wrought iron pipe, thirty inches in diameter was subsequently put down at State Street and was in use in 1869. This new main was manufactured by Charles Ressig, of Chicago, at a cost of \$3,561, and was laid by S. S. Durfee, at an additional cost of \$2,000. The connecting main was completed October 1, 1854. Thirty and one-half miles of pipe were laid up to December 31, 1854. The total cost of the works at that date was \$393,045.32. During the first year much trouble was experienced from sand

being driven from the inlet pipe into the pump-well. The mouth of the pipe being only a few inches under water, near the shore, was exposed to the heavy waves of the lake. On one occasion the water was entirely stopped by a vast number of insects accumulating on the strainer. To protect the inlet-pipe from those obstacles, a break-water or basin was constructed in 1855. This being dredged to a considerable depth fully answered its purpose, and was in use until the completion of the first lake tunnel. In June, 1852, the water commissioners purchased from P. F. W. Peck a piece of land upon which to erect the South Side reservoir. The lots had a frontage of 217½ feet upon Adams Street, and cost the city \$8,750. The reservoir was completed in November, 1854. It was filled within ten feet of the top, or twenty-eight feet deep, on November 22, and the next morning it was found that the immense weight of water had caused the masonry to settle so that fissures were discernible on every side of the building. The water was immediately drawn off, and the various methods of patching up the job, which had already cost \$60,000, were canvassed. Various plans were laid before the Council and a committee was appointed to examine them. This committee could not agree upon one thing, viz.: that it was necessary to construct substantially a new building. The water commissioners, therefore, strengthened the cracked walls as best they could with rods and braces, so that the tank could be partially filled with water and thus do some service during the winter. Pending the repairs of this reservoir the engines were run day and night. A portion of the thirty-inch inlet-pipe from the lake to the well was found to be defective, and a new one, three by four feet square, made of oak plank, was put in at a greater depth. Considerable difficulty was experienced in laying this pipe, involving the removal of the east wall of the engine house. Upon completion of the lake tunnel this arrangement was also abandoned and served subsequently as a waste-pipe for the water from the air pumps of the several engines.

In June, 1855, the reservoir was strengthened after the accident of the preceding fall, until it would hold eighteen feet of water, which, with other charges for repairs and general expenses, brought up the construction account to \$380,070.73. A large fracture was found in the main pipe near the standing column of the works, on December 22, 1855. Notice was immediately given that the water would be cut off at Monday noon. Care was taken to have the reservoir full, and a man was kept stationed there with orders to turn on the water instantly in case of fire. The pipe was repaired within a few days, and but little inconvenience was felt by the people.

Up to December 31, 1855, there had been expended upon the construction and extension of the water-works system \$496,849.64. The whole amount of bonds issued by the water commissioners had been \$650,000. Over forty-one miles of pipe had been laid, and 4,251 buildings were supplied with water.

During the early part of 1856 the quantity of water used was nearly equal to the maximum capacity of the high pressure engine. Therefore it was necessary to replace it with a much larger one. A contract was made with the Morgan Iron Works for the construction of the south engine, which was set up and put in operation July, 1857. This engine was similar in construction to the condensing engine previously referred to, with a steam cylinder of sixty-inch diameter, stroke of ten feet, two single acting pumps, each forty-inch diameter, six and one-fourth feet stroke. Much difficulty was experienced in preparing a foundation for this engine, as a portion of the only pump-well then built,

from which the city supply was pumped, as well as the site of the old high-pressure engine, was to be occupied. However, the high-pressure engine was moved to a temporary site, where it might be used until the new works were ready. The labor of setting the stone was carried on during the night only. While constructing the foundation, no water could be admitted to the well, which seriously retarded progress. The daily supply of water was uninterrupted, and the reservoir in the South Division kept full, so that in case of fire the water therefrom might be admitted to the mains. In the summer of 1857 a twenty-four inch main was laid from the pumping works to the West Division, crossing the river at Chicago Avenue, by means of a wrought-iron pipe. Soon after it was completed, the river portion was rendered useless by a pile twelve inches in diameter being accidentally driven through it, permitting the water to flow into the river. From this accident the engine narrowly escaped injury by the sudden reduction of load. The damaged pipe was taken up, repaired and placed in its original position.

Up to 1857 two engines had been built by the North Side pumping-works. The first one, that of 1853, was put in operation December 16. It had a capacity of seven and one-half million gallons every twenty-four hours; steam cylinder, forty-four inches in diameter, nine feet stroke; length of working beam, thirty feet; weight, nine tons; diameter of fly-wheel, twenty-four feet; cost of engine and boiler, \$24,500. The engine of 1857 was put in operation in July; capacity, thirteen million gallons every twenty-four hours; steam cylinder, sixty inches in diameter; ten feet stroke; working-beam, thirty feet; weight, sixteen tons; diameter of fly-wheel, twenty-four feet; cost of engine and two boilers, \$59,000. Some parts of the engine were made to conform to the conditions of the building. Owing to the position of the tower, the valve-gear or customary front of the engine was placed on the side, as it was deemed imprudent to cut the corner of the tower to admit locating the front in the usual place. In December, 1853, water was first pumped into the pipes to test them, and the first hydrant was opened on North Clark Street, near the bridge. The first permits to take water from the distribution pipes were granted February 12, 1854, to residents of the North and West divisions. Pipes were tapped February 15, and water introduced into the buildings of the city for the first time.

Following is a table exhibiting the "finances" of the water-works from 1854-57:

YEARS.	COST OF WORK.	OPERATING EXP. AND INTEREST.	REVENUE.
1854	\$393,045 32	\$38,128 51	\$26,808 50
1855	496,849 64	59,051 27	54,739 19
1856	641,509 93	73,087 23	76,806 36
1857	738,436 51	85,170 61	97,008 55

On May 1, 1857, the works were supplying seven thousand and fifty-three buildings with water, for \$85,012 per annum. May 6, 1861, the Board of Public Works was instituted. Following is the roster of commissioners up to the time of the establishment of the new board:

1851—John B. Turner, Alson S. Sherman, Horatio G. Loomis; 1853—J. H. Woodworth, George W. Dole, John C. Haines; 1855—Orrington Lunt, George W. Dole, John C. Haines; 1857—George W. Dole, John C. Haines, Orrington Lunt; 1860-61—Orrington Lunt, Noah Sturtevant, Edward Hamilton, Benjamin Carpenter. The officers during the terms of the several boards of water commissioners were as follows, in the order stated, viz.: Secretaries—Henry Tincker (?), P. R. Forrest, A. W. Tinkham, Thomas Forrest; Superintendent—B. F. Walker; Clerks—W. R. Larrabee, J. H. Bross; Engineer—Dewitt C. Cregier; Assistants—William Moses, H. M. Fuller, and F. Trautmann.

EARLY EFFORTS AT DRAINAGE.—Those who have made a study of the subject, in opposition to the popular error, testify that the substratum of the soil upon which the city of Chicago is built, far from being swampy and miry, is remarkably solid.* Too nearly on a level for the rain to run off, it must evaporate or soak into the soil. Almost uniformly, except near the lake, a rich, black loam of one or two feet or more is gradually mixed with clay until it becomes pure, or hardpan intervenes. Occasionally a bed of quicksand occurs, rendering piling requisite for a sure foundation, but probably no other city ever arose where the ground was so perfectly adapted, by nature, to solid building. While groping after a good drainage system, in early days, the authorities made two mistakes. At first they attempted to dig down the streets, and construct crude sluices to carry off the surface water; next an effort was made to lay pavements and sewers upon the natural surface, or rather to let the drainage and sewage run along the gutters of the streets. Going more into detail, it is found that on February 16, 1847, the Legislature in an act supplementary to the charter gave the Common Council power to make and repair all sewers in the city. When, in 1849, the city virtually discarded stone pavements and commenced to plank the principal streets, the Common Council adopted a series of grades by which it was hoped to drain the surface as well as pave it. It was thought to be practicable in determining the grades to effectually drain the lots contiguous to the streets by digging down the latter some eighteen inches beneath the common surface. Most of the planking of 1849 was upon that plan. Randolph, Lake and South Water streets were excavated, the grade ascending from the South Branch eastward to State Street, which was to form the summit-level from north to south. Madison Street was determined upon as the summit-level for all grades running toward the main river and in the opposite direction. Randolph, Lake and South Water streets were therefore cut down to conform to these grades. The object was to drain the South Division from State Street into the lake on one side and into the South Branch on the other, and from Madison Street into the main river on the north, and to some yet unestablished east and west line on the south. Fortunately the Council confined their experiments for the first year to the three streets named. Before one month had passed by after their completion, the plan was regarded as a failure, and the attempt to make streets answer the purpose of sewers was abandoned. In 1850 State, Clark, LaSalle and Wells streets were planked, mostly upon the natural surface, with only such grading as was found necessary to carry off the water that might fall upon it. The main sewers were constructed in Clark, LaSalle and Wells streets, running through their centers from the river to Randolph Street. They were built of heavy oak plank, triangular in shape. Their length was one thousand feet each; the side sewers being nine hundred and sixty-seven feet. The sum of \$2,871.90 was thus expended, and the property was specially assessed to the full amount of the cost. But although these improvements were in the march of progress, there was a determination among the far-seeing to look upon them as merely expedients. The formation and perfection of a system was demanded. The following extract from the *Gem of the Prairie*, of August, 1850, illustrates the advanced ideas:

"To any intelligent person going about our city, who understands the physical conditions of health, and the causes which, with

* See among others J. S. Wright's "Chicago: Past, Present and Future."

mathematical certainty generate disease, the wonder is not that we have had cholera in our midst for two seasons in succession, and that the common diseases of the country are fatally prevalent during the summer months, but that a worse plague does not take up a permanent residence with us. Many of the populous localities are noisome quagmires, the gutters running with filth at which the very swine turn up their noses in supreme disgust. Even some portions of the planked streets, say, for instance, Lake between Clark and LaSalle, are scarcely in better sanitary condition than those which are not planked. The gutters at the crossings are clogged up, leaving standing pools of an indescribable liquid, there to salute the noses of passers by. There being no chance to drain them properly, the water accumulates underneath the planking, into which flows all manner of filth, and during the hot weather of the last few weeks, the whole reeking mass of abominations has steamed up through every opening, and the miasma thus elaborated has been wafted into the neighboring shops and dwellings, to poison their inmates. Such being the state of facts, the people naturally expect the corporation will do something to abate the universal nuisance, or at least make the attempt to do so. But what has been done? Lime has been distributed to some extent, but in insignificant quantities, and some of the worst localities have been entirely neglected. * * * Here is a long bill of complaints to prefer in the ears of the city fathers, which, for the future welfare and honor of the place, we hope they will take into serious consideration. The evil, though great and increasing, is yet susceptible of a remedy. The only condition of health and decency, is a regular, thorough system of drainage. Such a system is feasible, and must be adopted if the 'Garden City' is to be habitable. It may and probably will cost \$30,000 or \$40,000 to begin with, on an extensive scale, and eventually \$100,000 or more; but what is such a sum in comparison with salubrity of atmosphere and health?"

The last attempt of any magnitude which citizens made to drain a large extent of territory without working under a clearly defined system, was under the direction of Henry Smith, George W. Snow, James H. Rees, George Steele, H. L. Stewart, Isaac Cook and Charles V. Dyer, who were appointed commissioners under an act of the Legislature dated June 23, 1852. They and their successors in office were empowered to locate, construct and maintain ditches, embankments, culverts, bridges and roads, on any lands lying in Townships 37, 38, 39 and 40, in Ranges 12, 13 and 14, Cook County; and to take land and materials necessary for these purposes, and to assess the cost of such improvements upon the lands they might deem to be benefitted thereby. Their examination showed the commissioners that a vast body of land (more than one hundred and fifty thousand acres), within the limits of the commission which had before been deemed worthless, lay, in fact, from four to twelve feet above the lake, and needed only proper drainage to make it available for purposes of agriculture and occupation. When the commission, was first created, objection was made that its powers were too great, and a fear was expressed that the proposed reform would develop into a stupendous speculation—even into a gigantic speculation. But subsequent events showed that such fears and suspicions were groundless. Within two years the commissioners expended \$100,000 in authorized improvements, with the most praiseworthy results. Large tracts of land were redeemed from the swamps and made valuable, and people were able to live comfortably, in dry houses, in localities which previously were thought to be uninhabitable. The lands drained extended four miles north, five miles west and ten miles south of the city. The ditches were mostly laid upon section lines, and parallel, draining into the Chicago and Calumet rivers. The *Democratic Press* in its annual review of 1854 has the following:

"There are within the city four and a half miles of sewers put down at a depth of from five to eight feet below the surface. These extend along our principal streets, in the business portion of the city, and so far as the removal of surface water is concerned, answer, so far as they go, a complete purpose. This may be inferred from the facts already stated in regard to cellars, since a cellar

without a drain is only a pool or an eel pit. Before these sewers were put down, no cellar could be dug either upon Lake or Water streets except in the dryest of seasons. There was never, perhaps, a city with features better fitted for drainage than this. The peculiar shape of its river, with its two branches, gives easy and short access to it from every section of the town; while there is, from every square rod of its surface, a gradual and sufficient inclination to the adjacent bank. The sewers only need to be extended as they have been begun to render the town as dry as is desirable. As they are, however, of a temporary and experimental make, if they are also to be made channels of the filth of the town, they will require to be laid in a more permanent manner."

By the act approved February 14, 1855, a board of sewerage commissioners was incorporated, consisting of one member for each of the three divisions of the city, to be elected for two, three and four years. It was their duty to consider all matters relative to the thorough and systematic drainage of the city; to advertise for plans and receive written objections, for thirty days; to report a plan to the Common Council with estimate of the necessary amount to complete it; to issue bonds, purchase lots and erect buildings, and appoint a secretary and treasurer. E. S. Chesbrough was appointed chief engineer, and insisted, from the first, upon the advantage of a high grade for the purpose of proper drainage and dry streets. The grade at last fixed upon was lower than he urged, but still sufficiently high to alarm the Common Council, who ordered a general extension of grades. By the system then in vogue about one-half the drainage from the South Division, all from the North Division except from establishments immediately along the lake, and all from the West Division, ran into the river. The dividing ridge in the South Division was along State Street, the water to the east of that line running into the lake. It will thus be seen that the river was the receptacle of all the drainage from packing-houses, distilleries, and most of the hotels, business blocks and dwellings of the city, so that constant streams of filth were pouring into it. On December 31, 1855, Mr. Chesbrough made a report to the Common Council, stating that the commissioners had already decided that the plan of sewerage to be devised should "cover at present, the territory included within Division Street on the north, Reuben Street on the west, North Street on the south, and Lake Michigan on the east. The plan of draining the sewerage into the river and branches directly, and thence into the lake, had been decided upon as being less expensive than draining directly into the lake. In order to keep improper substances out of the sewers, it was proposed to introduce a slight but constant current into the mains, and to resort to flushing or cleansing by hand. The sewers in the South Division were to have their principal dividing or summit-line on State and Washington streets. Starting from these dividing lines, they were to discharge westwardly into the South Branch, between North and Washington streets, northwardly from Washington Street into the main river, between Market Street and the lake, and eastwardly into large mains on Michigan Avenue, one of which was to empty into the river, and the other have its outlet in the lake, on Twelfth Street. Small branch sewers were to run through the streets, which lie parallel with the summit-lines, so that every lot, might be reached. In the North Division, three main lines extended from Division Street to the main river, and had their outlets on Rush, Clark and Franklin streets respectively. He also proposed a main having an outlet into the North Branch, on Chicago Avenue. All the intermediate streets between the mains, and those running east and west, it was proposed to drain by branches of different sizes, so that every lot might be reached the same as in the South Division.

It will be observed that no sewer had its outlet into the lake in the North Division. In the West Division mains from Reuben Street to the South and North branches were proposed. For the present it was recommended that they be constructed only in Prairie, Randolph, Monroe and Van Buren streets, and in these only as far as existing improvements might require them. The streets and parts of streets intermediate between the mains, were to be drained by branches as in the south and north districts. With regard to the outlets of the sewers it was recommended that they be so placed that the bottom of the interior surface of the mains would be six inches above the low-water level of 1847; and to place the bottoms of the two-foot sewers, six inches higher, or about the level of the present surface of the lake. The estimates made did not cover the sewerage for all the territory embraced in the plan, but merely so much as was considered necessary for present purposes: South district, \$157,893; north district, \$156,522; west district, \$188,831. In the winter of 1856-57 Mr. Chesbrough, upon the order of the board, visited some of the principal cities of Europe for the purpose of examining the various methods of sewerage adopted there, with a view of perfecting the system of Chicago. He recommended the system of intercepting sewers as the most feasible, the discharge to be into the lake, at some point in the southern part of the city. With the idea of inaugurating the system the first sewers were constructed in 1856—a total of six and two one-hundredths miles. During the next year four and eighty-six one-hundredths miles were built, making a total of about ten and four-fifths miles included in the sewerage system in 1857.

THE RIVER.—Very early in the history of Chicago the attention of citizens was called to the sluggish nature of the river, and ordinances were enacted by the town and municipal authorities against polluting its waters. The first measure was passed November 7, 1833. The ordinance of August 5, 1834, under the impetus of the cholera scare, was more stringent. Although the town and city authorities intended to be severe in times of epidemics, or when scourges were feared, very many offensive substances did find their way into the river at all seasons of the year, and by 1845 the stream became terribly offensive, in consequence of blood and other refuse from slaughter houses being thrown into it. When that nuisance was abated, however, the odors of the "melancholy and slow" stream became comparatively bearable for some years. When the board of sewerage commissioners adopted Mr. Chesbrough's plan of draining directly into the river and its branches (in December, 1855,) the public became alarmed lest this should endanger the city's health, and also fill up the river so as to obstruct navigation. Mr. Chesbrough discusses these objections, and explains his plan as follows:

"It is proposed to remove the first [objection] by pouring into the river from the lake a sufficient body of pure water to prevent offensive or injurious exhalations, by means which will hereafter be described. The latter objection is believed to be groundless, because the substances to be conveyed through the sewers to the river could in no case be heavier than the soil of this vicinity, but would generally be much lighter. While these substances might, to some extent, be deposited there when there is little or no current, they would, during the seasons of rain and flood, be swept on by the same force that has hitherto preserved the depth of the river."

In speaking of the steamboat canal project, he says:

"If it should ever be made for commercial purposes, the plan would be about as well adapted to such a state of things as it is to the present, making it necessary to abandon only the proposed method of supplying the South Branch with fresh water from the

lake, and to pump up from the canal, or draw from the Desplaines directly, flushing water for the West District instead of obtaining it from the present canal at Bridgeport, as herein recommended. For the purpose of keeping the water in the South Branch fresh, it is proposed to construct a canal, twenty feet wide and six feet deep at low water, between the lake and the South Branch, through North Street (Sixteenth), and for the purpose of purifying as much of the North Branch as possible, it is believed that the necessary canal should be located as far north as Center Street."

By reference to the history of the sewerage system, it will be seen that the first sewers were constructed in 1856. During the next spring occurred the freshet which increased the depth of the river two feet, sweetened its waters, and destroyed, for a time, the apprehensions of sensitive people.

STREET IMPROVEMENTS.—Previous to 1855 the efforts made to grade and otherwise improve the streets of the city were unsystematized and spasmodic. The first "road" was located in 1831 from the public square to the western county line. But the report of the viewers was rejected by the County Commissioners, because it was believed they had selfish ends in view in locating it as they did. The Commissioners therefore voted that the viewers "have no pay for their services." In April, 1832, several streets and roads were authorized; among others the first street leading to Lake Michigan was laid out. It then commenced at the east end of Water Street, and is thus described by Jedediah Wooley, Surveyor: "Direction of said road is south eighty-eight and one-half degrees east from the street (Water) to the lake, eighteen chains, fifty links." The street was laid out fifty feet wide. The viewers on this occasion believed that "the said road is of public utility and a convenient passage from the town to the lake." In June, 1832, the County Commissioners ordered that a road be viewed "from the town of Chicago to the house of B. Laughton, from thence to the house of James Walker on the Du Page River, and so on to the west line of the county, and that Elijah Wentworth, R. E. Heacock and Timothy B. Clark should be the viewers." These men were appointed to the same office to do similar work for a prospective road "from the town of Chicago, the nearest and best way to the house of the Widow Brown on 'Hycory Creek.'"

By March, 1833, the State road leading from Chicago to the left bank of the Wabash River, opposite Vincennes, was completed, and during the spring and summer of that year, various minor roads were laid out. Thus, even at this early period, Chicago was becoming a road center. When, later, plank roads commenced to be built, Chicago also took the lead and drew in the trade of all the country around. In August the town of Chicago was incorporated, and one of the first official orders of the Trustees was given to the Surveyor to "pitch" South Water Street from the United States Reservation to Randolph Street, on or before April, 1834. In these days Benjamin Jones was Street Commissioner, and he and his successors were autocrats in their way. The law empowered them to call out anybody between the ages of twenty-one and sixty years, to work upon the streets and bridges for three days per annum. The territory within which this law operated covered the country one mile from the center of the town limits. During July, 1834, the Surveyor was required to graduate South Water Street, so that "water should flow from each cross street into the river." South Water and Lake streets were the two principal thoroughfares of the village, and therefore were early turnpiked and graded. Plank sluices were also built across Clark Street, to carry the drainage to the South Branch, and that street was somewhat improved in 1836. In

the fall of that year Canal Street was turnpiked and bridged as far north as Kinzie; Lake Street similarly improved as far west as Desplaines, and Randolph Street from the river to the west side of Section 9. As late as July 9, 1836, the American calls attention to a pond of water on Lake Street, corner of La Salle, inhabited by frogs. "It smells strong now, and in a few days will send out a horrible stench." By the winter of 1836 the leading thoroughfares were turnpiked. The next spring Hiram Pearsons commenced to improve his north addition to Chicago, advertising for proposals for "clearing, grubbing and grading" Market, Franklin, Chicago Avenue, La Salle, Clark and Dearborn streets; also Union, Desplaines, Peyton, Canal, Webster, Spring, Harmon, Hamilton, George, Maria, Elizabeth, Catharine streets, and one-half of Division Street, in the same addition, making in all, fourteen and one-half miles of streets. Most of this work was accomplished before Mr. Pearsons went into bankruptcy in July, 1842.

For several years the work of grading, grubbing and crudely improving the streets went on, but it was not until 1849 that the authorities commenced to generally plank them. As a rule this work amounted to less than nothing, for when the heavy teams broke up the planks, and wet weather came, the pavement was a dangerous and active weapon, flying up into horses' faces and dashing foot-passengers with mud. As late as 1868 relics of the broken plank could be seen on Blue Island Avenue, and as late as 1859 West Madison and State streets were laid with this planking. Descriptive of the "pavements" of these early days is the following paragraph taken from Bross's History:

"I said we had no pavements in 1848. The streets were simply thrown up as country roads. In the spring for weeks, portions of them would be impassable. I have at different times seen empty wagons and drays stuck on Lake and Water streets on every block between Wabash Avenue and the river. Of course there was little or no business doing, for the people of the city could not get about much, and the people of the country could not get in to do it. As the clerks had nothing to do, they would exercise their wits by putting boards from dry goods boxes in the holes where the last dray was dug out, with significant signs, as 'No Bottom Here,' 'The Shortest Road to China.' Sometimes one board would be nailed across another, and an old hat and coat fixed on it, with the notice 'On His Way to the Lower Regions.' In fact, there was no end to the fun; and jokes of the boys of that day—some were of larger growth—were without number. Our first effort at paving, or one of the first, was to dig down Lake Street to nearly or quite on a level with the lake, and then plank it. It was supposed that the sewage would settle in the gutters and be carried off, but the experiment was a disastrous failure, for the stench at once became intolerable. The street was then filled up, and the Common Council established a grade from two to six or eight feet above the natural level of the soil."

The planking of Lake Street, referred to above, was ordered by the Common Council January 22, 1849, and was from the west side of State to the river, through the center of the street, forty-eight feet wide. Prior to 1849 the attention of the citizens had been called to the fruitlessness of using stone pavements upon the streets of Chicago. It did not seem a profitable investment for the city to lay down a pavement which would sink out of sight in one or two years. The experiment of laying plank roads had proved a success in Canada and New York, and accordingly in 1849 the Common Council determined to plank the principal streets of this city. In 1849-50 Market, State, South and North Clark, LaSalle, Wells, East and West Madison and West Randolph were treated to a coating of this material—(nearly three miles of pavements) at a cost of \$31,000.

Soon after this was commenced a general numbering of the streets. In the spring of 1848, Clark Street was numbered from South Water to Randolph. In July,

1850, the Common Council ordered that North Water, Kinzie and Michigan streets be numbered from their eastern *termini* to Franklin Street; and that Wolcott, Dearborn, Clark, LaSalle and Wells be numbered from North Water to Ontario; also that the names of these streets be posted up in large letters on each of their corners.

In the summer of 1854, D. Harper, superintendent of public works, made the following measurements of levels above the lake surface:

South Division.—Market Street, at Madison, 5.140; at Washington, 6.740; at Randolph, 6.890; at Lake, 6.945.

Water Street, at Lake, 6.945; Clark, 7.000; State, 6.715.

Clark Street, at Water, 7.000; Randolph, 7.665; Madison, 9.080; Twelfth, 8.995.

State Street, at Water, 6.715; Randolph, 8.620; Madison, 9.950; Monroe, 10.070; Van Buren, 11.135; Polk, 12.464; Twelfth, 12.030.

Madison Street, at Market, 5.140; Franklin, 6.560; Wells, 9.050; LaSalle, 8.090; Clark, 9.080; State, 9.95.

North Division.—Kinzie Street, at Wolcott, 7.580; Clark, 8.075; North Market, 8.485.

Chicago Avenue, at North Market, 7.705; Franklin, 8.84; Wells, 8.73; LaSalle, 10.335; Clark, 10.900; Wolcott, 12.871.

North Market Street, at Kinzie, 8.485; Michigan, 7.435; Indiana, 6.760; Ohio, 8.025; Huron, 8.450; Chicago Avenue, 7.705.

North Clark Street, at the dock, 7.405; Kinzie Street, 8.075; Indiana, 8.925; Ontario, 9.085; Superior, 10.000; Chicago Avenue, 10.900.

Wolcott Street, at Kinzie, 7.580; Indiana, 9.610; Ontario, 11.761; Superior, 11.810; Chicago Avenue, 12.871.

West Division.—Canal Street, at Twelfth, 10.065; Harrison, 9.285; Madison, 8.760.

Halsted Street, at Second, 9.95; Third, 9.47; Fourth, 9.015; Milwaukee Avenue, 9.895; Prairie, 9.905; Fulton, 10.5; Lake, 10.28; Randolph, 11.365; Washington, 12.045; Madison, 11.460; Monroe, 10.865; Jackson, 14.170; Polk, 13.995; Twelfth, 12.990.

Buckner Street, at Chicago Avenue, 11.450; Third, 13.30; Prairie, 13.295; Fulton, 15.555; Lake, 15.4; Washington, 16.130; Madison, 16.7; Monroe, 16.405; Adams, 15.960; Jackson, 15.635; Van Buren, 15.135; Harrison, 13.510; Taylor, 11.350.

Reuben Street, at Chicago Avenue, 17.020; Owen, 16.925; Fulton, 17.625; Lake, 17.885; Randolph, 17.640; Harrison, 11.785; Polk, 11.305; Warren, 17.290; Madison, 16.440; Adams, 15.265; Van Buren, 13.065; Tyler, 12.015; Taylor, 10.755; Twelfth, 10.84.

Twelfth Street, at Canal, 10.065; Clinton, 12.975; Jefferson, 13.125; Union, 13.205; Halsted, 12.305; Hoosier Avenue, 11.380; May, 10.570; Reuben, 10.84.

Harrison Street, at Canal, 9.205; Desplains, 13.695; Green, 15.260; Borden, 14.185; Rucker, 13.475; Loomis, 12.900; Reuben, 11.525.

Madison Street, at Canal, 8.760; Jefferson, 9.445; Union, 10.155; Halsted, 11.460; Sangamon, 12.930; Morgan, 15.380; Curtis, 15.775; May, 16.260; Ann, 16.405; Elizabeth, 16.705; Loomis, 16.970; Laflin, 17.15.

Chicago Avenue, at Liberty, 6.490; Union, 8.140; Carpenter, 10.165; Milwaukee Avenue, 10.915; Noble, 13.980; Reuben, 17.020.

In 1855 surveys were made for the purpose of laying ground-work for the new sewerage system.

"It was found," says Assistant Engineer Clarke, "that the surface of the ground along the North and South branches of the river was only three or four feet above the average surface of the lake, but rising irregularly eastward until, at Michigan Avenue and Rush Street, it was from ten to twelve feet above the same level, and also rising westward to about the same level at Ashland Avenue. This, of course, involved the necessity of raising the grade of the streets, in order to cover the sewers, in those parts of the area of the city which required it. After a good deal of discussion it was decided to fill to a level of ten feet above ordinary water on the streets adjacent to the river, raising them with an inclination sufficient to protect the sewers and to give cellars of seven and one-half to eight feet in height. A greater height of surface was strongly recommended, but it was supposed that great difficulty would be experienced in obtaining the requisite earth for the above minimum filling. It has, however, been found that the surplus earth of the South Division has been sufficient not to only raise the grade of the streets, but to fill up the whole of the lake basin between the railroad and Michigan Avenue."

In August and September of 1856, Mr. De Golyer,

inventor of the pavement which bears his name, did some work on Lake and South Water streets, which gave general dissatisfaction. They were paved with cobble stones, quite carelessly laid, or as one critic learnedly remarked, the stones were not laid *secundum artem*. Among those interested in good streets the discussion for the next few months waxed warm between the advocates of planking, macadamizing and cobblestoning. It was during the spring of 1857 that the excitement was intense in regard to the raising of the grade over that established in 1855. Lake-street property owners especially were aroused, as the proposed fourteen-foot grade would bring up their level some three or four feet. The Tribune of April 9, 1857, brings out the difficulties of the situation in very strong light. They did seem insurmountable, and that they were overcome is but another evidence of the energy of Chicago in the line of public improvements:

"What effect is this new grade going to have on buildings already erected in this city? The streets and sidewalks must be raised some seven feet above the natural surface level. In other words, every house now built must be raised about the height of the Mayor above its present foundation, or be entered through doors cut in its second story. The proposed grade would damage immensely all our citizens who have built those magnificent brick and stone blocks within the past three years. These buildings have been erected to correspond with the present grade. The 'new grade' would throw their floors some four feet below the sidewalks, while their second floors would be five or six feet above the street surface, and their cellars would become dark pits or dens underground. The older buildings erected on a level with the natural surface would fare much better than any of the great blocks constructed to suit the present grade. Frame houses could be set up on blocks, while brick ones, such as the Tremont House, might be entered from the street through the second story windows, by building two or three short steps upon the proposed sidewalks. We should say that \$2,000,000 would be a low estimate of the damage that would be done to present structures! Who must pay it—or would the owners have to lose it? But that is not all. It will be a costly job to raise all the streets and sidewalks of Chicago six to eight feet within the space to be drained by sewers—a space of more than 1,200 acres. Where are the millions of cubic yards of earth to come from to fill them up to the second stories of the present buildings? And how many millions of dollars is it going to cost the tax payers? What sort of 'up and down' sidewalk will the establishment of this 'new thirteen or fourteen feet grade' create during the next twenty years? Because it is all *dash* to say that a uniform system of level sidewalks, corresponding with the proposed grade can be established short of many years. * * * Those opposed to the new grade had better be stirring themselves before it is too late. Now is the time to speak or forever hold your peace."

Apropos of these times it is remarked by an old citizen and a close observer:

"A good joke was told about the first brick Tremont House that was put up. Of course it was at first built to the grade of that period; but, as the grade was every now and then established higher and still higher, it at last left the hotel three or four feet below the surface of the road in front of it, and steps were built around it both on Lake and Dearborn streets for the convenience of persons going there or passing along the sidewalk. A wag of a fellow, from New Orleans, while visiting here, wrote back to his paper that they need not talk any more about the low land of New Orleans, for Chicago had got a brick hotel five stories high—that was so heavy that it had sunk into the soft soil several feet, and had forced the ground up into the street around it. I must say it had that appearance. The building was afterward raised eight feet, bringing it up to the grade, and making cellars and basements underneath. It was the first brick building ever raised in Chicago, and the raising was done at a cost to the proprietors, Ira and James Couch, of some \$45,000. The contractor, I think, came from Boston, and many were the prophecies that the building would fall down during the process. But it was raised without the breaking of a pane of glass, although it was 160x180 feet. After the success attending the raising of the Tremont, many others were raised to grade, and at last one-half of a block of heavy buildings on Lake Street were successfully raised. It took 5,000 screws and 500 men to accomplish it."

The handsomest and most substantial piece of

paving in the city was completed in July, 1857, being the section on State Street, between South Water and Lake. It was a cobble stone pavement. The work was done by David French, of Detroit, who also had the contract for paving Randolph Street, from the bridge to Clark. Later during this same month was finished the first piece of Nicholson pavement, not only in Chicago, but in the West. The work was done on Wells Street, between South Water and Lake. This kind of pavement had already been tested and stamped with the approval of "The Hub," and the people of Chicago took kindly to it from the start, rightly conjecturing that the "era of cobble-stone pavement" was drawing to a close. The cost of the Nicholson was \$2.30 per square yard. During this year the south half of Wells Street was laid with wooden pavement; also Washington Street, from LaSalle to Clark. In the fall of 1857 the "Plankers" lost the day, in their conflict with the Macadamizers. The former received their *coup de grace* from N. S. Bouton, the city superintendent, who, in August, presented a report to the Common Council, showing conclusively that the first cost of laying the macadam was less than that of planking streets with three-inch oak lumber. Thus the era of plank and cobble-stone pavement may be said to have ended in 1857.

STREET NOMENCLATURE.—The study of street nomenclature is always an interesting one, not alone for the mementoes it presents of citizens, many of whom have ceased to be remembered, but who were intimately identified with its progress; but also for the indexes it affords to the idiosyncrasies of the civic potentates, to wit: the omission of Adams from the roll of Presidents in naming Chicago streets, and the expurgation of Tyler Street. Arbitrary names of streets become identified with cities also, as Unter den Linden with Berlin, the Prater with Vienna, Boulevard des Italiens with Paris, the Strand with London, Broadway with New York, and Wabash Avenue with Chicago, although in the case of Chicago the boulevards are fast replacing and nullifying any other noted streets or avenues in the city. This fact would appear to be an argument in favor of giving the streets some distinctive name that has some relevance to the city's history, and not designating thoroughfares by names that convey no meaning, annotate no history, neither recall any individual.

The two first roads that received official recognition in Chicago village were those which led to Barney Laughton's, and to the Widow Brown's on Hickory Creek.* The first survey made and platted in 1830, by James Thompson, exhibits the streets that bound the village to be Washington on the south, Jefferson on the west, Kinzie on the north, and Dearborn on the east. From this arrangement (which disarranged the presidential succession), the presumption is reasonable that the Chicagoans named the boundary streets after the three most prominent men, according to their ideas, George Washington, Thomas Jefferson, and John Kinzie. Dearborn Street, of course, derived its name from Fort Dearborn—so called in honor of Gen. Henry Dearborn. East of Washington was Randolph, named in honor of John Randolph, of Roanoke; then Lake—after Lake Michigan; next Fulton—after Robert Fulton; then Carroll—after Charles Carroll of Carrollton, and then Kinzie. From Jefferson eastward, came Clinton—after DeWitt Clinton; then Canal—after the Illinois & Michigan Canal; then West Water. East of the river was Market—because the market was located on that street; then Franklin—after Benjamin Franklin; then

Wells—after Captain William Wells, massacred at Fort Dearborn, subsequently changed to Fifth Avenue; next LaSalle—after Chevalier LaSalle; then Clarke—after Gen. George Rogers Clark, the conqueror of Kaskaskia, and then Dearborn. Clark Street for a long time was spelt with a terminal e, until it was found that General Clark's name was properly spelled without, when the terminal vowel was dropped from the name of that street.

On a map of 1835, the town of Chicago is delineated as having grown one street to the south—Madison, named after James Madison. Westward the streets were increased by Desplaines—the road to the town of that name, and by Union, which then terminated at Kinzie on the south. North of Kinzie on the West Side were Hubbard Street, named after Henry George Hubbard, the brother of Gurdon S. Hubbard; then Owen (now West Indiana), named after T. J. V. Owen; then Fourth, Third, Second and First. On the North Side was Wolcott (now North State), named after Alexander Wolcott; east of Wolcott was Cass—named after General Lewis Cass; then Rush—named after Benjamin Rush; then Pine—so-called because there were some scattered pine trees along its site; then Sand (now St. Clair) so-called because of the nature of the soil. The subsequent name of this street was given in honor of General Arthur St. Clair. North of the river running east and west, were Michigan, Illinois, Indiana and Ohio, named after the four States; then Ontario, Erie, Huron and Superior, christened in honor of the four lakes. Upon the juncture of these streets with First, Second, Third and Fourth the latter took the names of the streets of which they were a western continuation. Kane (or Cane) Street, Dunn and Water streets, in an angle bounded by the river, Jefferson and Kinzie, have ceased to exist as streets; Kane was named after James Kane, an early inhabitant. The North Side Water Street ran at right angles to the present Water Street—then also named Water—and appears to have derived its name, as many other streets did, because of its proximity to the river. Two nomenclative last resorts were used by the street sponsors of old; the numbers one, two, three and four and the designation Water; and these five appellations were indiscriminately dispersed around the town and city. From Chicago Avenue to the river and west of Halsted, Second, Third, Fourth and Fifth streets flourished in 1854, and there was a First Street west of the South Western Plank Road, a continuation of Tyler Street. In Section 30 a number of streets were laid out that are now extinct, the lumber yards and slips having usurped their localities, namely, Russell Street, after J. B. F. Russell; Johnson (subsequently Hoosier), after Colonel Johnson who slew Tecumseh; Kinzie (subsequently Sharp), after John Kinzie; Hogan, after John S. C. Hogan; Hubbard (subsequently Kedzie), after Gurdon S. Hubbard and John Hume Kedzie; Cornelia (subsequently Amelia); Archer, after W. B. Archer; Clybourne (subsequently Kearney), after Archibald Clybourne and General Philip Kearney; Owen, after T. J. V. Owen; Hamilton, after Richard Jones Hamilton; Canal (subsequently Richard), also after Hamilton, and now Canalport Avenue; Clinton (subsequently Dexter), after De Witt Clinton; Pearsons, after Hiram Pearsons; Ewing, Cohen, Kercheval—after Gholson Kercheval; Dole, after George W. Dole; Campbell, Garrett, after Augustus Garrett; Bond (subsequently Fir); Wilson (subsequently Sand); Edwards (subsequently Warden); Cook (subsequently Rock); Slade; Robinson, after Alexander Robinson; Kane; May (subsequently May Flower); Reynolds,

* Vide Map in chapter upon Early History.

after Eri Reynolds ; Casey, after E. W. Casey ; Henry (subsequently Cicero) ; and Thornton streets. Union Park absorbed three short streets : Wright Place, after John Wright ; Webster Place, after Daniel Webster ; and Larned Place, after Edwin C. Larned. Shields Avenue, after General Shields, was formerly Garibaldi Street, and prior to that Kossuth Street ; named in honor of the Italian and Hungarian heroes. The present Kossuth Street is also named in honor of Louis Kossuth. The following streets that bear the same names now that they did anterior to 1857, have arbitrary names that require no explanation. Aberdeen, Ash, Berlin, Blucher, Bremen, Bloomingdale Road, Calumet Avenue, Canalport Avenue, Cedar, Cherry, Chestnut, Chicago Avenue, Central Avenue, near I. C. R. R. depot, Cypress, Coblenz, Courtland, Center, Commercial, Desplaines, Eleventh, Elm, Eagle, Front, Frankfort, Fifth, Grove, Goethe, Gold, Hope, Hawthorn, Hickory, Lexington, Linden, Locust, Lumber, Lubeck, Lafayette and Washington places, on the North Side ; Maple, Meridian, Michigan, Indiana, Milwaukee and Wabash avenues ; Mohawk, Main, Napoleon Place, North Branch, Water, North Avenue, Oak, Olive, Orchard, Park Avenue, Peoria, Pleasant, Prairie Avenue, Quarry, River, Sangamon, Schiller, School, Silver, Southport Avenue, State, Twelfth, Union, Vine, Walnut, Wisconsin and Willow. When the streets upon the South and West sides were designated by numbers in lieu of names, the following lost any historic, or specific, nomenclature : Fenimore (after Cooper), now East Thirteenth ; Dobyns and Sampson (after William H. Sampson), now West Thirteenth ; Liberty, now East Fourteenth ; Mitchell (after the Presiding Elder of the Methodist Episcopal Church in 1834) ; and Davidson (after Dr. Alfred W. Davidson), now West Fourteenth ; Springer (after George A. Springer), now East Fifteenth ; Catherine and Halleck, now West Fifteenth ; North, now Sixteenth ; New, now Seventeenth ; Old, now East Eighteenth ; and Evans (after Dr. John Evans), now West Eighteenth ; Cross, now Nineteenth ; and Harbine (after Thomas Harbine), now West Nineteenth ; Bridge, now Twentieth ; Commerce, now East, and Clayton, now West, Twenty-first ; South and Ringgold* Place, now Twenty-second ; Palo Alto Place, now Twenty-third ; Monterey Place, now Twenty-fourth ; Buena Vista Place, now Twenty-fifth ; Rio Grande Place, now Twenty-sixth ; Sycamore Street, Douglas Place, and Northern Avenue, now Twenty-seventh ; Southern Avenue, now Twenty-eighth ; Hardin Place (after Colonel Hardin), now Twenty-ninth ; Yates, now Thirtieth ; Ridgley Place (after N. H. Ridgley), now Thirty-first ; Smith Place (after George Smith), now Thirty-second ; Douglas Place (then Douglas Avenue, after Stephen A. Douglas, as are all the Douglas Places), now Thirty-fifth Street, or Douglas Avenue ; Wah-pan-seh† Avenue, now Thirty-seventh, and Egan Avenue (after William Bradshaw Egan), now Thirty-ninth Street and Egan Avenue ; the names Douglas and Egan cling to the renamed streets. The streets named after the Presidents are: Washington, Madison—Adams was ignored, and Jefferson was the boundary on the West Side in 1830—Monroe ; then the Chicagoans, swallowing their anti-federalism, named Adams Street after John Adams, but could not forgive the election of John Quincy Adams by the House of Representatives, so named the little street that abuts upon the Government Building after him ; Jackson, Van Buren, Harrison,

*Tyler, now West Congress Street, Polk, Taylor (Fillmore is ignored), and Pierce Place, now Elgin Street. It must be remembered by the reader of this chapter that no streets are mentioned herein that did not have an existence prior to, or in, the year 1857 ; and the following list completes the catalogue of such thoroughfares : Alexander, after Alexander Wolcott ; Ann, after the wife of Philo Carpenter ; Augusta, after his daughter, now Mrs. Cheney ; Armour, after G. Armour ; Armitage Avenue, after A. Armitage ; Astor, after John Jacob Astor ; Arnold, after Isaac Newton Arnold ; Archer Road, formerly called State, or Archer, Road, after W. B. Archer, canal commissioner ; Asylum Place, so called because of the Orphan Asylum there, now called Webster Avenue, east of the Elston road ; Ada ; Beach, after John Beach ; Bickerdike, after George Bickerdike ; Bissell, after William H. Bissell ; Black Hawk, after the Indian chieftain ; Blackwell, after Robert S. Blackwell ; Blanche, Blue Island Avenue, the road to that place ; Bond, after Shadrach Bond, now Homer, after the poet of multifarious birth-places ; Bradley, after Asa F. Bradley ; Bremer, after Fredrika Bremer, now Milton Avenue, after the blind poet ; Brigham ; Broadway Avenue, now Iglehart Place, after Nicholas P. Iglehart ; Brown, after William H. Brown ; Buddan, now Portland Avenue ; Bunker, after Bunker Hill ; Burling, after Edward Burling ; Bushnell, after O. Bushnell ; Butler, after Lorin G. Butler ; Butterfield, after Justin Butterfield ; Buffalo, after the city, or the animal, now Fourth Avenue ; Baker Avenue, after E. D. Baker ; Beers, after Cyrenius Beers ; Barry Point road, now Colorado Avenue, for the Widow Barry† ; Bishop, now Division Street from State to the lake, after either the Catholic or Episcopal office ; Boone, after Levi D. Boone, extended from Canal to Stephenson streets, now extinct ; Campbell, now Hoyne Avenue, after Colonel James B. Campbell, the latter designation after the lamented Thomas Hoyne ; Carpenter, after Philo Carpenter ; Center, now Waldo Place ; Chapin, after John P. Chapin ; Chittenden, now Crittenden—the first name after old man Chittenden who kept shooting headquarters on Lake Calumet, the latter after John J. Crittenden ; Church, now merged in Schiller, after William L. Church ; Clarinda, formerly called Clarkina ; Cleaver, after Charles Cleaver ; Clybourne Avenue, after Archibald Clybourne ; Cochrane, now Robey, after James Cochrane ; Cook, after Daniel P. Cook, first representative in Congress ; Coolidge, now Thirteenth Place ; Cornelia, now Robey ; Cornell, after Paul Cornell ; Cottage Grove Avenue, after a cottage that once stood there ; Crosby, after Uriah H. Crosby ; Currier ; Curtis, after James Curtis, Mayor ; Dayton, after William L. Dayton ; Dean, after Philip Dean ; DeKoven, after John F. DeKoven ; DePeyster ; Dinet, after J. Dinet (this street is extinct) ; Division, the section line ; Dyer Avenue, now Halsted, after Charles Volney Dyer and Halsted, a Philadelphian whose money was invested in Chicago by William B. Ogden ; North Division, now Banks Street ; Dodge, after A. R. Dodge ; Eastman, after Zebina Eastman ; Edina Place, now Third Avenue ; Eldridge Court, after John W. Eldridge ; Elizabeth, after Elizabeth (May) Curtiss ; Ellen ; Ellsworth, after Joseph Ellsworth ; Elston Road, now Elston Avenue, after Daniel Elston ; Emily, after Emily (Carpenter) Bridges ; Eugenia ; Ewing, after William L. D. Ewing ; Edwards, after Ninian, or Cyrus

*Ringgold, Palo Alto, Monterey, Buena Vista, and Rio Grande were commemorative of General Taylor.

†Wah pan-seh is the same as Waubansch, or Wauwansia.

*East Congress was formerly Tyler Street, and was changed to Congress when Tyler left the Whig party; then the street south of Van Buren, on the West Side, was named Tyler, and this was changed to Congress likewise, in late years.

† See Chapter on Early History.

Edwards (now extinct); Elk Grove Avenue, after Elk Grove; Ferdinand; Finnel; Fisk; Fleetwood; after Stanley H. Fleetwood; Flournoy, after Lafayette M. Flournoy; Forquer, after George Forquer; Foster, after John H. Foster, now Law Avenue, after Robert Law; Fremont, after General John C. Fremont; Fullerton, after Alexander N. Fullerton; Fond du Lac Road, now North Robey (from Milwaukee Avenue); George, named by John Noble in honor of one of the gentlemen who disgraced the British Throne; Hanover, now Rhine, and Sovereign streets were also named by John Noble; Grace; Grand Haven Slip, merged in Goethe; Granger; Greene, after W. Greene; Green Bay was a continuation of Rush north of Chicago Avenue, merged in Rush Street; Green Bay Road is now North Clark from North Avenue; Griswold, after Charles E. Griswold; Gurnee, after Walter S. Gurnee; Gurley, after Jason Gurley; Hamilton Avenue, now Harrison Street, after Richard Jones Hamilton; Harmon Court, after Elijah Dewey Harmon; Hastings, after Hiram Hastings; Henry; High, after John High, Jr.; Hills, after D. Hobart Hills; Hinsdale, now Chestnut, after John Hinsdale; Holt, after Thomas J. Holt; Hoyne Avenue, after Thomas Hoyne; Hubbard Street, now Hudson Avenue, and Hubbard Court, after Gurdon S. Hubbard; Hurlbut, after Horatio N. Hurlbut; Hoosier Avenue, now Blue Island Avenue, as a compliment to the Hoosiers; Harbour Street used to be at the southern extremity of Rush Street bridge but is now extinct; Hobbie (now extinct), after Albert G. Hobbie; Hamburg, now West Fullerton Avenue; Hervey, after Robert Hervey; Iglehart Avenue, now Oakley, after Nicholas P. Iglehart; Ingraham; Jane; Johnson, now Rumsey, after Captain Seth Johnson, formerly of the garrison; Johnson Avenue, after W. F. Johnson; Johnston, now Johnson, West Division, after W. S. Johnson; Judd, after Norman B. Judd; Julian, after Julian S. Rumsey; Kansas, named in honor of Bleeding Kansas, is now West Eleventh; Kedzie, now Lincoln, was named after John H. Kedzie; Kernon, now Keenon; Kankakee Avenue was rechristened Douglas Avenue, is now South Park and Grand Boulevard; Laffin, after Matthew Laffin; Larrabee, after William M. Larrabee; Leavitt, after David Leavitt, canal commissioner; Lee, now Morgan, after David S. Lee; Little Fort Road, now Lincoln Avenue, northwest from North Wells, so called because it was the road to Little Fort, now Waukegan; Loomis, after H. G. Loomis; Lydia; Long John, after John Wentworth; Lock, because of its contiguity to the Bridgeport lock; Legg, near Lill's Brewery, after Isaac Legg; Lake View, now Lake Avenue; Mau-te-ne, after an Indian chief, now Langley, after Esther Langley; Margaret; Marie, or Mary, now Wood; Mather, after Thomas Mather; May, after Elizabeth May Curtiss; Maxwell, after Dr. Philip Maxwell; Meagher, after Thomas Francis Meagher; Miller, after Samuel Miller; Morgan, after Caleb Morgan; Myrick Avenue, now Vernon Avenue, after W. F. Myrick; Moo-nah-way, then Moonaway Place, after an Indian chief, now Stanton Avenue; Mills, now extinct, after Benjamin Mills; McGlashan, after John McGlashan; McGregor, after Alexander McGregor; MacHenry, in honor of the adjoining county; McLean, after Judge John L. McLean, now extinct; McReynolds, after A. T. McReynolds; Nebraska Avenue, now extinct; Northwestern Plank Road now Milwaukee Avenue; Newberry, after Walter L. Newberry; Nevins, now extinct; Noble, after the Noble family; Norton, now extinct, after Theron A. Norton; North Division, now Banks; North Park, now Ems; Oakley, after Charles Oakley, canal commissioner; O'Brien, after

George O'Brien; Otis, after L. B. Otis; Oakwook, afterward Oak, now Bellevue Place; Page, after Peter Page; Park Place, now Dearborn Place; Park Row, by Dearborn Park, now extinct; Paulina, after Paulina Edy Taylor, deceased wife of Reuben Taylor; Peyton, now Kingsbury, after Francis Peyton, partner of James Grant; Peck Court, after Ebenezer Peck; Prairie, now Carroll Avenue, from North Halsted to North Reuben; Price Place, now Boston Avenue, after Jeremiah Price; Purple, after the jurist Norman H. Purple; Pearce, now Frank, after Asahel Pierce, as was Pierce, now Wilmot Avenue; Pine, now Kendall Avenue; Pearson, after Hiram Pearson; Pennsylvania Avenue, now West Lake from Ashland Avenue to west city limits; Peterson; Racine Road, now Racine Avenue; Rebecca; Rees, after James H. Rees; Reuben, now Ashland Avenue, after Reuben Taylor; Ridgeville Road, now Paulina, so named because it ran along the top of a sand ridge; Roberts, now North Jefferson, after Edmund Roberts; Robey, after James Robey; Rucker, now Centre Avenue, after Henry L. Rucker; Rural Lane is now extinct, but used to be between Johnson Avenue and Iglehart Place; Rolker, now Throop; Robbins' Road is now part of Western Avenue; So-mo-nauk, after an Indian chief, now Ellis Avenue, after Samuel Ellis; Stephenson, after Robert Stephenson; Shurtleff Avenue, now Fifth Avenue, south of Twenty-sixth, after B. Shurtleff; Samuel; Sanger, after J. Y. Sanger; South Park, now Hamburg; Scott, now York, after General Winfield Scott; Sebor; Sedgwick, after Robert Sedgwick; Selah, now extinct, from the Hebrew word; Sharp, now Leavitt, after J. W. Sharp; Sheffield Avenue, after Joseph E. Sheffield; Sherman, after Alanson S. Sherman, Mayor; Spring, after Charles Spring; Sheldon, occasionally erroneously spelt Shelton, after Edwin H. Sheldon; Sholto; Sloan, after W. B. Sloan, manufacturer of horse liniment, etc.; Smith, now Ogden Place, after S. F. Smith; Smith, now De Kalb, and Smith Avenue, after George Smith; Snider, misspelt, and should be Schneider, after George Schneider, of the National Bank of Illinois; Southwestern Plank Road, now Ogden Avenue, after William B. Ogden; Stetson, now extinct, after Sandford H. Stetson; Stewart Avenue, after Hart L. Stewart; Stinson, now Paulina, after T. Stinson; Saint Michael, now Hudson Avenue, named by Michael Tuomey, in honor of the archangel; Swift, after R. K. Swift; Thorn is now merged in Elm; Throop, after A. G. Throop; Townsend; Tuomey, now Twomey, after Michael Tuomey; Telegraph, now Wood, presumably the street whereon the telegraph line was first introduced into Chicago; Van Horn, after John Van Horn; Vedder, after Volkhart Vedder; Chicago and Vincennes Road, or Min-ne-mang Avenue, after an Indian chief, is now Vincennes Avenue; Wallace, after John S. Wallace; Waller, after Charles S. Waller; Warren, after Daniel Warren; Washington Avenue, now Walnut Street and Place, after George Washington; Wayman, after G. B. Wayman; Wendell, after John Wendell; Wentworth Avenue, after John Wentworth; Wesson; Western Avenue, south of Twenty-second Street, used to be called Blue Island Avenue Plank Road; Wheeler, now extinct, after William Wheeler; White, now Locust, after Julius White; Whitehouse Place, after Bishop Whitehouse; Whiting, after William L. Whiting; Whitney, now Delaware Place, after William Whitney; William, now North Paulina, after William Sampson; Williams, afterward Mitchell, then West Fourteenth, after Eli B. Williams; Wilson, after John L. Wilson; Wisconsin Avenue, now North Wells; Wolcott, now North State, after Alexander Wolcott; Wood, after

Alonzo Church Wood; Woodstock Avenue, now Ashland Avenue, north of Chicago Avenue, the latter after the home of Henry Clay; Wright, after John S. Wright; Waubansia Avenue, after the Indian chieftain, and Wheeling Avenue, now North Wood, after Wheeling, W. Va. There are several streets herein named, whose eponyms are entirely forgotten, and others whose nomenclature, if known, would convey nothing of historical interest.

PLANK ROADS.—Very early in the history of plank roads, Chicago became quite a "center." The first road of this kind constructed in the State was commenced in May, 1848, and was called the Southwestern Plank Road. In 1850 it was completed from Chicago to Brush Hill, sixteen miles. An extension of this road was built soon afterward, known as the Naperville & Oswego. The Northwestern was constructed in 1849-50 from Chicago to Wheeling, a branch running west to Desplains River, and the main line extending to Dutchman's Point—a total of eighteen miles. The Western was organized in the winter of 1850-51, connecting with the Desplains River branch, at Robinson's, and extending west to the west line of DuPage County, through Bloomingdale, seventeen miles. The company operated a saw mill. The Elgin & Genoa, organized in the spring of 1850, connected with the Western Plank Road Company and passed through Elgin to Genoa, in DeKalb County, twenty-eight miles. Two saw mills were erected by the company. Thus from Chicago west there was a continuous line of plank road of over fifty miles. In February, 1850, the Southern was organized with the intention of building to the southern county line, but in conformity with the general desire of citizens, it was only constructed to Kile's Tavern, ten miles. By the latter part of 1850 fifty miles of plank road had been built out of Chicago, at a total cost of \$150,000.

As the railroads centering in Chicago came into general use, the plank roads, as beaten ways of travel, were abandoned. The city was furnished with a new and more perfect system of commercial arteries. It is merely intended in presenting the few facts above given, to bring forth another proof of Chicago's enterprise in the way of public improvements and commercial growth.

As a specimen of the unbounded confidence with which the plank roads were looked upon as a means of developing a country, the following communication is given, taken from the Democrat, of February 16, 1848. It is an earnest and honest argument in favor of plank roads and against the building of railroads, at that time:

"Will you be so kind as to allow me to say a few words through your paper, showing the very many advantages our country will derive by the introduction of plank roads over that of railroad communication? The former can be brought into every street and alley, to every warehouse and manufactory in our city—in the country all sections are alike benefitted by them. They do not enhance one man's property and depress that of another. The farmer can take his produce to market when his time is of little or no value. When a sudden advance in the staples of the country takes place, there is no railroad directory to reap the benefits of it, by refusing to carry only that which they may be interested in. Such has been the operations in a neighboring State. * * * Do railroads give the same facilities for traveling that plank roads do, even to those living by the side of them? Their stations are generally ten and twelve miles apart. They will only take in and put out passengers at these places. Our plank road passengers travel at the rate of ten miles an hour, which is as fast as they are conveyed (and with ten times the safety) on the Michigan Central Railroad. The charges made by the railroad for the transportation of produce are more than it would cost the farmer by plank roads and very little less than common roads. On the Michigan Central Railroad they charge sixty-two and one half cents per barrel for flour, and fifty cents per hundred pounds for merchandise between Kalamazoo and Detroit, 140 miles. On a plank road, a two-horse team

will haul three and one-half tons two and one-half miles an hour for ten hours out of fourteen; which experience has proven to be the most economical rate of speed teams with heavy burdens ought to travel. From an examination of the statistics it would appear that the whole number of teams arriving in our city during the past year was not far from seventy thousand. Now, in place of the railroad now agitated, construct three hundred miles of plank road, divided to the best advantage, say northwest and southwest. This will not cost more than \$500,000, about what it will cost to build a good railroad to the Fox River, for which the annual receipts for the next ten years could not be less than \$200,000, supposing the average number of teams arriving per annum to be 130,000 (a calculation not large, as the population of Northern Illinois doubles in about six years), which at \$1.50 per team would give that sum—sufficient to keep the roads in repair, divide thirty per cent dividends, and when the road is worn out (ten years hence) we would have a city containing seventy thousand inhabitants. Then we might talk of a railroad. One of the reasons most argued with those in favor of the proposed railroad to Fox River is that if we don't build one, Milwaukee will. The people of that city are not able to build a railroad of any length; if they were, they are not so simple."

By 1854 Chicago had completed the Northwestern Plank Road to the town of Maine, seventeen miles. Seven miles from the city the Western road branched off and was finished seventeen miles from Chicago. The Southern Plank Road left the city at Bull's Head, on Madison Street, and passed through Lyonsville to Brush Hill, sixteen miles. From Brush Hill the Oswego Plank Road extended fourteen miles to Naperville. The Southern Plank Road was commenced on State Street, at the south line of the city, and was finished to Comorn, ten miles south of the city. The Blue Island Avenue road extended from the village of Blue Island north to the heart of the city, on the west side of the river, about thirteen miles. The Lakeshore Plank Road, under contract, was an extension of North Clark Street, and was to run parallel with the lake shore for five miles.

FERRIES AND BRIDGES.—In June, 1829, the Commissioners of Peoria County established a ferry "across the Chicago River, at the lower forks, near Wolf Point, crossing the river below the Northeast Branch." The precise locality is where West Lake Street crosses the river. The keepers, Archibald Clybourne and Samuel Miller, were to pay a tax of \$2, and execute a bond in the sum of \$200 for the faithful performance of their duties. Rates for ferriage were fixed as follows: Foot passenger, six and one-fourth cents; man and horse, twelve and one-half cents; Dearborn sulky chair, with springs, fifty cents; one-horse wagon, twenty-five cents; four-wheeled carriage, drawn by two oxen or horses, thirty-seven and one-half cents; cart with two oxen, thirty-seven and a half cents; head of neat cattle or mules, ten cents; hog, sheep or goat, three cents; hundred weight of goods, wares and merchandise, each bushel of grain or other article sold by the bushel, six and one-fourth cents; "and all other articles in equal and just proportion." The rates established were one-half the sum that "John L. Bogardus gets at his ferry in Peoria." The main landing was on the South Side, from which passengers could be ferried over to either the North or West Side. By the spring of 1831 the business of ferrying was confined to the individual exertions of travelers who found themselves obliged to navigate the torpid waters of the Chicago River and its branches. This lack of enterprise, however, was partially overcome by the energy of Mark Beaubien, who, in April of that year, purchased a scow from Mr. Miller for \$65. His bond of \$200 was secured by James Kinzie, and in consideration for the privilege of running this ferry, Mr. Beaubien was to transport the people of Cook County free, the emoluments of his office coming from strangers. Some of

his friends go so far as to say that for a time Mark considered the office a sort of sinecure. However that may be, it is possible that he was brought to a realizing sense of his importance as a public functionary by the order of the Commissioners that he should ferry citizens of Cook County over, "from daylight in the morning until dark, without stopping." This effectually put an embargo upon any more "fast running" of Mr. Beaubien's horses with ambitious redskins, which is the rumored cause of Mark's dereliction of duty.

After Mark Beaubien had been running his ferry for less than a year the citizens of the young town decided that they had left such a primitive affair behind them, and feeling, furthermore, that it would be well to utilize the United States troops then stationed at Fort Dearborn, they conceived the idea of throwing a bridge over the South Branch, just north of the present Randolph Street crossing. This feat was accomplished by Anson H. and Charles Taylor, assisted by the militia. To effect its construction the citizens contributed

\$286.20 and the Pottawatomies \$200, making a building fund of \$486.20. The bridge was a floating concern, built roughly of logs, and three years' travel upon it created alarming havoc. Early in January, 1836, a petition to the Trustees was extensively signed, asking for the removal of the bridge and the building of a good "draw," at Lake Street. The "undersigned" found that the bridge was "much decayed and in a ruinous condition," and that lives were endangered so long as it was not repaired; also that it could not be repaired because there were defects in the original plan of construction, viz., that it was too narrow and had no draw to admit vessels to pass; that it should not be repaired because its present site was not upon a traveled thoroughfare. The bridge was a dangerous "public nuisance," they said, and a good substantial draw-bridge should cross the South Branch, at Lake Street so as "to unite and continue said street through the town." The prayer of the petitioners was not granted, although offered up by such men as J. B. and Mark Beaubien, G. W. Snow, H. G. Loomis, F. Moseley, Josiah C. Goodhue, George Davis, Stephen F. Gale, Philip Dean and John T. Temple. In March, 1836, the Town Trustees issued an order for the building of drawbridges at Kinzie and Randolph streets, but in May they deemed such works inexpedient. The South Branch bridge was repaired, however, at considerable expense several times, before its removal in 1840.

In the summer of 1832 Samuel Miller, the original possessor of the old ferry scow, built the first bridge over the North Branch. It was located near the southeast corner of Kinzie and Canal streets, in the vicinity of the present bridge of the Chicago & Northwestern Railroad Company. It was formed of stringers and only fitted for foot passengers. Even up to the summer of 1833 the structure was useless for teams.

The first drawbridge thrown across the river was at Dearborn Street, and was built in 1834 by a shipwright named Nelson R. Norton, who in a letter, says :

"I came to Chicago November 16, 1833. Soon after I arrived, I commenced cutting the lumber for a drawbridge, on the land adjoining Michigan Avenue, afterward owned by Hiram Pearsons. In

March, 1834, I commenced building it, and I think it was completed by the 1st of June. The first steamboat that passed through it was the old 'Michigan,' with a double engine, commanded by Captain C. Blake, and owned by Oliver Newberry, of Detroit."

Mr. Norton is evidently in error as to the time of the completion of the bridge, since the Democrat states that it was formally accepted by the Trustees in August, the first proposals having been received in February. At the time the Dearborn Street bridge was completed, the bridges across the North and South branches also belonged to the corporation, and a committee had been appointed during the previous December, consisting of G. W. Dole, Madore B. Beaubien and Edmund S. Kimberly, to see that they were properly repaired. In September the corporation paid \$166.67 on account of repairing. The Dearborn-street structure was a primitive affair and received the blows of passing vessels and the curses of pedestrians and drivers. From various sources it is learned that it was about three hundred feet long, and the opening for the passage of craft about sixty feet. It was of the "gallows pattern," and for five years, the frames, one at either end, stood like instruments of death to frighten the timid stranger at night. Upon one occasion when hoisted it "would not down" at anyone's bidding, and for forty-eight hours the gallows frames held the draw suspended in mid-air. The bridge was repaired in 1835 and 1837, and the Common Council ordered its removal in July, 1830. Many citizens were so afraid that the Council would rescind this action, that a large crowd gathered upon the river before daylight, the next morning, and going to work with a will, in a very short time chopped the bridge to pieces. This step was only one in the progress of the bridge war which had been raging for several years. During the spring of that year two ferries were running, one at Clark and the other at State Street. The latter was supported by private subscriptions. The feeling finally reached such a pass that in April some envious supporter of the Clark Street ferry cut the rope of the State Street institution with an ax. This ferry was the famous "Velocipede," the approach to which is thus noticed by the American the day previous to the cutting: "The access has been made solid and clean by the laying of a nice board or platform, on which the Chinese foot of the most delicate of nature's handiwork may step with perfect impunity from the vulgar mud and Brobdingnagian gravel." This ferry, with its wretched approach, was used at State Street until August 29, when it was transferred to Dearborn Street. It consisted of a scow, large enough to accommodate two double teams, operated by a rope which was fastened to a windlass, on each side of the river. The boat was propelled by one man with the aid of such of the passengers as chose to assist. George Brady and Samuel Carpenter were ferrymen.

The bridge and ferry troubles commenced when Chicago became a city, continued through many variations of heat and cold (mostly heat), for a period of five years, and culminated in 1840. The cause of this sectional warfare between the North and South sides is thus detailed by a writer in the Chicago Times :

"Every night there came up out of the south a great fleet of prairie schooners that anchored on the Reservation. It often numbered five hundred, and came laden with wheat and corn and all sorts of produce. All the warehouses were in that day built on the north bank of the river. The South Side opposed the Clark-street bridge, in order that their prairie schooners might not reach those warehouses, and thus be compelled to trade on the south bank. The old Dearborn bridge, the first drawbridge ever built in the city, had been demolished in 1830, and a scow ferry substituted. At Clark Street, there was another ferry; these were not of the most approved pattern. They were simply scows hauled to and fro by ropes. The North Side warehouses were in sore distress. They

needed a connection with the other two towns. The Council was evenly divided. At the time when the question was at its height, Messrs. Newberry and Ogden presented to the Catholic ecclesiastical authorities the two blocks now occupied by the cathedral. It was said at the time that the present was to influence votes on the bridge question. It undoubtedly was. The North Side won her bridge. Mayor Raymond cast the deciding vote."

Subsequently the subscription to the fund of \$3,000 was completed by residents of the North Side, and on April 18, 1840, the work of driving piles for the Clark-street bridge was commenced. Mayor Raymond, in his inaugural address, March 7, 1842, refers to the bridge question thus :

"I will take the liberty of referring to a subject which agitated the Council through the whole municipal year of 1839. This was the bridge question. As the contract for the construction of the present Clark-street bridge was the last official act I was called upon to ratify during my connection with the Council of that year, it is quite natural that I should have a ready ear to any commendation of, or complaint against, either the plan or location of the bridge; and I am gratified to find so large a portion of those who were previously hostile to any bridge, now satisfied with this one; although many now, as well as then (myself among the number), would prefer it on Dearborn Street, and think if this had been erected there and had caused as little hindrance to the passage of boats as the present one has thus far been, the community generally would have been as well satisfied as with the present location. But I should deprecate the idea of a change in location, so long as this bridge answers so good a purpose, and in the present state of our finances should consider it an unwarrantable expenditure to make any change."

The building of Clark-street bridge may be said to have terminated the bridge war. It was found that the weight of public opinion was adverse to the existence of a bridge as low down as Dearborn Street, and that ferries were both inconvenient and expensive. The \$3,000 required to build the bridge was raised by those principally interested—citizens of the North Side—by subscribing to seven per cent stock at par. "If thrown upon the market," says the American, "the stock would not have sold for more than fifty cents on the dollar." This was the first floating swing bridge ever constructed in the West, and, as it was mainly the work of William B. Ogden, it is perhaps unnecessary to add that it was well done. Nine years after its building, the ice jam of 1849 swept it away.

In 1840 a low flood-bridge was built at Clark Street, a sort of pontoon arrangement. To open it, one of the floats was pulled around by means of a chain and windlass.

During the next year the float bridge at Wells Street was constructed. The greater share of the funds contributed to build it came from Walter L. Newberry.

W. L. Newberry

This bridge with those structures at Randolph, Kinzie and Clark streets were swept away by the flood of 1849.

The public demanded with the building of the Clark-street bridge, that the ferries should be free. In May, 1842, the Common Council passed an ordinance obliging all persons who ran ferries on the Chicago River to obtain licenses. One of its provisions was: "The ferryman may receive all such sums of money from private subscription for the support of said ferry as he can obtain." N. Scranton had been operating a ferry since August, 1844, and according to his own statement, had been conducting his business at a loss. In June, 1842, he was tried for violating the ordinance, noticed above. Henry Brown appeared for the city, and Justin

Butterfield and B. S. Morris for Mr. Scranton. Through his attorneys, he claimed that he was running his ferry-boat "because the ordinance of 1787 for the government of the Northwest Territory declares that the navigable waters of the Mississippi and St. Lawrence and the carrying places between the same, shall be common highways and forever free," and that he had the same right to run his boat across the river as owners of vessels had to run theirs up and down it. The jury rendered a verdict for the defendant. He offered to pay a license of \$100, provided he be allowed to charge one cent for each person (ladies excepted), and such sums as the Common Council should prescribe for families paying by the month or year; or to run a free ferry for strangers, on receipt of such a sum as could be obtained by private subscription and \$30 per month from the city. The city would not accede to these propositions, and in July Mr. Scranton discontinued his ferry. But he was not a man who could remain long idle. Accordingly he constructed a pleasure boat, "Commodore Blake," its figure head a Roman gladiator, with helmet, shield and sword. In company with Z. Woodworth, he also commenced to operate the "Chicago and Michigan City lines," composed of sloops "C. Blake" and "Sea Gull," which crafts left every day from the foot of Rush Street.

The Common Council ordered the construction of a bridge at Wells Street in, November, 1846. It was at once commenced, the structure being completed in July, 1847. The bridge consisted of a floating draw of boiler iron, one hundred feet long from the pivot to the opening point, making a clean passage-way between the fenders of eighty-one feet. The total length of the bridge was two hundred and two feet, costing \$3,200. There were two tracks for teams, and a sidewalk, on either side, for foot passengers. In the spring and summer of 1847 there were constructed, besides the Wells-street bridge, that at Madison Street, and a second across the South Branch at Randolph Street. The latter was a semi-floating draw, with a self-regulating apron. It had two tracks in the center for teams and a sidewalk on either side for passengers. It cost about \$5,000. The Madison-street bridge, built upon a similar plan, was one hundred and ninety-five feet in length and twenty-six feet wide, with a draw eighty feet wide in the clear, and resting on boiler-iron floats. This bridge cost about \$3,200.

Thus in 1848 there were float-bridges at Clark, Wells, Randolph and Kinzie streets. They were all swept away by the flood of 1849. William Bross, in his "History of Chicago," says: "When it was necessary to open the bridge for the passage of vessels, a chain, fastened on or near the shore on the side of the pier at some distance from it, was wound up by a capstan on the float-end of the bridge, thus opening it. It was closed in the same manner by a chain on the opposite side of it." It is quite evident, however, that some of the bridges at first were not even operated with a chain. In March, 1848, the rope attached to Madison-street bridge was carried away by a schooner, and this sort of accident was of no infrequent occurrence. It was as obvious to the Common Council as to other common people that a rope did not fully answer the purpose, as it would not sink rapidly enough. They therefore resolved that "the Street Commissioner of the West Division be authorized to procure a chain for the bridge." Of old "Bill," the Lake House ferryman, the Democrat, of December 12, 1848, has a word to say:

"He works his ferry with as much ease and assurance as the captain of one of the largest crafts upon the lake his floating

palace; and we can assure our readers the task is not without its difficulties, and withal not unaccompanied with danger, if not to life and limb, at least to the reputation of the ferryman. Sometimes the wind blowing strong up the creek, a brig comes bowling along with fore-sail, top-gallant and jib set. An impatient citizen is on the South Side with visions of roast beef and dessert to match in his minds eye and hunger knocking at the walls of his stomach. Bill sees the brig. The captain halloos: 'Let go your d---d rope.' The citizen cries: 'Come over; you have time enough,' but Bill thinks 'it's better to be sure of the line; if that breaks, the gentleman loses his dinner, and I may lose my place.' So he very properly 'lets go all;' and the impatient citizen has to wait just two minutes and a half, at which he grumbles some, when Bill runs the old boat's nose ashore and gives him a chance to step aboard. But Bill takes it coolly. He works at his rope, and with the consciousness of having done his duty, he lets the landsman have his 'pipe out,' as he can afford to be generous as well as just. Old Bill is a

before. The following account of the flood, from the pen of Rufus Blanchard, is taken verbatim :

"The last thing one might expect in Chicago, situated as it is on almost a dead level, is a flood, in one of the branches of its river. But this actually took place one fine morning in March, 1849. After two or three days' heavy rain, which had been preceded by hard snow storms during the latter part of the winter, the citizens were aroused from their slumbers by reports that the ice in the Desplaines River had broken up; that its channel had become gorged with it; that this had so dammed up its waters as to turn them into Mud Lake; that, in turn, they were flowing thence into the natural estuary, which then connected the sources of the South Branch of the Chicago River with the Desplaines. These reports proved to be correct. Further, it was also rumored that the pressure of the waters was now breaking up the ice in the South Branch and branches; that the Branch was becoming gorged in the main

THE FLOOD OF 1849.

man-of-war's man. He has been thirty-six years in the service of Uncle Sam, although he drew his first breath under the shadow of the British lion. His hair has grown gray while he has been fighting the battles of his adopted country; but his eye is not yet dimmed. He can tell a vessel's rig, although she lies away in the offing, or read her name upon the stern or head when a lubberly landsman couldn't see a letter. You can see this in the tidy way in which the boat is kept. The painters are coiled men-of-war fashion. The deck is neatly swabbed every morning, and once or twice in the day, besides, this wet weather. Old Bill is one of the steadiest men we have ever known, and we hope he will continue to wear his blushing honors thick upon him and remain, many years to come, the best ferryman in Chicago."

THE FLOOD OF 1849.—The flood which occurred March 12, 1849, was an event of most calamitous nature. For two or three days previous to that date the citizens of Chicago had been reading accounts of the remarkable rise of rivers in the interior of the State. The heavy snows of the winter had been followed by frequent and hard rains. Rock, Illinois and Fox rivers were threatening to burst their bounds and devastate the country. Their waters were higher than in 1838, and, in some localities, even than in 1833. The bridges on Rock River were nearly all swept away, and the Illinois had partially destroyed the village of Peru. The Desplaines River was also higher than it had ever been

channel at various points, and that if something were not done, the shipping which had been tied up for the winter along the wharves would be seriously damaged. Of course each owner or person in charge at once sought the safety of his vessel, added additional moorings to those already in use, while all waited with anxiety and trepidation the result of the totally unexpected catastrophe. It was not long in coming. The river soon began to swell, the waters lifting the ice to within two or three feet of the surface of the wharves; between nine and ten A. M. loud reports as of distant artillery were heard towards the southern extremity of the town, indicating that the ice was breaking up. Soon, to these were added the sounds proceeding from crashing timbers, from hawsers tearing away the piles around which they were vainly fastened, or snapping like so much pack-thread, on account of the strain upon them. To these in turn were succeeded the cries of people calling to the parties in charge of the vessels and canal boats to escape ere it would be too late; while nearly all the males, and hundreds of the female population, hurried from their homes to the banks of the river to witness what was by this time considered to be inevitable, namely, a catastrophe such as the city never before sustained. It was not long before every vessel and canal-boat in the South Branch, except a few which had been secured in one or two little creeks, which then connected with the main channel, was swept with resistless force toward the lakes. As fast as the channel at one spot became crowded with ice and vessels intermingled, the whole mass would dam up the water, which, rising in the rear of the obstruction, would propel vessels and ice forward with the force of an enormous catapult. Every lightly constructed vessel would at once be crushed as if it were an egg-shell; canal-boats disappeared from sight under the gorge of ships and ice, and came into

view below it in small pieces, strewing the surface of the boiling water.

"At length a number of vessels were violently precipitated against Randolph-street bridge, then a comparatively frail structure, and which was torn from its place in a few seconds, forcing its way into the main channel of the river. The gorge of natural and artificial materials—of ice and wood and iron—kept on its resistless way to the principal and last remaining bridge in the city, on Clark Street. This structure had been constructed on piles, and it was supposed would prevent the vessels already caught up by the ice from being swept out into the lake. But the momentum already attained by the great mass of ice, which had even lifted some of the vessels bodily out of the water, was too great for any ordinary structure of wood, or even stone or iron to resist, and the moment this accumulated material struck the bridge, it was swept to utter destruction, and with a crash, the noise of which could be heard all over the then city, while the ice below it broke up with reports as if from a whole park of artillery. The scene just below the bridge after the material composing the gorge had swept by the place just occupied by the structure, was something that bordered on the terrific. The cries and shouts of the people, the crash of timbers, the toppling over of tall masts, which were in many cases broken short off on a level with the decks of the vessels, and the appearance of the crowds fleeing terror-stricken from the scene through Clark and Dearborn streets, were sounds and sights never to be forgotten by those who witnessed them. At State Street, where the river bends, the mass of material was again brought to a stand, the ice below resisting the accumulated pressure, and the large number of vessels in the ruck, most of which were of the best class, the poorer ones having previously been utterly destroyed, helping to hold the whole together. In the meantime several canal boats, and in one instance a schooner with rigging all standing, were swept under this instantaneously constructed bridge, coming out on the eastern side thereof in shapeless masses of wreck, in the instance of the schooner, and of matchwood in the instance of the canal boats. Presently the ice below this last gorge began to give way, clear water appearing, while a view out into the lake showed that there was no ice to be seen. It was then that some bold fellows, armed with axes, sprang upon the vessels thus jammed together, and in danger of destruction.

"Among the foremost and most fearless were: R. C. Bristol, of the forwarding house of Bristol & Porter; Alvin Calhoun, a builder, brother to John Calhoun, founder of the Chicago Democrat newspaper, and father of Mrs. Joseph K. C. Forrest; Cyrus P. Bradley, subsequently Sheriff and Chief of Police, and Darius Knights, still an employé of the city. These gentlemen, at the risk of their lives, succeeded in detaching the vessels at the eastern end of the gorge, one by one, from the wreck, until finally some ten or twelve large ships, relieved from their dangerous positions, floated out into the lake, their preservers proudly standing on their decks and returning, with salutes, the cheers of the crowd on shore. Once in the lake, the vessels were secured, in some cases by dropping the anchors, and in others by being brought up at the piers by the aid of hawsers."

"Yesterday morning," says the Democrat, "the scenes in the river between Haddock's warehouse and Fort Dearborn, were most melancholy. Piled indiscriminately, in some places, lay vessels, most of them as fine craft as float upon the lake, a mass of entangled wreck. Between them lay pieces of canal boats; a bow sticking out here and a stern there, and a mass of wreck in other places, ground up into pieces small enough for kindling wood. Tall spars here and there lay across the decks, and ropes, chains, etc., in inextricable entanglement, lay knotted and twisted in all directions. Some forty crafts of various kinds were wrecked or injured, and formed one of the most costly bridges ever constructed in the West, and the only one that Chicago now boasts of. Crowds of people were at the wrecks yesterday, and crowded the decks of the various vessels. Many ladies were not afraid to venture over this novel causeway, beneath which the water roared, falling in cascades from one obstruction to another, the whole forming the most exciting scene perhaps ever witnessed. We understand several daguerreotype views of the vessels in their present position were taken."

The following additional particulars are gathered from the files of the Journal:

At about ten o'clock the mass of ice in the South Branch gave way, carrying with it the bridges at Madison, Randolph, and Wells streets—in fact, sweeping off every bridge over the Chicago River, and also many of the wharves. There were, in port, four steamers, six propellers, twenty-four brigs, two sloops, and fifty-seven canal boats, many of which have been either totally destroyed or damaged seriously. The moving mass of ice, canal boats, propellers, and vessels was stopped at the foot of Clark Street, but withstood the pressure only a moment, crashing vessels and falling

spars soon giving note of the ruin which was to follow. A short distance below the river was again choked, opposite Kinzie's warehouse; vessels, propellers, and steamers were piled together in most indescribable confusion. A number of vessels are total wrecks, and were carried out into the lake a mass of débris. A boy was crushed to death at the Randolph-street bridge, a little girl was killed by the falling of a topmast, and a number of men are reported lost upon canal boats which have been sunk, and upon the ice and bridges as the jam broke up. The bridge over the lock at Bridgeport is gone. The wharves all along the river have sustained serious injury. A son of Mr. Coombs was lost at Madison-street bridge, and James L. Millard had his leg badly fractured while on board his vessel. One poor fellow on a canal boat waved his handkerchief as a signal of distress, about ten miles out, during the afternoon; but there was no boat which could be sent to his assistance. The vessels were without their riggings, and the engines of the steamers were out of order. The loss by the flood is thus estimated:

Damage to the city.....	\$15,000
To vessels.....	58,000
To canal boats.....	30,000
Wharves.....	5,000
Total.....	\$108,000

The figures given are rather below than above the actual loss. The city went to work with a will to repair the great damage. In the meantime the river was crossed by a number of ferries. Besides the boat at Randolph Street, a canal boat lay across the river, upon which passengers were allowed to cross on payment of one cent each. The ferry at the Lake House, the safest and the pleasanter on the river, was free. A schooner was used at Clark Street; fare, one cent. Mr. Scranton's old ferry was running at State Street; fare the same as the others. Other temporary appliances were brought into use to bridge over the inconveniences of the next few months. These ferries were generally overcrowded with passengers who, in their eagerness to cross, sometimes rushed aboard, recklessly, and it is a wonder that fatal results did not sometimes follow.

In June, 1849, the Madison-street bridge was opened to travel, and about two weeks thereafter (July 3d,) teams passed over the Clark-street structure for the first time. Wells-street and Kinzie-street bridges were completed in September. VanBuren and Randolph streets were also accommodated about the same time. Thus before the year 1850 fairly set in the destruction occasioned by the flood of 1849 was mostly repaired. Piles were driven for the Lake-street bridge in January. While its construction was progressing, in March, an application for an injunction was applied for, and the motion tried before Judge Drummond, of the United States District Court. The injunction was refused, the Court deciding that "the right of free navigation is not inconsistent with the right of the State to provide means of crossing the river by bridges or otherwise, when the wants of the public require them." The bridge, as completed in the spring, was similar to the Clark-street structure and suggested the style of the latter. It had a passage-way of seventy-six feet, on each side, and was twelve feet above the water.

Previous to the flood of 1849 the city did little to regulate bridges or bridge-tenders. In April, 1847, an ordinance was passed prohibiting teams from stopping on a bridge or within forty feet of one. There were continual complaints against the slowness and indifference of bridge-tenders. In October, 1848, the Harbor and Bridge Committee were instructed to inquire into the "competency of bridge-tenders." And yet, though E. MacArthur charged a specific bridge-tender (the Madison-street individual) with keeping his bridge open for "an hour longer than was necessary," and, although the majority of citizens sustained Mr. MacArthur in his warfare, the erring bridgeman retained his place. Bridge-

tenders were not even required to give bonds for "the faithful performance of their duties" until 1852.

In 1853, as is shown, there were safe thoroughfares over the river at Madison, Clark, Wells, Kinzie, Van Buren, Randolph and Lake streets and Chicago Avenue, besides the railroad viaduct over North Water Street. Bridge-tenders were appointed for these structures, and, because of the ordinance of March, 1852, they were each under \$500 bonds to do their duty. The bridges mentioned above were constructed largely by the subscriptions of those owning property in the vicinity, but there were many delinquents, as those who did pay learned to their cost.

January 13, 1854, bridge-tenders were made special policemen and their bonds were increased from \$500 to \$2,000. Under this ordinance they were required merely to open and close their bridges as quickly as possible. But so far as is known they were never punished for not doing it, and they seemed to have been the supreme judges of the meaning of that expression, "as quickly as possible." In 1854 the pivot-bridge across the river at Clark Street was built, under the superintendency of D. Harper, at a cost of \$12,000. It contained a double carriage way and sidewalks. During the summer and fall of 1855 both of the arches gave way. Heavy iron plates were bolted to them, and the structure was made quite substantial. During this and the succeeding year the repairs amounted to \$2,145.55.

The ordinance of June 18, 1855, regulated the order in which vehicles should cross the bridges. The vehicles running direct with the bridges were to have precedence in crossing, while vehicles from side streets on the right were to follow, and lastly were to come those which entered from the left. The Common Council decided, in October, 1855, to build a bridge across the main branch at Fort Dearborn ferry; but the decision was with a proviso that \$35,000 be first subscribed, which wrecked the project completely. During that year Twelfth-street bridge was built anew, at a cost of \$2,877.16. Repairs were also made upon the bridges at Wells, Van Buren, Kinzie, and Clybourne streets, and Chicago Avenue.

In 1847 the Common Council ordered a ferry across the river at the foot of Rush and Harbor streets. Later, ferries were established near the Lake House and Twelfth Street. By 1856 these institutions of by-gone days were in operation at Randolph and Wells streets and Chicago Avenue. They were merely of a temporary character. Up to 1856 the bridges were built mostly at the expense of the citizens whose property would be enhanced in value by such improvements. The plans for Madison-street bridge were agreed to in that year. As it was proposed to construct it at municipal expense, a vigorous protest was entered against such a proceeding. During the year the old bridge at Randolph Street was removed, and a new one substituted, at a cost of \$20,811. It was ready for foot travel by July of 1856. Wells-street bridge was also completed during the summer, at a total cost of about \$20,000. It was built by D. Harper, and, at the time, was the longest draw-bridge in the West, being one hundred and ninety feet in length and eighteen feet above the water.

In June, 1856, the city contracted with Harper & Tweedale, civil engineers, to build an iron bridge across the river at Rush Street, to cost \$48,000—\$18,000 to be paid by the city and \$30,000 by the Galena & Chicago Union and Illinois Central Railroad companies. It was the first iron bridge in the West.

A shocking calamity occurred September 19, 1856. About seven o'clock in the morning, the boat at the Lake

House ferry capsized while crossing from the North to the South Side. It was crowded with passengers, all men, and most of them laborers going to their daily work. Many succeeded in swimming ashore, others were picked up by boats. It was supposed that a very large number were drowned, but as only ten bodies were subsequently found, it was concluded that the fatality was not so great as was at first believed. The boat was not the regular ferry boat in use at that point; that had been taken away for repairs, and the substitute was the old flat scow ferry that had been used at Wells Street. It really was not fit for use. Those who crowded upon the boat in such numbers did not know its unseaworthy character. They were so impatient to cross that they took the boat out of the charge of the ferry-man and left him on the shore. When the boat was a few feet from the shore, the ferry-man slacked the line, as a vessel was approaching. The coroner's verdict declared this act imprudent, but it could not of itself have caused the accident. The boat immediately careened with its overweight, and all the passengers went down.

The Polk-street draw-bridge, the float-bridge at Indiana Street, and a like concern at Erie Street, were built during 1856-57, costing about \$5,000 each. During the winter of 1856-57 the discussion continued over the question of building the Madison-street bridge at the city's expense, but notwithstanding the protests it was done in the latter year. Its total cost was about \$30,000. This was the first bridge built *entirely* at the city's expense.

The public and the marine were still at enmity with each other. Each had rights which neither seemed inclined to respect. In July, 1857, a motion was made in the Common Council to have the City Attorney prepare an ordinance requiring vessels to pass the bridges within a certain time. The Committee on Bridges reported that "the laws regulating bridge-tenders" covered all that ground, and that vesselmen were already sufficiently attentive to the landmen's conveniences.

That the bridges of 1857 were far superior to the earlier efforts is evident from the fact that they withstood the flood of February 9, 1857. Its ravages were general along Rock River, and railways were much obstructed. There was an ice gorge in the North Branch of the Chicago River, an immense mass being formed at Chicago-avenue bridge. Subsequent warm rains caused the gorge to break up, and the ice passed out into the lake without causing disaster. Even in this matter of bridges, Chicago evinced a desire to lead the West in the introduction of novelties which should prove of lasting value. So a swift advance was made from stringers to pile bridges, and from the original pivot to the swing bridge of 1857.

POLICE DEPARTMENT.

There is but little to be said or written concerning the early police affairs of Chicago. Indeed, the officers to whom was entrusted the duty of enforcing the then few criminal laws, were not known as policemen. Though doing what might be termed police service, they were simply constables; their real functions being to discharge the executive duties of a justice court. The town of Chicago was incorporated August 5, 1833, and the first town election was held August 10; but no mention is made of the election of a Constable until at the third election of town officers, which occurred August 5, 1835. At that time O. Morrison was chosen "Police Constable," and in addition to the requirements of this office, was also delegated to act as Town Collec-

tor. Mr. Morrison was undoubtedly the first Constable the town of Chicago ever had—the records previous to this time disclosing that “half the fine went to the informer,” as a sort of reward for his zeal in bringing offenders against the law to punishment. As early as May 9, 1834, a notice was posted about the streets, which imposed a fine of five dollars to any one riding or driving over a bridge faster than a walk. Here, too, as the town had no officers to see to the enforcement of this law, half the fine was given the informer. September 1, 1834, the first Sunday law was passed, which prohibited any “tippling shop” or “grocery” from keeping open on Sunday. The penalty was a fine of five dollars and costs for each offense, one-half the fine to be given to the complainant. June 6, 1836, the fourth town election was held, and O. Morrison was re-elected Constable; but by this time, it appears, the duties of his office had increased to such an extent that he was not asked to act as Collector; that work being assigned to the Town Assessor. It should also be noted that in August, 1835, the new Board of Town Trustees had passed a code of municipal laws, the chief features of which were: prohibition of gaming houses, definition of what were street nuisances, proscription of the sale of liquors on Sunday, and the firing of guns and pistols in the streets.

In 1837 the city charter was granted and the town of Chicago, as a corporation, ceased to exist. This charter, among other provisions, created the Municipal Court, which had concurrent jurisdiction with the County Court over all matters occurring within the city limits. There was also created at the same time, and as an officer of this court, the office of High Constable, who with his deputies, chosen from among the city Constables, constituted the police force. The charter also gave the Council the power to appoint “as many police constables as they shall think proper,” not exceeding one from each of the six wards which then comprised the city. At the first city election John Shrigley was elected High Constable. The Council, however, did not think one from each ward necessary, and until 1840 (certainly not before that time), two Constables, Lowe and Huntoon, did the police duty for Chicago. It appears that the Press of those days did not regard two men as being a force by any means large enough to properly look after the city's police interests, and frequently did the editor of the Daily American urge upon the Council the necessity of increasing the number.

Under date of May 20, 1839, the American says: “The Grand Jury after a session of four days has adjourned, after finding six indictments, four for larceny and two for perjury.” Here the editor takes occasion to refer to the condition of the morals in the city. He says: “When we consider the number of indictments found at previous times, the public must be satisfied that crime is fast diminishing.”

Previous to this time a murder had been committed in the county, but as it did not occur in the city its details are not given in this chapter.

The police force of Chicago did not, until the year 1855, reach anything like systematic organization. Prior to that time the force was composed of Police Constables, chosen one from each ward, which, until 1842, was without a head officer, unless the High Constable, who had the power to select his deputies from the town Constables, could be regarded as the chief of the police constabulary of the city. The first City Marshal was Orson Smith, elected in 1842, who served two terms, being succeeded in 1844 by Philip Dean. The latter served until 1847, when by act of the Legislature, the

number of wards in the city was increased from six to nine. At the following election, in the spring of 1848, Ambrose Burnham was chosen Marshal, and, together with the Police Constables, nine in number, comprised the force. Burnham remained in office from 1848 until the spring of 1852, when James L. Howe was elected as his successor and held the position three years. In 1854 Darius Knight was elected and served two years, until 1856, when he was succeeded by James M. Donnelly. In April and June, 1855, ordinances were passed creating the Police Department, whereupon Cyrus B. Bradley was appointed captain, or Chief of Police. The roster of officers for 1856 is as follows: Chief, Cyrus P. Bradley; captain, J. W. Connett; West Division, first lieutenant, M. Finion; second lieutenant, F. Gund; North Division, first lieutenant, John Gorman; second lieutenant, Charles Denehey; South Division, first lieutenant, Charles Chilson; second lieutenant, H. Schockley; Clerk of the Police Court, Benjamin R. Knapp.

Three precincts were designated, as will be shown. These divisions contained each a station-house and a force of men. The first precinct station was located in the old market, on State Street, between Lake and Randolph. In 1856 there were twenty-three patrolmen appointed; three more being added in 1857. They were officered by Luther Nichols, first lieutenant, and E. S. Hanson, second lieutenant. The latter resigned and was succeeded by D. E. Ambrose. In 1858 the station was moved to the corner of Franklin and Adams streets.

The second precinct station in 1855 was located in the old West Market Hall. The force there consisted of fourteen patrolmen, with Michael Grants, first lieutenant, William Tenbroeck, second lieutenant, and Charles Warner, sergeant. The next year the force was increased to twenty patrolmen, officered by John Gorman, first lieutenant, Charles Denchy, second lieutenant, and Francis Humelshine, sergeant. In 1857, under the administration of Hon. John Wentworth, John M. Kennedy was appointed first lieutenant at this station, Charles M. Taylor, second lieutenant, and D. E. Ambrose, sergeant.

The third precinct was established June 16, 1855, with S. P. Putnam, first lieutenant, John Noyes, second lieutenant, and George Leander, sergeant. The force was composed of twenty-one patrolmen. In 1856 Michael Finnigan was first lieutenant, and Fred Gund, second lieutenant. The next year, under Mayor Wentworth, Jacob Rehan was for a time first lieutenant and was succeeded by H. A. Kauffman; John Noyes was second lieutenant and Phillip Petrie, sergeant. That year the force was increased to thirty-three men. The total strength of the police force of the city at the close of 1857, including the officers, numbered something over one hundred men.

The chief officers from 1835 to 1857 (the period embraced in this volume) were: Constable, O. Morrison, elected August 5, 1835, served two years; High Constable, John Shrigley, May 3, 1837, two years; High Constable, S. J. Lowe, May, 1839, three years; Marshal Orson Smith, May, 1842, two years; Police Constable, William Wiesenraft, May, 1842, three years; and Marshals Philip Dean, 1845; Ambrose Burnham, 1847; James L. Howe, 1852; Darius Knight, 1854; M. Donnelly, 1856.

The Police Constables, from the year 1848 (at which time the law compelled the election of one from each ward), to 1855, when the police system formally began, are here given in order by wards: 1848—A. Burnham,

D. C. Warren, W. Wiesenrafft, Nicholas Bordie, Henry Meisner, D. C. Davis, Bartley Ford, John Pahlman, Martin Rose. 1849-50—Carding Jackson, J. H. Pahlman, A. J. Chappel, D. T. Wood, Henry Meisner, J. E. Willick, Bartley Ford, E. Pattiolett, William Boomer. 1851—C. S. Bogue, W. H. Wells, Michael O'Brien, A. S. Facy, Henry Meisner, J. N. Norton, B. Ford, M. Maguire, John McHale. 1852—A. B. Wheeler, S. H. McDearman, John A. Norton, J. G. Cutler, Richard Carthew, R. V. Wightman, James Daly, Michael Grant, William Cameron. 1853—A. B. Wheeler, S. H. McDearman, D. T. Wood, J. G. Cutler, Richard Carthew, Thomas Hennessey, Charles O. Malley, Thomas Melvin, James Quinn. 1854—C. S. Bogue, A. B. Wheeler, John Beach, Michael Hickey, Richard Carthew, Thomas Hennessey, James Keefe, Michael Grant, William Duffey.

THE BRIDEWELL—So-called "from a hospital built in 1853 near St. Bride's, or Bridget's, well in London, subsequently turned into a workhouse," and now commonly applied to city houses of correction—was opened in December, 1851. Prior to that date offenders against the law were confined in a jail on the public square. In 1850-51 the Legislature authorized the city to found the Bridewell, and accordingly a building was prepared for such use on Block 87 of the school section, corner of Polk and Wells streets. The prison was built of three-inch oak planks, set upright, and roofed with the same material. It was one hundred feet in length by twenty-four feet in width, one story high. Cells were furnished for about two hundred persons. David Walsh was the first keeper, and held the position until 1857. Mr. Walsh states that an average of one hundred prisoners were in his charge during that time. At first the culprits were given employment in piling and handling the large quantity of lumber used by the city in paving its streets. Subsequently, when planking was abolished as a roadway, a stone yard was opened near the jail, wherein the prisoners were forced to labor.

EDUCATIONAL DEPARTMENT.

The germ from which evolved the grand educational system of Chicago was implanted in this fertile soil nearly three-quarters of a century ago. The effort to trace so feeble an act as this necessarily was to its generation must partake mainly of the traditional, and many years of the time which has elapsed can be spoken of but vaguely. Fortunately, there is extant an official basis for the present history to rest upon, in the form of a brief sketch prepared by W. H. Wells, who for many years was honorably and actively identified with the labor of founding the public schools of this city. The account referred to was prepared in 1851, and has endured the scrutiny of interested parties these many years. It has not only borne that investigation without material challenge, but has also been officially endorsed by the Board of Education, in a most interesting and comprehensive pamphlet, prepared by Shepherd Johnston, clerk of the Board, and issued in 1880. In the light of subsequent research, Mr. Johnston was able to revise Mr. Wells's brief history so satisfactorily that all future historians must accept the "Historical Sketches of the Public School System" as indisputable authority. Acknowledging, therefore, our indebtedness to Mr. Wells and Mr. Johnston for the record of facts, copious extracts are made from their compilations, with such additions, in later years, as the nature of this present history renders possible, through independent

examination of original documents, newspaper files and individual interviews.

According to Mr. Wells, the first regular tuition given in Chicago was in the winter of 1810-11, by Robert A. Forsyth, who subsequently became Paymaster in the United States Army. The pupil was John H. Kinzie, then a lad of six years, and the master himself was but thirteen years old at that time. The question of what course of study was best to be pursued was easily solved, for the sole educational volume then available was a spelling-book, which by some chance or other was brought to the embryo metropolis safely packed in a chest of tea. Thus it transpired that before the white sands on the lake shore were crimsoned with the blood of the little colony, the seeds of the most potent of civilizing forces were sown, and the name of one who was destined to be forever identified with the history of Chicago became the first enrolled as a pupil in a city which to-day stands unrivalled in its educational facilities.

It was not until 1816 that a school was regularly taught here, however. In the fall of that year, William

Stephen Fowler

L. Cox, a discharged soldier, received John H. Kinzie, his two sisters, his brother, and three or four children from the fort, in a small log building which stood in the back part of Mr. Kinzie's garden, near the present crossing of Pine and Michigan streets. The house was formerly used as a bakery. In that humble manner the systematic instruction of youth began. How long this school was continued cannot now be stated; nor is there any record of another venture of the kind until

1820, when, it is said, a school was taught in the fort, by a Sergeant.

An hiatus of nine years occurs before further authentic data is obtained. In 1829 the families of J. B. Beaubien, agent of the American Fur Company, and of Mark Beaubien received instructions from Charles H. Beaubien, son of the former, who obtained a room "near the garrison." These undertakings, it will be seen, were partial and private in their character.

Stephen Forbes was employed as a private instructor of J. B. Beaubien's children, and also by Lieutenant Hunter, then stationed at the fort, in a similar capacity.

The first school to assume general proportions was taught by Stephen Forbes, in June, 1830, in a building near what is now the crossing of Randolph Street and Michigan Avenue. The school-house stood on the west bank of the river, which at that time followed its natural course, and emptied into the lake south of the existing Madison Street line. Mr. Wells says: "Mr. Forbes's school numbered about twenty-five pupils, of ages from four to twenty, and embraced the children of those belonging to the fort, and of Mr. J. B. Beaubien and a few others. It was taught in a large, low, gloomy log building, which had five rooms. The walls of the school-room were afterwards enlivened by a tapestry of white cotton sheeting. The house belonged to Mr. Beaubien, and had been previously occupied by the sutler of the fort. Mr. Forbes resided in the same building, and was assisted in school by Mrs. Forbes. After continuing the school about one year, he was succeeded by Mr. Foot." Mr. Forbes was afterwards Sheriff of Cook County, and subsequently removed to Newburg, Ohio.

In October, 1831, Richard J. Hamilton was appointed commissioner of school lands for Cook County. By a wise provision of the general laws, Section 16 in each newly platted congressional township, as shown by the United States surveys, is set apart for the benefit of public instruction. It so chanced that this section, or one square mile, within the township on which Chicago is located, lay in what is now the business center of the city; being bounded on the north by Madison Street, on the west by State Street, on the south by Twelfth Street, and on the west by Halsted Street. As will hereafter be shown, this vast property was not judiciously disposed of, for had it been retained until the present time, the rentals therefrom would afford a revenue which would make the school system of Chicago the wealthiest municipal institution of its kind in the world.

In the fall of 1832, Colonel Hamilton and Colonel Owen employed John Watkins to teach a small school in the North Division, near the old Indian agency-house in which Colonel Hamilton then resided. It is stated in Mr. Wells's report that these gentlemen, afterwards built a house on the north bank of the river, just east of Clark Street, in which Mr. Watkins continued his school, and that it was the first house built for a school in Chicago. But this does not recur to Mr. Watkins's recollection. Mr. Watkins wrote a letter to the Calumet Club, bearing date Joliet, Ill., June 22, 1879, from which the following extracts are made:

"I arrived in Chicago in May, 1832, and have always had the reputation of being its first school teacher. I never heard my claim disputed. I commenced teaching in the fall after the Black Hawk War, 1832. My first school was situated on the North Side, about half way between the lake and the forks of the river, then known as Wolf Point. The building belonged to Colonel Hamilton, was erected for a horse stable and had been used as such. It was twelve feet square. My benches and desks were made of old store-boxes. The school was started by private subscription. Thirty scholars were subscribed for, but many sub-

scribed who had no children. So it was a sort of free school, there not being thirty children in town. During my first quarter I had but twelve scholars, only four of them were white; the others were quarter, half, and three-quarters Indians. After the first quarter I moved my school into a double log-house on the West Side. It was owned by Rev. Jesse Walker, a Methodist minister, and was located near the bank of the river, where the North and South branches meet. He resided in one end of the building and I taught in the other. On Sundays, Father Walker preached in the room where I taught. In the winter of 1832-33, Billy Caldwell, a half-breed chief of the Pottawatomie Indians, better known as 'Sauganash,' offered to pay the tuition and buy the books for all Indian children who would attend school, if they would dress like the Americans, and he would also pay for their clothes. But not a single one would accept the proposition, conditioned upon the change of apparel."

Mr. Watkins taught as late as 1835, but the exact date of his retirement is not known. Among the pupils who attended the first of these schools were the three

Eliza Forbes

Owen boys, Thomas, William and George; the three Beaubiens, Alexander, Philip and Henry; Richard Hamilton, and Isaac N. Harmon.

The mania for speculation which prevailed in 1833 induced the authorities to sell the school lands of the State, wherever it was possible to do so. A public sale was carried on in Chicago from October 20, for five days, at which one hundred and forty city blocks were disposed of, being all but four blocks of the school section. The sum realized was \$38,619.47, which was placed at ten per cent interest. The four blocks reserved from the sale were, Block 1, bounded by Madison, Halsted and Monroe streets, and by South Union extended, on which were subsequently located the High and Scammon school buildings; Blocks 87 and 88, lying between Fifth Avenue and the river, and between Harrison and

Polk streets; and Block 142, bounded by Madison, State, Monroe and Dearborn streets.

By the school law of 1833 the school commissioner was required to apportion the interest derived from each township school fund among the several teachers in the town, according to the number of their scholars residing in the township, and the number of days each scholar was instructed; on condition, however, that the trustees of the several schools should first present a certificate that the teacher had given gratuitous instruction to all such orphans and children of indigent parents residing in the vicinity, as had been presented for that purpose.

In the light of present knowledge, which demonstrates the unwise policy pursued concerning the sale of the Chicago school lands, and the conversion of what might now be an unparalleled fund, had the title of this section remained vested in the School Board, into a fixed cash sum, it is but just to the memory of a faithful and honorable public servant, Colonel Hamilton, school commissioner in 1833, to state that the sale was not his own work. A petition, signed by ninety-five residents of Chicago, the leading citizens of the place, urged him to that course; and it was in compliance with that formal demand that the sale was ordered. Those men deemed it advisable to convert unproductive property into a stated sum, drawing ten per cent semi-annual interest payable in advance. Acting upon the will of the overwhelming majority, Colonel Hamilton caused the property to be disposed of, as has already been stated, and thereby obtained a productive fund of nearly \$39,000. This was the basis of revenue which will hereafter be alluded to as the school fund.

MISS ELIZA CHAPPEL is entitled to especial distinction in this work. Born of parents who united Huguenot and Pilgrim blood (her father being a descendant of La Chappelle and her mother of Elder Brewster, of "Mayflower" fame,) she possessed strong qualities of mind and heart, which fitted her for the life she led. She was born at Geneseo, N. Y., November 5, 1807. Illness interfered with her educational aspirations, but not to such an extent as to debar her from acquiring a liberal store of general knowledge and especially that which fitted her to teach the young. After ascertaining the method of kindergarten instruction, Miss Chappel was induced by Robert Stuart, agent of the American Fur Company at Mackinaw, to leave New York and establish a school of that sort on the island, about 1830. She also founded a similar school at St. Ignace, soon afterward.

Miss Chappel came to Chicago, from Mackinaw, with Mrs. Seth Johnson, in June, 1833, with the intention of establishing a school, and upon arriving here became a member of Major Wilcox's family. Her school was opened with about twenty pupils in September, of that year, in a little log house just outside the military reservation, used up to that time by John Wright as a store. While Miss Chappel was waiting for Mr. Wright to vacate the log store, he was erecting a frame store, the fourth one built in the village, into which to move his goods. This removal being accomplished, Miss Chappel took possession of the log building, with her "infant" scholars, dividing the house into two apartments, one for a school-room, the other for a lodging-room for herself. Many of the scholars furnished seats for themselves, but those who were unable to do so, had primitive seats supplied them. None of the seats had backs, and there were no desks, but there was a table on which the elder pupils did their writing. In one end of the room was a small raised platform, upon which stood a table for the teacher. The apparatus used in teaching consisted of a numeral frame, maps of the United States and of the world, a globe, scriptural texts and hymns, and illustrations of geometry and astronomy. Miss Chappel continued to teach in this log school-house until in January, 1834, when she moved into the First Presbyterian church building, in which soon afterward her infant school gave an exhibition which was highly satisfactory to her and to the patrons of the school. Among the twenty pupils who attended in the log school-house were two children of Colonel R. J. Hamilton, Charles Davis, Celia Maxwell, two or three children of Mr. Baxley, Willie Adams and his sister, a child of a Mr. Evarts, Emily Handy, and Elizabeth, Mary, Margaret and Henry Brooks. The Brooks children "paddled their own canoe" across the Chicago River to and from school. An appropriation was made by the Commissioners

from the public school fund, for the partial maintenance of this school; by which official act Miss Chappel was recognized on the rolls as the first teacher employed, and to her must be accredited the honor of having taught the first public school in Chicago. Miss Chappel soon conceived the idea of educating the girls who lived on

Eliza Chappel

the prairie. Her proposition to the parents of these girls was to the effect that if the parents would send in their daughters with provisions upon which to subsist, she would give them a home in a one-and-a-half story frame house, owned by a Sergeant in the fort, which stood on La Salle Street, nearly west of the jail. In response to this proffer of Miss Chappel, twelve girls were sent to her school, and made their home with her in the Sergeant's house. The school continued in the church until Miss Chappel gave it up in the fall of 1834. After getting in an older class of pupils, it was determined to fit them for teachers, and thus Miss Chappel's school became the first normal institution in Chicago. Among the pupils in this school were Misses Miriam and Fidelia Cleveland, Miss Goodrich, who afterward married Elder William Osborn; Frances, Edward and Annie Wright, the latter the widow of General J. C. Webster, of the United States Army, and Dr. Temple's children, among the latter Eleanore, who afterwards became Mrs. Thomas Hoyne. During the latter part of 1834, two assistant teachers were employed, Mary Barrows and Elizabeth Beach. In the winter of 1834-35, Miss Chappel resigned her school into the charge of Miss Ruth Leavenworth. Miss Chappel married Rev. Jeremiah Porter, on June 15, 1835. Miss Leavenworth married Joseph Hanson.

Grenville T. Sproat, of Boston, opened his "English and Classical School for Boys," December 17, 1833, in a small house of worship belonging to the First Baptist Church Society, on South Water Street, near Franklin. The school was conducted on the subscription, or private, plan; each patron contributing individually his share toward the necessary sum for its sustenance. When a public fund was secured by the sale of land, Mr. Sproat applied for a portion of the money, and by the acceptance of such aid transformed his school into a public institution. Under the law, if a teacher kept a record

according to the statute, and had it properly certified by certain school officers, he was entitled to his proportion of the public fund. Although the school laws were changed from time to time, as the development of a new State demanded, the general plan obtained that interested parties could form a school by subscription, and apply *pro rata*, upon the subscriptions, whatever money could be secured through official recognition. This was done in order that the union of forces might inure to the advantage of regions requiring a higher grade of educational facilities than could be readily afforded upon either system singly. In 1834, official aid was obtained, and Mr. Sproat's school thereby became the second on the list of public schools; but

Thomas Wright

at this date no formal organization into districts had been effected. During this year (1834) Dr. Henry Vander Bogart was engaged in the school, and he in turn was succeeded by Thomas Wright. Miss Warren acted as assistant in this school from March, 1834, to June, 1836, and afterward married Abel E. Carpenter. From a letter written by this lady the following extract is taken:

"I boarded at Elder Freeman's. His house must have been situated some four or five blocks southeast of the school, near Mr. Snow's, with scarce a house between. What few buildings there were then were mostly on Water Street. I used to go across without regard to streets. It was not uncommon in going to or from school, to see prairie wolves, and we could hear them howl any time in the day. We were frequently annoyed by Indians; but the great difficulty we had to encounter was mud. No person now can have a just idea of what Chicago mud used to be. Rubbers were of no account. I purchased a pair of gentleman's brogans, and fastened them tight about the ankle, but would still go over them in mud and water, and was obliged to have a pair of men's boots made."

Owing to the loss of the one record kept from 1833 to 1837, the early period can be alluded to but vaguely, and the distinction between public and private work in these primary institutions can be traced with difficulty.

In July, 1834, Miss Bayne kept a boarding and day school for young ladies in a building on Randolph Street, nearly in rear of Presbyterian church, between Randolph and Clark streets.

Miss Wythe announced a school, July 9, 1834, wherein young ladies were instructed in general tuition and music.

The citizens of Chicago took a deep interest in educational affairs from the first. A meeting was held at the Presbyterian church, November 24, 1834, to choose delegates to attend the Educational Convention, which assembled at Vandalia December 25. The meeting designated J. C. Goodhue chairman, and Thomas Wright secretary. The delegation was composed of Colonel Hamilton, Colonel Owen and J. T. Temple.

During the winter of 1834-35, George Davis opened a

Geo. Davis

school on Lake Street, over a store, between Dearborn and Clark streets. Later, in 1835, Mr. Davis taught in the Presbyterian church.

John Watkins was then teaching what had become

a public school on the North Side, on the river bank just east of Clark Street, in the building erected by Colonels Hamilton and Owen, as has already been stated, in 1833.

In February, 1835, the Legislature passed an act establishing a special school system for Township 39 north, Range 14 east of the third principal meridian, or in other words for Chicago. The incorporation of the city two years later rendered this act void, but it nevertheless belongs to the history of the schools here. The substance of the laws was:

Sections 1, 2, and 3 prescribed that the legal voters should elect annually, on the first Monday in June, either five or seven School Inspectors, who were to examine teachers, designate text books, visit schools and perform a general supervision of the educational interests of the town. They were to recommend to the County Commissioners the division of the town into districts, in accordance with the Inspectors' decision. Section 4 stipulated that three trustees of common schools should be annually elected in each district, whose duty it was to employ qualified teachers; to see that the schools were free, and that all white children had an opportunity to attend them, under regulations imposed by inspectors; to manage the financial and property affairs of their respective districts; and levy taxes for running the schools, except for paying teachers' salaries, provided the additional tax should never exceed one-half of one per cent per annum on all taxable property in the district.

By this law the Inspectors had no power to elect teachers or fix their compensation; nor could they levy tax to pay salaries. A meeting of the electors of the district was required to do that; and, in fact, the practical operation of the schools rested directly with the people.

In 1835 the school founded by Mr. Sproat was committed to the care of James McClellan, with Miss Warren as assistant.

In 1835 the first building erected specifically for school purposes was built by John S. Wright, at his own expense, on Clark Street, just south of Lake. Miss Ruth Leavenworth was engaged as teacher, the successor of Miss Chappel in the original school. Mr. Wright says, in his work, "Chicago: Past, Present and Future (1867):" "The honor is due to my sainted mother. Having then

John S. Wright

plenty of money it was spent very much as she desired. Interested in an infant school, she wanted the building, and it was built." This simple but noble tribute to Mrs. Wright links her name, no less than that of her son, indissolubly with the noblest of Chicago's public institutions. The honor of having erected the first public school building, by private means, is one of which the family may justly boast.

The tuition charged at the infant school during 1835 was \$2 per quarter, unless the parents were unable to pay that sum, in which event no charge was made.

In August, 1835, Charles Hunt proposed the establishment of a high school for young ladies, upon a permanent basis; but no record is preserved of the result.

September 19, 1835, the following call was issued, for the purpose of organizing the town into school districts:

The undersigned residents of Congressional Township 39 north, Range 14 east, respectfully request a meeting of the qualified voters of said township, at the Presbyterian church, in Chicago, on Tuesday, the 20th inst., at 6 P. M. for the purpose of taking into consideration the propriety of organizing said township for school purposes, under the late act of the General Assembly of Illinois.

" JOHN H. KINZIE,	HENRY W. SAVAGE,
R. J. HAMILTON,	E. B. WILLIAMS,
BYRAM GUERIN,	JOSEPH MEEKER,
GILES S. ISHAM,	JOHN WRIGHT,
FREDERICK MYERS,	ERASTUS BOWEN,
HENRY MOORE,	S. W. SHERMAN,
H. M. DRAPER,	ISAAC HARMAN,
DAVID STILES,	E. E. HUNTER,
PETER PRUYNE,	JOHN WATKINS.
J. C. GOODHUE."	

The result of this meeting was the division of the town into four districts. No. 1 embraced the North Side; No. 2 was bounded as follows: Commencing on Chicago River on a line with south side of the river, running south to Madison Street, west to Wells Street, south along Wells to Block 85, Section 16, thence west along South Branch to the junction of the branches, thence east to the place of beginning. No. 3 was bounded: Commencing on Lake Michigan at the boundary line of Section 15 to the southeast boundary of the township, west along township line to South Branch, thence down the river to the boundary line of District No. 2, thence east with said line to the place of beginning. No. 4 began at LaSalle Street, on the river, ran south to Madison, west to Wells, along Wells to Block 194, thence to the South Branch, thence south along the river to the south line of Section 16, thence east along the section line to the lake, thence north along the lake shore to the Reservation line, thence west to the southeast corner of Block 58, thence north to the river, thence west to the place of beginning.

There were at this time three public and four private schools taught in town.

In the spring of 1836, Miss Leavenworth's school was discontinued; and in the same building Miss Frances Langdon Willard opened a school for the instruction of young ladies in the higher branches of education. She was a very energetic and laborious teacher. Her private record of her pupils is now in the possession of her nephew, Dr. Samuel Willard, of the Chicago high school, and enrolls the name of many who became matrons of the city. Miss Louisa Gifford (afterward Mrs. Dr. Dyer), was her assistant; and after a primary department was added and it became a public school, in 1837, it passed into Miss Gifford's hands. Miss Willard opened another school on her original plan, which she did not continue longer than about a year. She subsequently married Rev. John Ingersoll.

The following extracts taken from letters written by Miss Willard to friends in the East, are not without interest:

May 25, 1836. I like Chicago much; the society is first-rate; that is, a large proportion of it. I did not open the Seminary until May 9, as the room was not quite ready. Began with seventeen pupils, increased to twenty-five; others have applied; eight came on the \$10 terms, five on the \$8 terms and the remainder on the \$5. The trustees prefer that, for the present, in the unsettled state of society, I take the responsibility and the perquisites. Mrs. Wright is a superior woman, with a great deal of zeal and energy, *pro publico bono*. She gave the \$650 which has erected the Seminary, just to make a beginning for Chicago.

June 8. The school has increased to thirty. I believe all but two have entered for a year. Mr. Brown told me that five more had spoken for admittance. I cannot take another one without assistance. I have ten music pupils, but we must wait until the trustees send to New York for a piano.

June 28. I am refusing young ladies every day, for my thirty are ten more than I ought to instruct without an assistant. It is

impossible to enlarge the school until I obtain one; and of six who have offered not one is qualified.

July 8. I have this day engaged a lady direct from the Clinton Seminary, New York; an assistant there, two years; and had previously assisted two years in the Geneseo Seminary under the celebrated Mrs. R. Corde. Her name is Miss Clifford.

August 25. Miss Clifford proves an excellent assistant to me. There are thirty-eight pupils, and more are expected next week. I like everything here but the low state of religion.

October 30. The number of pupils has increased to fifty-seven. On Friday, October 28, the public examination was held in the Presbyterian church. About four hundred spectators were present.

December 20. I have my forty daughters around me this cold season. There is no public boarding house for my pupils, as I expected; so I was obliged to accept the offer of boarding with a Mr. Prescott and lady, from Sackett's Harbor.

December 25. The great expenses of living here, and the difficulty of getting board for young ladies, have almost discouraged me. Both my assistants are now engaged in marriage. They have been excellent in their places.

October 9, 1837. I am gradually turning the Seminary into a boarding school; for it is impossible to get along here without having my pupils from abroad directly within the sphere of my control. Chicago exceeds every place for dissipating girls' minds that I ever knew. An instructress needs the eyes of an Argus, to see all the dangers which surround her charge. I expect to find it difficult to manage all my girls to advantage and have any single gentleman to flatter them. I wish every man on earth married. Is that a wrong wish?

January 17, 1838. The hard times deeply affect all the schools. The great school fund of \$36,000, for which Chicago has been so celebrated, is all loaned out and cannot now command sufficient interest to support even one district school. All have been stopped by order of the trustees, I am informed. I intend to continue teaching; but the fine promises of public buildings made to me, before I left Alton, have never been fulfilled.

March 31. There are three ladies' schools now in town, besides mine; they were commenced last fall during the sickness in my family about ten or fifteen pupils, of all ages and both sexes in each. So much for the negligence of the citizens in not building a public female seminary.

In 1836, and until March, 1837, John Brown taught a private school in the North Division, near the corner of Dearborn and Walcott streets. Mr. Brown ceased to teach in consequence of being severely beaten by some of his pupils, and sold out his leases in March, 1837, to Edward Murphy, who took decided means to secure

success. On opening his school with thirty-six pupils, he addressed them, setting forth the necessity of observing the rules of the school and promising chastisement to those who should infringe them.

"The day after," says Mr. Murphy, "I placed an oak sapling, an inch in diameter, on my desk. That afternoon a Mr. S. who owned the building, came into the school-room, and seeing the walls decorated with caricatures, and likenesses of almost every animal from a rabbit to an elephant, he got in a raging passion, and used rather abusive language. I complained, he became more violent. I walked to my desk, took the sapling and shouted 'clear out,' which he obeyed by a rapid movement. This trifling incident effectually calmed the ringleaders, some of whom now occupy honorable and respectable positions in society."

Mr. Murphy's vigorous administration secured the admiration of the school officers, who rented the building and made him a public school teacher from August, 1837, to November, 1838, at a salary of \$800 per annum.

Mr. McClellan, who took charge of the school in the

Baptist church, on Water Street, in 1835, continued to teach a public school until 1838.

The incorporation of the city of Chicago, March 4, 1837, marks an epoch in the history of the schools, for the management thereof, excepting the control of the funds, was, by the provisions of the charter, vested in the Common Council of the city.

The first Board of Inspectors elected by the Council was chosen May 12, 1837, and consisted of Thomas Wright, N. H. Bolles, John Gage, T. R. Hubbard, I. T. Hinton, Francis Payton, G. W. Chadwick, B. Huntoon, R. J. Hamilton and W. H. Brown. The first standing committee on schools in the council consisted of Alderman Goodhue, Bolles and Caton. The only records to be found covering the years from 1837 to 1840 are such irregular mention as is made in the official municipal documents of that period, and they are exceedingly unsatisfactory. There appears to have been no uniform system of action in the management of the schools. Each district partook of the nature of a district school division, and conducted its own affairs in its own way. There were seven districts organized, but there is no evidence extant to prove the boundaries of the several districts. From the records of the election of trustees, and from the scattering reports submitted by teachers about this time, it is inferred that District No. 1, No. 2 and possibly No. 3, were in the South Division; Nos. 4 and 5 in the West Division; and Nos. 6 and 7 in the North Division.

If school was held in Districts No. 4 and 6, no indication of that fact is now attainable. In truth, the teachers' reports were irregularly made, and schools may have been taught in those districts without formal acknowledgement being made to the Council.

In August 1837, the Council passed an ordinance governing the length of school terms:

"The quarters shall begin on the first Mondays in February, May, August and November, and continue five and a half days in each week, which time shall be understood to constitute one-quarter of one year's schooling, and for teaching, to the satisfaction of all concerned, such time the teacher shall be entitled to one-quarter of a year's salary."

The clause compelling the teacher to perform his duties "to the satisfaction of all concerned," must have been a barrier to many would-be applicants; for it is seldom that one is willing to venture the payment of salary upon the probability of pleasing everybody.

The school-house in District No. 5 was located on the west side of Canal Street, north of Lake Street, opposite the Green Tree Hotel. During the winter of 1837-38 the school was taught by C. S. Bailey, who was succeeded in the spring by Calvin DeWolf, and he in turn by Thomas Hoyne.

In July, 1837, the following petition was presented for the establishment of a school in District No. 4, signed by sixteen persons representing twenty-five scholars, of whom one of the signers, John Gage, represented seven:

"The undersigned inhabitants of the Fourth School District, in said city, considering they have a sufficient number of scholars to form a school, and that being attached to the Fifth District, the distance is so great as to make the school of little use to them, would request that they be immediately set off in a district by themselves, in season to elect three Trustees on the fourth Monday of this month."

September, 1837, J. H. Blatchford, "one of the Inspectors of the Fifth Ward," addressed a communication to the Common Council stating that the school in the Fifth School District, situated in the Fourth Ward of the city "has been closed for the space of more than two months, that a gentleman is ready to undertake the management and instruction of the school in that dis-

trict, but that no trustees have yet been elected by the voters in said district." He further states that notices have been issued by the Council several times for the legal voters to elect trustees, but that the inhabitants have neglected to meet in conformity with such notices, and asks that the Council fill the vacancies, as he understands that said body has the power of filling vacancies in offices of election as well as in offices of appointment.

The following is a certificate of the Trustees of School District No. 1, accompanying the report of the teacher for a period of eight weeks, from August 15, 1837, to October 11, 1837:

"To the School Inspectors of the City of Chicago:

"We, whose names are hereunto subscribed, trustees of School District No. 1, in the city of Chicago, report that the foregoing schedule, made, subscribed and sworn to by Sarah Kellogg, exhibits correctly the number of scholars taught by her in said District No. 1, and the number of days each scholar attended, and that she taught the length of time certified to by her, and that she was employed by us to teach a common school of female pupils in said District No. 1, for a quarter of a year, at the rate of \$10 per week, and that the reason she did not teach the whole quarter is, that neither a suitable room, stove nor furnace could be obtained by any means within our power so as to make her and her pupils comfortable.

"All of which is respectfully submitted.

"J. M. STRODE,

"SOLOMON WILLS,

"A. D. TAYLOR,

"Trustees of School District No. 1.

"Chicago, October 20, 1837."

The school for advanced scholars, in District No. 1 was taught by George C. Collins, who was employed at a salary of \$800 per annum.

The reports for the quarter ending November 1, 1837, show the attendance in the various schools then in session:

District.	Teacher.	Pupils enrolled.
One	George C. Collins	113
Two	James McClellan	107
Three	Hiram Baker.....	52
Five.....	Otis King.....	44
Seven.....	Edward Murphy	84
Total enrolled.....		400

Miss Sarah Kellogg, Samuel C. Bennett and A. Steel Hopkins were employed in the South Division schools during 1837.

In 1838 the public schools were taught by Messrs. McClellan, Murphy, Bennett, Collins, Bailey, DeWolf and Hoyne, all of whom have received mention.

In 1839 the school fund was unproductive, and the schools were in a depressed condition.

Up to this date the school fund had remained under the control of the County Commissioner. Legislative aid was invoked to transfer the financial management to the Common Council, and March 1, 1839, such an amendment to the charter was granted.

In June, 1839, the School Inspector recommended the Council to lease Blocks 1, 87, and 88 of the school section, being the blocks on which the high school stands, extending to Halsted Street, and the blocks extending from Harrison to Polk streets, between Fifth Avenue and the river, for agricultural purposes; also that Block 142, being the site of the Tribune Building and McVicker's Theatre, be subdivided into sixteen lots, for which not less than \$30 per lot per annum be asked as rental. The size of the lots was forty-nine and one-half by one hundred and fifty feet. The recommendation stipulated the reservation from lease of "Lot 2, on which the old district school-house is situated." This indefinite allusion is partially explained by the following petition, addressed to the Council:

"Your petitioners respectfully beg leave to represent that in the fall of 1836 the inhabitants of School District No. 4, located in that portion of the town which now comprises the First Ward of the city, at a school meeting, duly notified, voted a tax of \$5,000 to build a school-house in said district. At that time, building materials and labor were extremely scarce and high, and the inhabitants of the district being very anxious to have a school commenced immediately, it was thought by the Trustees that it would be much cheaper to put up a temporary building for that purpose than to attempt to build permanently, when there would be not only great expense in procuring material, but much delay would be unavoidable in collecting the tax for that purpose. Under these circumstances, that there might be as little delay as possible in commencing a school, the Trustees availed themselves of a provision in the school law which authorized them to borrow \$200 from the school fund to build a school-house. For this sum a note was given by the Trustees, which, owing to the precarious and unsettled condition of the school fund laws, still remains unpaid. But as soon as a school tax can be levied, the inhabitants of that district will doubtless most cheerfully pay the amount necessary to refund the said sum which they have enjoyed the benefit of, in possessing for several years the only public school-house in this city. As the said note has been placed in the hands of an attorney for collection, by the agent of the school fund, the object of this petition is to request that your honorable body will direct that legal proceedings in this case may be suspended for the present.

"CHICAGO, March 30, 1840. N. H. BOLLES,
"One of the Trustees who signed the Note."

There is no other record of this transaction until it is alluded to in the following terms, in a report made by the School Inspectors, March 30, 1845, after the opening of the Dearborn School building: "As it is known by the Council, the only school-house or school-room belonging to the city was in the First Ward, and this was so old, small and dilapidated, that it was sold recently by the Trustees for the sum of \$40, and the purchaser has no occasion to congratulate himself on account of his bargain."

Thus began and ended the first school-house owned by the city.

Among the select day schools of 1839, well remembered and much patronized was that established by Rev. I. T. Hinton, on April 21. The institution was managed for the benefit of young ladies, the course of study embracing the English, Latin and French languages, ancient and modern history, and the most important branches of physical and moral science. The school was located in the Baptist church.

Miss Dodge also conducted a private school that year.

Miss R. R. Carr, formerly of Lima, N. Y., managed an advanced school for young ladies, in a room on Clark Street, adjoining the Presbyterian church; and Miss Prayton taught a similar school in the fort, in the summer and fall of 1840.

Re-organization of the school system, under the new charter was not effected until 1840. February 27, 1840, William H. Brown accepted the office of School Agent, and assumed charge of the public fund. It may be here observed that Mr. Brown discharged the responsible duties of that office for thirteen years faithfully; and during the long term of services did not make a loan, by which the school fund suffered loss.

The appended report of the commissioner of school lands, at the close of the year 1839, when the fund was transferred, shows the condition of finances at that date:

Loaned on personal security, not in suit.....	\$11,564 22
Loaned on mortgage, not in suit.....	12,437 74
Amount in suit.....	6,545 00
Amount in judgment.....	7,366 36
Included in note given for interest.....	64 00
Total securities.....	\$37,977 32
Cash on hand.....	648 15
Total.....	\$38,625 47

The law was prepared by Hon. J. Young Scammon.

On this subject, and referring with characteristic modesty to his own connection in framing and drafting these laws, Mr. Scammon in a speech delivered at the reception tendered by the Calumet Club to the old settlers, in May, 1879, said:

"There is one other man, now departed to his long home, who deserves a great deal of credit, in relation to the schools of the city, and I beg permission to say a few words in his commendation. That man was Dr. Josiah C. Goodhue, and if I recollect right, he was one of the first aldermen of the city. He was one of the committee who designed the seal of the city, which I recollect was called 'Dr. Goodhue's little baby.' He it was to whom we are indebted very much for our present school system. The public schools had been tried in Chicago, and proved to be a failure. While he was a member of the first Council—I think every member of the Council was Democratic—one evening he came into my office (which was very near where it is now, on the south side of Lake Street, near Clark), and lamented over the condition of things in Chicago. It was after the panic of 1837, which was vastly worse than the panic of 1873, and every thing was very depressed. 'Nothing,' he said, 'could be done here in the West. The people of Chicago had voted down the free school system.' I said, playfully, to Dr. Goodhue 'We can have free schools, and if you will put the matter into my hands, I will establish a free school system that will be satisfactory to the city of Chicago.' He said he would do it; I said, 'You cannot do it; you and every member of the Council are Democrats, and I am a Whig.' He said, 'That makes no difference. If you will take hold of it, you shall have unlimited power to do what you choose, and the Council will sustain you.' I said, if he would do that, I would give as much time as was necessary to it, but, I said, he could not get the Council to agree to it. He said, 'I think you are mistaken; I think you can have your own way about everything. I will consult the Council, and let you know next week.' About a week afterward he came to my office, and told me that the Council were all agreed, and if I would take hold of the matter, I might write my own ordinances and laws, and they would give me supreme power within all reasonable bounds. I did so. I wish to say this, not for the purpose of recounting anything I have done, but to give to the Common Council of Chicago, which differed from me in politics, and of which you, Mr. Chairman (Judge Caton) was a member, and to Dr. Goodhue, the credit of the first act which culminated in the permanent establishment of the public schools of Chicago. We are indebted now for our excellent school system to the stone that was first laid by Dr. Goodhue."

The first Board of School Inspectors under this provision were: William Jones, J. Young Scammon, Isaac N. Arnold, Nathan H. Bolles, John Gray, J. H. Scott and Hiram Hugunin. The first meeting was held November, 1840, at which Mr. Jones was elected chairman and Isaac N. Arnold secretary. At this date the written records begin. Meetings were thereafter held weekly, until April, 1843, when they were held monthly.

In October, 1840, the Inspectors recommended the organization of the city into four school districts: District No. 1 to comprise the First Ward, being at that time that portion of the South Division of the city lying east of Clark Street; District No. 2 to comprise the Second Ward, being that part of the South Division lying between Clark Street and the South Branch of the river; District No. 3 to comprise the Third and Fourth wards, being the entire West Division of the city; and District No. 4, to comprise the Fifth and Sixth wards, being the entire North Division of the city. The school building in District No. 1, the only one owned by the city, was located where the Tribune building now stands, corner Madison and Dearborn streets; the building in District No. 2 was on the north side of Randolph Street, about midway between Fifth Avenue and Franklin Street; the building in District No. 4 was on the corner of Cass and Kinzie streets.

In November, 1840, the Inspectors recommended that, "in view of the necessities of the children, the trustees of each district be directed to procure immediately rooms in which to hold schools, and take all necessary steps to put the schools in operation, also that a tax

of one mill be levied for the support of schools." In a communication from the Inspectors to the Common Council, dated November 30, 1840, they report that :

"The Trustees of District No. 4 have secured a room at \$6 per month, for six months or more and have submitted estimates for furnishing with seats, stoves, necessary utensils, and fuel, amounting to \$132. The Inspectors approve of all but \$50 for benches, apparatus, etc., believing that in the present condition of the school fund, no apparatus such as is indispensable should be purchased. The Inspectors recommend however, that the School Agent be instructed to pay upon the order of the Trustees of the district such amount as they may need, not to exceed \$132. The Trustees have selected Mr. Dunbar as a teacher at \$400 per annum."

The Inspectors, in a report dated December 7, 1840, informed the Common Council that :

"The Trustees of District No. 3 have employed A. D. Sturtevant as teacher at \$400 per annum : have hired a convenient

A. D. Sturtevant

room at \$6 per month, and have fitted it up at an expense of \$81.29 of which \$12.97 is to be deducted from the rent. This sum includes seats, which can be used in other buildings. That the Trustees of District No. 1 had employed Mr. Argill Z. Rumsey as teacher, at \$400 per annum ; had taken possession of the district school-house, and are repairing and fitting it up at a cost of \$86.24. Also, that H. B. Perkins had been employed as teacher of District No. 2, at \$400 per annum."

The first attempt to secure uniformity of text books was made December 9, 1840, at which time the Inspectors adopted Worcester's Primer, Parley's first, second, and third books of history and an elementary spelling book.

The report of attendance at each school for each month extending to February, 1850, giving the name of each pupil, and the number of days' attendance, are now on file in the office of the City Clerk.

In June, 1841, the Inspectors report that for the four months ending in March, there had been expended \$563.32 for teachers, and \$520.94 for fuel, rent of school-houses, repairs, etc.; that upon the present plan it would require \$1,800 to pay the teachers for one year; that it would be necessary to levy a tax of one-tenth of one per cent upon all the taxable property of the city.

Vocal music was first introduced into the public schools in January, 1842, and the subject provoked much comment. Strenuous opposition to this branch of instruction was encountered. The first music teacher employed was N. Gilbert, whose contract extended for about one year.

March 10, 1842, the Inspectors voted that a school be established in the "Dutch Settlement," in the North Division, provided a house be furnished by the inhabitants; but on the 16th of that month this order was modified to the extent of allowing the materials for the house to be furnished from the general funds, if the people of the district would erect the building themselves. The cost of such materials was \$211.02. This was agreed to by those locally interested, and the school was established on the Green Bay road, between Chicago and North avenues. The school was called School No. 3, Fourth District, and was continued until a permanent building was erected in 1846, on the corner of Ohio and LaSalle streets, as will be shown later on.

The Trustees appointed by the Common Council March 11, 1842, were : District No. 1—S. J. Lowe, N. H. Bolles, C. N. Gray ; District No. 2—A. Loyd, James Carney, John K. Boyer ; District No. 3—Azal Peck, William Mitchell, Osahel Pierce ; District No. 4—

Henry Brown, S. H. Gilbert, Henry Smith. These gentlemen constituted what may be termed the business managers of school affairs.

The Inspectors for that year were : William Jones, J. Y. Scammon, John Gray, James S. Scott, George W. Meeker, Mark Skinner and Grant Goodrich. Their duties related more especially to educational methods.

In May, 1842, the Inspectors resolved to authorize the Trustees of District No. 3, the Third Ward of the West Division, to employ a female teacher at \$200 per annum, payable in Illinois State Bank currency, or in current funds after the collection of the regular tax ; and to hire a house, provided the people of the district furnish the means for the payment of the rent, and also for fitting up the school-room. Like authority was conferred in reference to the Second Ward, or District No. 2, in the South Division.

Joseph K. C. Forrest taught a private school in the West Division in 1842-43. A select school was opened in Thompson's Block, May 11, 1842, by Miss Dodge.

In January, 1843, the Council ordered that the Inspectors "dispense with the services of a music teacher, as soon as it can be done consistently with the present contracts;" and music was stricken from the list of studies early that year.

Block 142, being that bounded by Madison, State, Monroe and Dearborn streets, was subdivided, by authority of the Council, and offered for lease to the highest bidders for a term of ten years from the 8th day of May, 1843. This explains why school-land leases date from the 8th, instead of the 1st of May. It was caused by the convenience of the issuance of the first papers.

From the report of the Inspectors for the year ending December 31, 1843, it would appear that there were eight schools in operation: Two schools in the First and Second districts comprising the First and Second wards; one in the Third District, comprising the Third and Fourth wards, and three in the Fourth District comprising the Fifth and Sixth wards. The total number of scholars was 588—131 in District No. 1; 135 in No. 2; 65 in No. 3; and 257 in No. 4.

Early in the year 1844, the Inspectors called the attention of the Council to the needs of the residents of the southern part of the township. May 1, 1844, the Trustees of District No. 1 were authorized to expend \$10, if so much is necessary, in filling up the school lot. In June, 1844, proposals were received for erecting a building in District No. 1. It was completed in the spring of 1845 at a cost of \$7,500 and was situated on Madison Street, opposite McVicker's Theatre. Early in the year 1858 it received the name of the Dearborn school. This was the first permanent public school building erected, and as Ira Miltimore was instrumental in having the structure erected, it was pointed at as "Miltimore's Folly." Mayor Garrett also looked upon the building as far beyond the needs of Chicago, and recommended, in his inaugural address for 1845, that it be either sold, or converted into an insane asylum. Upon the opening of the building, Districts No. 1 and 2 were consolidated and were accommodated in this building. From this time until the opening of the building on Block 113, School Section addition, afterward known as Jones school, the reports are headed Districts 1 and 2. One year after the opening of the building on Madison Street there were enrolled five hundred and forty-three pupils; at the end of the second year six hundred and sixty; at the end of the third year eight hundred and sixty-four. The first teachers in the school were Austin D. Sturtevant, principal, who had been in the employ of the city in Districts No. 3 and

2, since October, 1840; Lucia A. Garvin, and Martha Durant.

During 1844 school conventions were held throughout the State. On the 8th of October such an assembly met in Chicago, to choose delegates to attend a general convention at Springfield. At the Springfield meeting the plan of teachers' institutes was formed.

A State meeting was also held at Peoria October 9, at which Chicago was represented by W. H. Brown, William Jones, R. J. Hamilton, John H. Kinzie, S. C. Bennett, John B. Weir, A. D. Sturtevant, Dr. Noble, Mark Skinner, N. B. Judd, Isaac N. Arnold, H. L. Stuart, F. C. Sherman, G. W. Meeker, J. Y. Scammon, Socrates Rand, F. T. Miner, John Blackstone, Lot Whitcomb, L. D. Browne, John Hill and John S. Wright.

January 9, 1845, a convention was held at Springfield, for the purpose of organizing a State educational society. Cook County was represented by John S. Wright. In an autograph letter of Rev. J. Ambrose Wight appears the following tribute to Mr. Wright :

"In the educational department he performed a service for the State of Illinois, for which he has perhaps received little credit. He drafted a common-school law, and got it enacted by the Legislature, at the time when the center and south of the State were averse to such a thing. But his acquaintance with leading men all over the State gave him the influence to secure its passage. That law, altered and amended, is, I believe, the basis of the present school law of Illinois."

The rapid growth of the city during 1845 compelled the Council to take action concerning the accommodation of pupils in the several districts; chief among which was the acceptance of William B. Ogden's proposal to sell Lots 1, 2 and 3, Block 20, Wolcott's addition to the city, for a school site, at \$950, provided the Legislature confirmed the title in Mr. Ogden. The site was on the corner of Ohio and LaSalle streets. This was in District No. 4. The school-rooms in this district were declared to be wholly inadequate and unfit for the uses to which they were put, with the exception of that in the "Dutch settlement."

In May, 1845, the salaries of the male teachers were raised from \$400 to \$500 per annum, and that of female teachers, in September, from \$200 to \$250.

The erection of the house, corner of Ohio and LaSalle streets, a building forty-five by seventy feet, two stories in height, caused the discontinuance of the little school in "New Buffalo," or the "Dutch settlement." In January, 1846, a petition, signed by residents of this neighborhood, was submitted to the Council, stating that the school had been discontinued since the opening of the new building, and asking the privilege of opening a German school in the old building, to be kept at their own expense, and offering to purchase the building, stating that at the time of its erection the city had advanced about \$150 and that the balance had been supplied by themselves. In answer to this petition the following order was adopted by the Council, January 30, 1846 :

"Ordered, That the Mayor and Clerk issue a deed, under the seal of the city, of the school-house in the Dutch settlement, to Michael Diversy and Peter Gabel, to be used for a German school in that settlement, upon said Diversy and Gabel executing a note to the school fund for \$110, payable in twelve months."

The new school buildings erected in 1844-45 (the one on Dearborn Street at a cost of \$7,523.42 and one on the corner of Ohio and LaSalle streets at a cost of about \$4,000) were ready for occupancy this year.

The legislative abridgement of the power of taxation for school purposes prevented the erection of buildings in 1846, as the school-tax fund was then indebted

to the general fund in the sum of \$3,694.06. The most important act of the year was the adoption, September 4, 1846, of an amendatory ordinance regulating the powers and duties of Trustees and Inspectors. The Trustees were entrusted with the care of the school property, and held for its proper preservation; they were authorized to recommend needed repairs and purchases of apparatus, fuel, etc., but not permitted either to contract for and pay for the same, or incur any expenses, except for fuel and water; all bills being audited by the Council, and paid from the school-tax fund. The Inspectors were not empowered to fix the compensation of teachers, nor to cause any expenditures out of the fund, except for wages of teachers already fixed; all bills being referred to the Council. They were permitted to make recommendations for alterations and additions to school property. The ordinance also ordered the publication, in such papers as would do the service gratis, of the full proceedings of the Council and Board regarding schools.

October 8, 1846, a State common school convention was held in Chicago, during which the following named residents manifested especial interest in its proceedings, as well as their regard for the cause of education generally: John S. Wright, Henry Brown, J. Young Scammon, Dr. M. L. Knapp, Samuel J. Lowe, D. M. Bradley, R. J. Hamilton, John P. Chapin, B. W. Raymond, William B. Ogden, Mark Skinner, James Carney, Grant Goodrich, Richard L. Wilson, Walter L. Newberry, John Gray, Dr. E. S. Kimberly, Charles McDonnell, Dr. McArthur, N. H. Bolles, A. S. Sherman, Azel Peck, Z. Eastman, John Murphy, James Curtis, T. A. Stewart, F. C. Sherman, John Gage, N. B. Judd, Jesse B. Thomas.

November 13, 1846, an order was passed by the Council authorizing the employment of a teacher in the southern part of the First and Second wards, upon receiving notification from the Mayor and school committee that a suitable school-room had been prepared in a proper place; provided said teacher be employed from month to month, instead of by the year. This was the beginning of what is now known as the Jones School, which was taught by Alice L. Barnard, afterwards principal of the Jones school, and located at the corner of Wabash Avenue and Twelfth Street.

An act was passed by the Legislature, February 16, 1847, providing for the sale or lease of Lot 5, Block 4, Lot 9, Block 50, and Lot 6, Block 55, in the original town of Chicago.

In March, 1847, a motion was made by a member of the Council, "that the committee on schools inquire into the expediency of making vocal music one of the permanent branches taught in the schools," but another member moved to amend by adding dancing. This satirical amendment received but three votes, and the original motion prevailed. The subject was taken under advisement by the appropriate committee.

In April, 1847, the School Agent was authorized to purchase eight lots in Block 113, school section, for a school site, at a cost of not more than \$450 per lot. A building was completed in May, 1847, on West Madison Street, near Halsted. This was subsequently called the Scammon school. The cost was \$6,795. In October \$100 was appropriated for repairs on a building used as a school-house, in the southern part of Districts No. 1 and 2.

In pursuance of an order passed by the Inspectors, November 12, 1847, Frank Lombard was appointed teacher of vocal music in the public schools, for one

year from January 1, 1848, at a salary of \$250. The "Primary School Song Book," by Lowell Mason and George James Webb was officially adopted for the use of the pupils.

June 23, 1848, the Council authorized the purchase from Walter L. Newberry, of eighty-five feet adjoining the school lot in District No. 4 the original lot being but one hundred and eleven feet front on Ohio Street, for the sum of \$1,050. In July, 1848, a school was opened at Bridgeport, and the teacher was paid for two months, when the Inspectors found there was no authority for a continuance of the school, and it was closed. September 11, 1848, the committee on schools reported that they had purchased at the sale of canal lands, Lot 13, Block 22, fractional Section 15, as a site for a school-house, for \$630. This lot is located on the northwest corner of Wabash Avenue and Twelfth Street, and is the one on which the building stood in which the school in the southern part of Districts No. 1 and 2 was located. It was occupied for school purposes till about the time the Haven school was built (1862). Alice L. Barnard was the teacher.

The Inspectors, in their annual report, dated February 5, 1849, speak of the progress of the schools since their re-organization in 1840, as follows:

"Since the organization of our public schools in the autumn of 1840, there has been a change unparalleled in the history of any western city. Then, a few miserably clad children, unwashed and uncombed, were huddled into small, unclean and unventilated apartments, seated upon uncomfortable benches and taught by listless and inefficient tutors, who began their daily vocations with dread, and completed what they considered their unpleasant duties with pleasure. Now the school reports of the township show the names of nearly two thousand pupils, two-thirds of whom are in daily attendance in spacious, ventilated, well regulated school rooms, where they are taught by those whose duty is their pleasure. The scholars are neat in person and orderly in behavior, and by the excellent course of moral and mental training which they receive, are being prepared to become good citizens, an honor to the City and State."

Appropriations were asked for to purchase school apparatus, and in reference to school accommodations they report as follows:

"The increase in the number of children and the crowded rooms in the First and Second districts, embracing the four wards lying between the South Branch and the lake, render the erection of another school-house absolutely necessary in the southern part of the city. The school-house on the west side of the river has been found to be admirably adapted to the wants of the schools, and it is recommended that an order be passed to build on Block 113 a house similar in size and arrangements to the one in District No. 3."

The State Educational Convention was held at Springfield, January 23, 1849, presided over by J. B. Thomas. William Bross acted as secretary. Resolutions were adopted defining a liberal policy concerning the support of public schools.

The Council voted that \$100 should be expended for library purposes. It was also ordered, February 12, 1849, that a brick school-house be erected on Lot 113, as soon as practicable. The power to appoint teachers was vested solely in the Inspectors, by action of the Council, February 12, 1849. The lot whereon the Franklin school was erected was purchased of William B. Ogden, July 25, 1849. November 26, 1849, Districts No. 1 and 2, which were united for convenience, were divided and the boundary line was drawn through the center of blocks lying between Monroe and Adams streets. The southern section of the South Division was then called the Second District. The building on Block 113, in District No. 2, was completed December 17, 1849, at a cost of \$6,795.

The new school in District No. 2 was opened in

January, 1850, with H. McChesney and C. McArthur in charge.

The Council purchased an addition to the school lot on Dearborn Street, fifty by one hundred and eighty feet being the west fifty feet of Lot 7, Block 58, original town, for \$2,500; paying Alexander N. Fullerton in one and two years, at ten per cent per annum interest.

The residents of the Sixth Ward, being the southern portion of District No. 3, the region afterward known as the Washington-school district, in May, 1850, petitioned for a school, claiming that the number of children in their proposed district exceeded five hundred. An appropriation of \$400 was made in July, 1850, for the employment of an instructor in the elementary principles of music. Frank Lombard and Mr. Warner were engaged as music teachers.

During the month of December, 1850, a petition was presented to the Council, signed by residents of the district west of the Southwest Plank Road, (the Brown-school district,) representing that they were one and a half mile distant from the nearest school; that they had a school room furnished, which had been built by the inhabitants, and asking that a teacher be assigned to teach in said school. During the same month the Council passed an order authorizing the Trustees of District No. 3, in connection with the Inspectors, to employ a competent teacher to take charge of the school. The school was continued during the winter, but in May, 1851, the Council ordered its discontinuance.

The number and pay of teachers was:

	Teachers.	Pay.
District No. 1.....	6.....	\$1,627.75
District No. 2.....	4.....	1,386.43
District No. 3.....	5.....	1,513.59
District No. 4.....	5.....	1,462.13
Total.....	20.....	\$5,989.90

The music teachers are not included in the above.

A teachers' association was organized in this city in the winter of 1850-51, with a membership of twenty-four, which included four private instructors. This was done in compliance with an order of the Council, passed December, 1850, compelling the public teachers to meet weekly for consultation, under the direction of the Inspectors.

In February, 1851, the Council authorized the committee on schools to advertise for proposals for a school site in the Sixth Ward, north of Kinzie Street, and about the same distance west of the river as School No. 3; and also to procure plans for a building, and at the meeting of the Council, April 28, 1851, a proposition of Henry Smith, Agent, to sell Lots 12 to 16 (both inclusive) in Block 14, Ogden's addition, for the sum of \$1,250 was accepted, and the Mayor and Clerk were authorized to issue a city bond for this amount, payable in one year, bearing ten per cent interest. This is the site now occupied by the Sangamon school, formerly known as the Washington, corner of Indiana and Sangamon streets.

By an act approved in February, 1851, the School Agent was given the custody of the school fund, subject to the direction of the Council. In September of the same year an ordinance was passed establishing at least one common school in each district; and giving the Council authority to appoint seven Inspectors for the city and three trustees for each school district. It was made the duties of the inspectors to superintend the schools, examine and employ teachers, divide the schools into grades, etc., and of the Trustees to take charge of the property and recommend improvements in buildings or appliances.

May 30, 1851, the Council passed an order authorizing the committee on schools and the Mayor to negotiate a loan of \$8,000 to be expended in erecting school-houses in the North and West divisions of the city, payable in two years from the first day of June, 1851; and also an order authorizing the committee, together with the Inspectors, to adopt plans for such buildings, to advertise for proposals for their erection and let the same to the lowest bidder, providing the cost of the buildings did not exceed \$4,000 each. The order authorizing the loaning of \$8,000 was repealed at a subsequent meeting of the Council, September 19, 1851. An order was adopted instead authorizing the issue of city bonds, payable in two years from June 1, 1851. July 2, 1851, the committee on schools report proposals received for the erection of these buildings, one to be located corner of Division and Sedgwick streets (Franklin school) and the other corner of Indiana and Sangamon streets (now known as Sangamon-street school, formerly known as the Washington) and an order was passed authorizing the award of contracts at a slight advance on the amount fixed, \$4,000 each. An ordinance was passed by the Council, September 8, 1851, defining the powers of the Trustees and Inspectors. It was essentially the same as that of 1849. One change was the provision fixing the salary of assistant principals at \$250, instead \$400 per annum.

February, 1852, the people of the extreme western portion of the city (the Brown District) secured a \$75 appropriation for a teacher. Miss Case was appointed, who received \$54 for her services. In December Miss M. E. Hartley was assigned to this school, in a building temporarily obtained. An appropriation of \$171 was made and added to the unexpended balance, \$21 of the former sum set apart for this purpose.

The Washington (Sangamon) school was completed in December, 1851. It was located on the corner of Indiana and Sangamon streets, in the West Division, and was opened in January, 1852. The Franklin school, on the corner of Division and Sedgwick streets, was completed and opened simultaneously with the Washington building. The cost of these houses was about \$4,000 each.

In February, 1853, W. H. Brown, who for thirteen years had held the position of School Agent, resigned his office to the great regret of the Council and citizens of Chicago. The condition of the school fund, at this time, was as follows: Loans secured by real estate \$28,527.18; loans on personal security, \$7,437.59; balance, cash on hand, \$5,158.43; total, \$41,123.20. James Long succeeded Mr. Brown in office.

May 30, 1853, the residents of the southern part of the city, in the vicinity of the works of the American Car Company, petitioned the Council to take immediate steps for the purchase of a site, and the erection of a building somewhere in Section 27, in the vicinity of said works; and the Council, June 27, 1853, directed the committee on schools to procure propositions to sell suitable grounds in this vicinity, and report at its earliest convenience.

In November, 1853, the Teachers' Association reached a commendable degree of efficiency, and was thoroughly organized. The Council then permitted semi-monthly meetings. L. Walker acted as secretary of the body.

A period is now reached where a more detailed review of educational work can be begun. The close of the school year in 1853 saw an enrollment of over three thousand pupil, and the public schools were maintained at a cost of \$12,129.

The rapid increase of population and the enhanced importance of the educational interests of the city demanded a more systematic management of details than was permissible under the then existing regulations. It was deemed no longer desirable to rely solely upon the Inspectors, who were men of active pursuits, and could therefore give but partial attention to the duties of their office. Governed by that lofty spirit which has always characterized the conduct of school affairs in this city, the Council determined to place some one at the head of the educational department, and on the 28th of November, 1853, the office of Superintendent of Schools was created, with a salary of \$1,000 attached.

June 23, 1854, the ordinance was so amended that instead of fixing the salary at \$1,000 per annum, it was provided that the salary should be fixed from time to time, by the Inspectors with the proviso that the salary must not exceed \$1,500 per annum.

In October, 1853, a school was established near the works of the American Car Company, that corporation furnishing the room. This was called District No. 7, afterward known as the Moseley-school district. In December of that year a site was purchased on Warren Avenue, between Page and Wood streets, subsequently occupied by the Brown school. The price paid was \$2,800. January 3, 1854, an appropriation of \$150 was made to support the school.

The Inspectors invited John D. Philbrick, principal of the State Normal School at New Britain, Conn., to fill the Superintendent's office, but the invitation was declined. On the 6th of March, 1854, John C. Dore, principal of the Boylston grammar school, Boston, was elected at a salary of \$1,500. Mr. Dore assumed the duties of the position in May. Under his management the work of classifying and grading the schools was effected.

From Mr. Dore's first report, which consisted simply of a review of his labors during 1854, is gathered an interesting statement of the condition of the schools at that time. There were in all the schools thirty-five teachers regularly employed, but each school was independently governed. Some of the schools, however, were totally deficient in system, many of the pupils attending one department in the morning and another in the afternoon of the same day. No registers were kept, and it was impossible to tell what pupils did or did not belong to specified schools, except as they were seen in actual attendance. Mr. Dore said: "As much time was consumed in going to and from recitations as was devoted to recitation." The principals did little more than govern the filing in and out of classes. A rigid examination was instituted, in which fair results were shown, except in English grammar. This was "virtually a sealed book in several of the schools." In the lower departments little attention was paid to oral arithmetic or even to the multiplication table. Neither examination nor age governed the promotion of pupils from one class to another. Mr. Dore continued: "The pupils in the schools have been classified, and the several classes apportioned among the several teachers, so as to secure a proper division of labor and individual responsibility. A system of promotion has been adopted, depending upon the qualifications of the pupils, determined by examination." Class books were adopted, and a general system devised. The Teachers' Institute, which was then somewhat neglected, was revived.

Among the most important recommendations made by Mr. Dore was the establishment of a high school. The inspectors manifested the warmest spirit of co-operation with the new Superintendent, and endeavored to

secure the best teachers. The report contained an able argument for the advancement of interest in the public schools, which were declared to be needed from a philanthropic standpoint, no less than a political one. The high school would serve as a stimulus to the pupils of the lower grades, and create a feeling of commendable rivalry among the students. Mr. Dore evinced a broad and comprehensive conception of his duties, and of the duties of the parents and the public generally.

In April, 1854, an ordinance was passed increasing teachers' salaries as follows: Principal (male) of higher departments, \$1,000; assistants, \$300; principal of primary departments, \$350; assistants, \$250. There were, at that time, seven public schools owned or leased by the city, but the seating was inadequate by at least one thousand. In addition to that number, there were many more who should attend. The schools were designated by number.

Number 1—J. P. Brooks, principal, salary, \$1,000; assistants, Mrs. A. E. Whittier, Misses S. A. LeBosquet, M. Cooper, A. L. Graves and E. McClure.

Number 2—I. Claffin, principal, \$1,000; assistants, Misses C. McArthur, F. A. Cogswell, A. E. Lowery, E. A. Kent and L. Perkins.

Number 3—D. S. Wentworth, principal, \$1,000; assistants, Misses L. M. Reed, H. Culver, S. E. Tibbetts, N. M. Hill, Mrs. R. M. Wight.

Number 4—A. G. Wilder, principal, \$1,000; assistants, Misses A. M. Duffy, D. A. Dean, E. Hall, J. Richards, F. Brown.

Number 5—D. C. Ferguson, principal, \$900; assistants, Misses L. Everden, Mr. Shields, and E. Dickerman.

Number 6—H. McChesney, principal, \$1,000; assistants, Misses J. Williams, F. Smith, A. Duncan, — Hunter, and Mrs. J. E. Seymour.

Number 7—Miss C. C. Fox.

The site of the Foster school was purchased, including two lots, for \$5,800, in May, 1854.

With the exception of the portion occupied by the Scammon school, Block 1 was occupied by squatters, up to March, 1855, when the Council passed an order for their removal and the subdivision of the land into lots, to be leased for the benefit of the school fund.

The committee on schools in their report on the annual report of the Agent for the year ending February 1, 1855, speaks in the following manner on the matter of the sale of school lands:

"But the real estate belonging to the school fund, though heretofore yielding less revenue, is by far the most important, as in it are the elements of growth in value, commensurate with the growth of the city and surrounding country. If the real estate yet belonging to the school fund, though but a fraction of what it once was, shall be judiciously managed and kept, and it cost nothing to keep it, the next generation may be in possession of a revenue adequate for the support of the grandest system of public schools of any city in the world. A comparison of the small cash school fund now on hand (about \$40,000), with the value of lots, nearly all of the school section addition to Chicago, that were sold but a few years ago, now worth at low estimate six million dollars, and almost certain to quadruple in the next twenty years, will show in the strongest possible light the folly of selling school lots of lands in a growing city or country to obtain a revenue for school purposes; and yet the whole country is dotted over with marks of similar, though generally less disastrous, strokes of policy."

In August, 1855, the purchase of what is now known as the Ogden-school lot was organized, but the business was not carried out at that time.

In 1855 the Council decided in favor of the establishment of a high school, and an ordinance to that effect was passed by that body. The site still occupied on West Monroe Street was then chosen. It was proposed to embrace in this institution an English high, a normal and a classical department. For convenience of reference, we omit the chronological action concerning the high school at this time, and give all matters relating to

it at the conclusion of this paper, that a complete record may be preserved on that topic.

Recurring to the general school work done in 1855, it is found that the Teachers' Institute was well attended, monthly meetings being then held. The exercises consisted of instruction in the branches taught in the schools, discussions, and exhibitions of model classes, taken alternately from the primary and grammar departments, which proved beneficial as a stimulus to the pupils.

The lower grades were in a prosperous condition, great improvements being shown in scholarship, order and discipline. The Press spoke encouragingly of the change in the tone of the schools, and both Council and the Inspectors joined heartily and liberally in the effort to advance the cause of public education.

During the year 1855 two minor schools were added to the list, increasing the number to nine. Forty-two teachers were employed and the enrollment was 6,826.

Flavel Moseley, an active supporter of the schools, and a member of the Board from 1850 to 1864, donated \$1,000, December 29, 1855, to establish the "Moseley public school fund," the interest of which was to be

F. Moseley

expended in the purchase of school books for pupils whose parents were unable to furnish the necessary books. Upon his death, in 1867, Mr. Moseley increased this fund by the bequest of \$10,000, making the sum of this noble charity \$11,000.

Superintendent Dore resigned his office March 15, 1856, and was succeeded by William H. Wells, principal of the Normal School at Westfield, Mass.

WILLIAM HARVEY WELLS was born in Tolland, Conn., February 27, 1812. His father was a farmer in moderate circumstances, and the son received no educational advantages, beyond a few weeks each year at a district school, until he was seventeen years of age. After spending one winter at an academy at Vernon, Conn., and one at a similar institution in his native town, he then began teaching district school. Shortly afterward he was an assistant teacher in a school in East Hartford, under the principalship of Theophilus L. Wright. Here he began preparing himself for college; he taught in the daytime and pursued his studies evenings. His labors were, however, too much for his physical strength, and he was soon compelled to abandon his hopes of taking a thorough collegiate course. Turning his ambition now to teaching, a pro-

W. H. Wells

session for which he then exhibited marked capabilities, he, in 1834, entered the Teachers' Seminary at Andover, Mass. He remained here eight months, when he returned to East Hartford, where he stayed until the fall of 1836, when he again returned to Andover as a teacher in the seminary already mentioned. He now began an extensive course of study in grammar, English literature and composition, and, in 1846, published his "School Grammar," of which, since its issue, half a million copies have been sold. In 1845 the trustees of Dartmouth College conferred upon him the degree of Master of Arts, and two years later he was elected principal of the Putnam Free School at Newburyport, Mass. This school was founded by the munificence of Oliver Putnam, and opened in April, 1848. It was as principal of this institution that Mr. Wells fully developed his abilities as a thoroughly progressive educator. He remained here six years, during which time he was an active member of the Essex County Teachers' Association, two years its president, and was also for two years president of the Massachusetts State Teachers' Association. In 1854 he was elected principal of the Westfield State Normal School, and in two years, under his excellent management, the Trustees were compelled to enlarge the buildings to accommodate the fast-increasing number

of pupils. In 1856, he was appointed Superintendent of the Public Schools of Chicago, since which time he has been closely identified with the educational interests of not only the city, but the State as well. It was while principal of the Chicago schools that he fully developed his system of graded courses, a system which is now adopted by leading educators all over the country. He delivered many lectures on this system, which have since been published in book form under the title of "The Graded School," and has become a standard volume in almost every teacher's library. In 1863 he was president of the Illinois State Teachers' Association. In the following year he resigned his position as Superintendent of the Schools to engage in business. This move, however, did not wholly sever his connection with educational matters, as he for years afterward was a member of the School Board, and always an energetic, earnest worker in behalf of the city schools, whose interests he has ever had prominently in view. He, during the interval since his resignation, has published several text books of such excellence that they at once were recognized as standard authorities on the subjects treated. Mr. Wells has done a noble work for the schools of Chicago. His reward is in the appreciation in which he is held to-day by all who know him.

The first report submitted by Mr. Wells for the year 1856, opened with the statement:

"We find abundant evidence of the deep and abiding interest of our citizens in the cause of education. No reasonable expense has been spared to provide for the moral and intellectual training of the children and youth of the city. Not a single request has been made for the support and improvement of schools, that has not been cheerfully and promptly granted. The high school building has been completed, and the school itself organized, and welcomed to the hearts of our citizens. Two large and commodious grammar and primary school buildings have also been erected; and no investment has been made more freely. But so rapid has been the growth of the city that, notwithstanding the large provision which has been made for increasing our school accommodations during the past year, there has never been a period when the demand was greater for additional houses to meet the wants of the 4,394 children, between five and fifteen, that have not been found a single day in any school of the city, either public or private."

Mr. Wells made a careful examination of the statistics of the city, and concluded that there were fully "three thousand children in our city who were utterly destitute of school instruction or any equivalent for it." In other words, liberal as had been the conduct of the Council, the average daily attendance of children in the public schools was equaled by the number who did not avail themselves of the educational advantages offered.

February 7, 1856, the Mayor was authorized to purchase two hundred by one hundred and fifty feet on the southwest corner of Wolcott and Elm streets (Sheldon school) at a price not to exceed \$9,000.

The grammar and primary schools completed this year were the Ogden, in the North Division, and the Moseley, in the South Division, in accordance with the public demand. It was in March, 1856, that contracts were awarded for the erection of these buildings, and in April of the same year a petition of residents of the North Division was presented asking that the Ogden building be erected on the lot on Chestnut Street, east of Clark; and the site which was ordered purchased in August, 1855, at \$11,041.25, was purchased at this time at a cost of \$11,790.79; the advance in price being allowed for interest during the period elapsing since the original order to purchase was passed.

In April, 1856, Elias Greenebaum was elected School Agent.

The Board of Inspectors had, since its organization, consisted of seven members. In February, 1857, the Legislature passed a bill amending the charter, and increasing the number to fifteen. The bill also abolished the Board of Trustees.

During the month of February, 1857, Dr. John H. Foster, a member of the Board of Education, donated to the city \$1,000, the interest on which was to be used by the Board of Education and the Superintendent of

Schools in the purchase of gold, silver or bronze medals, or diplomas, to be awarded to the most deserving scholars in the different departments of the public grammar schools of the city.

March 23, 1857, authority was granted by the Council to procure plans for permanent buildings in Districts No. 8 and 9 (Brown and Foster schools), and in July of the same year authority was granted to heat the school building in District No. 8 with steam. This was the first school building heated by that method. These buildings were opened about the commencement of the year 1858.

The two-story frame buildings which had been used by the Brown school since 1855, was removed shortly after the completion of the new building, to the Wells-school lot, corner of Ashland Avenue and Cornelia Street, a little over one mile north, and after the erection of the permanent building on the Wells-school lot, in 1866, it was again removed to the Burr-school lot, corner of Ashland and Waubansia avenues, about a mile distant, remaining in this location till the permanent building was erected on this lot, in 1873, when it was again removed to Wicker-Park lot, on Evergreen Avenue, near Robey Street, a little over a mile, where it is still in use, an addition having been made to the building while on the Burr-school lot.

The plan of this History, which is so comprehensive in character as to necessitate its division into several volumes, arbitrarily terminates the present chapter at the close of the year 1857—an epoch in the commercial world, owing to the financial depression of that period. The narrative of school progress is, therefore, brought to a summary halt, with a review of the condition of the schools at that date. The selection of this year as a dividing line seems appropriate for the reason that, with the beginning of 1858, the designation of schools was by name, instead of number, as was observed from the foundation of the graded system.

At the close of 1857 there were ten public schools with two minor branches of schools of the grammar and primary grades. They were located and governed as follows:

School No. 1—On Madison, between State and Dearborn; O. B. Hewett, principal, aided by five lady assistants. Salaries paid, \$2,900.

School No. 2—Corner of Clark and Harrison; Willard Woodard, principal, aided by five lady assistants. Salaries paid, \$2,925.

School No. 3—On Madison, between Halsted and Union; Daniel S. Wentworth, principal, aided by six lady assistants. Salaries paid, \$3,600.

Branch of No. 3—In the Jefferson-street church, between Washington and Madison; Sarah A. Culver and one assistant. Salaries paid, \$650.

School No. 4—Corner of Ohio and La Salle; Alden G. Wilder, principal, aided by five assistant teachers. Salaries paid, \$3,100.

School No. 5—Corner of Division and Sedgwick; William Drake, principal, aided by five lady assistants. Salaries paid, \$2,850.

Branch of No. 5—On Larabee; Emma Hooke. Salary, \$325.

School No. 6—Corner of Owen and Sangamon; A. D. Sturdevant, principal, aided by five lady assistants. Salaries paid, \$3,100.

School No. 7—Corner of Michigan Avenue and Monterey; B. Y. Averill, principal, aided by two lady assistants. Salaries paid, \$1,750.

School No. 8—Corner of Warren and Wood; Henry M. Keith, principal, aided by Julia E. W. Keith. Salaries paid, \$1,425.

School No. 9—On Union, near Twelfth; George W. Spofford, principal, aided by two lady assistants. Salaries paid, \$1,500.

School No. 10—Corner of Chestnut and Wolcott; A. H. Fitch, principal, aided by five lady assistants. Salaries paid \$2,600.

William Tillinghast, teacher of music. Salary, \$1,000.

Notwithstanding the fact that two large buildings

were erected in 1857, to accommodate about one thousand and five hundred pupils, the demand for seats was far in excess of the supply. Recommendations were made for two new houses, one in the North and one in the South Division; for an addition to the Scammon school; and for the removal of the frame buildings from the Brown and Foster lots to more convenient localities.

The conditions of the schools, so far as training and discipline were concerned, received the commendation of the public.

The whole number of pupils enrolled in 1857 was 10,636; the average belonging, 4,380; the average daily attending, 3,318. A rule was adopted by the Board making it the duty of teachers to report monthly to parents and guardians the attendance, scholarship and department of pupils.

William Jones in 1857 donated \$1,000, the interest of which was to be devoted to the purchase of text books for poor children attending School No. 2, subsequently called the Jones.

The school fund, in 1857, was reported as follows:

Amount of real estate then belonging to the school fund, within the city limits, estimated at.....	\$900,000
Amount of real estate outside the city limits, estimated at.....	25,000
Money loaned, principal.....	52,000

Total fund.....\$977,000

A considerable portion of the real estate was not then available, and much was leased at low rates. Block 87 was leased to the city for \$800 per annum until 1862; Block 88 was leased to private parties for \$8,500 per annum. The high, the Scammon and the Jones schools, were situated on lots belonging to the school fund. The interest, State dividend, and rentals for the year ending February 1, 1858, were:

Interest on \$52,000.....	\$ 6,240 00
Rents.....	11,648 50
State dividend.....	18,255 60

Amount of revenue.....	\$36,144 10
Amount paid by this fund for salaries, including Superintendent and School Agent....	\$36,079 18

Balance.....\$64 92

In March, 1857, Eugene C. Long was appointed School Agent.

The total expense of running the schools during 1857 was:

Salaries, paid from school fund.....	\$36,079
Incidentals, fuel, repairs, office expenses, etc....	9,622
Rents, including interest on buildings and lots belonging to the city, estimated.....	17,000

Total amount.....\$62,701

This was an average of \$5.81 per pupil, or lower than any large city in the Union.

The experiment of evening schools was begun in the winter of 1856-57. The charge of the school was voluntarily assumed by B. S. Wentworth, principal of No. 3, assisted by Misses Kennicott, Reed, Bickford, Wadsworth and Culver, and Messrs. Moore, Delano and Woodard, all teachers in the public schools; and by Messrs. Pearson, Culver and Sheilling, from other institutions. The use of West Market Hall was gratuitously furnished by the city. Sixty scholars assembled, and an average of that number attended, with an enrollment of two hundred and eight. The pupils were, many of them, adults and all were from the classes employed in mechanical and domestic services during the day. The experiment was regarded as highly satisfactory.

AN INDUSTRIAL SCHOOL was maintained in each of the three divisions of the city, during 1857, an outgrowth of a charitable movement commenced in 1854, by benevolently inclined ladies. These schools were supported by private bounty.

THE REFORM SCHOOL, located five miles south of the city, was then under the supervision of Mr. Nichols, and was referred to by Superintendent Wells as an institution worthy of the aid and support of the city educators.

Mr. Wells, in his report of 1858, paid the following tribute to certain prominent educators:

"When in the far distant future the philosophic historian shall write the history of our city; when the character and acts of successive generations shall be weighed in the scales of impartial judgment; when material wealth shall be regarded in its true light, as the means to an end; when social enjoyment and intellectual cultivation and moral worth shall be rightly estimated as essential elements of prosperity in every community—then will the wisdom of those who have laid the foundation of our public school system be held in grateful remembrance; then will the names of Scammon and Brown, and Jones, and Miltimore, and Moseley, and Foster, and their coadjutors, be honored as among the truest and most worthy benefactors of Chicago."

The subjoined table will give an idea of the comparative development of the schools, up to the close of 1857:

FOR YEAR ENDING	Total Population of the City.	Number under 21 years of age.	Total Enrollment in the Public Schools.	Average Daily Membership.	Number of Teachers.	Total Amount Paid for Tuition.	Total Amount Paid for all Current Expenses.
1837	4,170
1840	4,479	2,109	317
1841	410	5	\$1,889 82	\$2,676 75
1842	531	7	2,289 88	3,225 99
1843	7,580	2,694	808	7	2,379 38	3,099 97
1844	915	8	2,363 32	3,106 22
1845	12,088	1,051	9	2,277 53	3,413 45
1846	14,169	1,107	13	5,635 87
1847	16,859	7,603	1,317	18	4,248 76
1848	20,023	1,517	18	5,790 82
1849	23,047	1,794	18	5,195 50
1850	29,903	1,919	1,224	21	6,037 97
1851	12,021	2,287	1,409	25	6,921 17	7,398 97
1852	2,404	1,521	29	9,107 64	10,704 04
1853	59,130	17,404	3,086	1,795	34	10,829 58	12,129 59
Dec. 31, 1854	3,500	35	13,316 79	14,254 72
Dec 31, 1855	80,000	31,235	6,826	42	15,626 73	16,546 13
Dec. 31, 1856	84,113	8,577	3,688	61	23,365 00	29,720 00
Feb. 1, 1858	10,786	4,464	81	36,079 00	45,701 00

OFFICERS OF THE BOARD.—The written record of the Board of Education does not extend back of 1840. In November of that year a meeting was held at the office of William Jones, upon which occasion that gentleman was elected president and Isaac N. Arnold, secretary. Until April, 1843, the meetings were held weekly, thereafter monthly. From 1840 to 1857, inclusive, the officers of the Board have been as follows: President, William Jones, 1840-43; Jonathan Y. Scammon, 1843-45; William Jones, 1845-48; Dr. E. S. Kimberly, 1848-50 (?) (Record of 1849 lost); Henry Smith, 1850-51; William Jones, 1851-52; Flavel Moseley 1852-53; William H. Brown, 1853-54; Flavel Moseley, 1854-58. Secretaries—Isaac N. Arnold, 1840-41; Jonathan T. Scammon, 1841-43; George W. Meeker, 1843-49; (1850 lost); Andrew J. Brown, 1850-52; Edward C. Larned, 1852-54; John C. Dore, 1854-56; William H. Wells, 1856-64.

School Agents—William H. Brown, 1840-53; James Long, 1853-56; Elias Greenebaum, 1856-57; Eugene Long, elected in March, 1857.

Superintendents—John C. Dore, 1854-56; William H. Wells, 1856-64.

THE HIGH SCHOOL.—Although the high school was not formally inaugurated until 1856, the inception of the plan dates from the period of 1840. The attention of the Inspectors was directed to the subject as early as that year, when the scattered schools began to assume a more advanced character. The time was not yet ripe, however, and no definite action was taken. The In-

In December, 1846, the Inspectors, in their quarterly report to the Council, again call attention to the need of "at least one school where the ordinary academic studies may be taught."

February 7, 1847, the committee in their report on the quarterly report of the Inspectors, after commending the general condition of the schools, further report:

"In reference to a high school they are of the opinion that there are insuperable objections to the establishment of such a

CHICAGO HIGH SCHOOL

spectors first allude to the topic in their report of 1843, as follows:

"Had we the means, the establishment of a high school, with two good teachers, into which might be placed a hundred of the best instructed scholars from the different schools, would remedy this increasing evil."

In May, 1844, in a report of the committee on schools, Ira Miltimore, chairman, to the Council on the subject of the erection of a permanent school building in the First Ward, the question of providing for the more advanced scholars is spoken of as follows:

"The lower story to be divided into two rooms, one for small boys and the other for small girls, the upper room to be so divided as to give necessary recitation rooms for a high school, so that one principal teacher and two or three assistants shall be able to conduct the several schools, and thus give us a high school in which may be placed the more advanced scholars, and in a good degree remedy a very serious difficulty that has heretofore been the general complaint of teachers and Inspectors, namely, that our schools are too much crowded and that the smaller scholars must necessarily be neglected, or justice cannot be done to those who are more advanced."

school, independent of the inability of the city at the present time to build one."

The subject seems to have been dropped until November, 1852, when the Inspectors appointed W. H. Brown, J. E. McGirr and G. W. Southworth a committee to enquire into the expediency of presenting a plan for such a school. Report was made December 27, favoring the establishment of a high school, to be located in "the central part of the city." This report was attended with no immediate good results.

In September, 1854, the Board renewed the question, and the Council ordered the preparation of an ordinance for the establishment of the school. This was done, and the local law passed the Council January 23, 1855. February 19, an order was issued by the Council for the drafting of plans for the building, and on March 5 the final steps were taken to secure legal permission to proceed. The edifice was begun in 1855 and completed the following year.

The school was organized October 8, 1856, under the charge of C. A. Dupee, as principal.

It was designed to open the building with appropriate inauguration ceremonies, but unexpected delays prevented this. The first examination for admission to the school was held July 15, 1856, and was largely attended by applicants and their friends. The per cent of correct answers required was fifty; and a special examination was held October 1, for the benefit of those who, through embarrassment, failed during the original trial, as well as for those who were unable to attend at that time. The number first applying was one hundred and fifty-eight, of whom one hundred and fourteen were admitted. Of those who failed, thirty-five made a second attempt, and eleven were successful. A third examination was made, for the winter term, December 19. Out of two hundred and four applicants, but fifty-one were able to sustain the requisite scholarship. It is worthy of record that the average per cent of admissions from the public schools was forty-eight, while from private schools it was fifty; proving the efficiency of the public schools almost equal to that where pupils were enabled to avail themselves of special preparation, in classes numbering considerably less in the per cent of pupils to teachers.

VOCAL MUSIC.—The question of adding vocal music to the list of regular studies received attention officially in December, 1841, at which time a committee, consisting of N. H. Bolles, William Jones, John Gray and H. S. Rucker, reported favorably thereon. The first instructor was N. Gilbert, who was appointed in December of that year at a salary of \$16 per month. In September, 1842, Mr. Gilbert was re-engaged for six months, at the rate of \$400 per annum. The opposition encountered, however, induced the discontinuance of the study after the first quarter of 1843. In July, 1845, an unsuccessful attempt was made to revive the classes. In 1846 the Council refused to supply funds, and the Inspectors granted permission to a "competent teacher of music to teach music in the schools for a small remuneration afforded him by the scholars, or as many of them as can or will pay; that the scholars are very fond of this new exercise, and it is believed to exert a most beneficial influence upon their tastes and feelings."

And in their next quarterly report, submitted in December, 1846, they say:

"From what we have seen of the influence and effect of introducing music into our schools as a part of the education of all, we would strongly recommend that a teacher be permanently employed to devote his whole attention to the several schools of our city. Mr. Whitman has for some months past been giving lessons in music to a large number of scholars in the several districts, and the effect has been of the most salutary character."

The Choral Union Musical Society, in June, 1846, were allowed to occupy the recitation room in the building in District No. 1, for singing, on agreement that they give one concert a year for the benefit of the common school library.

In November, 1847, the sum of \$250 was appropriated for the employment of a vocal music teacher. Frank Lombard received appointment January 1, 1848. The sentiment of the Inspectors was favorable to a continuance of this work, but financial restrictions compelled a relinquishment of the office. It was not until July, 1850, that another appropriation was made, being \$400. On the 28th of December, 1850, Mr. Lombard was re-elected. April 19, 1852, the salary was increased to \$500.

Mr. Lombard continued in charge of instruction in vocal music till December, 1853, and was succeeded by Christopher Plagge. Mr. Plagge resigned March, 1854, and was succeeded by J. L. Slayton, who served till July, 1856. In September, 1856, William Tillinghast was elected at a salary of \$1,000 per annum, and remained till the middle of October, 1860.

PRIVATE SCHOOLS.—In 1848, the Chicago Academy, under the management of J. E. H. Chapman and two assistants, was located in the basement of Clark-street Methodist church. This school had sixty pupils.

The Sutton Female Seminary, with forty pupils, was located at the corner of Madison and State streets; principal, Mrs. Marion L. Gaylord; assistant, Miss Adelaide M. Crary.

Miss Mary A. Nelson also taught a select school of about thirty pupils at 94 Michigan Avenue. Schools of the same character were taught by Miss Morse, on Michigan Street, between Clark and LaSalle streets; by the Misses Bennett and Chandler on the same street between Cass and Wolcott streets; by Miss A. W. Walker on Canal Street, between West Randolph and West Washington streets; by Miss E. Moore, 152 Washington Street; by Miss Pearce at 52 Randolph Street; and by Mrs. M. A. Warner at 167 Clark Street. This school had fifty pupils. Mrs. H. M. Shaw also taught a select school on Wabash Avenue, between Monroe and Adams streets. With exception of the one just above mentioned, the number of pupils in the select schools ranged from twenty to thirty in daily attendance. The Chicago Normal School, Professor M. B. Gleeson, principal; Miss Jane Stewart, assistant, had at that time forty pupils, and was situated on Jefferson Street.

A German school with sixty pupils, was taught by A. Unterhrer at 134 Wells Street.

Linnear College was conducted by Rev. A. M. Stewart, in 1846, at 73 Lake Street.

In 1850 an English classical and high school, the number of pupils limited to forty, was taught by Daniel H. Temple in the basement of the First Presbyterian church. In this year the Chicago Academy was taught by W. N. Dunham and Mrs. E. Cornwell; and a select school for both sexes was taught by Rev. Charles Reighley, A. B.

In 1853 the Northwestern University, now at Evanston, was located in this city. This institution was under the management of the Iowa, Wisconsin, Michigan and Rock River conferences, of the Methodist Episcopal Church. Each conference selected four of the trustees to constitute the general board and this board appointed twelve others to act with them. At this time the faculty of the University had not been appointed, but the officers of the Board of Trustees were Dr. John Evans, president; A. S. Sherman, vice-president; and A. J. Brown, secretary. Grant Goodrich, George F. Foster, Dr. N. S. Davis, with the president and vice-president, *ex officio*, constituted the executive committee. The then proposed site for the university buildings was on a lot situated between Quincy and Jackson streets, west of Clark Street. In 1854, however, the University was removed to Evanston, where it now is. That year a part only of the faculty had been chosen, as follows: Rev. C. T. Hinman, D. D., president and professor of moral philosophy and logic; Rev. Abel Stevens, professor of rhetoric and English literature; Rev. William Godman, professor of Greek; and Rev. Henry S. Noyes, professor of chemistry.*

In 1853 a mathematical and classical school, conducted by W. G. Hatheway, principal, assisted by J. R.

* The Northwestern University will be treated of fully in subsequent volumes.

Livingston, was opened at 56 Lake Street ; and the English and classical high school, already mentioned, situated in the basement of the First Presbyterian church, was taught by Alonzo J. Sawyer. In that year Bell's Commercial College, situated at the southwest corner of State and Randolph streets, was incorporated, although the college had been instituted three years before. This was the largest institution of its kind in the city, and was a most excellent school. Its faculty was as follows : Digby V. Bell, president, and professor of double-entry book-keeping and commercial calculation and lecturer on the general laws of trade. Hon. Andrew Horvil, A. M., professor of commercial law ; John F. Starr, professor of penmanship ; James Bowes, William Scott Stewart and Dwight S. Heald were also assistant teachers in the book-keeping department. The trustees were Digby V. Bell, William B. Ogden, Walter S. Gurnee, Henry A. Tucker, John P. Chapin, John H. Dunham, B. W. Raymond, C. V. Dyer, John H. Kinzie and Edward I. Tinkham. The following gentlemen composed the board of examiners : Hiram Brown, Franklin Hatheway, H. C. Munch, J. Q. Adams, M. F. Talbot, J. Dyhenfurth and Edward H. Ring. The officers of the college, in 1857, were Theodore M. Ford, president ; Elisha B. Wallace, vice-president ; Robert C. Furman, secretary and treasurer.

The Garden City Institute was established in 1853. Henry H. Lee was principal, and teacher of mental and moral science and literature. This institution of learning was situated at Nos. 69 to 71 Adams Street, and was in the nature of a preparatory school, fitting its students to enter college. It had an excellent and efficient corps of teachers, as follows : W. M. Blenkairon, M. A., teacher of ancient languages and mathematics ; W. C. Hunt, M.D., lecturer and demonstrator of chemistry, physiology and anatomy ; Leopold Mayer, teacher of German and Hebrew ; Miss M. E. Powell, principal of female department and teacher of French and ornamental branches ; Miss Juline M. Johnson, teacher of mathematics and English ; Miss E. S. Smith, principal of primary department ; Miss F. A. Cogswell, assistant ; and Miss E. Parsons, teacher of vocal and instrumental music. The officers of the institute were Jacob Russel, president ; E. L. Sherman, secretary ; and W. S. Gurnee, Dr. Charles V. Dyer and Dr. L. D. Boone, trustees. Two years later, H. O. Snow became the principal, and was at the head of the institute in 1857.

Dearborn Seminary was organized in January, 1854, and in 1857 had erected a building on Wabash Avenue, which cost \$20,000. This sum was raised entirely by the sale of scholarships. Its trustees, eighteen in number, were J. H. Dunham, president of the board ; Amzi Benedict, secretary ; Orrington Lunt, Rev. R. W. Patterson, Rev. R. H. Clarkson, Tuthill King, E. S. Williams, E. C. Larned, William B. Ogden, George E. Shipman, Stiles Burton, Timothy Wright, Rev. H. Curtis, Charles Cleaver and N. P. Wilder.

There were in 1859 the following private schools : a boys' classical school, T. W. Bruce, A.M., principal, situated in basement of the First Presbyterian church, fifty pupils ; the Chicago Female Seminary, A. J. Sawyer, principal, with assistants, located at 168 and 170 Clark Street, eighty pupils ; Miss Fisher's select school on Lake Street, thirty pupils ; the Green-street Seminary, D. R. Clendenin, principal, eighty pupils ; the Misses Stevens' select school for young ladies, at 158 Washington Street, sixty pupils ; Miss Hodley's high school, corner State and Harrison streets, sixty pupils ; Union high school, located in the vestry of the Jefferson-street Methodist Episcopal church, Mrs. Sarah G.

Cleveland, principal, with three assistant teachers ; a German school on the alley between Indiana and Ohio streets, George H. Fisher, teacher, seventy-five scholars ; also a German school, corner of LaSalle and Ohio streets, C. P. Weber, teacher, one hundred and twenty scholars. With this it will be seen that, in addition to the efficient system of public schools, there was at no time between 1848 and 1859 a dearth of private institutions affording splendid educational advantages.

VOLUNTEER FIRE DEPARTMENT.

The memories clustering around the old volunteer companies of any city can never be effaced by the achievements of a paid department, however grand. In the days when the property owners of Chicago—her men of brains as well as brawn—were her firemen and "run the machines for all they were worth," there was an affection felt for the very apparatus, as if it were alive. There were favorite companies and favorite firemen, upon which men, women and children gazed as on heroes of old. A reflection made upon the capacity of an engine or a company was enough to bring the indignant flush to many cheeks, and often was esteemed an insult which could only be wiped out by blood. There were friendly and there were bitter contests of skill, speed and endurance between engine and hose companies, as to which should get first to a fire, which should throw the farthest stream, which should "wash" or be "washed." In their determination to acquit themselves with credit, to even cover themselves with glory at a fire, the "boys" strove with awful determination for commanding and daring positions ; sometimes, it would appear, entirely forgetting that the prime object of their existence was to quench the flames. But at fire or festival the spirit of rivalry was never at rest. And when, upon a particularly grand occasion some company would indisputably triumph in a decisive test, how the breasts of her boys would swell with pride ! For instance, few of the old volunteers will forget the review of the department in 1848, when the River and Harbor Convention was being held, and how "Red Jacket" triumphed over all rivals by throwing a stream over the flagstaff in the center of the public square. Sometimes it was "Niagara" ("the kid-glove" company of the North Side) and sometimes the "Fire Kings" (No. 1) who would carry off the laurels ; or perhaps "Protector" (No. 6) would make a spurt for fame. To give variety to the contests of the department it might be that the fleet boys of "Hope" (Hose No. 2) or "Lafayette" (No. 4), would have a brush, and one or the other of the companies arrive at the scene of conflagration far ahead of its competitor, but minus the hind wheels of the cart. Perhaps some of the boys will call to mind the contest which took place in presence of the Racine companies (October, 1856), at which these incidents occurred : No. 3 played into the tank two minutes, when the watch of the judge stopped, and the company refused to proceed ; No. 4 broke twice ; No. 7 tried once and broke ; No. 10, after playing about one minute, "heard something crack," stopped, went on again, and finally, after trying to get a good stream, took the machine to pieces and found three sticks of wood inside. No. 3 was induced to make another attempt, and put the most gallons of water in the tank—1,323. And perhaps the older members will recall the contest in October, 1857. Then it was that No. 4 bursted her hose four times, and No. 3 five times, when, the twenty minutes being wasted, she did not have time to play. No. 10 came and had just commenced to gain on the engine

"when her packing flew out." No. 7 gained the day. And so the sport went on. Then there were the processions, upon public occasions, when the boys would put on their best clothes, polish their engines to a blinding brightness, deck them with flowers, and look their sweetest and best generally. And again the festivals when firemen from other cities would come to show themselves and their darlings. These were the young, by-gone days, when the blood of the city was warm; days which many veterans still remember as their jolliest and best; when the old Unitarian church bell, in 1844, and, later, the Baptist church bell and the court-house bell (1855), were to them as bugle calls to war-horses, who "snuff the battle afar off."

But before the boys had any engines, or fire bells, or processions, or contests, or jealousies, or fights, or sociables, or anything of enjoyment whatever, they had laws which authorized them to inaugurate this programme, composed of triumphs and humiliations, pleasure and pain.

In January, 1831, an act was passed by the Legislature authorizing the trustees of any incorporated town or village in the State to organize fire companies, not exceeding thirty members, and exempting them from jury service, or military service except in time of war. The "Washington Volunteers" organized in 1832, but merely had an existence on paper. They had no apparatus. They had no need of any, for there were not more than half a dozen frame buildings in Chicago. Chicago was not yet a town, and so the company was not formed under the general State law. The "Washington Volunteers," in fact, had so "immaterial" an existence that they are looked upon as the veriest ghost of a company by the oldest firemen now living, who remember nothing about it. All that is left of it is the following notice:

"A. V. Knickerbocker, Sir:—You are hereby notified that C. Boardman has applied to become a member of Washington Volunteer Fire Company in the place of H. Williams, and a meeting is called by order of the captain for that purpose, on Thursday, at four o'clock P. M., January 8, 1833.

"J. J. GILLUFFY, Secretary."

Chicago became a town August 10, 1833, and on November 6 an ordinance was passed forbidding, after December 10, "the passing of any stove-pipe through the roof, partition or side of any building, unless guarded by tin or sheet iron, six inches from wood, under penalty of \$5; the cause of complaint to be removed within forty-eight hours, or fine to be repeated. This was the town's first fire ordinance, and under it Benjamin Jones was appointed Fire Warden. September 25, 1834, the town was divided into four wards, and the stove pipe ordinance of November 6, 1833, was re-enacted with a few slight changes. The following Wardens were appointed for each district: First Ward, W. Worthington; Second, E. E. Hunter; Third, Samuel Resique; Fourth, James Kinzie. These Wardens were charged with the duty of enforcing the ordinance previously passed, and of directing the movements of citizens who responded to the alarm of fire. By sections 4, 5 and 6 it was made the duty of the Wardens on the first Monday of each month to make a tour of inspection to see that the stove pipe ordinance was properly enforced. They were paid according to the time thus employed.

An account of the first fire which ever occurred in the town of Chicago appears in the Democrat of October 12, 1834:

"On Saturday last, about 10 o'clock A. M., a building on the corner of Lake and LaSalle streets, and the one attached, were dis-

covered to be in flames. Our citizens repaired to the scene of conflagration with a promptitude worthy of commendation and succeeded in arresting its progress, after destroying two other buildings adjoining. The wind being high at the time, threatened the destruction of a number of the surrounding houses, but, by the exertions of our citizens, were saved from the devastation. The loss of the sufferers will be severely felt, as some of them lost their all. A building on the corner, occupied as a dwelling, loss \$300. There was in the house \$220 in money, \$125, being in Jackson money, was found in the ruins. The remainder, the rag currency, was destroyed. A building owned and occupied as a cabinet shop, and another building as a grocery by H. Rhines, together with dwelling, furniture and tools, loss \$1,200. A building owned and occupied as a dwelling by James Spence, loss \$500. The fire commenced by a coal from a shovel in carrying from one building to the other. The want of suitable officers to take charge and oversee in cases of fire is much felt, and we understand the Trustees have suitable regulations in respect to it."

Two days after the fire the Board of Trustees held a meeting at the Tremont House and adopted their third fire ordinance, by which Wardens were empowered to summon by-standers to assist in suppressing fires, making the Warden of the ward in which the fire occurred the "chief," for the time being, and obliging fire wardens to wear badges of office. A short time afterward Mrs. Hopkins was fined for violating the "stove pipe ordinance," in the district ruled by Fire Warden No. 2. The October fire appears to have stirred up the town authorities to unusual activity, for on November 3, the Board of Trustees had another meeting at the "Exchange" and adopted the following "ordinance for precaution against fires:"

"WHEREAS, It has been represented by sundry citizens, householders and owners of property in the town of Chicago, that great danger of destruction to their property and to that of the community at large exists, by means of a practice too generally indulged in, viz.: that of carrying fire from one house to another without care or caution, and, WHEREAS, The President and Trustees of the town of Chicago have been called upon by their fellow-citizens to adopt measures for the prevention of the said practice in the future; therefore

"Be it, and it is hereby ordained by the President and Trustees of the town of Chicago, that hereafter it shall not be lawful for any person or persons to convey fire brands or coals of fire from one house or building to another within the limits of the corporation, unless the same be carried or conveyed in a covered earthen or fire-proof vessel. Any person offending against the provisions of this ordinance shall be liable to a fine of \$5 for each and every offense, to be recovered before any Justice of the Peace in like manner as other fines are by law recoverable. This ordinance to take effect and be in force from and after the 12th day of November, A. D. 1834.

"JNO. H. KINZIE, *President Board of Trustees.*

(Attest:)

"E. W. CASEY, *Clerk Pro. Tem.*"

On February 12, 1835, the Legislature passed an act authorizing any number of persons not exceeding forty to form themselves into a fire company. It also exempted them from military duty during the time of their service; and all persons who should serve twenty years were forever exempt. Yet laws and ordinances did not make a fire department, and even so late as May, 1835, the Chicago Democrat complains that "there is not even a fire bucket" in the city. The first practical step taken toward the organization of other than a "paper" fire department, was when, on September 19, 1835, the Board of Trustees resolved that "the President order two engines for the use of the corporation, of such description as he shall deem necessary, and also one thousand feet of hose, on the credit of the corporation." Whereupon William B. Ogden, as agent of the corporation, was vested with authority to make such purchase. On October 7 the Board of Trustees, at a meeting held at Trowbridge's Eagle Hotel, ordered the purchase of two fire-hooks, with chains and ropes, two ladders sixteen feet long, four axes and four hand saws, at a total

cost of \$29.63. On the same date P. F. W. Peck, Joseph L. Hanson, Silas B. Cobb, James A. Smith, J. K. Botsford, Joseph Meeker, and J. McCord signed their names as the first members of the "Pioneer" hook and ladder company. Soon afterward John L. Wilson, E. C. Brackett, John Holbrook, T. Jenkins, T. F. Spalding, Isaac Cook, J. J. Garland, George Smith, J. K. Palmer, Thomas S. Ells, John R. Livingston, Henry G. Hubbard, George W. Snow, Thomas J. King, N. F. L. Monroe, George W. Merrill, Samuel S. Lathrop and Thomas S. Hyde joined the company. These feeble steps were

preliminary to the passage of the ordinance of November 4, 1835, by which the first regular fire department of Chicago was organized. By its provisions the Department was made to consist of a chief engineer, two assistants, four fire wardens, in addition to the Town Trustees who were (ex officio,) Wardens. The Board

of Trustees had the power to appoint the members of the department.

Section 35 of the ordinance made it incumbent upon every dwelling-house or other building, containing one fire-place or stove to have one good painted leathern fire bucket, with the initials of the owner's name painted thereon; every building with two or more such places, two buckets. The penalty for breaking this order was a fine of "\$2 for each deficient bucket, and the further

sum of \$1 for each month he shall neglect to provide himself with such bucket or buckets after he shall have been notified by a fire warden so to do." Every able-bodied male inhabitant possessing a bucket, who did not repair to the place of fire and work under the direction of the fire wardens or other officers of the department was liable to pay a penalty of \$2. These provisions contained in sections 35 and 36 of the ordinance, comprised the authority for the formation of the first bucket company, which was not disbanded until 1840. The only one of these old leather buckets known to be in existence hangs in the Historical rooms. Although in appearance a modest enough instrument for the extinguishment of a serious conflagration, even in its old age it looks tough and serviceable. Its general shape is that of a clown's long hat, with the picked end somewhat flattened. The handle consists of a plain leather strap, fastened to each side of the mouth by a simple iron buckle. Appearing in a scroll on the side is the

name "C. Stose," and underneath, "Relic of the Volunteer Fire Department of Chicago, used by C. Stose until the disbandment of the bucket company in 1840."

It may be that attention was called to the great necessity of some such embryonic organization as could be effected under this ordinance, by the fact that, during October, the prairie fires had been raging in alarming proximity to the limits of the town.

In September the authorities had ordered the purchase of a fire engine. It was bought of Hubbard & Co., December 10, for \$894.38, payable in two annual installments. Two days thereafter, under the fire ordinance, the "Fire Kings" (No. 1) organized. The first members whose names appeared on the roll were H. G.

Loomis, H. H. Magie, J. M. Morrison, W. H. Clarke, John Calhoun, Alvin Calhoun, W. H. Stow, C. Beers, Peter L. Updike, A. Gilbert and J. C. Walters. But the machines ordered by the corporation through Mr. Ogden were slow in arriving, and the hook and ladder company was slow in organizing. The American of December 12, accordingly, has this paragraph:

"The engine ordered by the corporation cannot arrive until next year, and no efforts are made, as we understand, to fit and man the one already in town for use on a sudden emergency. Why is not the fire company in preparation and training for service? What has become of the hook and ladder company?"

Before December 17, when the hook and ladder company effected an organization under the ordinance, the "boys" had been without officers. Upon that date, Hiram Hugunin, President of the Board, became chief engineer; William Jones, first assistant, and Peter L. Updike, second assistant. On the 23d, the Fire King Company reported to the Board, in addition to the same general officers of the "department," recommended by the hook and ladder company, the following names: S. G. Trowbridge, foreman of Engine Company No. 1; H. G. Loomis, treasurer; A. C. Hamilton, clerk; Ira Kimberly, steward; William Worthington, S. Lincoln, William Forsythe and W. A. Norton, fire wardens. The motto of the company was, "*Pro bono publico.*"

The committee appointed to select a site for an engine house reported that the County Commissioners would give them "leave to erect an engine house on the public square, on LaSalle Street, to occupy the same for and during the term of five years, without paying rent therefor." The clerk called for proposals for the erection of an engine house twelve by eighteen feet. The company, however, not wishing to be so closely confined, induced the Board to expand the limits to twenty-four by twelve feet, and to agree that it should also have a cistern "to hold two hogsheads of water, to be made of good pine lumber." On the 30th of December, 1835, Levi Blake contracted to build the engine house for \$220. Before it was fairly completed, however, and before the department was formed, Mr. Hugunin thought best to resign his position as chief engineer (February 17, 1836), and George W. Snow, of the "Pioneer," was appointed to the vacancy. The feeling had become general among the members of the department that they should be allowed to elect their own chief. Mr. Hugunin's action was occasioned more particularly by the following communication, addressed to the Board, through him:

"Mr. President,—I am directed by the chairman of the joint committee of the Engine and Hook and Ladder Company No. 1 to ask of the Honorable Corporation of the town of Chicago to

grant the said companies the privilege of electing their engineer and other officers, in which the committee ask the concurrence of the Honorable President and Trustees of the Town of Chicago.

"P. PRUYNE, Secretary."

In March, 1836, Company No. 1 adopted by-laws making its officers to consist of a foreman, assistant foreman, clerk, treasurer and steward, to be elected annually. The treasurer was to keep the apparatus in good order, or be fined \$2 for each neglect; to see that all the men did their duty, enforce all the laws, and audit all bills against the company, or pay a fine of \$1 for each neglect. The fines were to be voted by the company, and any member fined by the foreman could appeal to the popular will of his fellows. The duty of the assistant foreman was, particularly, to attend to the pipe and leaders, when the engine was at fires. To the clerk and treasurer appertained the usual duties of such offices. The steward was "to provide suitable refreshments, so far as the officer in command may think reasonable." Fines were provided for members of the company who did not respond promptly to the alarm of fire. At the alarm of fire the member first arriving at the engine was entitled to the pipe of hose and in case of the absence of the foreman and assistant foreman, the member arriving second took command of the company. No other fire organizations were effected for over a year.

On February 9, 1837, before the city charter was in force, the department elected candidates for chief engineer and assistants. A special committee consisting

Wm H Taylor

of A. Calhoun, T. O. Davis and J. K. Botsford, on March 3, reported to the Board the following names: Chief engineer, John M. Turner; first assistant, Jeremiah Price; second assistant, P. F. W. Peck. The Board approved the department's choice of chief engineer, made February 9, but sent back the names of the assistants, with a request that they report other names, to be taken from each of the other districts of the town. The report of Hook and Ladder Company No. 1, from their secretary, George W. Merrill, was presented and accepted. It announced the following individuals as officers and members of the company: John M. Turner, foreman; J. K. Botsford, assistant;

John L. Wilson

S. B. Cobb, secretary; S. F. Spaulding, steward; John L. Wilson, J. Meeker, W. H. Taylor, W. Osborne, E. C. Brockett, Joseph L. Hanson, Grant Goodrich, Charles Adams, Charles Cleaver, P. F. W. Peck, James A. Smith, J. McCord, S. J. Sherwood, Isaac Cook and Tuthill King.

John Calhoun, clerk of Engine Company No. 1, reported that at the annual election, held on the first Monday of December, 1836, the following officers were chosen: Alvin Calhoun, foreman; Thomas O. Davis, first assistant; John Calhoun, clerk; A. C. Hamilton, treasurer; John Rice, steward. In April, however, N.

R. Norton and David Cox were confirmed, as first and second assistant engineers of Engine and Hook and Ladder companies No. 1, in other words of the Fire Department.

Under the provisions of the charter, passed March 4, 1837, the Council were given power to organize fire companies, and were named as Fire Wardens, with power to appoint others. The Chief Engineer and two assistants were to be chosen annually thereafter. In May an ordinance was passed making more stringent regulations in regard to the prevention of fires, and defining more in detail the duties of the members of the department. The four Wardens were required, under

Luther Nichols

the direction of the Council, to see that the new regulations were enforced. In the fall a Rochester engine was purchased for \$775, and the Hook and Ladder Company was fitted up anew. A second company, the "Tradesmen's," was organized December 4, 1837. Its name was afterward changed to the "Metamora," and its headquarters was on Lake Street, east of the river. In December, Alexander Loyd was chosen Chief Engineer; S. J. Lowe, first assistant. They continued in office until 1839, when Alvin Calhoun became Chief Engineer and Isaac Cook assistant. The next year Luther Nichols was elected Chief, but there was no further increase of the organizations until in September,

S. J. Lowe

1841, when the Chicago Bag and Fire Guard Company (afterward better known as the "Forty Thieves") was formed. With canvas bag, cord and wrench they fought fires, rescued and guarded property, and gave delightful "socials" for five years.

October 27, 1839, the department fought one large fire that broke out on Lake Street, extending west to B. W. Raymond's brick store, and east to the corner of Lake and Dearborn, consuming the Tremont House. Eighteen buildings were laid in ruins. The loss was about \$60,000.

A. S. Sherman acted as Chief from 1841 to 1844. On September 7 of the former year, Bucket Company No. 1, "Neptune," was organized. Its original members were twenty-five in number, its headquarters on the river at the foot of La Salle Street, and there were one hundred and sixty buckets. "Neptune" was provided with a carriage, was neatly uniformed, and admitted into the department in October. F. T. Sherman was its first foreman. In November, 1846, "Neptune" gave up the ghost, and her members breathed the breath of life into the "Red Jackets," a company famous in the annals of the volunteer department for twelve years thereafter. "Neptune's" uniform was a red jacket, white belt and cap.

Engine Company No. 3, "Osceola," afterward called "Niagara," was organized November 21, 1844. It was at first stationed at the foot of North Dearborn Street, and subsequently removed to the corner of Kinzie and North Wells. G. F. Foster was chosen foreman and W. M. Larrabee, assistant. No 3 was known

as the "kid-glove company," because its members were drawn from the very best material which the North Side afforded. No company was braver, more intelligent or more respected. The "Red Jackets" (No. 4) had not yet made their appearance to contest the field with No. 1, the "Fire Kings." But when No. 3 had organized and procured their engine, at the first fire which they attended, they had the supreme joy of being stationed next to the river, and pumped with such vigor into the hose of No. 1 that the latter's machine was inundated—"washed" clean.

From 1844 to 1847 Stephen F. Gale acted as Chief.

Philadelphia Hose Company No. 1 was organized in January, 1845, its headquarters being on the North Side, near Clark-street bridge. Jacob B. Johnson was foreman.

In March, 1846, the Council was requested to disband the Chicago Fire Guards (bucket company), as it was thought they were no longer necessary. This was done, and they were assigned to other companies.

As previously noticed, on November 13, 1846, the members of "Neptune" Bucket Company No. 1 combined to form Engine Company No. 4, the "Red Jackets." From the start they worked to win success, and won it. They had worthy rivals to contend with in Nos. 1 and 3, and were especially anxious to triumph in some decisive way, over the former. The headquarters of No. 4 were at the foot of Clark Street, near the bridge; and they were furnished with an old goose-neck engine which had been used by the "Fire Kings." They were afterward transferred to new quarters on the southeast corner of Washington and LaSalle. In May, 1852, the "Red Jackets" were made happy by a fine "piano" engine, (10-inch cylinder, 12-inch stroke) built by L. Button & Co. Thereafter the contests with No. 1 were carried on under more favorable auspices. The following extract from the Fireman's Journal of July 3, 1880, gives a few incidents illustrating the rivalry between No. 1 and No. 4; also of the latter's great triumph in New York:

Once when it was nip and tuck between the "Fire Kings" and "Red Jackets" for the supremacy, a bet was made by the respective foreman. They bet an oyster supper for the two companies, each that his own engine would be first to reach the spot wherever the next fire was. The time soon came, and it caught No. 1 napping. A "still" was given the Red Jackets, and away they went for the locality designated. With muffled bells they hurried along the sidewalks, and as they ran, nowhere could they discern their rivals. Unfortunately they were compelled to pass Bradley's house, and just when they were in front of the place the sidewalk gave way, and the engine broke through. The sudden wrench loosened a muffler, one of the bells sounded its unwelcome warning. Bradley heard the sound, and in another moment, half dressed, and hardly awake, was on his way for No. 1's house. But No. 4 beat them for all that, and after the fire had been put out the two companies went down to the St. Charles and ate oysters till they couldn't eat any more.

Subsequently No. 1 gave No. 4 a beating. There was a fire in the neighborhood of Fifteenth Street, on the South Side. They started about even from Washington Street, with the "Fire Kings" having much the best of it all the way up town. Coming home, No. 4 took the sidewalk on State, and No. 1 the walk on Clark Street. It was a lively run. As one company crossed each intersecting street a glance to the right or left revealed their rivals on equal terms with them. Each company was endeavoring to reach first the corner of Washington Street. When No. 4 dashed across Madison they could see nothing of No. 1. They had crossed Monroe together, and No. 4 could not understand how it was the

others had so soon disappeared. But when they reached Washington Street corner, to their grief and astonishment, they were greeted with a terrible shout from No. 1's boys, who had already reached the goal. Soon afterward it was discovered, however, that only a portion of No. 1 Engine had reached Washington Street. Just after the "Fire King" had crossed Monroe, the king-pin broke, and the heavier part of the machine dropped upon the walk. Determined not to be defeated, the boys kept on with the front wheels, and easily reached the corner in advance of their competitors. Only a short time previous to the big fire of 1871, in front of the Little Giant (steamer) engine-house on Dearborn Street, while some of the boys were relating certain things which happened in the past, spoke one of the crowd: "Well, there is one thing I wish had never happened. I wish we had never had that row at the Rock Island depot. It was all well enough at the time, and I ain't going to say No. 1 boys didn't get their dues." The fight was one of the most desperate in the history of the Chicago department. The old feeling toward "Fire King" No. 1 had broken out badly among No. 4's boys, and when all came together at the big fire above Twelfth Street, there were a few old heads who scented a coming battle. Only a few minutes later and the rival companies were at each other with all their fierceness. Spanners were freely used, and many a fellow's head was swelled that night. The battle was with the strong, and they were the "Red Jackets." They not only whipped the "Fire Kings," but they captured the engine and they "just turned her over" in the ditch.

Sometime in 1852 "Red Jacket" went East. There was to be a grand tournament in Providence, R. I., and they were desirous to win first prize. On their arrival in New York City the "Red Jackets" learned that the tournament was postponed. In no hurry to return they remained in New York one week, the guest of the "Live Oaks." U. P. Harris, who was Chief at the time, was of the party. The result was they received an invitation from the New York chief to show their skill in competing with some of the crack engines of that city. The afternoon of their debut before a New York audience arrived, and the "Red Jackets" were in fine spirits, thousands of persons had assembled in and around the city hall park to witness the skill of the Western company. Only a very few of the spectators had ever heard of such an engine, and it was considered absurd to attempt to beat New York's crack organizations. In the park there was a pole, it is forgotten how many feet in height. At the summit was a figure of Justice with her scales in hand. There was never an engine company in New York that could force a stream as high as those scales. Presently it came to the turn of the Chicago company. Three of the New York engines had tried and failed to throw a stream to the feet of Justice. Eighty "Red Jackets" were on the brakes, whose determination, individually and collectively, was to win a victory. When everything was in readiness "U. P." made them a speech, in substance saying that if they failed never again would he recognize them as Chicagoans. Charley Moore, with trumpet in hand, stood midway of the pipe and the engine. The crowd was quiet, almost painfully still. "Play away!" The brakes came up, then down, faster and faster, not a misstroke or a hit. Soon the lead of hose is stretched, then the stream is seen to leave the nozzle. Upward and upward it climbs toward the gilded figure. The people begin to shout, and Eastern firemen were fast realizing that the Western men were mighty. "Down on her, 'Red Jackets,'" shouted Charley Moore, and the strokes grew faster and more furious. Then Chieftain Harris seized the trumpet and with one of his well-remembered shouts, he yelled: "Work for your lives, you Red Jacketed sons of Chicago," and with that there was renewed vigor imparted to the men. Already the stream had reached the feet of Justice. A few more strokes and water would be where it had never been before. Jack McLain and Robert Brown, of Utica, held the pipe, the nozzle pointing at the apex of the staff. Then there was a grand shout from many mouths. It grew louder until it was heard from all parts of the park. The New York laddies took it up, and helped to swell the volume of sound. For the stream had not only reached the scales, but it had ascended even higher. A few moments later the "Red Jackets" were receiving numerous congratulations, nor were they permitted to drag home their engine. That was done by New Yorkers who had witnessed the triumph of a comparatively unknown engine company.

Excelsior Engine Company No. 5 was organized in November, 1846; headquarters on Clinton Street, between Randolph and Washington; A. S. Sherman, foreman.

In 1855 the first steam fire engine was brought from Cincinnati and given a trial. A special committee had been sent to that city to examine into the excellencies of "the machines." The Chicago firemen were hospitably entertained, and an engine, the "Joe Ross,"

was fired up, but the engineer was so careless that the boiler burst and he was instantly killed. A second trial was entirely successful. Subsequently a trial was arranged between the steamer sent to Chicago and the hand engines of the department. The result was that

AN EARLY STEAMER.

No. 2, No. 8 and No. 10 beat the interloper. No. 10's horizontal stream was greater than either of her competitors, while her perpendicular attempt was equal to that of the "Fire King." The steamer did not give satisfaction and was subsequently sold to the city of St. Louis.

"Rough-and-Ready" Bucket Company No. 1 was formed in January, 1847; Charles Harpell, foreman.

Because of the numerous incendiary fires which occurred in October, 1847, especially in the vicinity of the lumber and ship yards, a special committee of the Council was directed to take into consideration the expediency of passing an ordinance to prevent the establishment of planing factories, lumber yards and other dangerous mercantile business in thickly settled portions of the city. Two years thereafter (October, 1849) an ordinance was passed to "prevent the erection of wooden buildings within the following limits: South of the center of the Chicago River, and east of the center of the South Branch thereof, and north of Randolph and west of Wabash." Buildings used for warehouse purposes upon the so-called "wharfing privileges" were not subject to the provisions of this ordinance.

In October, 1847, was formed the Firemen's Benevolent Association; S. F. Gale, president.

In March, 1848, the friends of Mr. Gale, to whose efficiency and zeal much of the good standing of the department was due, urged him to allow his name to be used as a candidate for the position of Chief. This was done, but, on account of ill health, he was obliged to withdraw, and the following ticket was elected: Charles E. Peck, Chief; Charles M. Gray, first assistant; James H. Rees, second assistant. Mr. Peck served from 1847 to 1849. During his administration—in March, 1848—"Hope" Hose Company No. 2 commenced its brilliant career. Says the Fireman's Journal:

"Hope" was always the brag company, not only of Chicago, but of the West. In St. Louis, "Tiger" No. 4; in Alton, "Dolphin" No. 4; in Springfield, "Young America" No. 1, and in Keokuk, "Liberty," were the crack hose companies of these cities. But they could never be induced to meet "Hope" boys. Not only was the Chicago company the swiftest of foot, the fastest in making a coupling, the speediest in affixing the pipe, and the handiest in working at fires, but they were thoroughly imbued with the idea that only by strict discipline could they maintain their supremacy. The strictest rules were laid down, and he who neglect-

ed these was unceremoniously expelled. The members were in sympathy with each other only so far as they strove to perpetuate the good name of their society. Having tired of the old cart purchased for them by the city, they raised a large sum of money and secured in Philadelphia probably the finest hose carriage ever manufactured. She was a beauty—enriched with pure silver mountings; her woodwork polished to perfection; her reel was the admiration of every beholder. She was the pride of every member's heart, and the outsider who was permitted to look upon her charms was considered a favored being. So highly was she prized, that it was but seldom the laddies trolled her to fires. She was used oftentimes on State occasions—such as parades and annual reviews. Previous to her making an appearance the boys arranged her for inspection. You could see your face in the woodwork, while the silver shone almost as brightly as the noonday sun. The flaxen rope was so clean that white kid gloves were not soiled while grasping it; and the sweet-sounding bells with which she was adorned, how they struck chords in the souls of the hose-men; neither piano nor violin were so musical as were those bells, which rang so blithely with every move of the pride of No. 2. Occasionally there was something the matter with their every-day cart, and then "Hope" boys were obliged to run out their darling. It is something singular, but nevertheless a fact, that almost every time the boys went anywhere with their silver carriage she got upset. If it were muddy, then her appearance was anything but pleasing; and, until she had been cleaned and brightened up, not one of the company was happy. The company remained in service until the fall of 1860, when the cart was sold to a company in Michigan. The greatest achievement of "Hope" Hose was when she ran five hundred yards and made connection with three hundred feet of hose in one minute and seven seconds, or the second best time on record. For a long time "Hope" boys occupied a house at the corner of Franklin and Washington streets; but they afterwards gave up the place to "Illinois" No. 3, and made their own quarters in No. 4 engine house on La Salle Street, in the rear of the Baptist church.

The Legislature of Illinois passed an act February 10, 1849, exempting the firemen of Chicago from working out any street or road tax, or from paying any money in lieu thereof. "Protector" Engine Company No. 6 was organized in August, 1849, while Ashley Gilbert was Chief. Mr. Gilbert was succeeded the next year by Cyrus P. Bradley, who remained in office for two terms.

At a meeting of the Council held August 1, 1850, the fire limits of the city were extended "so as to include the district east of the South Branch of the Chicago River and west of State Street, north of the alley running between Randolph and Washington streets."

The Firemen's festival of October, 1850, was a grand affair for the boys who "run the machines" here. There were twenty-three companies in line, representatives being present from Buffalo, Detroit, Milwaukee, Racine and Kenosha. The hospitalities of the city were tendered by Alderman Page, who had been an honored member of the "fraternity" for ten years. The dinner was at the Tremont. Among the organizations which received a great share of the admiration were "Lafayette" Engine Company No. 4 of Detroit, "Ocean" Fire Company and Supply Hose Company, "Milwaukee," of the Cream City. The attempt to successfully engineer a torch-light procession in the evening, however, was a failure on account of the windy condition of the atmosphere. "Lawrence" Engine Company No. 7 was organized in September, 1850, and re-organized as the "Eagle," in 1852. In December, 1851, a third hose company was formed, called the "Lone Star," afterward, the "Illinois."

"Phoenix" Engine Company No. 8, organized December 22, 1851, was changed to "Cataract" in October, 1853. The company was composed principally of sailors, and consequently could not be depended upon during the season of navigation. "Illinois" Hose No. 3 was formed the next day. No further organizations were effected until February, 1854, when the "New England," subsequently known as the "America" No. 9, sprang into being. From 1852 until 1854 (two terms)

U. P. Harris was Chief, being succeeded by J. M. Donnelly, who served but one term in 1854. In January, 1855, was formed "Washington" Engine Company No. 10. An ordinance was passed by the Council July 23, 1855, dividing the city into six fire districts: No. 1, South Division, north of Madison Street; No. 2, South Division, south of Madison; No. 3, West Division, south of Randolph; No. 4, West Division, north of Randolph; No. 5, North Division, west of Clark; No. 6, North Division, east of Clark. Eight strokes of the bell constituted the alarm, the additional strokes indicating the number of the district. At this time the alarms of fire were sounded from the First Baptist church, which had a powerful bell. In February, 1855, the large bell was hung in the tower of the new court-house, and the honor of possessing the town fire alarm was transferred to that structure soon afterwards. A watchman was also continually on duty there to fling out his flags by day or his lanterns by night, in order to direct the firemen to the locality in which he had discovered the flames.

Silas McBride was Chief for three terms, 1855, 1856 and 1857. He was a great favorite with the department, and during his incumbency many new organizations were formed. In September, 1855, "Lafayette" Hose No. 4, "Hope's" worthy rival, was organized and stationed at the corner of Clinton and Washington streets; in November came "Rescue" Hook and Ladder No. 2; "Neptune" No. 11, "Wide Awake" No. 12, and "Torrent" No. 13, in January and February, 1856; "Lady Washington" Hose No. 5 and "Liberty" Hose No. 6, in January, 1857, and in March of the same year, "Empire" Hook and Ladder No. 3. On March 2, 1857, occurred one of the most destructive fires heretofore experienced. It originated in the five-story brick block corner of South Water and State streets, occupied by Hale's Chair Factory, and Dix & Harris, wholesale grocers. This was destroyed with the adjoining store west, occupied by Tuttle, Hibbard & Co., wholesale hardware dealers, and Jewett, Root & Co., a stove warehouse firm. The east wall of the first-named structure fell and crushed Mrs. James Carney's dwelling-house, the family narrowly escaping with their lives. O'Neill's Brewery, in the rear, was also somewhat damaged. The loss by this fire is covered by the first annual report of the department from March 1, 1856, to May 1, 1857. The entire loss by fire for that period was \$553,000; insurance, \$385,100. Ten engines were reported in good condition; three in ordinary repairs, and two in process of building; also six good hose carriages, connected with engines, and six more supply hose-carts. There were ten thousand feet of hose in use. The last contest of a purely volunteer department took place at the county fair October 12, 1857. The Cook County Agricultural Society had offered a \$200-silver trumpet to the engine which should throw a horizontal stream of water, through five hundred feet of hose, the longest distance. The contest was exciting, and No. 7 (J. M. Reis, foreman) triumphed, the engine throwing the stream to a distance of over two hundred feet. Nos. 3 and 4 burst their hose, and Nos. 6 and 10 their air-chambers. As the reader will soon see, the effects of this contest were seriously felt by the city.

A GREAT CONFLAGRATION.—Up to the year 1858, the most destructive fire which Chicago had suffered occurred October 19, 1857. It entailed upon the city not only a great loss of property, but a distressing loss of life. The fire originated in a large brick store, Nos. 109 and 111 South Water Street. Though reports and

rumors as to the origin of the conflagration are conflicting, the weight of testimony goes to show that in a room in the second story of the building four abandoned men and women were indulging in a drunken carousal, and one of their number overturned a lamp. The flames spread rapidly in all directions, and in a very short time the occupants of the building, among whom were other men and women of ill fame, were pouring out of their disgraceful haunts. Some escaped to the street, others leaped from the windows to adjacent buildings, and thence reached the ground. So far as is known, no lives were lost in this locality. The scarcity of the water supply, and the inability of the Fire Department, made the progress of the flames a complete triumphal march, and it was not long before some of the finest and most costly business edifices in the city were heaps of ruins. Nearly half a million dollars' worth of property was destroyed, and twenty-three lives were lost. Early in the morning, John B. Dickey, foreman of "Liberty" Hose Company No. 6, was in the act of getting a new lead of hose to bear upon Edward Hempstead's wholesale grocery building, on South Water Street, when the rear and side walls of the structure fell, instantly killing the unfortunate fireman. Shortly after this accident, a terrible casualty occurred on Lake Street, by which several lives were lost, and which caused the greatest consternation. A large number of persons were engaged in removing dry goods from the four-story brick store occupied by Mr. Barnum, when suddenly the roof and upper floors came down with a terrible crash, burying some twenty men beneath the ruins; and, a moment after, a portion of the side walls also fell in, adding still more to the horror of the scene. Instantly the most intense excitement prevailed, and the people rushed wildly around the burning building, in the vain effort to save, if possible, the lives of those beneath the ruins. The fire was so intensely hot that no one could enter the building. As soon as practicable, streams were brought to bear, and after a short time a crowd of men rushed in and began to search for the bodies among the hot bricks and burning rubbish. This was a work of great danger, as the walls on either side were tottering and liable to fall any moment; and indeed, when they did come down, many persons had a narrow escape from being buried with those for whom they were searching. The dangerous portions of the walls left standing by the fire were thrown down by means of ropes passed across them, and the work of rescuing the bodies was systematically commenced. Before dark the bodies of the following had been recovered: Timothy Buckley, member of Hook and Ladder Company No. 1; Auguste Wolf, Hook and Ladder Company No. 3; E. R. Clark, of the firm of Clark & Metz, stove and tinware dealers; Dudley C. White, employed in Joseph Fisk & Co.'s hardware store; John Tar, gas-fitter, with Gerould & Co.; Jean Jungers; H. S. Bradley, jeweler. The bodies, as fast as recovered from the ruins, were carried to the grand-jury room in the court-house. Coroner Hansen at once summoned a jury of inquest, and the following additional bodies were identified: Marcus D. Grants, of Lady Washington Hose Company No. 5; Matthias Marsh, clerk with Beckwith & Co.; John A. Raymond; D. C. Emerson, a painter; Ezra H. Barnum, of the firm Barnum Bros.; John High, retired merchant; Lawrence Griebel, sailor; John Keegan; Alfred H. P. Corning, clerk with Merchants' Loan and Trust Co., cousin of Erastus Corning, of Albany, N. Y.; Abram Bogart, foreman for Campbell & Co., silver platers. On the evening of the 20th, the various offi-

cers of the Fire Department met at the Comptroller's office, to make arrangements for the burial of their dead comrades. The obsequies were fittingly observed on the 21st.

The testimony adduced at the Coroner's inquest proved the utter helplessness of the Fire Department, as then organized, to cope with a wide-spread conflagration. It brought out the fact that the two engines Nos. 6 and 10, were out of order and did not work. While competing at the fair for the \$200-silver trumpet they were broken. Besides having burst considerable hose at the fair ground, which had not been replaced, about five hundred feet of it had been taken away and left. On the morning of the fire the Chief sent an express wagon for it, but it came too late to be of any essential service. The immense amount of property lost by the unorganized exertions of those who even were attempting to save goods, as well as the impossibility of protecting valuables from thieves, induced the business men and insurance companies to form at once a "fire brigade." The movement was inaugurated by E. E. Ellsworth, who suggested that the brigade consist of one hundred picked men, invested with police powers, and divided into companies and squads, commanded by captain, lieutenants and sergeants. The brigade was to be provided with a carriage for carrying one fire escape apparatus, six ladders, one hundred fire axes, etc. The officers were to have general supervision of the men at work in removing property from buildings, and were required to set a good example of coolness and presence of mind. They were to prevent to the greatest possible extent all hurry and confusion, to select the most valuable goods for removal first, and, in the language of Mr. Ellsworth, "see that the men work in concert, and do not occupy themselves in removing coal, old iron, stone flooring, etc., when anything more valuable is to be found; and take especial pains to prevent the destruction of furniture, as it is not considered good policy to throw mirrors from the fourth story windows, or like Doesticks's hero, knock pianos to pieces in order to save the castors." An organization was accordingly effected and gentlemen were appointed to canvass each of the six fire districts in the city for subscriptions. November 19, a constitution was adopted, christening the association as the "Citizens' Fire Brigade of Chicago, Ill." The officers selected were as follows: President and captain, Arthur C. Ducat; L. K. Sanborn, S. B. Raymond and Henry Bandt, vice-presidents and lieutenants; secretary, Grafton Fenno; treasurer, W. G. Hibbard; finance committee, Charles H. Hunt, Frederick Fisher, H. G. Williams, F. W. Wadsworth and J. B. Shay. Among the original members of the brigade were, H. O. Smith, L. S. Burton, Shaw Williams, J. W. Davis, H. N. May, G. W. Gardner, S. B. Raymond and William Thompson. The brigade was not long lived.

"Red Jacket" No. 4 and "Red Rover" No. 14 at this time, came in for a large share of public censure, the former being generally suspected of having burned down their engine house in the fall of 1857. According to the report made by the committee on fire and water, in November of that year, No. 14 is represented "as being composed of a very inferior class of beings, all more or less being given to intoxication and guilty of rowdyism generally." The question of disbanding these companies, which was demanded by many citizens, was left with the Mayor. And there was a serious cause of complaint against the system which was made by citizens as a body, whether they were firemen or not. The Department had become to some

extent a harbor of refuge for idlers from distant cities—a sort of hospital for the encouragement of laziness. In the words of the committee, "there appears to be too many outsiders, as they are termed; men and boys coming from other cities to this, who either cannot or do not seek for employment. Consequently the first step they take is to run with the machine. The present arrangement in our city provides for them at least a sleeping place for the night, if nothing more." It was suggested that the Chief Engineer and his assistants make a thorough examination, throughout all companies, and whenever they found anybody "so infringing upon the rights of our firemen" to arrest him, have him brought before a proper tribunal and justly punished. Another difficulty to be overcome, if possible, was the excessive use of free whisky in times of fire.

Previous to 1858 it had been customary for the firemen to meet in convention and nominate candidates to be supported by the people. The Chief called the meeting. Accordingly, on January 26, the usual call appeared for a convention to be held on the 28th. As the firemen considered that longer notice should be given, they requested the Chief to postpone the convention for a week or ten days. This Mr. McBride refused to do, and the firemen accordingly assembled, on the day named, at the South Side Market Hall. There

were three candidates in the field, D. J. Swenie, Peter Casey, the then assistant, and John Egan, foreman of No. 4. Some of Mr. Swenie's friends charged that Companies Nos. 4 and 14 (Egan's warmest supporters) had brought a large number of non-members to vote their favorites into office. A resolution which was introduced to prevent anyone from voting who could not show a badge, created a great uproar and resulted in many of the companies leaving the hall. The "bolters" adjourned to Dearborn Park, and resolved to meet at North Market Hall the next day. In the meantime those who had remained had chosen Egan as their standard-bearer, but the Chief declared the election informal. Mr. Egan attempted to effect a compromise with the Swenie (or paid department) element, by offering to resign in favor of U. P. Harris. Mr. Swenie refused to do so, as he said he had already solicited Mr. Harris to become a candidate, without success. The next day therefore, at North Market Hall, Mr. Swenie's friends met and nominated him, with L. Walters for first assistant and M. W. Powell second assistant. February 11, John Egan was formally nominated to head a second ticket; John Shank, first assistant; Jacob Held, second assistant. The Swenie ticket was elected.

THE FIRST STEAM FIRE-ENGINE which was retained by the city was the "Long John." It was tested at the foot of South LaSalle Street on February 5, 1858, and approved by experts and the city generally. The boys of the volunteer department saw in its every puff a death blow to their own system. None of them will deny even at this late day that they felt, and acted, "ugly." After Mr. Swenie had been chosen engineer in March, the feeling reached such a height that it seemed, for a time, as though it would culminate in a riot. On the 6th of that month Engine Companies No. 4, 10 and 14, Hose

Companies No. 3 and 5 and Hook and Ladder No. 3 met on Clark Street. After forming in line they marched down that thoroughfare, headed by the Great Western Band, and traversing the principal streets of the city, marched into the court-house square. A large crowd had collected there, and were becoming more and more

THE "LONG JOHN" FIRE ENGINE.

excited. Fearing a disturbance, the Mayor dispatched an extra force of two hundred policemen. He ordered the arrest of the firemen for disorderly conduct, and they fled, abandoning their machines to the city. No. 14 only partially owned its engine, and when the proceedings of the volunteer department were thus informally broken into by the representatives of the law, her boys ran off with their machine to the Central depot, intending to ship it East to the maker, "to whom they are indebted for it," spitefully says the Tribune. Some dozen arrests were made, but the prisoners were afterwards released by order of the Mayor. The police took the engines to the Armory and locked them up, arrangements being made with special policemen to man them in case of fire. Four horses were provided for the use of the new steam fire engine. A police force was placed in the different engine and hose houses to protect them, should any demonstration be made against the new regime. No further trouble occurred however. The organizations which took part in the procession were disbanded by the Council, March 22, 1858, which action may be called the beginning of the death of the old volunteer department.

On August 2, 1858, the Council passed the ordinance organizing the paid department. December 4, 1858, "Northern Liberty" Engine Company No. 15 was created, and was the last of the volunteer engine companies. The headquarters were on the corner of Larrabee Street and North Avenue. The first foreman was Conrad Folz.

The last two hose companies to organize in the volunteer department, in fact the last organizations to be effected, were, "Northern," No. 7 and "Union," No. 8. They were both formed in February, 1859, and disbanded in 1862.

FIRE COMPANY SKETCHES.—The original members of "Pioneer" Hook and Ladder No. 1 signed their names to the roll, October 7, 1835. They have

already been given; also those who joined the company up to the time it was regularly organized, under the ordinance of November, 1835. During the fifteen succeeding years more than seventy citizens entered its ranks. The following names (and those of other companies) are taken from the several old records, as the lists which have heretofore appeared in print are unreliable: Grant Goodrich, William Osborne, W. H. Taylor, Charles Cleaver, S. J. Sherwood, Starr Foot, J. Price, J. W. Hooker, A. Peck, Benjamin W. Raymond, T. Whitlock, T. Church, B. Briggs, S. P. Warner, A. C. Wood, O. Sherman, H. O. Stone, J. Campbell, T. B. Carter, Alexander Loyd, J. Wadsworth, L. B. Goodsell, S. Sawyer, W. King, N. Sherman, Jr., J. M. Underwood, Darius Knights, George Collins, C. M. Gray, T. King,

O Sherman

J. Keen, J. S. Root, J. H. Rochester, P. C. Sheldon, C. N. Holden, S. M. Davis, A. D. Sturtevant, A. Bent, J. D. Davis, H. Witbeck, R. P. Hamilton, L. M. Boyce, J. M. Adsit, S. B. Collins, A. G. Downs, A. E. Fuller, E. W. Herrick, E. Bestwick, S. W. Peck, J. B. Jackson, T. W. Goodrich, J. S. Vanduser, W. H. Cheeseman, I. L. Milliken, S. J. Surdam, W. Lock, George Smith, G. M. Rogers, C. Adams, J. H. Reed, J. H. Kinzie, R. Freeman, G. G. Randolph and J. Brooks. Hook and Ladder No. 1 did good service until the disbandment of the volunteer department. John M. Turner, J. W.

Ho. J. Carter

Hooker, C. M. Gray, George Collins, Darius Knights, Charles Burley, B. W. Seaton, and Charles E. Provost were foremen. When disbanded, in 1859, the company was using a truck built in 1856, and consisted of about thirty-five men. The house was located on La Salle Street, between Madison and Washington.

Engine Company No. 1, the first, and in many respects the best, of the volunteer companies, was organized December 12, 1835. Its first foreman was S. G. Trowbridge. A. Gilbert, Cyrus P. Bradley and J. M. Donnelly, foremen of this company at different times, were afterwards Chiefs of the Department. Alvin Calhoun, on the other hand, who served as Chief in 1839, six years later held the position of foreman of No. 1 with almost as much pride. Asher Rossiter, James J. Langdon and F. A. Bragg also held the position of foremen. As its motto indicated, No. 1 worked for the "public good" for many years. The company was not disbanded until February, 1860. Its engine house was then on Dearborn Street, between Washington and Randolph, and the organization went out of the department about eighty strong. Among the earliest members of No. 1, in addition to those given in the general sketch of the Department, were: S. G. Trowbridge, E. Morrison, Joel Wicks, H. B. Clarke, John S. C. Hogan, W. A. Neff, T. O. Davis, Peter Pruyn, Ira Kimberly, M. B. Beaubien, A. V. Knickerbocker, Seth W. Paine, Ebenezer Peck, H. C. Pearsons, George Davis, J. C. Hamilton, Luther Nichols, E. B. Hurlbut, A. G. Burley, A. Rossiter, C. E. Peck, Isaac Cook, C. P. Bradley and N. Sturtevant. There were also in the ranks, at a later period, their service in some cases stretching over many years, H. H. Yates, J. Beecher, Peter Page, G. Randolph, C. P. Albee, C. Skinner, G. R. Bills, J. W. Steele,

A. Loomis, N. C. Walton, J. Harmon, P. P. Chapin, E. Bowen, D. D. Stanton, D. M. Wooster, T. D. Grey, G. W. Fish, S. James, C. G. Carpenter, Thomas Smith, Prentiss Law, William R. Green, E. P. Groom, G. A. Robb, E. W. Newhall, W. Butz, J. L. Howe, J. Volf, W. W. Keith, A. Spencer, J. Martindale, A. Ferguson, M. Hubbard, B. Benton, R. P. Hamilton, W. L. White, O. C. Moody, H. Pike, W. M. Butler, H. Warner, George Stephens, G. C. Wicker, P. Myer, P. Canfield, S. S. Durfee, W. W. Jackson, J. Tiffany, H. Rodcap, J. Rosenberg, S. H. Jennings, J. E. Weber, G. F. White, Charles Wood, R. Bell, A. Stow, J. G. Patterson, A. Crawford, William Carson, V. A. Boyer, M. Shapley, H. McGraw, A. F. Bradley, P. Casey, S. J. Noble, H. H. Lubbecker, F. Lubbecker, C. Chovin, C. Baldwin, Martin Hale, C. Dole and J. McDonald.

"Metamora" Engine Company No. 2 was organized December 4, 1837. Among its original members were Nat King, A. S. Bates, P. Graff, A. G. Hobbie, T. E. Tucker, C. Sauter, J. Cruver, A. D. Sturtevant, S. B. Collins, S. Johnson, J. Sauter, F. E. Seybold, F. Rose, Ira Coleman, E. H. Sammons, C. Buhl, A. S. Sherman, E. A. Rider, B. W. Raymond and George L. Campbell. Mr. Rider was its first foreman. The "Metamora" retained its organization until 1859, the last diplomas being issued in April of that year. Sanford Johnson, A. S. Sherman and John T. Edwards will be remembered as among its best foremen. J. L. Gerber and J. L. Wagonberger served for several years previous to the disbanding of the company. Among other early members were: S. Lind, J. Martindale, George Collins, Thomas Melvin, A. Batz, A. Pierce, G. R. Bills, John Waite, S. S. Hovey, C. Mann, Loomis Andrews, J. E. Keisling, Henry Gekler, William Crawford, A. Scongale, A. G. Downs, J. W. Kraff, J. W. Steele, Chris. Hoffman, S. S.

S Lind

Barry, S. Burton, Joseph Berg, S. S. Robinson, J. C. Brantigan, A. Burnham, P. L. Yoe, B. Blazey, O. F. Geer, J. Letz, John Hettinger, J. A. M. Hoisington, Charles Hoag, Fred Letz, J. F. Jewett, I. Shaw, S. N. Stebbins, Z. Martin, J. Hogan, H. R. Davis, C. V. Ware, J. W. Poulton, Joseph Purdy, E. J. Van Alstien, C. Charleston, J. T. Edwards, L. Jackson, J. H. Martin, B. G. Johnson, B. W. Brunker, H. Webber, W. H. Adams, William Blank, William Wetsell, George Peterman, George R. Roberts, M. Schram, G. M. Vandercook, J. H. Toogood, C. Arnold, W. Dunn, P. Groll, G. Vandercook, Lewis Haas, Fred Sween, Casper Lauer, A. Kroeger, P. Apfel, M. Schaub, J. Thomme, Fritz Muhlhausen, J. R. Thomas, M. Moran, D. Leonard, J. M. Hannahs, A. Woods and J. Schank.

The Chicago Bag and Fire Guard was organized in September, 1841, and was disbanded in July, 1846. Among its foremen were G. A. Robb and L. M. Boyce. Mr. Boyce was the last to hold the position and was among the original members of the so-called "Forty Thieves." The duties of the company were similar to those of the Citizen's Fire Brigade, formed after the disastrous fire of 1837. The names of the famous "forty" were as follows: L. M. Boyce, D. S. Lee, W. H. Adams, J. C. Haines, L. P. Hillard, J. Goss, J. B. Mitchell, W. Dunlop, W. M. Larrabee, Ira Couch, J. B. Wier, F. A. Howe, J. W. Strail, J. H. Rees, George Raymond, A. Follansbee, C. N. Holden, E. I. Tinkham, A. H. Burley, Sol. Taylor, A. McClure, T. P. Robb, H. M. Stow, S. J. Surdam, H. W. Bigelow, R. P. Hamilton,

Thomas George, A. E. Fuller, P. C. Sheldon, I. S. Harb-
ley, E. K. Rogers, C. R. Vandercook, E. G. Hall, J. C.

J. H. Hodge Jr.

Hodge, W. S. Newberry, J. H. Burch, J. E. Davis, J. H. Dunham, E. Emerson and Luther Nichols.

"Neptune" Bucket Company No. 1 was organized September 7, 1841, with F. T. Sherman, foreman; W. J. Hamilton, assistant; S. J. Lowe, William H. Jones and S. Woodworth were also foremen. Among its leading members were: F. T. Sherman, Charles Whitlock, Charles Hodgson, B. Sammons, W. H. Jones, J. K. Murphy, D. N. Chappell, G. H. Lafin, Ed. Sherman, F. W. Getzler, W. J. Hamilton, C. D. Grannis, James Woodbury, H. B. Payne, W. H. Wachter, W. H. Green, O. F. Lowe, G. W. Beecher, W. J. Thompson, C. C. P. Holden, Jerome Butler, J. J. Clarkson, Joel A. Kinney, B. F. Wells, C. H. Getzler, Philip Fry, J. F. Gunter, Sam Lowe, James Doyle, H. Woodbury, W. F. Hughes, John Patterson, W. Ewen, Sam Beach, W. Walton, H. C. Tiffany, F. W. Taylor, G. W. Pike.

Engine Company No. 3 was organized November 21, 1844, and was not disbanded until February 13, 1860. The company had for its motto: "Semper Promptus," and when the boys were not prompt it was only because there was a "Niagara" of difficulties in the way. George F. Foster, its first foreman, was followed by such men as William M. Larrabee, Julian S. Rumsey, A. H. Burley, J. M. Johnson, and E. P. Wood.

J. S. Rumsey

Mr. Foster also served a second term in 1850-51. No. 3 was one of the last volunteer companies to go out of the Department, and maintained its reputation to the end. It occupied a house on the corner of North Wells and Kinzie streets, and used a piano-style two-crane-neck engine, built in 1854. Among its earliest members were John H. Kinzie, G. F. Foster, A. H. Burley, George F. Rumsey, J. S. Rumsey, G. S. Hubbard, Alex Wolcott, J. M. Van Osdel, U. P. Harris, S. A. Lowe, M. Scranton, Jr., J. E. Bishop, John Turner, J. B. Preston, J. B. Doggett, E. I. Tinkham, J. O. Shaw, W. H. Macy, C. R. Vandercook, J. S. Farwell, Benjamin Bourland, L. Turner, P. Kelsey, T. P. Robb, W. M. Larrabee, J. Magill and Denis J. Swenie. Mr. Swenie became a member December 3, 1849.

"Philadelphia" Hose Company No. 1 was organized January 30, 1845; with headquarters on the North Side, near Clark-street bridge. J. B. Johnson was foreman. After 1849 it occupied part of Engine House No. 3, corner of Kinzie and Wells. In 1855 it was removed to the Kinzie school lot, corner of Ohio and LaSalle streets. "We strive to save" was the talisman by which the company accomplished many brave deeds. Following Mr. Johnson as foreman may be mentioned T. J. Holt, James V. Boyer, John F. Fitzpatrick and E. Baggott.

Its original members were William Smith, Jacob B. Johnson, Al. L. Scranton, Francis Jordan, Hugh K. Henry, Julian Dunham, John Stockton, George Crane, William O. Snell, Samuel Warner, Thomas Cann, John Nicholson. In the spring and summer of the same year James K. Webster, Thomas Holt, Charles Williamson, William Alverson, C. Anderson, C. Hodgson, H. Butterfield, R. Alverson, and R. N. Garrett joined the company.

"Red Jacket" Engine Company No. 4 was formed November 13, 1846, the organization being composed mostly of members of the disbanded "Neptune" Bucket Company. F. T. Sherman was the first foreman, and Hiram Jones, J. L. Marsh, Edwin Sherman, D. N. Chappel, C. E. Moore, John Eagan and William H. Wachter, subsequently held the office. The plucky ones under them made No. 4 what it was from the time of its organization until its disbandment by the Council, March 22, 1858. The "Red Jackets" were disbanded September 5, 1854, but re-organized in May, 1855, as the "Humane Company," with William Wachter, foreman. There was so much feeling, however, against those who had abandoned the old name that when the "Humanes" first appeared at a fire, it was with difficulty that a lot of "Red Jacket" supporters were prevented from mob-

C. N. Holden

bing them. The boys soon re-christened themselves the "Red Jackets" and again became public favorites, retaining their former warm place in the city's heart until the paid department came in. In 1858 the company worked a piano-style engine, built in 1848. Their house was at the armory, on South Franklin Street. In addition to names already mentioned, No. 4 enrolled Charles Whitlock, C. B. Sammons, W. H. Jones, J. K. Murphy, G. H. Laffin, E. Sherman, F. W. Getzler, W. J. Hamilton, C. N. Holden, J. A. M. Hoisington, K. K. Jones, J. N. Harmon, J. J. Wilkie, H. B. Paine, W. H. Green, C. D. Grannis, O. F. Lowe, G. W. Beecher, W. J. Thompson, J. Butler, I. J. Clarkson, J. A. Kinney, B. F. Wells, C. H. Getzler, P. Fry, J. F. Gunter, J. C. Church and S. C. Bliss.

"Excelsior" Engine Company No. 5 was organized November 23, 1846, with headquarters at Clinton Street, between Randolph and Washington; A. S. Sherman, foreman. The company was afterward located on Jackson Street, between Jefferson and Clinton. Succeeding Mr. Sherman in office were Charles Morton, R. Green, Silas McBride, Lewis Dodge, William H. Ostin and James Kehoe. No. 5 was disbanded June 10, 1859. Among its early and well-known members may be mentioned A. D. Sturtevant, A. Pierce, M. Keith, E. L. Clarke, C. D. Robinson, C. Morrison, R. B. Barnes, George Reynolds, John P. Fish, J. M. Edwards, E. Edwards, "Captain" Cringle, George Walrad, Thomas George, E. J. Chapin, E. Sullivan, G. R. Sloat, A. G. Throop, A. A. Dexter, Charles Marston, E. M. Gregory, H. Witbeck, N. Sturtevant and J. H. Rees.

"Rough and Ready" Bucket Company No. 1 was formed in January, 1847, and during the succeeding April was received into the Department. Charles Harpell was the first foreman. Its headquarters were at the foot of La Salle Street. In 1849 it went out of service. Charles S. Perry, Henry Gybe, and Sanders Woodworth also were foremen. This company was the immediate successor of "Neptune." Among the more prominent members were S. O. Gibbs, F. Townsend,

H. Blaney, S. S. Williams, Charles Harpell, Matt Conley, H. C. Kelly, W. S. West, E. Grubb, J. Battery, Dennis Morris, John McGraw, James Barry, Hiram Scoville, Edward Flood, J. E. McGinnis, S. George, Patrick Barry and Samuel Scott. No. 1 was put into service by the Common Council, and its membership was limited, as were also its duties. It was disbanded for non-attendance at fires.

THE FIREMEN'S BENEVOLENT ASSOCIATION was formed in October, 1847; S. F. Gale, president; J. H. Kinzie, vice-president; C. E. Griswold, secretary; A. Gilbert, treasurer. The members (and the association included nearly the entire Department) were assessed at first an initiation fee of \$1, with annual dues of fifty cents. In 1850 the initiation fee was abolished, and the fees reduced to twenty-five cents. The association was incorporated by the Legislature June 21, 1852, and a new constitution and by-laws were adopted. These confined the benefits of the association to the volunteer department, and refused to recognize the "Citizen's Brigade as firemen of the city of Chicago." A life membership was acquired by paying three dollars into the treasury. After the great fire of October, 1857, the association undertook the erection of a monument in Rosehill Cemetery, in memory of the brave men who lost their lives in that casualty. It was not completed until seven years after the idea was conceived, but even then it was the first monument of the kind ever erected in the United States. In July, 1853, two physicians for each division of the city were appointed by the association to attend to firemen who should suffer injuries in the discharge of their duties—Dr. W. B. Herrick and Dr. J. V. Z. Blaney, North Division; Dr. Philip Maxwell and Dr. C. G. Smith, South Division; Dr. V. L. Hurlbut and Dr. E. McArthur, West Division. The officers of the association up to 1857 were, Presidents—S. F. Gale, 1847-1850; C. E. Peck, 1851-1854; U. P. Harris, 1855; John T. Edwards, 1856-1863. Vice-Presidents, C. E. Peck, 1847-1850; U. P. Harris, (resigned before term expired), 1851; P. L. Yoe, 1851-1852; U. P. Harris, 1853-1854; J. M. Donnelly, 1855; J. M. Johnston, 1856; J. M. Donnelly, 1857. Second Vice-Presidents, J. H. Kinzie, 1847; C. M. Gray, (resigned before term expired), 1848; James H. Rees, 1848-1849. (Office abolished in 1850.) Secretaries, C. E. Griswold, 1847-51 (resigned before the latter term expired); J. H. Rees, 1851-52; G. H. Rankin, 1852; T. W. Wadsworth, 1853-54; C. P. Bradley, 1855; Isaac Brown, 1856; P. P. Wood, 1857. Treasurers, A. Gilbert, 1847-55; H. Greenbaum, 1856; J. M. Johnston, 1857.

"Hope" Hose Company No 2 was organized March 24, 1848, by George R. Sloat, Hugh Dunlop, P. O. Donahue, Daniel Day, William Lull, Eben Lewis, James Thomas, D. E. Kelly, James S. Gibson, William Mix, Joshua White, J. R. Hamlin, A. P. Penny, George Penny, Noah Sturtevant and W. H. Sadler. In January, 1849, the company resigned, but was re-organized again in October, 1850, with Samuel O. Eames as foreman. The members of the company again resigned but re-organized in November, 1854, and were finally disbanded in 1859. "Hope" was considered the most perfect organization of the kind in the West. S. A. Lowe, George Sloat, Noah Sturtevant and William James, Jr., were among some of the best remembered foremen. At its re-organization, November 27, 1854, the original members were R. S. Johnson, N. G. Tucker, W. W. Billy, H. Meyer, B. F. White, J. E. Martin, D. W. Jenkinson, B. E. Dye, A. Seligman, J. D. Davis and W. Stebbins. August 1, 1849, "Protector" Engine Company No.

6 was formed; with Charles Morton, foreman; W. H. Hannahs, assistant; T. P. Plantz, secretary; Henry Nettleton, treasurer. Mr. Morton was succeeded in 1850 by W. H. Hannahs. Afterward came E. A. Webber, G. P. Groff, R. A. Williams (Chief in 1868), W. J. McMillan and Edward Mendson. Among the members who joined the first year were E. A. Webber, H. M. Nettleton, J. Mitchell, F. J. Hannahs, D. H. Neff, A. H. Dufer, J. Crawford, J. McGinn, L. W. Fish, H. Cook, J. McCafferty, M. P. Coughran, C. Haysen, S. Baker, M. Lynch, B. Rum, J. Braily, H. Renney, E. Waggoner, E. Low, J. Curtiss, E. O'Rourke, D. W. Coney, J. M. Hannahs, H. B. Bacon, T. Santes, G. B. Stole, P. Willard, F. M. Justice, G. W. Neff, O. Neff, Erwin Fowler, G. Kenderick, C. Hamlin, A. Warner, and B. Kurn. The company was disbanded June 10, 1859. Its house was then located on West Lake Street, between Clinton and Jefferson.

"Lawrence" Engine Company No. 7 was formed September 2, 1850. On January 6, 1852, it was re-organized as the "Eagle." Matthew Conley was its first foreman, and C. E. Peck, Nicholas Gross and John M. Reis also had charge of the company. For a time its headquarters were on LaSalle Street, but afterward a house was built on State, near Harrison. As an efficient organization this company never took the lead, but among its members were several active men. As they were most decidedly "on the muscle," they were often prominently before the public. Once, to the surprise of everyone (themselves most of all), it is related that No. 7 captured the prize at the State fair. This puffed them up with pride and they demanded a new machine. The demand was refused. A few weeks later their engine house was burned to the ground, and the "old machine" was found chained to the floor. The point has never been definitely settled whether these circumstances had any relation to each other, or whether they formed a mere coincidence. The "Eagles" disbanded July 9, 1859, numbering then about forty men.

"Wabansia" afterward "Phoenix" No. 8 was organized December 22, 1851, among its original members being J. B. Sanford, E. B. McCagg, S. S. Durfee, C. Charleston, J. R. Hugunin, W. M. Larrabee, S. H. Kerfoot, H. A. Mitchell, F. Hathaway, W. E. and J. B. Doggett, F. A. Benson, W. Whitney, J. Magill, G. P. Rumsey, G. L. Hubbard and A. V. G. De Wolf. In June, 1853, the "Phoenix" disbanded and October 17, of the same year, "Cataract" was organized from its remains. Among the foremen of the two companies may be mentioned S. S. Durfee, Silas McBride and O. Durfee. "Cataract" went to pieces October 4, 1858.

Hose Company No. 3 was organized as the "Lone Star," December 23, 1851, moving into the house of No. 2 on Franklin Street. Among its original members were: H. Thiele, William Nemyer, H. Wellmann, F. Busch, D. Tung, W. Sorgenfree, C. Flentze, C. Batz, A. Beck, F. Iselind and E. Kiesling. A. Meyers, A. Balson, J. Tyler and William Warlick were foreman. In 1859 the company numbered about fifteen members.

"Illinois" was one of the companies which opposed Mr. Swenie and the paid system, and was among those which turned over their apparatus to the city, and was disbanded by the Common Council on March 22, 1858.

"New England" Engine Company No. 9 was organized February 6, 1854, and disbanded March 5, 1855. Among its original members were N. Tryon, J. W. Boutwell, R. W. Sperry, C. Whitcomb, S. Parker, C. D. French, L. M. Emerson, A. P. Grover, N. McPherson, J. M. Caldwell, B. F. Davis, S. M. Marble, J.

P. Garland, H. P. Norton, H. L. Sweat and George Upson.

"America" No. 9 was organized August 24, 1857, and was disbanded in 1863. W. F. Beecher, W. D. Smith, D. S. Hadley, F. B. Clapp, G. W. Fuller, R. B. Hill, John Lawless, Ed Sanders, W. H. Eddy, W. B. Bateham, D. H. Curtiss, B. M. Green and J. T. Morris were some of its earliest members. The "America's" headquarters were at "Carville," a settlement composed principally of employes of the Illinois Central Railroad Company. The company was organized by Mr. Bateham.

"Washington" Engine Company No. 10 was organized January 8, 1855, John Schank, foreman. Several members of "No. 2" were taken into the ranks, but it was composed mostly of Germans. "Washington's" house was located on Wells Street, near Polk, in the locality of the old Bridewell. The early members of the company, those who joined January 8, were: John Schank, John McCue, John Hainlain, S. J. Noble, Henry Riners, R. Van Riper, Anton Berg, J. Murrta, Jacob Buck, Peter Moulter, John Cook, P. J. Bishop, J. Bear, F. Lubeky, Jacob Pool, F. Schoch, F. Leinkenheld, G. Hartmann, A. Hackfelt, M. Hickey, John Collins, F. Hagemann, F. Shilthorn, W. Voltmer, R. Pannell, N. Kramer, G. Murray, C. Nickle, D. Baker, J. Brunst, G. Colkbrewer, N. J. Kreigh, A. Kramer, J. Wayant, C. Leodding, H. Brinckman, W. Blanke, R. Slagle, A. Matress, W. Koch, C. Koch, F. Jacobson, S. Caswell, S. Young, Frederick Jahn, Justice Jahn, T. Kiley, and P. Kehre. John Schank was foreman of No. 10, which was one of the strongest companies in the Department. Tom Buckley was one of its best-known members, being its secretary for many years. L. J. North, the circus man, was also one of the company, and an honorary member of the hose company attached to it. No. 10 was disbanded by the Council March 22, 1858.

Next, September 10, 1855, came "Lafayette" Hose Company No. 4, a rival of "Hope;" M. Powell was foreman. George Irvine held that office at a latter date. The company was stationed on the corner of Clinton and Washington streets. Its original members were: M. Powell, J. Connell, I. G. Carter, George Haden, J. Powell, H. B. Carter, R. Hackett, J. Stevens, A. McFarlin, H. Taylor, H. Cole, W. D. Francis, T. Maddy and William Curlet. "Lafayette" was one of the last companies to go out of the service.

"Rescue" Hook and Ladder Company No. 2, was admitted to service November 20, 1855. Following is a list of the original members: H. Warlick, P. Leannarde, C. Stroot, W. Fletcher, B. Weigselbaum, N. Schank, W. Tillman, R. Weiland, A. Hegnar, S. Davis, D. Tung, A. Dube, C. Neugart, H. Tias and O. Shelmeir. Mr. Warlick was the first foreman, and F. Lunatz subsequently held the place. This company formed a portion of the paid Department.

"Neptune" Engine Company No. 11 was organized February 8, 1856, and was not disbanded until 1860. Original members: T. Scheiner, T. Bahr, F. Rabach, F. Gerbing, J. Rehm, W. Busch, B. Nitchman, J. Sebastian, P. Weber, F. Gebel, J. Kuhn and T. Schreiner. N. Siemon and H. Bebee were early foremen. The house was on Dearborn Avenue.

"Wide Awake" Engine Company No. 12 was organized January 31, 1856, with headquarters on Liberty Street, at Third Avenue; John Wagner, foreman. Original members: George Walter, J. Doetsch, J. Pollak, F. Ross, N. Claris, P. Stevens, F. Miller, J. O'Brien, L.

Allan, O. Swartz, H. Sudorf, J. Frantz, S. Harper, Charles Rose, H. M. Peters, A. Driz, P. Sullivan, J. Ryan, T. Lyons, E. Hays, M. Doharty, and John McMurty George Ross, Charles Rose and Nicholas Claris also acted as foremen. It was disbanded August 15, 1859.

"Torrent" Engine Company No. 13 dated from January 31, 1856; headquarters on Third Street, near Milwaukee Avenue. It disbanded in April, 1859, but it was again organized. J. M. Lambien, F. Marcus, P. Lambien, H. Nash, M. Waller, George Hettinger, P. Eveling, H. Johnson, H. Nettleton, Peter Miller and E. H. Wagoner, were among its earliest members. J. M. Lambien was its first foreman. No. 13 survived most of the volunteer organizations.

"Lady Washington" Hose Company No. 5 was organized January 5, 1857; John R. Clark, foreman. Its house was located on the corner of Pacific Avenue and Harrison Street. Original members: J. R. Clark, J. P. Bishop, J. H. Clapp, G. D. Enis, D. Young, O. P. Hull, J. C. Pilot, W. E. Livingston, George Simmons, P. Ludwig, J. D. W. Howard, M. Grant, J. Comfort, J. Hart, M. A. Seymour, N. H. Wadem, C. R. Cummings, A. Watt, W. H. Sears, S. Walker and W. Nowland. It was disbanded March 22, 1858.

Although organized previous to the "Lady Washington," (December 5, 1856,) "Liberty" Hose No. 6 was not recognized until a few days afterward; hence its number. The company had its house near the Union depot, at the foot of Lake Street. Being so near the lake, the location was not conducive to distinctly catching sounds of the fire alarms. Sometimes the boys

missed the bells altogether; but when "the scouts" were out, and "Liberty" was duly notified of the alarm of the bells, they "made the dirt fly," and created a commotion in the breasts of "Hope" and "Lafayette." The company remained intact until November, 1858. Its gallant foreman, John B. Dickey, lost his life in the fire of October, 1857. Original members: J. B. Dickey, W. R. Goodnough, M. B. Mills, H. C. Hatch, H. C. Doty, P. Somers, T. O. Wilson, Robert Gardner, C. P. Bower, E. A. Tillibine, A. Greer and J. Thomas. M. W. Shay, assistant marshal in the paid Department, joined the company in January, 1857.

"Red Rover" Engine Company No. 14 entered the service January 24, 1857; Thomas E. Courtney, foreman. The headquarters were corner of Blue Island Avenue and Polk Street. The company was disbanded March 22, 1858, by the Council. In that year James Ready was foreman. The engine was third-class, goose-neck, Wright's style; the number of men forty-seven. Among its early members may be mentioned T. E. Courtney, M. P. Ryan, J. H. McCarty, William Foley, J. Magee, George Powell, M. Scanlon, William Day, D. Hays, J. Laughlin, M. Hanley, M. Hays, J. Ready, J. Hogan, P. Walsh, E. Murphy and E. Casey.

"Empire" Hook and Ladder Company No. 3 was added to the Department March 9, 1857; A. Reary, foreman. Its headquarters were on Clinton Street, corner of West Washington. The company went out of the Department, with other dissatisfied organizations, in March, 1858. No. 3 was the last organization to be effected in the Department during 1857.

HARBOR AND MARINE.

CHICAGO HARBOR.

Like other works of public utility the improvements and protection of Chicago harbor were accomplished only after many years of experiment and at great expense. The canal and the harbor were twin enterprises. The former would be almost worthless if there were no clear way of exit into Lake Michigan; and without a good harbor to shelter vessels from the storms which raged over the lake, it was early seen that Chicago could never become a port of entry. Previous to the voyages of Joliet and LaSalle, the accretions which had fallen to the lake bottom as they rested upon the ice piled up in the river's mouth, added to the natural formations caused by the lake currents, had formed a large sandbar, and, at times, blocked navigation.* LaSalle, from his observations in 1682, fails to see how a shallow cut canal could supply navigable water for the Illinois River during the dry season, or if that should be accomplished, how commerce would be benefited, since even in a rainy season the surplus water which flowed over the portage from the Desplaines (the "Chicago," he calls it), would not cover the sandbar at the mouth of the channel.† It is reasonable to suppose that all the early travelers noticed and commented upon this impediment to navigation, but until Fort Dearborn became one of the most famous of the Government trading-posts no decisive movement was made for the improvement of the river's mouth. In 1805 the agent at the United States Indian Factory, which was established that year, suggested to the Government the necessity of clearing away the obstruction, in a limited way, from the mouth of Chicago River. But his idea of a harbor was just as limited as his dreams of what the location was destined to be. All that was necessary to insure a safe entrance to the river was a narrow ditch, which might permit the easy passage of a Mackinaw boat up to the very door of the trading house; and, this effected, his conception of improvement was fulfilled. In a few years, however, keen observers traveling over the Western country saw the geographical advantages which this muddy point possessed, and realized and prophesied its future importance. The canal enterprise was therefore not only pressed to public notice, but the ideas of the new generation in regard to a harbor expanded prodigiously. In 1816 came Colonel Long, and he had something to say about the canal and the harbor. During the next year Samuel A. Storrow, Judge Advocate, traveled through the West, and like many another enterprising man since then, visited "Chicago" and talked about it. He admired the wonderful portage which separated the waters of the Great Lakes from the waters of the Great River, and said that the canal should be a matter of national concern. The Judge also described the site of Fort Dearborn, and (as all observers were beginning to do with unanimity) bewailed the fact that "it had no advantage of harbor, the river itself being always choked, and frequently barred." Then, in 1818, William Darby,

a New York author, took a trip through the West, and by him there was further expatiating on the wonderful portage and the importance of the canal. The United States commissioners, with their surveyor, Mr. Sullivan, were then running their lines to mark the lands which had been ceded by the Indians in 1816.* A map was therefore made of Chicago and vicinity. The main river flowed northeast and east, for about three-fifths of a mile, to a point nine hundred feet west of the parade ground. From that point it commenced to make a complete bend around Fort Dearborn, and entering upon its direct course south, flowed between the great sand-bank on the east and the marsh on the west, entering the lake (when it could), about eight hundred yards south of a line drawn east from the present southwest corner of River Street and Michigan Avenue. Some two hundred and fifty yards from the confluence of the river and the North Branch a small creek entered the main channel from the north, while from the south, at a point north of the present Wabash Avenue, another stream entered the river. Opposite Fort Dearborn a small bayou stretched back from the river to the northwest. The entire length of the main river in 1818 was about one and a half miles. No suggestion was made, however, to improve the harbor. It was reserved for H. R. Schoolcraft, secretary of the Indian commission which visited Chicago in 1821, to first call attention to the matter as a measure of general utility and humanity. It is observed that he expressed some doubt as to whether a harbor could ever be formed, but his plan was definite and bordered upon the prophetic:

"We allude," he says, "to the formation of a harbor on Lake Michigan where vessels may lie in safety while they are discharging the commodities destined for Illinois or encountering the delays which commerce frequently imposes. It is well known that after passing the Manitou Islands there is no harbor or shelter for vessels in the southern part of Lake Michigan, and that every vessel which passes into that lake after the month of September, runs an imminent hazard of shipwreck. Vessels bound to Chicago come to anchor upon a gravelly bottom in the lake, and, discharging with all possible speed, hasten on their return. The sand which is driven up into the mouth of Chicago Creek will admit boats only to pass over the bar, though the water is deep enough to allow vessels to lie above. Among the expedients which have been proposed for keeping the mouth of the river clear of sand, one of the most ingenious, and perhaps practicable, is that of turning the Konomic (Calumet), by a canal of sixteen miles, into the Chicago, above the fort, and by the increased body and pressure of water, drive out the accumulated sands. It is yet somewhat problematical whether a safe and permanent harbor can be constructed by any effort of human ingenuity, upon the bleak and naked shores of these lakes, exposed, as they are, to the most furious tempests. And we are inclined to think it would be feasible to construct an artificial island off the mouth of the Chicago Creek, which might be connected by a bridge with the main land, with more permanent benefit to the country at large, if not with less expense, than to keep the Chicago clear of sand. Stone for such a work is abundant near the entrance into Green Bay, and, if built on a scale sufficiently liberal, it would afford convenient sites for all storehouses required."

The Government breakwater, with the sandbars which it has been the means of forming, may be likened to Schoolcraft's bridge connecting the artificial island

* Pierre Margry, in *Magazine of American History*.

† *Ibid.*

* The map of 1813 was presented in the case of *George C. Bates vs. Illinois Central Railroad Company*, before the United States Circuit Court, Northern District of Illinois, in October, 1859.

with the main land, and his storehouses to the huge elevators which now cover those convenient sites. But when Schoolcraft wrote, there was little to be seen but an old stockade fort and John Kinzie's block-house; and although his general idea of protecting the river's mouth seems to have been the correct one, he did not see the necessity of forming an artificial channel, so that the river's course could be made more direct to the lake, and its current thereby strengthened. This idea, however, was left to be clearly brought out by the engineers who made the surveys for the canal route in 1830. In February of that year William Howard, U. S. C. E., proposed a plan for "improving the mouth of Chicago River." His idea was to close the original outlet, and cut a channel through the conformation of sand and gravel which prevented the river from flowing eastwardly, in nearly a direct course, north and south piers were to extend out into the lake, in a direction south of east; the artificial channel being somewhat over one thousand feet north of the natural outlet of the river. The map, and a well-conceived correspondence between residents of the settlement and influential members of Congress, caused general attention to be called to the improvement of the harbor, in connection with the building of the canal. When in August of this year (1830) the town of Chicago was surveyed, provision was made for a public levee on the general plan adopted by Western river villages, and extending along South Water Street. But the system applicable to the light-draught river boats was not applicable to the large lake craft. So the levee plan was abandoned, and the location became a part of the wharfing property, which, in later years, gave the corporation so much trouble. The continued efforts made to improve Chicago's harbor bore fruit in 1833. For the purpose of obtaining an appropriation, a map was sent to Congress, designed to show what a growing town Chicago was. It indicated the course of the river, the platted sections of the town, and the contemplated subdivisions. This map, undoubtedly, assisted in securing the appropriation of \$25,000, which was obtained from Congress, March 2, 1833. The works were immediately put in charge of Major George Bender, his assistant superintendent being Henry S. Handy. Samuel Jackson was foreman of construction, and held the position for some time. A. V. Knickerbocker was appointed clerk, and continued so to act for a number of years.* Mr. Jackson arrived from Buffalo June 27, 1833, in company with Joseph Chandler and Morgan L. Shapley, and work was at once commenced on the south side of the river, in front of the fort. The first stone was procured about three miles up the South Branch. The ties and timber were cut upon the Calumet, and were rafted down the river into the lake and thence along its shore to the harbor, under the direction of Jones & Gregory, the contractors for the wood work. Major Bender resigned October 31, 1833; but under his direction between four hundred and five hundred feet of the south pier were

finished.† Lieutenant James Allen took charge of the works in January, 1834, serving until September, 1838. During this season the appropriation of \$32,801 was ap-

* Morgan L. Shapley's letter to John Wentworth, May 19, 1870.

† Subsequently he was commissioned Captain of the First Dragoons, and died at Fort Leavenworth August 23, 1846.

plied chiefly upon the work of extending the north pier; and, as a rule, for several years that structure was kept from two hundred to three hundred feet ahead of the south pier. The most of the stone was taken from the quarry opened up on the South Branch. Subsequently ties and timber were procured in Wisconsin and Michigan, with the exception of a small lot taken from the North Branch in 1834-35. The appropriation of 1835 amounted to \$32,800, and under Lieutenant Allen's energetic management the work progressed most favorably.* By the close of the season the north, or weather, pier had been extended one thousand two hundred and sixty feet into the lake, where a depth of twelve feet of water was found, and most of the structure had been completed to its full height of seven feet. The pier-head was not constructed, for the reason that a new bar commenced to form in the spring, at a point on the lake shore about half a mile from the pier, and was now running obliquely, in a direction which threatened to form an obstruction across the harbor entrance, a short distance from the end of the work. Already the depth of the water on the line of the pier had been reduced from ten and twelve feet to eight. It was therefore resolved to wait until winter was over, when it could be determined whether it would be necessary to extend the pier across the new sandbar and shut out the threatened formation from the harbor entrance. It is to be remarked, however, that at the end of the north pier constructed in 1834, and for sixty feet beyond, nine feet of sand had been washed away, leaving a clear clay bottom, at a depth of eighteen feet from the surface. Many vessels had already found shelter there while discharging their cargoes. The south pier, in 1835, was extended five hundred feet, making its total length into the lake seven hundred feet. It will be remembered that during the season of 1833 a portion of it had been constructed across the river and bar. The two piers now enclosed a channel of two hundred feet in breadth, containing from three to seven feet of water, and all was ready for the dredging machines. Up to that time the current of the river had made no great impression upon the sand in the channel. Lieutenant Allen noticed that when the season's work was completed \$6,900 of the \$32,000 would remain to be applied in 1836, and that \$6,000 had been reserved for dredging purposes. Since the opening of navigation until September, two hundred and twelve vessels had arrived and discharged their cargoes at the harbor. Concerning the effects of the "land craze" upon his workmen he said:

"The great and continued emigration to the town and country has kept all kinds of grain and provisions scarce and dear, and often difficult to procure at any price. The very great demand for laborers and mechanics on the buildings and improvements of the town has maintained a very high rate of wages for workmen. The influx of this class of emigrants has been great, too; but the apparent facilities offered them of securing valuable portions of public land by settling on it—and which were confirmed to settlers and claimants at the recent land sales here—have encouraged mechanics and laborers on arriving, or soon after, to abandon their appropriate trades or occupations for a bright hope of soon making their fortunes under the pre-emption laws. Some of my best workmen, and who had been on the works since their commencement, have, since the sales at this place, refused to continue at a rate of wages from \$1.50 to \$2 per day. They have gone to Milwaukee and elsewhere to make locations on public lands. The constant changes of workmen thus made has been embarrassing and expensive to the work."

Captain Allen's map, drawn in October, 1837, indicates that, at this time, the south pier had been finished from a point opposite Fort Dearborn, across the old channel of the river, and so on out into the lake, a total

* See report of Lieutenant Allen to Brigadier-General C. Gratiot, chief engineer, dated September 30, 1835.

distance of one thousand eight hundred and fifty feet. Some five hundred feet of the lake end with the bulkhead was unfinished or only projected. The shore end of the north pier for seven hundred feet had not been finished, but it had been pushed out into the lake for twelve hundred feet, with four hundred feet of pier and bulkhead projected, in order to shut out the outer sandbar, which now extended beyond the end of this, the weather pier. Of the old sandbar, between the river and the lake, only a small tongue remained, about one hundred and seventy-five by one hundred and twelve feet. Although the eastern bank of the original channel was mostly washed away, its western boundary (the swamp east of the fort) was visible then. In 1838 \$30,000 was appropriated, but it became now evident that the improvement was progressing under a wrong plan. The prevailing currents of the lake had been rapidly depositing sediment in the shape of sandbars, which were backing up against the north pier, their general trend being a little more to the north than the old sandbar. Within the outer sandbar, which in 1837 extended beyond the finished portion of the north pier, had been formed two bars. By the continued process of deposit these were lifted further and further into view, and the intervening space filled with sand, until the second bar of 1837 virtually became the shore line of 1838. Since the commencement of improvements in 1833, the shore line had extended seven hundred feet out into the lake along the north pier, and was rapidly pushing farther in that direction. It was only a question of short time before the third sandbar, which had already been formed beyond the pier, would become a new shore line; and it would seem, unless the direction of the work was changed, that the task of protecting the harbor entrance would be an indefinite contest between the governmental purse and the natural forces of wind, wave and current. As the sandbars and the shore line extended out into the lake, the pier, in order to be of any benefit, would have to keep pace with its progress. It was therefore decided to change the direction of the pier $25\frac{1}{2}^{\circ}$ more to the north* but the appropriation of 1838 having been expended in extending the under-work four hundred and five feet in the new direction and dredging the bar already formed, it was found that this plan was no better than the old. The bar continued to form not only because of the currents of the lake, but the wind blowing from the north across the pier carried the sand from the beach into the harbor itself. Vessels now made the entrance with great difficulty in fair weather, and were entirely excluded from shelter during storms. At the commencement of operations in 1839 it was found that the bar had extended across the entrance to the channel, and four hundred and fifty yards beyond. In the latter part of March, 1839, Lieutenant (now General) A. A. Humphreys, who had succeeded Captain Allen, was relieved, at his own request, by Captain T. J. Cram. Under him Captain J. H. Leavenworth acted as agent in charge of the harbor works, the only thing attempted up to 1842 being to preserve the protections already built. Under him the superstructure of the pier was extended in the new direction, and then further appropriations were cut off. In April the board of engineers decided that all expenditures upon the harbor would be for only such work as might be necessary to protect what had been completed up to that date. A few days later, lake captains were notified of the formation of the bar across the harbor's entrance. Under date of September 1, 1839, when work was entirely suspended, Captain Cram

reported as still unfinished several hundred feet on the west end and four hundred and five feet on the east end of the north pier; also two hundred and fifty feet on the west, and three hundred and eighty feet on the east end of the south pier. Repeated but unsuccessful efforts were made by Chicago citizens to obtain appropriations in 1839 and 1840; the apathy of Congress and the evident attempt of that body to ignore the claims of Chicago creating much dissatisfaction, and suggesting the memorial of 1841. This document was signed by Mayor Sherman, the Board of Aldermen and City Clerk Hoyne. It exhibited the commercial importance of Chicago, showing that her average import trade for the past six years had reached \$1,500,000, her export trade \$348,362. The progress of work upon the harbor was reviewed and the deplorable condition of affairs at that time noticed. Piles and timbers from the upper end of the north pier were being carried away, and the dredging machines and sand scows were going to pieces. Not less than \$4,000 would repair the damage already done. The appropriation had run out and a permanent sandbar was rapidly forming. If assistance should not be granted soon, "commerce would be without shelter and human life and property endangered to a lamentable extent." The memorialists not only prayed for "immediate temporary," but for "immediate permanent" relief. Chicago's claims continued to be pressed upon Congress, and the result was that in 1843 an "item" of \$25,000 was obtained, to be expended upon the harbor. With this sum a series of repairs and some new work was effected, under the superintendence of Captain George B. McClellan. Another appropriation (\$30,000) was obtained in 1844, and during that year and the next the height of the north pier was increased from one to two feet. The appropriation was soon exhausted and Congress was again begged for assistance. Citizens of Chicago poured in upon that body facts and figures, showing her importance as a lake port and the supremacy of the commerce of the Great Lakes in which this city led the way.

Including the appropriation of 1844 over \$247,000 had been expended upon the harbor, with what results the reader is informed. Two years followed, during which the engineers made estimates, and the citizens presented memorials. Even Congressman Wentworth's speech in favor of the river and harbor bill, in February, 1846, did not break the monotony of the "No-appropriation" period. President Jackson, the friend of internal improvement, was dead, and President Polk was his antipode. The estimate of 1846 to provide for the completion of the north pier and for necessary repairs was \$24,297. It is well known that in August of that year the river and harbor bill received the presidential veto, which included \$12,000 to be expended on Chicago harbor and \$15,000 for a steam dredge boat to be used on Lake Michigan. The bill had, through the endeavors of Mr. Wentworth, received the powerful support of Daniel Webster, who addressed an able letter to the convention which met in 1847. This statesman had visited Chicago in 1837, had a fair knowledge of the lake region, and was thoroughly able to lay before the Senate his reasons for supporting the appropriation. He pictured a terrific storm on Lake Michigan, the despair of the crew, the wreck of the vessel and remarked: "What but a merciful Providence saved me from such a catastrophe when I passed over Lake Michigan in 1837?" Notwithstanding the able support which the bill received, and the decisive majority which it obtained, President Polk vetoed it and the whole Northwest arose against him. The summary

* Memorial to Congress of 1841.

action of the Chief Executive attracted the attention of the people, and, within a year, the great River and Harbor Convention was an accomplished fact.* William M. Hall, agent of the Lake Steamboat Association, with headquarters in St. Louis, is the acknowledged father of this gathering, wherein was assembled much of the political and commercial ability of the country, protesting against the narrow views and action of the President of the United States.

At the close of the season of 1846 Mr. Hall gave an editorial dinner in the city of St. Louis, at which the proceedings of the River and Harbor Convention, lately held in Memphis, came up for informal discussion. The conference concluded by Colonel A. B. Chambers, of the Missouri Republican, turning to Mr. Hall, and suggesting that the latter was the man of all others best fitted to move in the matter of calling a river and harbor convention, irrespective of party, to urge upon Congress the necessity of improving the water-ways of the West. Mr. Hall thereupon visited Chicago, where he met R. L. Wilson, Dr. W. B. Egan, S. Lisle Smith, and others, who approved of the plan, and pledged themselves to support the enterprise. Captain E. B. Ward and Oliver Newberry, of Detroit, Millard Fillmore and E. G. Spaulding of Buffalo—in fact most of the influential commercial and broad-minded men of the lake cities, of Springfield, of Boston and of New York, were as a unit in recognizing the grandeur and the beneficial effects of the movement. Finally, at New York, Mr. Hall met William Duane Wilson, Robert Fergus and a few other Western gentlemen, and made arrangements to hold a meeting, in furtherance of his project, at Rathbun's Hotel. The meeting was quite largely attended, and the committee recommended that a convention be held in Chicago, June 17. The time was subsequently changed to July 5. The committees on arrangements appointed were as follows: Chicago, William B. Ogden, S. Lisle Smith, George W. Dole; Milwaukee, Byron Kilbourne, W. D. Wilson; Detroit, Augustus J. Porter; Cleveland, J. W. Allen; Buffalo, James L. Barton; St. Louis, David Chambers. The Chicago committee called a meeting in this city on November 13. It was largely attended, and resulted in the preparation of an address, which so fairly presents the prevailing sentiment and the aims of the July convention that it is given entire:

"The high prices of freight, taken in connection with the loss of life and property upon the Western waters last season, caused several public meetings to be held in various sections of the country, for the purpose of devising the best means of remedying those and other evils of which the great mass of the people interested in commerce were complaining. At all these meetings the propriety of holding a convention at some convenient point was discussed and universally concurred in. In consequence of Chicago having been generally named as the proper point, its citizens called a meeting, named the 5th of July as the appropriate time, and chose the undersigned a committee to draft an address, setting forth the objects of the convention. The movers in this matter have been, from the first, like the undersigned, of entirely different politics, and, so far from there being, even in the remotest degree, any political design in the contemplated convention, one of the chief objects of it is to call together for a common object the men of all parties, and to convince the people everywhere that the improvements desired are not now, never have been, and never should be, connected with '*party politics*,' in the ordinary use of that term. Such a connection would, in the minds of all interested, have a very deleterious tendency. It can not be denied that there is a predisposition among all politicians to support the measure of a chief magistrate of their own party, and hence we have seen Western representatives, originally supporting harbor and river improvements, and elected upon express pledges to do so, finally vote to support a *veto* of bills providing for that purpose, and assigning as a reason therefor that it was their duty to sustain an executive of their own selection, even

* For full, reliable and interesting account of River and Harbor Convention of 1847, see Fergus's Historical Series.

though it be in express opposition to the wishes and interests of their constituents. Repeated instances of this kind must eventually give this question somewhat of a political cast, which the undersigned and all who cooperate with them would seriously regret.

The construction of *harbors* upon our northern lakes, as well as upon the Atlantic, with the improvement of our great rivers, where commerce is of a national character, necessarily involves no questions of party difference. They are matters that must interest all parties, as they do all classes, alike, and harbor and river bills have been supported by the ablest men of both the great political parties which divide this country. This subject has never entered into any presidential canvass, since each party has always taken it for granted that the candidate of the other was above suspicion upon a matter of such preëminent importance. The first congress that ever assembled under the present constitution, many of whose members helped to frame it, passed a law defraying all expenses which should accrue after the 15th of August, 1789, in the necessary support, maintenance, and repairs of all light-houses, beacons, buoys, and public piers, erected, placed, or sunk, before the passage of this act, at the entrance of, or within any bay, inlet, harbor, or ports of the United States, for rendering the navigation thereof easy and safe. General Washington signed this bill, and bills for the continuance of such work were also successively signed by presidents the elder Adams, Jefferson, and Madison. The first lake harbor bill was signed by Mr. Monroe. He never raised the constitutional question, nor do the congressional debates of those days show that any members of either branch of Congress made any distinction between *salt* and *fresh* water improvements, or between foreign and domestic commerce. All at that time were acknowledged alike deserving the fostering care of the General Government, as they also were during the administrations of the younger Adams, General Jackson and Mr. Van Buren. Though remarkably scrupulous as to the extent of which the power to construct works of internal improvements should be exercised, General Jackson and Mr. Van Buren signed bills for the improvement of rivers and construction of harbors to the amount of \$7,800,000, and the two bills signed by General Jackson in 1836 contained no less than eighty-nine items, and the bill of 1837 no less than fifty-nine. After the General Government has expended upward of seventeen millions of dollars for works of internal improvement, and mostly in the old States, by the consent and support of the very framers of the constitution and their cotemporaries, and by men, too, of all political parties, there can now be but little consideration due the cry that 'it is unconstitutional,' or the plan of a single political party to extend the advantages of such works to the new States, and to such portions of the old States as have thus far been neglected.

"Thus disposing of the constitutional and political question, the friends of harbor and river improvements arrive at the only one which can rightfully be raised, and that is merely the question of necessity. IS IT NECESSARY to protect our domestic as well as our foreign commerce? Shall we protect the *lesser* and neglect the greater? For the past three years, petitions have been presented to Congress in vain: Senators and Representatives in Congress have spoken in vain. The present Secretary of War, in his official reports, has recommended in vain; and the whole topographical corps has estimated in vain; our bills have invariably been vetoed, and we have been unable to secure two-thirds of the popular branch. Confident that there is wanting a knowledge of the necessity of these improvements among the people or their representatives, since all efforts at success have failed, it has been thought that a *general convention*, and consultation, with personal observation, might do much for us. There is not a State in the confederacy but that touches the lakes, the ocean, or the great rivers of the West. The lakes line almost our entire northern frontier, and separate us from a foreign country; and the rivers, like arteries run through the whole country, constituting an extent of navigation sufficient to reach round the globe.

"These great waters, for whose safe navigation this Convention is called, are soon to be united by the completion of the Illinois & Michigan Canal. The commerce of Boston, of Philadelphia, of Baltimore, of New York, of New Orleans, Cincinnati, St. Louis, and, indeed, of the whole country, thence becomes in a great measure connected. It has a common interest, and no injury *could*, and the greatest advantages *might* rise from a common consultation. It is a notorious fact that statements, during the pendency of harbor and river bills before Congress, are made on the highest personal authority, which never would be made if the authors had any personal observation of the great inland waters of this country, or could realize the necessity of the millions whose lives and property are jeopardized by them. Delegates in attendance will not only have the advantages of their own observation to take back with them, but they can profit others meeting them here by a consultation as to the best means of redressing existing wrongs. Having done this, they can impart the proper feelings to their neighbors, and thus aid in arousing the people to take this matter into their own hands, and see that their chief interests are no longer

neglected. It is confidently hoped that a more intimate acquaintance with the claims of these great waters, formed by men congregated for this special purpose from all parts of the Union, will result in sufficiently convicting and awakening the public mind to secure the constitutional majority, should a harbor bill ever again be vetoed. This Convention is designed to be one of free discussion, and it is hoped that the *opponents* as well as the *friends* of lake and river improvements will attend, and more especially since it is generally believed that they have only to see for themselves in order to be convinced that these demands, coming from all our great waters, are founded in justice.

"Although the construction of harbors and the improvement of rivers will be the prominent subject before the Convention, yet, whatever matters appertain to the prosperity of the West, and to the development of its resources, will come properly before it, and all plans and suggestions will be freely entertained. The committee invite a general attendance from all sections of the Union, and tender, in behalf of their fellow-citizens, the hospitalities of the city of Chicago to such, as impelled by a common interest, see fit to honor them by their presence on this occasion.

"JOHN WENTWORTH,
"GEORGE MANIERRE,
"J. YOUNG SCAMMON,
"ISAAC N. ARNOLD,
"GRANT GOODRICH."

As the date for holding the convention approached, it was obvious that the aim of its originators to avoid making it of any political significance had been realized. Previous to its opening, letters were re-

George Manierre

ceived from Daniel Webster and Thomas H. Benton, one the leading statesmen of the East, and the other a leading statesman of the West, warmly endorsing the objects of the convention and recognizing its national character.

The first day of the convention was marked by the reception of delegates by Mayor Curtiss. The procession took up the line of march, through the principal streets of the city, to the court-house square. Its order was as follows: Marshal Maxwell; band; Cleveland Light Ar-

A. Maxwell

tillery; Montgomery Guards, under Captain W. B. Snowhook; cavalry under R. K. Swift; Ship-Conventio; Engineers' Department, under Stephen F. Gale; Fire Department; band; Committee of Reception; Illinois delegation, six hundred strong; other delegations;

W. B. Snowhook

societies and orders of Chicago, etc. In the words of the editor of the Evening Journal, July 6, 1847:

"Never was the birthday of our National Independence more befittingly celebrated than on this day—to give freedom and tone to the pulse of commerce—to cheer the mariner on his airy shrouds—to brighten the homes and the hopes of thousands. Is there, *can* there, be a nobler cause under which freemen can rally in behalf of the State? That vessel with sails all set, and signals flying to the breeze, drawn by eight horses and manned throughout by sailors, bore a banner eloquent of the object of this Convention. It was a sea roughened by storms that lifted the waves to the very heaven in a distance, but hard by was a Harbor where 'the winds and the waves lay together asleep,' and a light-house lifting its star of joy and hope upon the rocky cliffs. Over all was inscribed the significant words, 'What we want.' Ah! that ship

'Convention' had a speech and an argument that appealed to the eye and reached even to the heart; and we are sure that it will not be the fault of the body of delegates now assembled, if many a gallant craft does not plough these inland seas and nobly breast the storm, in the good hope of a light to guide it, and a safe harbor at last."

When the delegates had taken their places in the pavilion, William B. Ogden, of the Committee of Nine,

R. K. Swift

appointed at New York, September 28, moved that James L. Barton, of Buffalo, be temporary chairman; Colonel A. B. Chambers, of St. Louis, and Hans Crocker, of Milwaukee, secretaries. This motion was carried, rules were adopted for governing the proceedings of the convention, and the committee on permanent officers presented a ticket to the convention, headed by Edward Bates, of Missouri. A motion made to substitute Thomas Corwin, of Ohio, in place of Mr. Bates, was thwarted by Mr. Corwin himself, who peremptorily declined serving, under the circumstances. Mr. Bates, although he had withdrawn from public life many years previously, had been a resident of the West since early manhood and having resided in St. Louis, was especially interested in all matters connected with the improvement and protection of navigation. While acting as the sole congressional representative of Missouri, in the days of the elder Adams, Mr. Bates had felt it his duty to cast the vote of his State for that gentleman. To use a phrase much in vogue among the politicians, Mr. Bates was therefore "retired" from public life, and had since resided in St. Louis, a respected and distinguished member of the Bar. When called to the chair few members of the convention were aware of his eminent fitness to guide the deliberations of so distinguished an assemblage. It is not within the province of this article to go into details with regard to the proceedings of this convention. Suffice it to say, that never before had there been a grander gathering of men, so free from political aims; nor has there been one since where the statesman so predominated over the party politician. The convention was held in an immense tent pitched in the public square. It is estimated that the attendance was fully twenty thousand, of whom one-half were members of the convention. Represented in that assemblage were leading men from Massachusetts, New York, Kentucky, Indiana, Missouri, Rhode Island, Iowa, Ohio, Connecticut, Pennsylvania, Wisconsin, Georgia, Florida, Michigan, Maine, Illinois, New Jersey and New Hampshire. It was a direct and national protest against the attitude of President Polk toward the improvements of the rivers and harbors of the West, and indicated how weakly he was supported. The sensations of the convention, however, were the wonderfully eloquent speech delivered by Hon. Edward Bates, chairman of the meeting, and the short, not to say curt, letter of regret, received from Hon. Lewis Cass, of Michigan. Governor Cass evidently forgot the resources of the times, failing to remember that an internal improvement convention of 1847 was not to be conducted upon the basis of 1837, when the wild fever swept over the State of Michigan as well as Illinois. The session lasted three days, and an executive committee, consisting of two members of the convention from each of the eighteen States represented,

was appointed to make known to Congress the principles and views of this national gathering. As far as the Chicago harbor is concerned, the convention apparently did not effect it until 1852. In October, 1849, Colonel J. J. Abert made an estimate for necessary improvements up to June 30, 1851; but the matter rested with the estimate and no further appropriation was obtained until 1852. This amounted to \$20,000 and was expended in improving the inner harbor. Another estimate was made for the year ending June, 1853, but the subject passed unheeded by Congress and was not reconsidered for the fourteen years intervening between 1852 and 1866. During this period slight improvements continued to be made on the inner harbor, under the act of July 21, 1852. The works of the harbor from 1848 to 1854 were under the superintendence of Lieutenant J. D. Webster, of the Topographical Engineer Corps. Lieutenant-Colonel J. D. Graham was in active charge of the harbor improvements from April, 1854, to 1855, and from December 11, 1856, to April 20, 1864. During his term of service the deepening of the river at the cost of the city was effected. He came two years after the appropriation of 1852 was made, and ceased connection with the work two years before the appropriation of 1866 was granted.* The improvements effected during the season of 1854 consisted of the dredging of a ship canal through the bar which obstructed the direct entrance of vessels to the inner harbor of over seven feet draught, repairing harbor machinery, and preparing for the defense of the piers beyond the line of accretion on the North Side. Work was commenced in May, and the channel was completed in July. Before the canal was cut vessels from the north, drawing over nine feet of water, were compelled to run down one-fifth of a mile south of the north pier-head, and then double on a northwardly course to enable them to enter the harbor. Vessels drawing twelve feet of water were compelled to make the double of the bar a half mile south of the north pier head. This oftentimes occasioned serious delays, as the north wind which brought them south opposed an attempt to sail northwest to the entrance of the harbor and, in fact, compelled them to anchor off the bar until the wind changed or a steamboat was hired to tow them into the inner harbor. In October, 1854, the Common Council ordered the excavation of the bank to be begun, under the grant made by Congress for the purpose of widening the river. The city superintendent began the work immediately, but the officer in charge of Fort Dearborn—Colonel Graham being then absent—informed him that further action by Congress, or the War Department, was necessary before any work could be done, and forbade him to proceed. A few weeks' work was accomplished on the excavation, later, but it was not regularly begun until the following year. The line for the excavation at Fort Dearborn, for widening the river, was not located until August 29, 1855. The line, as laid, gave the river an additional width of one hundred and fifty feet, below the Lake House ferry. It gave also a new shore on the south to a portion of the river, and rendered the turns easy for shipping. The whole of River Street was thus secured. In 1856 the improvement of the harbor at Fort Dearborn was accomplished at a cost of \$40,000, while the improvements in the vicinity of Blocks No. 6, 7 and 14, original town, cost \$43,000. The estimate furnished to Congress of funds required for repairing piers and otherwise improving the harbor, for the fiscal year ending June 30, 1857, was \$138,516.68.

At the time of the survey of April, 1857, the north

* Colonel J. D. Graham's Report to the chief engineer, December 31, 1855.

pier had been extended about two thousand eight hundred feet into the lake. In the map drawn during that year is shown the tide gauge at the shore end of the pier. Some five hundred feet of the shore end of the south pier remained uncompleted, while over one thousand and five hundred feet had been constructed, provision having been made for two openings. The map of April, 1857, also shows the pier of the Illinois Central Railroad Company, commencing four hundred feet from the shore end of the south pier, extending one thousand three hundred feet south, seven hundred feet west, about one hundred and fifty feet southwest and then some one thousand two hundred feet south again. The water basin beyond the pier was in progress of being filled with earth.

By the foregoing it will be seen that the work of improving Chicago harbor was one continued series of experiments. From various surveys made from 1821 to 1857, it is shown that the difficulties were of no slight nature. The following figures indicate the progress of accretion, or the rate of motion of the shore line eastward :*

WHARFING PRIVILEGES.—Closely connected with the subject of the river and harbor improvement of Chicago is the building of docks and the litigation in regard to wharfage property. For many years the land fronting on the river was such an object of controversy between the city and the alleged owners that no uniform dockage improvements were made. In 1833 the town first defined the wharfing privileges so that owners of lots fronting on the river, when the street run down to it, might use all but eighty feet of the thoroughfare for wharfing purposes, on payment of \$15 per year. Stipulations were also made for the purchase, by the corporation, of any improvements on lots leased from the town. In 1835 the canal trustees, under an act of the Legislature, caused a strip of land, lying south of the river (one hundred feet to two hundred feet wide) to be laid out into lots and leased for nine hundred and ninety-nine years. The lessees were to pay quite a consideration and an annual rental of one barley corn; and were also bound to build in two years a dock five feet wide, fronting on the river, which was to be kept open as a tow path. The trustees were required to dredge the river, ten feet in front of the docks, within four years from the sale, the lessees to erect good docks, five feet wide and three feet above the water, within two years from the time of the lease. The sale took place November 26, 1835, at the store of Messrs. Jones, King & Co. Soon afterward the trustees resolved that they would not dredge the river in making leases on North Water Street, and therefore they lowered the price of the lots. To aid in paying for leases, secured notes were taken for from three to six months, for the first quarter of the payment, and three years were allowed in which to pay off the balance. The sale was three times postponed, and when it did take place only six lots remained in market. In November, 1836, the time for payment was extended four months, and when the four months had expired the time was extended indefinitely. Under these and other arrangements a large amount of wharfing property changed hands, and, within a decade, most of it was in dispute either between private parties and the city of Chicago, or between the

* See topographical description of the locality, and the shore-line map in preceding portion of this work.

city and the trustees of the Illinois & Michigan Canal. The authorities rightly decided that something must be done, and done quickly, to settle the validity of titles, as on account of the bitter disputes, some of the property had been abandoned completely, and the benefits were being derived to a great extent by non-owners. The act approved February 27, 1847, was designed to adjust these titles and settle these disputes. It narrates how those portions of land on South, North, East and West Water streets, in the original town of Chicago, bordering on the river, called wharfing privileges, were a fruitful source of discord, dissatisfaction and illegal violence, and that the owners were not getting the benefits of the property. Power was therefore given the Common Council to vacate these streets, provided that nothing should be done to deprive any one or any corporation (particularly the trustees of the Illinois & Michigan Canal) of any property, without his or their consent. Persons or corporations having claims against the wharfing property were to file them in court, and to abide by its decision, unless an appeal should be taken within ninety days from the entering of the final decree. The principal reason why it was necessary that the title should be settled to this property, as soon as possible, was that the city desired to widen the river in several places, and, it is obvious, that, in order to condemn land for that purpose, it was necessary to fix the ownership of the water lots. Power having been granted to the Common Council to vacate the water streets in October, 1847, that body proceeded, by ordinance, to describe the land, in detail, which it was proposed to condemn for the purpose of widening the river and of forming several artificial basins. The lots on South Water Street were to be fifty-five feet; East Water and Market streets were to be united and called Market Street, whose width was to be one hundred and forty feet; and lots between Randolph and Madison streets were to be sold to owners who were required to excavate to within five feet of the channel of the river. To facilitate the construction of a commodious basin, by the canal trustees, on the North Side, and to deepen and widen the channel of the main river, the city assented to the following street alterations: all of North Water Street west of Wolcott; all of Carroll Street east of the North Branch and east of Water Street from North Water to Kinzie to be vacated, the contemplated basin to be commenced at the channel of the North Branch of the Chicago River, opposite the center of Carroll Street, east to the east point of Block 15, south along the channel of the main river, thence west and north along that channel and North Branch to the place of beginning. The line of the lots in Blocks 1 to 7, of the old town, and Lot 2, Block 1, of Kinzie's addition, be shifted forty feet south of the present line, and the owners of the lots east of the east line of the contemplated canal basin to excavate the ground in front of the new line to the channel of the river, within five years from January 1, 1848. A new street, to be called North Water, was to be laid out and opened from Wolcott Street west to within one hundred feet of the North Branch. In October, 1848, workmen commenced widening the river to the center of North Water Street.

As to the wharfing privileges of the West Side, in January, 1849, the Common Council ordered the dredging of the west bank of the South Branch, from Madison Street to Randolph, thence to Lake and Fulton. The city was to lay out a new street extending from Madison Street to Fulton, and discontinue that part of West Water Street lying between the east line of the new street and the river. As these improvements were

made and the dockage of the city somewhat extended, ordinances were passed imposing fines upon any one who should occupy or obstruct this property without authority from the Common Council. Although these energetic measures had the effect of inducing the improvement of water property, up to 1857 there was only about six miles of dockage built along the Chicago River and its branches, including the improvements in the artificial basins.

MARINE INTERESTS.

The pioneer of everything in this country of the Northwest is traced to some one of the French explorers. Thus in 1679 LaSalle built the first sailing vessel of the Upper Lakes, and, launching it from Cayuga Creek, a tributary of the Niagara River, departed from "Buffalo harbor" for Green Bay. The figure-head of this crude sailing-craft—a "griffin"—indicated its name. The "Griffin" was therefore the father of the numerous progeny which now cover the Great Lakes, and stretch their wings toward Chicago. The next navigating craft which should be dignified by the name of the "marine of the lakes" were suggested by the requirements of the fur trade, which called for a heavier vessel than the light bark canoe of the early explorers and missionaries. The Mackinaw barge therefore appeared upon the lakes and with it the voyageurs.

"A wild-looking set were these rangers of the woods and waters," says a well-known writer. "Their weirdness was often enhanced by the dash of Indian blood. Picturesque, too, they were in their red flannel or leather shirts, and cloth caps of some gay color, finished to a point, which hung over on one side with a depending tassel. They had a genuine love for this occupation, and muscles that seemed never to tire at the paddle and oar. From dawn to sunset, with only a short interval, and sometimes no mid-day rest, they would ply these implements, causing the canoe or barge to fly through the water like a thing of life; but often contending against head-winds and gaining but little progress in a day's rowing. But how sweet was the rest, when a favoring breeze sprung up enabling the little craft to carry sail. Then in came the oars, down lopped each, and in a few minutes all were in the enjoyment of a sound snooze. The morning and evening meal consisted, almost universally, and from choice, of bouillon, a soup made from beans, peas or hulled corn, with a piece of pork boiled in it, and hard bread, or sea-biscuit. To the Northern voyageurs rations were generally served out of one quart of hulled corn and half a pint of bear's grease or oil, this being the daily and only food. The traveler, Henry, says (1776): 'A bushel of hulled corn, with two pounds of fat, is reckoned to be a month's subsistence. No other allowance is made, of any kind, not even salt, and bread is never thought of. After supper, pipes were lighted, and, seated on logs, or squatted around the camp-fire, they chatted until bed-time. This came early and required little preparation. To wrap a blanket around the person, placing coat or shoe-pacs beneath the head, and a little greasy pillow—the only bed that was carried—constituted the whole ceremony; and speedy and sound was the sleep, beneath the watchful stars. The labor of the oar was relieved by songs, to which each stroke kept time, with added vigor. The poet Moore has well caught the spirit of the voyageurs' melodious chant in his "Boat-song upon the St. Lawrence." But to appreciate its wild sweetness one should listen to the melody, as it wings its way over the waters softened by distance, yet every measured cadence falling distinct upon the air. These songs, usually half ballad or ditty, and love, of course, the main theme, express the natural feelings of a people little governed by the restraints of civilization.'"

These barges and sailors were known at Chicago for many years, but about the year 1830 both boats and voyageurs ceased to visit the settlement, as the sloops and schooners then introduced monopolized the lake trade. As regards local marine interests, they, of course, commenced with the arrival of the first vessel at the mouth of Chicago River, after the Government had determined to establish a post and a fort here. In 1795, by treaty with the Indians, the Government came into

possession of a tract of land six miles square at the mouth of that river. To this locality, in the summer of 1803, Captain John Whistler's company was ordered from Detroit to build a fort. While the troops under Lieutenant Swearingen went overland to this point, the schooner "Tracy," under its master, Dorr, was dispatched with supplies, having also on board the family of Whistlers. At St. Joseph River they left the vessel and took a row boat to Fort Dearborn.* On arriving at Chicago the "Tracy" anchored about half a mile from the shore, and sent her cargo ashore in boats. A sand-bar shut up the mouth of the river, but there is no recollection of a sandy island at the mouth, sometimes spoken of. The schooner remained here four or five days, the stores she brought, which were sufficient to last the garrison a twelvemonth, being placed in tents. The soldiers soon made a stockade to protect the supplies from the Indians. While the vessel was there, some two thousand Indians visited the locality, being attracted by so unusual an occurrence as the appearance in these waters of "a big canoe with wings." Lieutenant Swearingen returned with the "Tracy" to Detroit. Being the first vessel of any size which visited Chicago, it is not out of place to say that this schooner and a brig were owned by the Government and were the only craft under national control on the lakes. On its return voyage, the "Tracy" stopped at Mackinaw. A boisterous storm nearly destroyed the little schooner, of only about ninety tons burden, but she finally reached Detroit in safety. In 1809 Ramsey Crooks arrived at the fort on board the "Selina." In 1814 the first merchant brig "Union" was placed on the lakes, but being considered too large (96 tons) she was laid up until the growth of trade called her again into service. Late in November, 1816, the schooner "Hercules" was wrecked in the lake between the two Calumet rivers, and all on board perished.† The first intelligence of the fatal catastrophe was communicated by finding the wreck of the vessel, and the bodies of the passengers strewn along the shore. Several days, however, had elapsed before this discovery was made, and the bodies were so beaten and bruised by the spars of the wreck, that the deceased could not be recognized by their features. Among these was Lieutenant William S. Evileth, an intelligent and promising young officer of engineers, whose death was much lamented. He had been employed in the rebuilding of the fort, and had embarked the day previous to the shipwreck, at Chicago, to return to his friends, after a summer spent in arduous and useful service. When the unfortunate young man was found, his face had been so gnawed by wolves that he could not have been identified, had it not been for the military buttons of his clothes.

The "marine interests" of Chicago during these early years were centered in the Mackinaw trading-boats, which belonged to the American Fur Company, and an occasional craft which stopped at the fort on Government business. During a few years succeeding the rebuilding of the fort, quite a number of vessels were built for lake service, but they mostly plied below Niagara Falls. In 1817, very soon after Fort Dearborn had been reconstructed, the schooner "Heartless" arrived off the lake shore. Attempting to run up the river she was beached in the sand. Efforts to float her proved unavailing, and there she remained, a complete wreck, and the first one which occurred within sight of Fort Dearborn. A great event in the history

of the marine of the upper lakes was the trip made by the first steamboat in the fall of 1818. The "Walk-in-the-water," built at Black Rock, arrived at Detroit on August 27, her general appearance being that of a schooner with an engine and two side-wheels. Her engine was not powerful enough to take her from the wharf at Black Rock up the rapids to the lake; so a dozen yokes or so of oxen were employed to assist. The "Walk-in-the-water" was wrecked in Buffalo Bay, November 1, 1821. That boat left Detroit July 31, of this year, and arrived at Green Bay August 5.* Her tonnage was three hundred and forty-two, and her engines were what are known as "low pressure." Some time previous to 1819, a few months before Jean Baptiste Beaubien was transferred from the American Fur Company's post at Milwaukee to Chicago, the United States revenue cutter "Fairplay" arrived outside the bar, and then proceeded to enter the river. This task was successfully accomplished, and for the first time a sailing vessel, other than a yawl or Mackinaw boat, was anchored in the river just north of Fort Dearborn. A few years after the "Walk-in-the-water" had been wrecked, various schooners, such as the "Chicago Packet" and the "Virginia," plied in these waters. In 1829, an Ohio distiller, who had touched at Mackinaw, Detroit and Milwaukee, in a vain attempt to dispose of a load of whisky, reached Chicago in his boat. After ridding himself of all but ten barrels, he proceeded on his way to Grand River. But it was not this brisk trade of 1829 which gave an impetus to lake interests; the opening of communication between Lakes Ontario and Erie was what accomplished it. Communication was first established in 1831, via Port Robinson and Chippewa, thence via Niagara River to Lake Erie. The first vessels which passed through were the "Erie" and the "Ontario," two American schooners, followed by the Canadian craft, "Anne and Jane."

During March, 1831, after the United States engineers had suggested a plan for the improvement of the harbor, an appropriation of \$5,000 was obtained for the erection of a light-house. Before it was fairly completed, however, on October 30, of that year, the structure fell. A few hours before it toppled over, so confident were many there was no danger of its falling, that several went upon the top of it, some of the visitors being women. The walls were three feet thick, and the tower had been raised to a height of fifty feet. Samuel Jackson was the contractor. He claimed that the light-house was built on quick sand, which caused the building to settle and fall; others held that the cause was the defective manner in which it was built. Another tower, forty feet high, was begun and completed by Mr. Jackson in 1832. It boasted of a fourteen-inch reflector. Samuel S. Lasby was the first, and Mark Beaubien the last, keeper of the old light-house. During the year 1831 three vessels arrived in Chicago. The first, which came May 20, took away the troops to Green Bay, leaving the garrison in charge of Colonel T. J. V. Owen, the Indian Agent. The year 1832, however, may be considered the commencement of the importance of the lake marine. Not only had communication been fairly established between the Upper and the Lower lakes, but the excitement of the Black Hawk War had caused considerable travel, soldiers coming from the East to the scene of the troubles, and fugitives scattering from the western country towards the East. This Black Hawk campaign was the occasion of the arrival of Chicago's first steamer, the "Sheldon Thompson," in command of Captain A.

J. P. Coatsworth

Walker. He brought a boat load of General Scott's soldiers, July 10, 1832; also the Asiatic cholera, whose ravages are sufficiently detailed in the article on sanitary affairs. At that time there was a fleet of vessels at anchor in the offing. Some eight days after the arrival of the "Sheldon Thompson" the "William Penn" appeared in Chicago harbor, with troops and supplies. From the year 1832 different steamboats made occasional trips to Chicago, the "Daniel Webster," "Monroe," "Columbus," "Anthony Wayne," "Bunker Hill," and others. In the year 1833, three brothers, Leonard C., Peter D., and Hiram Huginin, sailed a yacht, named the "Westward Ho," from Oswego to Chicago. After a voyage of nearly three months, they in August arrived outside the sandbar, went ashore, hired eight yoke of oxen, and hauled their vessel over the barricade into the river. The "Westward Ho" may therefore be considered the first lake boat, belonging to private parties, to fairly enter the river. The next year, when immigration to Chicago was active, the vessel interests received added impetus. Early in April a schooner arrived from St. Joseph, Mich., and two vessels cleared for that port. Between the 20th and the 30th of that month no less than one hundred immigrants arrived by boat at Chicago. The most noted of early steamers was the old "Michigan," built by Oliver Newberry, of Detroit, who, for many years, was largely engaged in the commerce of the lakes. This was the first steamboat which entered the river below Dearborn Street, arriving in June, 1834. The appearance of the first schooner, as it sailed up the river to Wolf Point was greeted with even more enthusiasm than hailed this craft. The date was July 12, 1834, and about nine o'clock in the morning the hearts of Chicago's citizens, in the language of the Democrat, were gladdened by the appearance of the splendid schooner "Illinois," as she came gliding up the river into the heart of the town, under full sail. She was a vessel of nearly one hundred tons, launched during the spring, at Sackett's Harbor, N. Y., and commanded by Captain Pickering. Her topmast was covered with streamers, and her canvas was spread to invite the gentle breeze, the banks of the river were crowded with a delighted crowd, and as she reached the wharf of Newberry & Dole, where she stopped, she was greeted with loud and repeated cheers. Her decks were immediately crowded by the citizens, all anxious to greet her commander with a warm and hearty welcome. The draw-bridge was soon raised, and she passed on to the upper end of the town, came to Ingersoll's wharf in front of the Western Stage Company. On her passage up the river more than two hundred visitors were on board. Two days after the arrival of the "Illinois," came the "Phillip." In the fall of 1834 the "Illinois" made her return trip from Cleveland, bringing provisions to the settlers at Chicago and Milwaukee. The old steamer "Michigan," made one or more pleasure trips around Lake Michigan, and she, with her veteran commander, Captain Blake, were great favorites with the traveling public. In 1834 three steamboats landed at Chicago and two at Green Bay. Such was the advent of steamers and schooners into Chicago River, and the heart of the growing town was at last connected with the navigable heart of the great Northwest. Soon afterward a large class of steamers commenced making regular trips from Buffalo, touching most of the intermediate ports. Among the number was the "James Madison," owned by Charles M. Reed, of Erie, and built with particular reference to the upper-lake trade. Her capacity for freight and passengers was the largest upon the lake at

that time. Still later in 1837 came the steamer "Illinois," owned and built by Oliver Newberry and designed for the Chicago trade. She combined strength, speed and beauty, and, under Captain Blake was a favorite for many years. Says Captain Walker (formerly of the "Sheldon Thompson") in regard to the development of steamboat navigation:

"From year to year emigration to Illinois and Wisconsin continued to increase, until a daily line of boats was established between Buffalo and Chicago, while at the same time the public demands were such as to require a still further advance, and a different class and style of boat with better accommodations and increased facilities, suited to the condition and circumstances of a large class of the more refined and wealthy, who were then emigrating and settling throughout your and the adjoining states. And hence the necessity of introducing the upper-cabin boat. When the 'Great Western' first made her appearance upon the lakes, and during the two years in which she was being built, many, who claimed to be judges, expressed doubts of the practicability and seaworthiness of that class of boats. But in a few trips she became a favorite with the public, and, notwithstanding the opinions and prejudices of a few, was the means of bringing about an entire revolution in the construction of our steam marine upon the lakes, causing all the boats in commission and contemporary with her, to convert their lower-cabins in steerages and freight-holds, and substitute the upper-cabin. * * * It is proper here to say that the 'Great Western' was built expressly for the upper-lake trade, and continued to make regular trips for ten successive years. Of the estimation placed upon her during those years, it is not my province here to speak, more than to say that she was designed, modeled by, and under my command during that period. At that time (1838) the principal forwarding houses in the city were Kinzie & Hunter, Newberry & Dole, Gurdon S. Hubbard, Esq., Bristol & Porter, the latter of whom were then agents and consignees for the above-named boats, Mr. Hubbard being the agent for the 'Great Western.' Subsequently she ran to the docks of Messrs. Walker, Smith and others as her agents and consignees."

A regular line of steamboats was established between Chicago and Buffalo in July, 1839, a boat leaving and arriving at Chicago every alternate day during the season of navigation. On the 6th of that month General Winfield Scott arrived at Chicago on the steamer "Illinois." The "Thomas Jefferson," "James Madison," "Buffalo" and "Illinois" were put upon the route.

Ship building, according to Captain Peter F. Flood, who arrived from Oswego in June, 1835, commenced in Chicago during that year. The "Clarissa" was begun in the spring of 1835, by Nelson R. Norton, but was not completed, or launched, until May 18, 1836. The "Detroit", Captain John Crawford, was built at Milwaukee in 1836-37 for the Chicago trade, at a cost of \$50,000. This vessel was lost off Kenosha in November, 1837, after only six months' service. About this time (1836) an association of the then young, energetic and enterprising citizens was formed, and they commenced the building of the steamer "James Allen." It was completed in 1838, Captain C. H. Case having charge of its construction. The boat was built for a company comprising George W. Dole and J. H. Kinzie. Captain Pickering was master of the steamer. The ship-yard was on "Goose Island." The "Allen" was built to be fast, and to run across Lake Michigan from St. Joseph to Chicago, in connection with the stage and mail line. Her hull was narrow and sharp in form, and light in material. Two powerful, low pressure, horizontal engines were put on the guards, on the main deck. The boilers were small, and, on trial, proved to be insufficient. When the "Jim Allen" had steam up and started on her trial trip for St. Joseph, she went out of Chicago at a speed that pleased, as well as astonished, her owner and designer. The first fourteen miles were run inside of an hour. Then the engines began to "slow up" and the voyage took about ten hours. Every effort was made to keep up the supply of steam to the two large engines, but the result was the same as expe-

rienced during the outward trip. To use the expression of her commander, she would run the first thirty minutes "like a skeered dog," then her speed would gradually slacken to about seven miles an hour, and nothing could coax her to do any better. For two seasons, notwithstanding the utmost exertions taken, there was no improvement in the "Allen's" average rate of speed, and she was then sold and taken to the lower lakes.

The "George W. Dole" was also built by Captain Case, soon after the completion of the "James Allen," and the two run together over the St. Joseph and Michigan City route. The former was sunk at Buffalo, in 1856, having previously been changed into a sailing vessel. These were the first and only steamers built in Chicago previous to 1842. Captain Case afterward went to St. Louis.

Among the early ship chandlers were Hugunin & Pierce, Foster & Robb and Dodge & Tucker. George F. Foster came to Chicago in July, 1837, and with his nephew, George A. Robb, opened a sail loft in the attic of a two-and-a-half-story building on North Water Street. In the spring of 1839 they bought out the old firm of Hugunin & Pierce, ship chandlers and grocers, and established the first sail-making house in the West. His sons still continue in the same business.

William Avery, who built the steamboat "Chicago" arrived at Chicago, February 25, 1837. He was a prominent steamboat builder from 1837 up to the time of his death in 1840.

In 1842 Captain James Averell established a ship-yard, on the North Side, just below Rush-street bridge,* and very soon after Thomas Lamb commenced business near the same place. In July of that year the "Independence," the first propeller built on Lake Michigan, and the third one ever run on the lake, was launched from this ship-yard. She was a large vessel for those days, being of two hundred and sixty-two tons burden. Aft the cabin in the "after-run" was placed an engine with which to run a propeller wheel, in case of head winds. The "Independence" was for years a successful sailing vessel, and it is claimed that she was the first steam barge of the lakes. She was wrecked on Lake Superior in 1853. In 1845-46 Captain Averill built the brigantine "S. F. Gale" for George F. Foster. He also constructed many other vessels, and of large size for those days. Among them were the schooner "Maria Hilliard," the brigs "Sultan," "Minnesota," and "Mary," the barque "Utica" and the scow "Ark," one of the first, if not the pioneer craft of that character ever constructed to navigate Lake Michigan.

Until 1841 the steam marine held sway over the lakes, and steamboats were the favorites. The old "North America," "Commodore Perry," "Illinois" and "Michigan," are well remembered. The great line between Buffalo and Chicago, with such masters as Captains Blake and Appleby, served to sustain the reputation of that kind of craft for speed and safety. "It was sometimes positively thrilling," says Levi Bishop, "to see old Captain Blake on the upper deck in a storm, as he maintained his perfect self-possession and directed the ship beneath him. * * The owner of the 'Illinois' was a well known citizen. He was popularly known as the 'Commodore of the Lakes.' He was a Whig of the Henry Clay, Daniel Webster, and John J. Crittenden school. He was a patriotic citizen, and, as expressing his sentiments and the true spirit of the State and National government, he placed at the masthead of the 'Illinois,' a steamer nearly or quite forty feet long, with the words 'State Sovereignty and

* Colbert's "Chicago."

National Union' inscribed upon it in large and conspicuous letters. That old steamboat and the national sentiment were the pride of Oliver Newberry, as well as the pride and boast of all beholders."

The fall of 1841 was marked by a series of obstacles and disasters in communicating with the lower lake ports, and public opinion commenced, especially to be set against steamboat navigation. Many of the boats had already served their day, and their large and ungainly sidewheels were evidently too good marks for the heavy waves of the lakes to miss. The old steamers "United States" and "Chesapeake" and other ancient craft, on their way from Lake Erie to Chicago, were disabled more or less, and in August occurred the burning of the "Erie."

Commencing with 1843, the steamboat had a serious competitor to contend with—the propeller. The "Vandalia," of Oswego, a sloop-rigged craft of one hundred and fifty tons was the first propeller to appear on Lake Erie, and the "Independence," built in Chicago, was launched soon afterward. Within the next two years over twenty new propellers were placed upon the lakes; one, the "A. Rosseter," coming from Chicago. This boat was wrecked on Lake Michigan in 1855.

The ship-yards of Chicago were now beginning to present unusual signs of activity. In 1845 there were constructed the schooners "Maria Hilliard," "J. Young Scammon," and "Ark;" in 1846 the barque "Utica," brig "Ellep Parker" and schooner "N. C. Walton."* In 1847 eight schooners had been, or were being built, in Chicago, one brig and one propeller—the "A. Rosseter"—a total tonnage of 4,833. Nineteen schooners, one propeller and one brig owned by Chicago people. The leading ship-builders at this time were Messrs. Jordan, Miller & Conners. The latter afterward formed a partnership with Riordan & Dunn, on the South Side, near Van Buren-street bridge.

The Congressional act for the erection of light-houses was passed March 1, 1847, when \$3,500 was appropriated for Chicago.

The year previous Chicago had been changed from a port of delivery, to a port of entry. In 1850 the district was divided so that Milwaukee also became a port of entry.

Chicago's importance as a marine port was further recognized by Congress in an appropriation of \$10,000 for the erection of a hospital, the act being passed in 1848. The Marine Hospital was built on the east side of Michigan Avenue, in the north part of Block 5, Lots 2, 3, 4, and 5, and the south ten feet of Lot 1. These grounds were sold to the Michigan Central Railroad Company, and the building was destroyed during the fire of 1871.

From 1850 the building of vessels at Chicago, and for the Chicago trade, and their arrivals and departures formed so large an element of her commerce that it is impossible to trace each craft from the stocks to the bottom of the lake, or to record each arrival and departure, as a noteworthy event. It is not only impossible but unnecessary, and only the most important steps in the growth of the lake marine will hereafter be noticed. In March, 1853, daily communication was established with Milwaukee by a line of boats, and in July two vessels of Ward's line were put on. The opposition line started the steamer "Garden City," August 1, and a few days later direct weekly communications were opened between Chicago and Sault Ste. Marie. The "Garden City" was wrecked on a sunken reef off St. Mary River,

* Statistics prepared by Jesse B. Thomas, by authority of the River and Harbor Convention of 1847.

May 19, 1854. Fortunately, all the passengers were saved. At this time Chicago had no life-boat, but was obliged to depend, in time of storm, when vessels were grounded on the bar and the lives of the crews in peril, upon such boats as steamers or propellers then in the harbor might have to send out. After the terrible storm of April 27, 1854, however, by which seven vessels were wrecked and seven lives lost, almost within sight of Chicago, it was urgently suggested by the Press of the city that the Government furnish a life-boat to the port. The harbor master, Captain Edward Kelly, immediately undertook the circulation of a petition for a boat. In October two life-boats were supplied. Two months previous to the time when they were obtained, Colonel Graham, in charge of the harbor improvements, had perfected his plan for the construction of a light-house. It was proposed to extend from the north pier head, crib work north and then west, in order to protect the light from the influence of storms and from contact with spars of vessels. Within this projection he proposed to build the light-house upon nine iron screw piles, eight of them forming an octagon thirty-three feet in diameter, with one in the center. The light-house was to be in the shape of a right prism, five feet above the water level. Above this it was to assume the form of a truncated pyramid, to the height of fifty-seven feet. Upon this a framework was to be erected supporting the watch-house and lantern, and giving seventy-three feet above the surface of the lake for the focal flame.

The increase of tonnage in the district including Chicago, Waukegan and Michigan City, in 1854, was very great. From the 1st of January to the 15th of May there were enrolled at the custom house forty-six vessels, with an aggregate tonnage of 9,496. With a few exceptions these were all owned in Chicago. The total tonnage of the district was 44,602.

The season of navigation for 1855 was disastrous, the storms raging with unusual fierceness during September and November. Among the casualties of local concern were the wrecking of the brig "Tuscarora" and the explosion of the steam tug "Seneca." The "Tuscarora" went to pieces in the storm of September 18, just outside the harbor, but all the crew were saved. The "Seneca" blew up while passing Randolph-street bridge, October 16, 1855. The explosion tore the upper works of the boat to pieces, and killed the captain and engineer. The "Seneca" was an old boat, having been in use since 1847. The cause of the explosion was not known, owing to the death of the engineer; but from the fact that the boiler was subsequently taken out of the river, and found to be intact, it is supposed that the explosion was due to a defective steam pipe. During October the schooner "Mark H. Sibley" and the barque "Pathfinder" were sunk in the outer harbor. The season of 1856 was even more fruitful of disasters than the previous year. In May the propeller "Bay State," in approaching the harbor, struck a sunken anchor about forty rods from the pier, and went down in five minutes. The steamer "Northern Indiana" took fire near Toledo, in July, and burned to the water's edge. Some Chicago citizens were on board. The brigs "A. R. Cobb" and "Happy Go Lucky" went to pieces on the pier, October 13. During the storm of October 24, several vessels were wrecked outside Chicago harbor. The scow "Yankee," the schooner "General Taylor" and the barque "Quebec" were all more or less disabled. Several vessels were also scuttled and sunk while attempting to enter the harbor during the storm of November 6. The schooners "N. C. Walton" and "Charles How-

ard" were wrecked on the pier of the outer harbor, December 2, and a few days afterward navigation closed.

It was during this year (July, 1856) that the first direct clearance was made from Lake Michigan for Europe by the steamer "Dean Richmond." The consignee was C. J. Kershaw, of Montreal, who hoped to ship a full cargo of wheat from Chicago; but here he could only obtain 5,000 bushels and was forced to seek the balance—9,320 bushels—at Milwaukee. She left Chicago about July 14, had her full cargo on the 18th, and sailed for Europe on the 19th. The "Dean Richmond" was a new vessel. She arrived in Liverpool on the 20th of September; the trip from her docks at Cleveland to Chicago being her first, and her European voyage her second. The trade between Chicago and Canada was now gathering considerable volume. In 1857 it amounted to over \$222,000. The vessels regularly engaged in the trade between Chicago and the other lake ports during this year were those of the American Transportation, Western Transportation, Northern Transportation, the Clement Steamboat, and the Lake Navigation companies; and those of the People's Buffalo and Chicago, Old Oswego, Chicago and Lake Superior lines. Quite a noted foreign arrival was that of the "Madeira Pet," which left Liverpool April 24 and arrived off Chicago harbor July 14, 1857, entering the river in the afternoon and anchoring at the north pier. About this time the Democratic Press describes the measures taken to protect the lake marine as:

"First the light-house, well enough when it was built twenty years ago, but now surrounded and shut from the view of the mariner by a number of higher buildings between it and the lake—perfectly useless—but lighted up punctually and carefully every night. Then came sundry old houses and any quantity of scows and old dredging machines and piles of timber, rotten and falling to pieces. One cannot help thinking how much good they might have done, if worn out in actual service, or calculating how many dollars were 'sunk' in their construction and accumulation. Then come the piers—gone to decay, under the power of the elements, until it is scarcely possible for sailors to walk along them to carry their lines, and hardly a 'snubbing post' where they can 'take a turn' or 'make fast.' Outside lies the bar. It cannot be seen, it is true, but there it is, and has been these many years, periling property and life, while for more than a year \$18,000 unexpended appropriation for this harbor has lain in the treasury, and not even a buoy has been placed to mark out the dangers to the tempest-tossed seeking for safety."

The Press drew attention to the ineffective work which was being accomplished by the Illinois Central Railroad, in the way of piers, breakwater, etc., and suggested that the company and the city take hold of the harbor improvements and "snap their fingers in the face of niggardly Uncle Sam." This crushing course of procedure, however, was not taken, and eventually Uncle Sam came to his senses.

LIGHT-HOUSE KEEPERS.—The first light-house keeper was Samuel C. Lasby, then William M. Stevens was keeper, then John C. Gibson; then William M. Stevens again held the office. The directories of Chicago give the following as light-house keepers, during the periods specified, and John Wentworth* gives the names of the Presidents appointing them, as prefixed to their names: Harrison—Silas Meacham, 1844; Polk—James Long, 1845 to 1849; Taylor—Charles Douglass, 1850 to 1852; Pierce—Henry Fuller, 1853 to 1855; Buchanan—Mark Beaubien, February 19, 1855, to October 7, 1859, at which latter date he resigned.

CUSTOM HOUSE AND COLLECTORS.†—Before the establishment of Chicago as a port of entry, the town

*"Fort Dearborn," by John Wentworth, LL. D., *Fergus's Historical Series*.
†Hon. Charles T. Folger, Secretary of the Treasury, courteously furnished valuable information on this subject.

was a tributary to the Detroit District, and the revenue was collected by Seth Johnson, formerly an officer of the garrison, with the office at 38 Clark street. Upon April 1, 1846, William B. Snowhook was appointed special surveyor of the port of Chicago, and after the making of Chicago as a port of entry by the act of July

16, 1846, on August 10, 1846, he was appointed Collector of the Port; some time during his administration removing the custom-house to No. 3 Clark Street.

WILLIAM B. SNOWHOOK was born in Raheen, Queen's County, Ireland, on March 25, 1804, and left the land of his birth when only eight or nine years old, for New York. At the printing office of Thomas McElrath, he learned the trade, under the tuition of William F. Porter; William B. Snowhook and Horace Greeley working together in this office for some time. About the age of sixteen, Mr. Snowhook paid a visit to Ireland, where he remained for two years, and then went to New Orleans and engaged in building levees by contract, afterward returning to New York and contracting for the building of a portion of the Morris & Essex Canal. The performance of this work gained him a reputation, and he received a contract for building a portion of the Maumee Canal; upon the completion of which he came to Chicago, in the early part of 1836, and, with William B. Ogden, George W. Snow and others, he took a contract on the construction of the Illinois & Michigan Canal. In the directory for 1844 he is designated as a grocer, with his store on Clark Street, near South Water; about 1848 the firm becoming Lonergan & Snowhook, remaining under this style until about 1851, when Thomas Lonergan retired, and Mr. Snowhook gave his attention to the produce commission business, in which branch of business he was a pioneer. Mr. Snowhook raised and equipped the Montgomery Guards, of which company he was Fourth Sergeant, warranted April 8, 1842; First Lieutenant, commissioned May 2, 1842, and Captain, commissioned April 3, 1847, and in 1846, during the Mormon disturbances at Nauvoo, Governor Ford commissioned him Colonel on his staff, which military title clung to him until his death. In 1847 he was Alderman of the Eighth Ward. In 1855 he gave up active business to follow the study of the law, and in 1857 was admitted to the Bar, varying his legal studies by running against John L. Wilson for Sheriff, in 1856, by whom he was defeated. He also took a course of lectures in the law department of the Chicago University, graduating from that institution with honor in 1858. In 1860 he associated himself with Samuel A. Irvin. In 1861, at the outbreak of the Civil War, Colonel Snowhook was authorized to recruit men for the volunteer service, and was largely instrumental in raising men for the famed Irish Brigade. For his work in this behalf he received the thanks of the Governor. In 1865 the firm of Irvin & Snowhook was dissolved, and Colonel Snowhook took George W. Gray as a law partner, the firm subsequently becoming Snowhook, Johnston & Gray, and so remaining until the day of his death, on May 5, 1882. Colonel Snowhook was twice married, his second wife dying in 1870. He left two children, Patrick W. Snowhook, a member of the law firm, and Mrs. Mary Tuttle.

On May 3, 1849, Jacob Russell was appointed Collector, and Valentine A. Boyer was Deputy Collector,

which latter position was occupied by James Breck, Jr., in 1850. In 1852 the custom-house was located at 129 South Water Street. Upon March 18, 1853, William B. Snowhook was re-appointed Collector, Philip Conly succeeding him on July 10, 1855; and in the year 1856 the custom-house was removed to 13 LaSalle Street. In 1856, Philip Conly is designated as sub-treasurer of the United States, and in this year Thomas J. Kinsella was Deputy Collector. March 31, 1857, Jacob Fry was

appointed Collector, retaining that position until June 15, 1858, when Bolton F. Strother was appointed, at which time Frederick C. Russell was Deputy Collector. In 1836, the exports were \$1,000.64, and the imports \$325,203.90; while in 1857 the imports from Canada were \$326,325, and the duties on imports at Chicago were \$143,009.23; while the value of exports, in 1857, was \$1,585,096.

In 1843, there was a Government agent resident at Fort Dearborn named Charles L. Schlatter, who was succeeded by William Gamble, in 1845, whose province was to oversee the improvements made in the harbor; William Gamble remained in charge until the work was taken charge of by the topographical engineers.

RAILROAD vs. CANAL.

It took many years for the people of Illinois to decide the proper highway over which the wealth of the Northwest was to pass, should be a combination of lake and railroad, rather than of lake, canal and river. The river towns had, since the first settlement, enjoyed a monopoly of the public favor, and even for some time after a few railroads had been chartered, these proposed highways seemed to push towards the river and to promise most of their benefits to the river sections. St. Louis, especially, which had for many years enjoyed a large river trade, was looking for still greater commercial supremacy, whether the rich State to the east should decide to throw its energies into the improvement of the Illinois & Michigan Canal or into the development of a grand railway system. The handiwork of this wealthy Missouri town is early seen in the legislative proceedings of Illinois. The first movement in this State looking toward the construction of a railway was an act passed in January, 1831, authorizing a survey from the bluffs of St. Clair County, along the American bottom, to the Mississippi River, near St. Louis. Commissioners were appointed for this purpose. At the same session the commissioners of the Illinois & Michigan Canal were to ascertain whether a railroad or a canal would be preferable between the Chicago and Desplaines rivers. A canal was deemed most desirable. Even the plank roads through Illinois seemed to be naturally tending toward the great river town. Already a State road had been built from Vincennes, Ind., to St. Louis, and was much traveled. In 1832 the Springfield & Alton Turnpike road was incorporated, its river terminus to be in St. Clair County, opposite St. Louis. Chicago was, however, early alive to the necessity of constructing a system of railways which should cut the many ties then binding her own legitimate territory to her old rival. There was yet another candidate for commercial supremacy in the field, and the State was, for some time, undetermined as to whether the harbor and the canal of Chicago would tend to develop this city into a greater business center than the lead mines would the village of Galena. As previously remarked, the friends of Chicago saw the necessity of doing something to bring her naturally tributary territory into close communication with herself, and, also, by some system which should not pour a flood of advantages into the rich city which sat by the river, waiting to be made wealthier. The agitation of a great central railroad through the State therefore commenced, which was to be operated in connection with the Illinois & Michigan Canal, and to strike the southern border of Illinois, at or near the junction of the Ohio and Mississippi rivers, there to connect with the railway system of the South. The Illinois Central

Railroad may be called the first great "St. Louis cut-off," and as such placed Chicago firmly upon her throne as the magnificent Queen of the West. The preface to this triumphant undertaking was the introduction of a bill in the State Senate, in 1832, by Lieutenant-Governor A. M. Jenkins, for the survey of a central railroad from Cairo to Peru. But public opinion had not yet been molded to see its necessity, and there the project rested. In 1834 the Chicago and Vincennes Railroad was incorporated, but the work was not commenced for many years thereafter. Interest in the Central road was revived by an enthusiastic letter, which appeared in the public prints, written by Sidney Breese, Circuit Judge, afterward Judge of the State Supreme Court, and United States Senator. It is as follows:

"VANDALIA, October 16, 1835.

"JOHN T. SAWYER, ESQ.,

"Dear Sir:—Having some leisure from the labors of my circuit, I am induced to devote a portion of it in giving to the public a plan, the outline of which was suggested to me by an intelligent friend in Bond County a few days since (Mr. Waite of Greenville), by which the North may get their long-wished-for canal, and the southern and interior counties a channel of communication quite as essential to their prosperity. In doing so, I have not stopped to inquire if my motives may not be assailed, and myself subjected to unkind remarks, believing, as I do, that the subject is of so much importance as to throw all personal considerations into the shade. The plan then is this: At the junction of the canal with the Illinois River let a railroad be constructed, to extend to the confluence of the Ohio and Mississippi, following, as near as may be, the third principal meridian, and let the credit of the State be pledged for the funds necessary to complete both works. This would be doing equal and impartial justice to three of the most prominent portions of our State, and would create a unity of effort and concert of action that would overcome every obstacle. The General Government also would grant some of the unappropriated land on the contemplated road throughout its whole extent in aid of the undertaking, and that it can be accomplished with the means we can raise there can be no manner of doubt. When made its benefits will be incalculable. It will make the southern and interior counties, cause them to settle, raise the value of their lands (which are intrinsically as good as any), and furnish the means of transportation for their products either to a Northern or Southern market, of which they are now destitute. It is a stupendous project, but one so easy of accomplishment, so just, so equal, and so well calculated to revive the drooping energies of the South and of the interior, that no doubt can be entertained, if our effort is made at the approaching session of the Legislature, but that the canal and the road will be under contract in less than six months after the loan is authorized.

"No sectional objections can operate successfully against the project, nor will the people complain of a loan the benefits of which are to be so general and so important. Posterity will have no cause of complaint if we do leave them a debt to pay, when at the same time we leave them the most ample means for discharging it. These things have not been regarded in the proper light. No objection should ever be made to incurring such debts when the fund is left out of which to pay them. As well might the heir object to taking his estate of half a million because encumbered by a mortgage of \$200,000. By a united, zealous effort at the next session, an artificial artery through the heart of our State, the fairest and richest in the Union, can be made, which will not be surpassed by the stupendous achievements of a similar kind in the other and older States. To avoid jealousies and heart-burnings, let the expenditures on both works commence at the same time and be prosecuted with equal energy, and when this main artery is finished it will not be long before smaller ones branching off to the Wabash and Upper Mississippi will be constructed. Then Illinois will rival any other State of our vast confederacy, not excepting even that which is so proudly, yet so justly styled the 'Empire State.'

"To ascertain the interests that can be brought to bear in its favor take a map of the State and trace upon it the proposed route, and notice the many important and flourishing counties and towns it will pass through and which it will benefit.

"Assuming Utica or Ottawa as the point at which the canal will terminate, the mouth of the Ohio bears from it some few miles west. To reach it, the road would pass through LaSalle, McLean, Macon, a part of Shelby, Fayette, a part of Bond, Clinton, Washington, Perry, Jackson, Union, and terminate as above in Alexander County. Pursuing nearly a direct line, it would pass through Bloomington, Decatur, and Vandalia, where it would intersect the National Road, Carlyle, New Nashville, Pickneyville, Brownsville,

Jonesboro, all seats of justice of the counties in which they are situate. Along the whole route, especially on the southern portion of it, abundant materials of the best kind can be had to construct the work. The distance from one extreme to the other, on a straight line, is only three hundred miles, and the necessary deviations from that course will not make it more than three hundred and fifty miles. Three-fourths of it, that is to say, from Utica or Ottawa to Pinckneyville, in Perry County, the surface of the country, so far as you can determine by the eye, is level or undulating; the remainder is hilly, but by no means mountainous. Taking the estimated cost of the Alton & Springfield road as data (which is on an average a fraction over \$7,000 per mile), the cost of this will not exceed \$2,500,000, a sum insignificant indeed, when we consider the immense benefits to ourselves and to posterity that must flow from its expenditure for such an object. Allowing fifteen miles an hour as the maximum of speed upon it, a locomotive with its train of cars can kindle its fire at Ottawa in the morning and on the next rekindle it at the junction of the Ohio. From this point an uninterrupted communication exists at all seasons with every part of the world, and when the canal and the lakes of the North are locked up by ice the markets of the South can be reached with certainty and speed by the railway and the Mississippi. Let then the South, the interior, and the North unite—let the project be submitted at the coming session, let the loan be authorized, and let us all enter upon it with that determined spirit which should characterize all great undertakings, and success is certain. They who shall be instrumental in its commencement and completion will have erected for themselves a monument more durable than marble, and throughout all future time will receive, as they well deserve, the grateful thanks of a generous people. I hope some gentlemen may feel sufficient interest in this matter to consider it maturely and give the result of their deliberations to the public through the newspapers. It is a great, magnificent, and feasible project. It can, it will, be accomplished.

"I am, sir, very respectfully your obedient servant,

"SIDNEY BREESE."

THE RAILROAD SYSTEM.

This able letter renewed the waning interest in railroad matters. Meetings were held throughout the State, conventions pronounced in favor of railroad and canal building, and as a result the files of the Legislature were literally weighed down with bills and notices of bills to provide for railroad and canal construction. Many opposed the enterprise in the central part of the State, because it was seen that such a north-and-south line would divert much of the traffic which that section might derive from a road crossing Illinois from east to west. Some localities were pledged to the support of the Wabash & Mississippi. The line of road as traced in Judge Breese's letter did not touch Springfield, and therefore was not looked upon with great favor by the citizens of that place. Those also who were most ardent in their support of the Illinois & Michigan Canal feared that its construction would be delayed by the prosecution of this "stupendous project." But Judge Breese never tired in his efforts to acquaint the people living along the proposed route of the road with the advantages of this central artery. He was the prime agent in obtaining the support of Senator Douglas. Chicago also was stretching her arms out toward the South and the West. "Internal improvement" was the cry of every one. With the meeting of the Legislature at Vandalia, in 1836, came also the convention which proposed wilder schemes (for those times) than the "internal improvement" act, which became a law the next year. And the people and the Press were with the convention, for under the plans proposed there was not a "cross-road" in the State which would not in some way be benefited.

The first railroad chartered out of Chicago, upon which work was immediately commenced, and which afterward became an important section of her great transportation system, was the Galena & Chicago Union Railroad, which was chartered January 16, 1836. The document was prepared by Ebenezer Peck and T. W.

Smith, with the object of increasing the value of real estate at both points; but Galena being then the leading village of the West, obtained precedence in the naming of the road. The capital stock was placed at \$100,000, but could be increased to \$1,000,000, and the incorporators were given the choice of operating the road by animal or steam power. They were allowed three years from January 16, 1836, in which to begin work. E. D. Taylor, Jesse B. Thomas, Jr., J. C. Goodhue, Peter Temple, William Bennett, Thomas Drummond and J.

Peter Temple

W. Turner were named as commissioners to receive subscriptions. The survey of the road was begun in February, 1837, by Engineer James Seymour, with his assistants, from the foot of North Dearborn Street, and run due west to the Desplaines River. In June, 1837, surveyors and laborers were discharged. In 1838 work was resumed, piles being driven along the line of Madison Street and stringers placed upon them. These operations were continued, under the direction of E. K. Hubbard, until the collapse of the enterprise during the same year. The ambition of Chicago was evidently a little ahead of her means, and the Galena & Chicago Union had to wait ten years before it was fairly placed upon a successful basis.

On January 18, 1836 (two days after the incorporation of the Galena & Chicago Union), the Illinois Central was incorporated. The incorporators numbered fifty-eight and they were empowered to construct a railroad from a point on the Ohio to a point on the Illinois, near LaSalle, with the object of forming a connection between the canal, then projected, and the Ohio and Mississippi rivers, and thence to the Gulf of Mexico. But the charter and the fifty-eight incorporators failed to accomplish anything in the way of railroad building and the "stupendous project" collapsed, remaining in that lamentable condition until revived by its immense land grant, in September, 1850.

Up to the latter part of 1837 the only road in the State which had been made a success was the "Coal Mine Bluff Railroad," built by ex-Governor Reynolds and friends, and extending from his coal-fields six miles from the Mississippi River, to East St. Louis. Among other difficulties overcome by the energetic young men was the bridging of a lake over two thousand feet across. The road was worked without iron, and with horse-power; was regularly chartered in 1841, and long afterward became known as the "Illinois & St. Louis Railroad." Governor Reynolds' railroad is claimed to be the first one actually constructed in the Mississippi Valley, and within the circumstances, he appropriately asserts "that it was the greatest work or enterprise ever performed in Illinois. But," he adds, "it well nigh broke us all." And the experience of these pioneers with that little six-mile section of road was the experience of hundreds of other would-be railroad builders, who made more ambitious attempts within the next dozen years.

But the enthusiasm and the sentiment most prevalent during 1836-37 are all incorporated in the "Internal Improvement Act" of February 27, 1837. The canal was progressing; thirteen hundred and forty miles of railroad were to be built; rivers and creeks were to be rendered navigable, and no less than \$200,000 were to be distributed throughout the townships of the State,

which were doomed to exist far away from the line of canals, railroads or navigable streams. To prove the magnificence of this legislative dream, the railroads were to be begun at both ends at the same moment; so that the Illinoisians from east and west and from north to south could experience the greatest happiness in their consciousness of the impartiality and wisdom of their Legislature.

The act appropriated \$250,000 to the Great Western Railroad from Vincennes to St. Louis; \$3,500,000 for a road from Cairo to the southern terminus of the canal and to Galena; \$1,600,000 for a "southern cross railroad" from Alton to Mount Carmel and to Shawneetown; \$1,850,000 for a "northern cross railroad" from Quincy to Springfield and thence to the Indiana line, in the direction of LaFayette; \$650,000 for a branch of the Central road, in the direction of Terre Haute; \$700,000 for a railroad from Peoria to Warsaw, on the Mississippi; \$600,000 from Lower Alton to the Central; \$150,000 for a railroad from Belleville to intersect the Alton & Mount Carmel line; \$350,000 for a railroad from Bloomington to Mackinaw, and a branch through Tremont to Pekin. The total amount appropriated for railroad building was \$9,650,000. William K. Ackerman, in a paper read before the Chicago Historical Society, February 20, 1883, gives the following extract from the report of Murray McConnel, commissioner, to the fund commissioners, which is dated August 11, 1837:

"The kind of iron wanted is of the width and thickness that requires twenty-two tons to the mile, including plates, bolts, etc. * * * If you should believe that iron will decline in price so that the same may be bought next year for less than at present, you may contract for the delivery of thirty miles, say six hundred and sixty tons or thereabouts, as we may not want to use more than that quantity in this district through the next season. * * * You will also contract for the building of one locomotive of the most improved plan, and a suitable number of passenger and burthen cars to be shipped via New Orleans to the house of McConnel, Ormsbee & Co., Naples, Ill."

"The commissioners' report to Governor Carlin of December 26, 1838, gives the estimated cost of this four hundred and fifty-seven miles of road (which covers only a portion of the present line of the Illinois Central) to be \$3,809,145, an average cost per mile of \$8,326. The commissioners, in their report to the Governor, say: 'In making these estimates the board has included all the expenditures for superintendence, engineering, and all other incidental expenses. Easy grades have in general been adopted, and in all cases calculations have been made for the most useful and durable structures; and the board has no doubt but that the works may be constructed upon the most approved plans at the cost estimated upon each work. It is believed that in every instance the lines may be improved, locations changed, and improvements made in the construction that may lessen the cost far below these prices.' The same piece of road has cost properly built and equipped as it stands to-day \$23,950,456, or an average of \$52,408 per mile. * * * If slight defects have been found in the law organizing the system, or if errors shall have been committed in carrying it into execution, it is what might reasonably have been expected in a system so extended. In locating 1,300 miles of road and performing other duties equally difficult, it could not well be otherwise than that errors of judgment should occur, and that we should be brought into contact with private interests and become the unwilling (though necessary and unavoidable) cause of disappointment to some, and the prostration of splendid but visionary schemes of speculation in others."

Engineer T. B. Ransom, in his report of December 3, 1838, after noticing the progress of work upon the only section of the great system ever completed by the State (a portion of the Northern Cross Railroad), concludes as follows:

"Believing, conscientiously, that the future prosperity and happiness of the people will be greatly promoted by carrying out the system to its full and entire completion, I am bound to advocate it to the extent of my abilities. So far from its being too large and extended, I believe that it might be enlarged with great propriety and decided advantage to the general welfare of the whole

State (if suitable appropriations were made in addition to those already granted by the Legislature), not only to improve the navigation of our rivers, but in connection with the same to drain the ponds and lakes, which can be accomplished with an inconsiderable expense in comparison to the general utility, health and pecuniary prosperity of the whole State. * * * And it appears to me that even at a period when steamboats are in full operation, the time and risk of life which could be saved by traveling on our roads would enable them effectually to compete with the river communication."

The Northern Cross road from Meredosia, on the Illinois River, to Springfield, was completed in February, 1842, the survey having been commenced in May, 1837. The road cost the State for actual construction \$1,000,000, was operated for five years at a loss, and in 1847 realized \$21,100 in State indebtedness. The attempt to allay local jealousies by starting the different roads simultaneously from each terminus, was one cause of the collapse of the stupendous scheme; as, to do this, immediate and large appropriations were required. The result was that in two years from the passage of the act, the State was checkered with patches of road and had virtually nothing to show for the \$6,000,000 of indebtedness, except a solitary locomotive running over a few miles of the Northern Cross road from Meredosia eastward. The act which had caused all this mischief was repealed in 1839. Far from lifting every community into an unexampled condition of prosperity, the operations of the law laid the basis of the present debt of the State, and the formal abandonment of the improvements undoubtedly retarded its growth.

Upon the suspension of operations on the Galena & Chicago Union Railroad, the people of the Rock River country made several attempts to avail themselves of Chicago's increasing commercial importance. First a plank road was urged to be built from Chicago to the Rock River, at a cost of over \$300,000. Next, in 1843, a survey was made between Joliet and Aurora for a canal to connect the Fox River with the Illinois & Michigan Canal; and the suggestion was favorably received that it would be a plausible undertaking to extend the improvements to Rockford. But these schemes were abandoned, and in 1846, the Chicago & Galena Union was revived by the convention held at Rockford, in January of that year. Delegates, to the number of three hundred and nineteen, attended from all the counties on the proposed line between Galena and Chicago. The officers selected were: President, Thomas Drummond, of Jo Daviess; vice-presidents, William H. Brown, of Cook, Joel Walker, of Boone, Spooner Ruggles, of Ogle, and Elijah Wilcox, of Kane; secretaries, T. D. Robertson, of Winnebago, J. B. F. Russell,

J. B. F. Russell

of Cook, and S. P. Hyde, of McHenry. A resolution was adopted that the members of the convention obtain subscriptions to the stock of the company, if satisfactory arrangements could be made with its holders; and resolutions were also passed, presented by J. Young Scammon, showing the necessity of a general subscription to the stock by the farmers along the proposed route. Galena and Chicago vied with each other in the renewed enthusiasm with which the enterprise was taken up. But about this time Messrs. Townsend and Mather offered the improvements, land and charter of the road to Chicago citizens for \$20,000. The offer was accepted under the following conditions: The payment of the entire sum in full-paid stock of the company—\$10,000 immediately after the organization of

the board of directors, and \$10,000 on the completion of the road to Rock River, or as soon as a dividend of six per cent would be earned. On December 15, 1846, the persons named above subscribed toward the expenses of a survey, and had one made during the succeeding year, by Richard P. Morgan.*

The Alton & Springfield road had been commenced the previous year, and on February 27, 1847, a charter was granted to the Alton & Sangamon Company, now a portion of the Chicago & Alton system. On the same day the Rock Island and LaSalle line was chartered, the nucleus of the Chicago, Rock Island & Pacific Railroad Company. The "Pacific" termination of the name was early foreshadowed, by the hopeful, public-spirited and, as it seemed to the more conservative, the "crazy" sentiment of the times. During the legislative session of 1847 the following joint resolution was adopted:

"Resolved by the House of Representatives of the State of Illinois, the Senate concurring herein, That we have seen and read with pleasure the very interesting report of our worthy and intelligent Senator Breese, upon the proposition of Mr. Whitney, of New York, on the subject of a railroad from Lake Michigan to the Pacific Ocean, and heartily concur in the sentiments and ideas therein set forth.

"Resolved, Further, That our Senators and Representatives in Congress, be, and they are hereby, requested and instructed to use their influence in sustaining the propositions of Mr. Whitney, which have been submitted to the Congress of the United States for a railroad from Lake Michigan to the Pacific Ocean.

"Resolved, That a copy of the above resolutions be transmitted by the Governor of this State to each of our Senators and Representatives in Congress."

Subscription books were opened at settlements along the proposed line of the Galena & Chicago Union. August 10, 1847, William B. Ogden and J. Young Scammon solicited subscriptions in the city, but could only obtain promises for \$20,000 from all the real estate men or others particularly interested. Some merchants opposed the scheme, fearing it would take the sale of goods from Chicago to points on the line of the road. Up to April 1, 1848, twelve hundred and six subscribers guaranteed \$351,800, on which sum payments amounting to \$20,817.68 were made up to that date. Outside the city there was scarcely any money, and the payment for subscriptions beyond the first installment of two and one-half per cent had to depend upon future crops. The people subscribed as liberally as their limited means would permit, and succeeded in raising a fair amount. Railroad meetings were not frequent in those days, the settlers residing so far apart that they could not assemble on short notice, and those interested in placing the stock were obliged to travel the county to secure its taking. In many settlements the residents were found willing to co-operate, the ladies vying with the men in their readiness to render assistance. They appreciated how necessary it was to have the road built, and were prepared to make any personal sacrifice to further the undertaking. Many of them helped to pay for the stock subscribed for at their solicitation from the profits derived from the sale of butter, cheese and other household productions, even depriving themselves of the means required to educate their children, that a railroad might be built for the good of that and future generations.

In the first annual report of the Galena & Chicago Union Railroad Company, dated April 5, 1848, William B. Ogden, the president, said:

"The Michigan Central Railroad Company decided to ter-

* Richard P. Morgan, who died about two years ago, was one of the oldest civil engineers in the United States, and assisted in laying out many of the principal railroads in the Union. He made the experimental survey of the Galena Air Line road, the first railway emanating from Chicago. At the time of his death he was over ninety-two years of age.

minate their road at New Buffalo in July last, and steps were taken preparing the way for an extension of their road to Chicago about the same time. Upon this your directors proceeded at once to announce their intention of opening books of subscription to stock; for the extension of this continuous line of railroad from Chicago westward to Galena. Books were accordingly opened at Chicago and Galena, and at the towns intermediate, on the 10th day of August last and about \$250,000 of stock were then subscribed. The first expectation of the board was to obtain a general subscription from the citizens of northern Illinois and southern Wisconsin residing along the line of the contemplated road, and in its vicinity, as indicative of their faith in the profitable character of the roads when constructed, and of the general interest of the people in its construction; and with the aid of this subscription, to open negotiations with and solicit other subscriptions or loans from Eastern capitalists, sufficient in amount to justify the commencement of the work. The amount subscribed, however, on the opening of the books, was so liberal, and the feeling manifested along the line, so ardent and so universal, that it was quite apparent the country and the people immediately interested in the construction of the road, were able to, and would increase their subscriptions to an amount sufficient, in connection with the credits on iron and engines then offered us, to build the road from Chicago to Elgin at once, and own it ourselves. Experienced parties at the East largely interested in railroad stock, and decidedly friendly to the success of the Galena & Chicago road, were consulted, and made acquainted with the particulars of our position at this juncture, and with the proposed plan of obtaining the additional means at the East necessary to secure the completion of the road to Fox River. They were clearly and decidedly of the opinion that the wisest and surest way to accomplish the speedy extension and completion of the entire route to Galena was for the inhabitants along the line of the road to raise means themselves for its commencement and completion to the Fox River and Elgin, forty-one miles, when there was everything to assure us that the comparatively small cost of construction and extreme productiveness of the country tributary to the road would secure such large returns as would enable us to command capital from any quarter, or loans or increased subscriptions to stock for the extension of the road to Rock Island, and to Galena, without delay. This course was adopted, the object explained and approved by subscribers, and further subscriptions solicited and obtained on this basis of operation, to an extent exceeding altogether the sum of \$350,000 (about \$10,000 of stock subscriptions have since been added) and the work was commenced in earnest. A corps of engineers was then (September last) immediately employed to survey and locate the line from Chicago to the Fox River, and prepare it for letting. The time occupied in doing so, has somewhat exceeded what was at first supposed to be necessary, and the road, except the first seven miles, was not prepared for letting until the first of March last, when the grading and bridging of the first thirty-two miles (inclusive of the seven miles let last fall) was put under contract, and on very favorable terms, as will appear by reference to the report of the Chief Engineer."

Under the provisions of the amended charter of February, 1847, the owners of stock met April 5, 1848, and elected the following-named directors: William B. Ogden, president; Walter L. Newberry, Charles Walker, James H. Collins, J. Young Scammon, William H. Brown, John B. Turner, Thomas Dyer, Benjamin W. Raymond, George Smith, all of Chicago; Charles S. Hempstead and Thomas Drummond, of Galena; Allen Robbins, of New York. Francis Howe was chosen secretary and treasurer. Thomas D. Robertson, of Rockford was elected director *vice* Allen Robbins, resigned, in April, 1849; Dexter A. Knowlton, of Freeport, *vice* J. Young Scammon, resigned in 1850.

The early canvassing along the proposed line of the Galena & Chicago Union Railroad for subscriptions toward building the road was made by Messrs. Ogden and Scammon, who traveled the whole distance from Chicago to Galena for this purpose, holding meetings and obtaining subscriptions at all considerable places on the route. Subsequently Charles Walker, Isaac N. Arnold, John Locke Scripps, John B. Turner and others canvassed at points on the line of the road. B. W. Raymond and John B. Turner visited the East in 1848, with the object of securing subscriptions to the stock. Their efforts resulted in the sale of \$15,000 of stock, and a

loan of \$7,000. This money completed the road across the marsh to the foot of Cottage Hill. Again they purchased two locomotives from the Baldwin Works. In the meantime, Mr. Ogden, then a member of the Common Council, had introduced an ordinance into that body, which was voted down, proposing to grant the right of way to the road from the west into the city on a line with Kinzie Street, with the necessary privileges for constructing tracks, drawbridges and depots. Notwithstanding which, the contract for the first thirty-two miles of road from Chicago was let March 1, 1848, the first sixteen miles to be finished by August 1, and the balance by October 1, 1848. John Van Nortwick had

been appointed engineer. George W. Waite, assistant engineer, drove the first grade-peg, near the corner of Kinzie and Halsted streets, in June, 1848, then a point outside the city limits. The Council had refused the entrance of the road into the city; but granted leave to build a temporary track east to the river so that one of the two engines could be brought to the head of the road.

In September the management purchased a locomotive of the Tonawanda (N. Y.) Company, and also one of the Auburn & Syracuse Company. These were fitted up with new gearing and boilers, and the first one was placed on the section between Chicago and the Desplaines River, in November. The "Pioneer" arrived on the brig "Buffalo," October 10, 1848. The engine was taken off the boat on Sunday by Redmond Prindiville, Wells Lake, George W. Waite, George C. Morgan and John Ebert, the engineer. This engine was sold by the Baldwin Company on commission for the Rochester & Tonawanda Railroad Company. It served its purpose well and is in existence to-day, as if waiting some signal act of public approbation.

When the Desplaines River division was in working order, the rolling stock consisted of six old freight cars and the "Pioneer." By November 21 the engine was running daily on the ten miles of completed road, west of Chicago, conveying materials and laborers to carry on the work. The day previous Chicago received the first wheat ever transported by rail. Upon the invitation of the board of directors, a number of stockholders and editors of the city, took a "flying trip" over Chicago's system of railways, then extending ten miles west to the Desplaines River! A couple of baggage wagons had been provided with seats, and at about four o'clock p. m., the train bearing away about one hundred persons, moved from the foot of North Dearborn Street, where a crowd had collected to witness the novel spectacle. On the return trip a load of wheat was transferred from a farmer's wagon to one of the cars, and this was the first grain transported by rail to Chicago. This fact soon became known to the farmers living west of the city, and the company made arrangements to accommodate the expected increase of their business. They at once placed covered cars upon the track, and about a week after the line was open to travel, the business men of Chicago were electrified by the announcement that over thirty loads of wheat were at the Desplaines River waiting to be transported to the city. The expected receipts of the road would amount to

\$15 per day for the winter, and wheat-buyers were informed (partly with a view of increasing the passenger traffic) that they must now take their stations at the Desplaines River instead of at Randolph-street bridge. Facts and statistics were pouring in from Galena also, showing the benefits that would accrue when the line should reach that flourishing city. For instance, in January, 1849, the public were informed that the arrivals in Galena from March 17 to December 6, 1848, were: Keel-boats, 158; flat-boats, 107; that the revenue was \$1,950, and the value of the exports for 1848 was \$1,602,050.40. Furthermore that "a large portion of these will seek an Eastern market by railroad." The citizens of Galena were shoulder to shoulder with Chicago in the building of this road, but rumors were soon afloat that there was a disposition in certain quarters to cut off that thriving town from the benefits of the road which she was doing so much to build. To allay these suspicions, at the annual meeting held April 5, 1849, the stockholders resolved that Galena was the true terminus of the road and that "any diversion would be a violation of good faith, a fraud on the stockholders and an illegal perversion of the charter." Of the \$150,000 loan, authorized in May, 1848, to be negotiated, \$71,700 had then been expended.

Henry W. Clarke, DeWitt Lane, now of Lane's Island, and Major James Mulford, were the commissioners appointed to procure the right-of-way for the Galena & Chicago Union Railroad, and to assess damages within Cook County. This work was undertaken in March, 1849. The commissioners were accompanied by William B. Ogden, John B. Turner, John Van Nortwick, engineer, James H. Rees, "Ogden's own surveyor," and a few others. When the party reached Harlem, then called Oak Ridge, the commissioners agreed that the assessment of damages for right-of-way should be merely nominal, and from this agreement resulted the offer of six cents to each land-owner along the route. This offer was accepted without dissent, quit-claim deeds were made to the company, and the roadway was secured.

The total earnings of the road from the commencement of business in January, 1849, to December 1, 1849, were \$23,763.74; from December 1, 1849, to December 1, 1850, \$104,359.62. By January, 1850,* the main line had been extended to Elgin, forty miles west of Chicago, and Galena was still cut off from railroad communication; her ambition, finally, was not to be realized through the instrumentality of the road which she was helping to build. Another rival for popular favor was reaching out its giant arms to embrace, at least, the territory of a great State.

The superstructure of the road was completed to Elgin, January 22, 1850, the length of the main track from the North Branch of the Chicago River to the western terminus being 42.44 miles, which, with side track 1.88 miles, gave a roadway of 44.32 miles. The amount expended on this superstructure was \$164,131.87. The stock of locomotives and cars May 1, 1850, was as follows: One ten-ton locomotive (second hand), six-wheeled, two drivers; three fifteen-ton locomotives (new Norris's) eight-wheeled, four drivers; thirteen double covered freight cars; sixteen double platform freight cars; three single covered freight cars; six single platform freight cars; eleven gravel repairing cars; four hand cars; two passenger cars (new), one of fifty-six and one of sixty seats; two passenger cars (old) forty seats each; two baggage and accommodation cars of eight wheels each.

* See Bross's History, page 121.

The progress of the road from June, 1848, to April 31, 1850, is shown in the following table:

1849.	MILES.	TOTAL RECEIPTS.
June.....	10	\$ 913 35
July.....	15	1,602 52
August.....	18	2,743 13

April.....	42½	5,794 63
Total.....	310½	\$48,331 06
Expenses of operating.....		18,519 82
Net earnings.....		\$29,812 14

The number of passengers carried over the road from June 1, 1849, to April 30, 1850, was 37,524.

The inner history of the Galena & Chicago Union Railroad is most valuable, for the reason that it goes into such details as are not generally given in annual reports. Such facts, as a reminiscence could only contain, have been fortunately noted down by one who was himself a most important pillar of Chicago enterprise. In J. Young Scammon's biography of William B. Ogden this history appears to be well and impartially treated; and, therefore, in justice to the men named, is here given so much of that sketch as relates to this road and its builders.*

"In the winter of 1846 a convention was held at Rockford, the half-way house between Chicago and Galena, to favor the work. There was a large meeting, attended by persons from Galena to Chicago. Thomas Drummond, then residing at Galena, presided over the assembly. The late William H. Brown, always a director and subsequently a president of the Galena Company and of the Chicago Historical Society; with Benjamin W. Raymond, our ever public-spirited citizen, and more than once Mayor of the city, and a director of the road till it merged in the Northwestern, and who still remains among us to witness and rejoice with others over the success of his faithful public efforts, was among the active men there. Isaac N. Arnold, so long and favorably known in the politics of Illinois, and as a Representative in the late War Congress of the United States, and long a leader at the Chicago Bar, now President of the Chicago Historical Society, and devoting the calm of mature years to literary work, with General Hart L. Stewart, one of Chicago's oldest citizens, whose whole life has been spent in building public works west of Lake Erie, in Michigan, upon the Illinois & Michigan Canal and elsewhere—and in the public councils of the State or official positions under the Government—rode in the same carriage with the writer, and were active participants in the work of the convention, as was Thomas D. Robertson, of Rockford, for many years a director of the road. We were two days on our journey each way, spending the night at Elgin, then a little hamlet. The landlord there told us that he was against railroads. They were bad things for farmers and hotel-keepers, but good for 'big fellows at the ends of the road.' He 'intended to make money while the road was building and then sell out and go beyond them.' He declared that Elgin would cease to be a place of business as soon as the railroad went beyond it.

"The meeting was harmonious and quite unanimous in its action; the only exception being a tavern-keeper at Marengo, who, fearing that his business would be injured by the road, appeared with his friends in the convention and denounced railroads as 'undemocratic aristocratic institutions that would ride roughshod over the people and grind them to powder. The only roads,' said he, 'that the people want are good common or plank roads, upon which everybody can travel.'

"In the fall of 1847, Mr. Ogden and the writer traveled the entire distance from Chicago to Galena together, stopping at all the principal intermediate places, making speeches for the road, and going into the highways to compel men to come in and help the enterprise, even if they could not take more than a single share of stock. Many farmers and other persons, be it said to their credit, did come forward and subscribe, though they had to borrow the first installment of two dollars and fifty cents on a share

* Fergus's Series, Biography of William B. Ogden.

and get trusted 'till after harvest,' for the same. Mr. Ogden was in his element in such enterprises. His go-a-headativeness here gave full play to his imagination, and filled not only himself, but his hearers with high hopes and generous courage. When it is remembered that it cost five bushels of wheat, and often from four days' to a week's journey to Chicago with a load of grain to get the first installment of a single or few shares of stock, none can doubt the public interest in the enterprise.

"At Galena, business men and bankers were fearful of the effect of the railroad upon their town. Among its chief advocates there were Judge Drummond, C. M. Hempstead, Elihu B. Washburne, and Thomas Hoynes. Galena had long been a very prosperous town at the head of navigation on Fever River, and the great lead-mining center and mercantile distributor for northwest Illinois and southwest Wisconsin, and the country north in the mines. The great obstacles we met there were two; one the local effect upon the town, and the other the fear that before the road should be completed the enterprise would break down, the small stockholders sacrificed, and the road pass into the hands of the large capitalists. We had to meet these objections by the promise to respect and protect the local interests of Galena, to whose capital we were much indebted in starting the work, and a pledge that until the stock rose to par, and was saleable at that price, we would never allow the work to proceed faster than its ready means would justify without endangering the capital invested. This promise was faithfully kept so long as these two persons remained in the directory. It has been said in justification of the abandoning of the west end of the line to the Illinois Central Railroad, that Galena was doomed, and a different course could not have saved it. The writer dissents from this proposition, and believes that if the pledges Mr. Ogden and he made at Galena had been faithfully, energetically, and courageously carried out, Galena would have been greatly benefited, and its importance and business permanently advanced. But whether this opinion be correct or not, Galena was a pioneer in the work, and the company had no right to sell her birthright to the Illinois Central Company. It would not have been done had the two most active directors, who were among the largest subscribers to the stock, when the company was re-organized in the writer's office, on the southeast corner of Lake and Clark streets, in the old Saloon Building, in the city of Chicago, in 1847, remained in their positions in its management.

"In a paper read before the Chicago Historical Society, by Mr. Arnold, December 20, 1881, on the occasion of the presentation, by Mrs. Ogden, of a portrait of her late husband, it is said 'the officers of the road, after he [Mr. Ogden] had been compelled to retire, had received a public dinner (I think at Elgin) in which they drank toasts to each other and everybody except Mr. Ogden. The omission of his name, the man who everyone knew had built the road, only made him more prominent.' If such an occasion took place, the occasion must have been more marked by the absence of the original and most efficient projectors of the road than their presence. There were officers of the road that were engaged in speculating along its line, as was confessed some years later, when one of them was made a scapegoat. Public allusion having been thus made to these personal troubles in the board of directors, it becomes proper to explain the same somewhat, as in doing so a trait in Mr. Ogden's character and conduct presents him in very bold and advantageous relief, when compared with that of some of his associates. Chicago at that time was a comparatively small and very ambitious city. It had three divisions, occasioned by the river and its North and South branches, which run almost at right angles with the main river, leaving east of them the North and South divisions, and west of them the West Division, extending the whole length of the city. Such divisions always create local jealousies, and the selfish interests excited are often difficult to manage or control. Mr. Ogden resided on the north side of the river, as did three other directors, Walter L. Newberry, Thomas Dyer, and John B. Turner. Two, Thomas Drummond and Charles M. Hempstead, lived in Galena, and one, Thomas D. Robertson, in Rockford, while the five others, Benjamin W. Raymond, George Smith, Charles Walker, James H. Collins, and J. Young Scammon, lived in the South Division, which was then, as now, the principal business and commercial portion of the town. Mr. Ogden being especially identified with the North Side could not exercise as much influence in obtaining subscriptions to stock in the business portion of the town as some of the South Side directors, as he was accused, by those who never suppose other than solely selfish motives can influence action, of 'wanting to build a railroad that would never pay, to help him sell his lots.' The gentlemen on the North Side naturally desired the road to cross the North Branch, and locate its depots or stations in the North Division; while the West Siders could see no necessity of expending money to cross the river, because the West Side was the largest division of the city and the nearest to the country. In the railroad work, either because Ogden and Scammon had more time to devote to it, or for some other reason, they became the specially active representatives of the road on their respective

sides of the river. The out-of-town directors could rarely attend its meetings, or only when very important questions demanded their presence. These two men gave very much of their time to the enterprise; Mr. Ogden receiving a small salary in stock, and the writer no compensation, except for legal services when required by the board. Ogden and Scammon traveled over the country together; visited Albany and Boston in the interests of the road in company with the late Erastus Corning, then president of the New York Central Railroad and the controlling spirit in the Michigan Central, the only road then in operation west of Lake Erie. They hoped to interest the Boston gentlemen who were stockholders in and engaged in extending the Michigan Central to aid in building the Galena. They called upon the Michigan Central directors, and especially upon William F. Weld, an iron merchant in Boston, who had then the reputation of being 'the Railroad King.' They were very kindly received and entertained by John M. Forbes, then a director of the Michigan Central, and a wealthy East India merchant, and since long identified with the Chicago, Burlington & Quincy road, and one of its principal stockholders. Mr. Weld said to us: 'Gentlemen, I do not remember any enterprise of this kind we Boston people have taken hold of upon statistics. You must go home, raise what money you can, expend it upon your road, and when it breaks down, as it surely, or in all probability will; come and give it to us, and we will take hold of it and complete it, as we are completing the Michigan Central. A resolution was then formed though not publicly expressed, that the Galena should not break down. We came home, sought and obtained subscriptions to the stock of the road upon the pledge that the stock should never be endangered until it rose to par, and the holders had an opportunity of selling their shares at that price. This pledge was kept.

"An opportunity occurred, as we were commencing the work, of buying the old strap rail which was being removed from the Rochester & Canandaigua road, to be replaced with T iron, together with two little second-hand passenger cars and two like engines, for \$150,000, on a credit of five years, if the writer recollects correctly, provided two of the directors would endorse the bonds. This would require each of the thirteen directors to make himself responsible for a little over one-sixth part of that sum as guarantee of the Galena company. There was one director who said 'he never endorsed other people's paper,' and declined to do so, though he was subsequently made president and claimed credit for building the road, with what propriety and how justly, in comparison with the endorsers, let others judge. All the others made the requisite endorsement, with the understanding that we were to stick together and re-elect the old board until these bonds should be paid. We went ahead with the road and had got out west nine or ten miles, across the wet prairie, to the sand ridge, where the teams from the country met us, and transferred their loads to the cars, making the road pay as soon as the first section was completed. We were so encouraged that we thought there ought to be no doubt about raising money to push the work. Mr. Ogden, as president, had boldly made some contracts with McCagg, Reed & Co., and others, for ties and lumber, based upon expectations of raising money in New York or at the East. A committee, consisting perhaps of Messrs. Ogden and Raymond, went to the East for that purpose. They returned unsuccessful. A meeting of the directors was called. It looked blue. To go ahead would endanger the stock. To stop entirely would be a fulfillment of the Railroad King's prophecy. Mr. Ogden was embarrassed. He knew that many of the public had no faith in the railroad, and believed it to be, on his part, an undertaking to aid him in selling his town lots, they saying that he could well afford to lose his stock if it would help him to sell his land. Most of the other directors were fearful. Mr. Raymond was hopeful, and Walker, Collins and Scammon, courageous. The latter said he believed arrangements could be made to defer or extend the contracts, and to bridge over the time till the installments on the stock that would be paid after the harvest should be realized, when the work on the road could proceed slowly, yet successfully. Mr. Dyer, who then owned the Lake House in the North Division, and was very anxious that the work should go on and the road be extended to the lake, so as to benefit his property, lost faith. The writer called him 'a doubting Thomas.' He replied, 'If Mr. Scammon has so much faith in the road, I move that a committee of five be appointed, with full power to do anything which they deem expedient, in regard to the road, and that Mr. Scammon be chairman of that committee, and be authorized to appoint his associates.' This was agreed to, and a committee, consisting of Mr. Scammon, James H. Collins, Charles Walker, Thomas Dyer, and Mr. Raymond, appointed to have charge of the subject. This committee gave the writer *carte-blanc*. He immediately applied to George Smith, the only banker in the place who could make such a loan, \$20,000 for six months, to enable him to go on with the road. Mr. Smith declined, though director of the road, and desirous of seeing it completed. He was

asked why; if he had not the money. He replied, 'Yes, but I do not wish to lose it. I have no confidence in the road.' Mr. S. rejoined, 'Don't you think I can build the road to Elgin with the \$363,000 stock subscriptions we have of farmers, which are good and sure to be paid?' He answered, 'Yes, but you are not the president of the road.' Mr. Scammon rejoined, 'Don't you think Mr. Ogden can?' Mr. Smith said, 'He can, but he won't,' adding, 'Mr. Scammon, I will lend you the money.' The writer replied, 'Make out your note, and let me have it.' He did so, and the money was taken and placed in the treasury of the company, no other person in the road, except those connected with the loan, knowing from whence it came, except the treasurer the late Frank Howe. This, with arrangements that were made for extending contracts, enabled the road to meet its engagements, and prevented any suspension of work thereon. The road was pushed and completed to Elgin. It did not cost much money in those days to build a flat railroad on mostly level land. Yet to obtain the small amount necessary, required, at that time, more courage and perseverance than is now requisite to build a road across the continent. The careful economy exercised in the building of this forty miles was nevertheless very conspicuous. We had money enough only to build the track with very few accessories. It was a single straight line—hardly more. Station-houses, sidings, turn-outs and turn-tables had to be, for the most part, deferred to the future.

"An incident occurs to the writer which may be worth recalling. Upon the completion of the road to Elgin, a general invitation was given for an excursion over the forty miles between Chicago and that place. Among the party was an Irish engineer, who had published, in Dublin, a work on railroad engineering, which he had with him in bright red binding. On alighting from the cars in Chicago, on our return, the writer asked him what he thought of our road. He replied: 'If it is the engineering you're asking about, I don't think anything of it. We would spend more in the old country, upon the engineering of a single mile, than you have spent upon your entire road.'

"In the meantime rivalries between the west and north sides of the river had sprung up, and some of the North-Side directors became suspicious that Mr. Ogden did not want to extend the road across the North Branch into the North Division, because his greater interest was on the West Side. The temporary depot was then there. Some of the directors proposed to the writer to accept the presidency of the road. Upon this being declined, it was proposed to make him treasurer and financial agent. This was also declined, for the reason that it would too much interfere with professional work, which the writer was unwilling to give up. Meanwhile, certain officers of the road had been busy misrepresenting Mr. Ogden's actions and intentions to Mr. Scammon and Mr. Scammon's to Mr. Ogden, until the latter was led to believe that there was a conspiracy to turn him out of the presidency and elect the writer in his stead. A counter movement was therefore undertaken by Mr. Ogden and the few who were in his confidence. This movement was not discovered until a few days before the election. Nine of the directors were very much surprised to learn it, and all of these nine sided with the writer. What combinations had been made, and how many proxies were held by the parties in this movement, were unknown. We started for Elgin, where the meeting was to be held. Mr. Ogden's party, with Mr. Arnold as their attorney, went in one car, the other Chicago directors in another. On the way out, the writer said to the directors who were in the car with him, that he had been thinking over the matter, and had come to the conclusion that inasmuch as we did not know how strong the other party were, and what they intended ultimately to do, the better way would be to propose to them that the writer would decline a re-election upon condition that all the other directors should be re-elected without opposition; and he said he would name, as his successor, Mr. Knowlton, of Freeport. That the other party would be obliged to accept this, or lose Mr. Knowlton's and the other Freeport votes, which would certainly defeat them. That we could not afford to have an open quarrel, which might hurt our credit and embarrass the progress of the road. The directors with the writer replied, if Mr. Scammon is willing to make this proposition they thought it would succeed, but no one could ask it of him. He replied, that he was more interested in the completion and success of the road than in any personal question; that he had worked solely in the interest of the road as a public improvement demanded by the country, and had no selfish axes to grind, and he would make that proposition, and trust to time for his justification. It was made, much to the surprise of the other party, and after some hesitation or consideration, as it 'broke their slate,' it was accepted. Mr. Ogden was re-elected president; but no sooner was Mr. Scammon out of the directory than all the batteries of the conspirators were turned against Mr. Ogden, and his place was made so uncomfortable that at the end of the year he left the road. Immediately after the election, the nine directors called the conspirators to account; and there was a confession that the

writer had been grossly misrepresented and improperly treated, and a promise made that a proper explanation should be made. It was never done. But William B. Ogden acted otherwise. When he learned the facts, and that we had both been made the victims of ambitious and designing men, who wished to get rid of the writer, because he had nipped in the bud their first attempt at speculation in the location of the road, and prevented its repetition, and because they knew that they were watched, and so long as he was in the board such movements were likely to be detected and defeated, Mr. Ogden came directly to the writer, and, on learning what statements these parties had made to the latter, relative to Mr. Ogden, at once frankly acknowledged that in his action he had been misled and imposed upon by those he trusted, and that the writer's conduct, to which he had taken so grave exception that he felt justified in self-defense to enter into combination to defeat his re-election, was entirely in the path of right and duty, if the writer believed the representations made to him, as he was bound to do within the circumstances."

THE ILLINOIS CENTRAL RAILROAD COMPANY.— Judge Breese's stupendous project, which had been lying dormant, but not dead, since the bursting of the internal improvement bubble in 1839, was taken up with renewed energy in 1848. John S. Wright, who had early taken a deep interest in public enterprises, and was a man of great foresight, energy and enthusiasm, was actively employed in circulating petitions and documents in favor of a land grant from the General Government to assist in the construction of the road, while the father of the enterprise, Judge Breese, was giving his time and energies to it in the Senate of the United States. Mr. Wright flooded the country with documents laying the matter before every class of people. He is said to have distributed at his own expense six thousand copies of petitions to Congress for a grant of land in aid of a railroad from the Upper and Lower Mississippi to Chicago. Three different ones were prepared—for the South, Illinois and the East. Judge Douglas said they came to Washington by the hundreds, numerous signed and had much influence, being the earliest movement for this object outside of Congress, except by the Cairo company. Arrangements were then (January, 1848), being made to continue the Michigan Central Railroad from New Buffalo to Chicago, sixty miles, which, with the road then building across Canada, would connect the city with the East. The Galena & Chicago Union Railroad had been surveyed. The proposed Buffalo & Mississippi road via Chicago to the mouth of Rock River was to be extended, in time, to Council Bluffs. An ardent admirer of this project and a warm practical supporter, and a hard worker to make the enterprise a success was Hon. Stephen A. Douglas. The Illinois Central from Cairo at the mouth of the Mississippi to the canal was designed to be a most important link in the great system of communication between the lakes and the Mississippi, as that river as far south as Cairo was open to the gulf at all seasons of the year.

The original bills, introduced by Judge Breese, as he himself says in a letter to Senator Douglas, published in January, 1851, did not contemplate a connection with Chicago. They confined the roads to the routes from Cairo, by Vandalia, Shelbyville, Decatur, Bloomington, Peru and Dixon, to Galena. In 1847 Senator Douglas made Chicago his home, and he, in connection with other large property owners, determined to establish a line binding the Northwest with the lakes. Thus many friends were secured for the measure in the northeastern and middle States, who did not favor a proposition having for its natural tendency the diversion of trade from the Upper Mississippi toward New Orleans alone.*

The bill was reported by Judge Breese, chairman

* See letter from Senator Douglas to Judge Breese, published in Weekly Democrat, March 1, 1851.

of the committee on public lands, the same year, but did not meet with further consideration.

On the 11th of December, 1848, in the United States Senate, Mr. Douglas gave notice that he would introduce a bill granting the right of way and making a grant of land to the States of Illinois, Mississippi and Alabama in aid of the construction of a railroad from Chicago to Mobile. The bill was introduced on the 18th of the same month, read twice, and referred to the committee on public land, of which Judge Breese was

chairman. On the 19th of December Judge Breese reported back the bill without amendment and it was ordered to be printed. On the 30th of January, 1849, Judge Breese moved that the prior orders be postponed for the purpose of taking up the bill. The Senate was in committee of the whole proceeded to its consideration. Mr. Breese submitted sundry amendments, but moved that the printing of them be dispensed with. Mr. Dodge, of Iowa, suggested a further amendment so as to provide for terminating the road at Dubuque, on the Mississippi River. Mr. Breese then amended by inserting after the word "Galena" the words "to the Mississippi River opposite Dubuque." No further amendments being submitted the bill was reported to the Senate, when the several amendments were concurred in. The bill was then ordered to be engrossed and read a third time, and was subsequently by unanimous consent taken up and passed in the Senate. In the House at this session it failed, but the matter having been so fully and fairly presented, ripened it for its subsequent passage in 1850.

General James Shields was sent to Congress as the successor of Judge Breese. In December, 1849, Congressman Shields and Senator Douglas, supported by the other Illinois members, prepared the bill, which was introduced into the Senate by Mr. Douglas in January, 1850. It passed the Senate May 2, and the House of Representatives September 20, 1850. Its triumph in that body was largely due to the energy and ability of Hon. John Wentworth, the Representative of this district, and the late Governor Bissell, then a member of the House. At the same time a strip of land between LaSalle and Cairo, two hundred feet wide, was granted to the State for the uses of road-bed, side-tracks, and stations of the Central Railroad. The main grant of which this was supplementary, was 2,595,000 acres in the heart of the State, or alternate sections designated by even numbers for six sections deep on each side of the main line and its branches, and for lands sold or pre-empted within those sections, an equal quantity within fifteen miles on each side of the line, on condition that the grant would be controlled by Illinois, and when the road should be built would be free to the General Gov-

ernment. The minimum price was fixed at \$2.50 per acre, but in 1852 \$5.00 per acre was realized.

This was the precedent of railroad grants, refused to the roads then completed, viz.: Chicago & Galena

from Chicago to Elgin; a section of the Northern Cross Railroad, from Naples and Meredosia to Springfield, and six miles of Governor Reynolds's track from a point opposite St. Louis to the Bluff coal mines. What now hopes the great land grant built up may be learned from the repeal of the act canceling the Great Western Railroad Company's charter, and the regranting of the charter to the Cairo City & Canal Company, with additional privileges. This transaction, known as the "Holbrook Charter," became notorious; so much so that Douglas prevailed upon D. B. Holbrook, president of the Cairo company, to yield up to the State the charter, which surrender was made December 24, 1849.

During the previous month, November 5, 1849, the act to provide for "a general system of railroad incorporations" went into effect. It provided that not less than twenty-five persons might form a railroad corporation, and elect directors when \$1,000 of stock per mile should be subscribed, and ten per cent paid in. Thirteen directors were to be chosen, at least seven of whom must reside in the counties through which the road was to run. Rules were laid down for the conduct of the directors, making the stockholders individually liable to the creditors of the company to the amount of stock held by them. Every company before proceeding to construct their road through any county was to make a map of its route and file it in the County Clerk's office. The corporation was not to interfere with navigable streams, or obstruct roads and highways. The compensation for any passenger and his ordinary baggage was not to exceed "three cents per mile, unless by special act of the Legislature." Rules were also laid down for obtaining the right of way. Each employé was to be appropriately "labeled" with his company's badge. Annual reports were required to be made to the Secretary of State, and the railroad property listed by the proper officer, the State having a lien upon appurtenances and stock, for penalties, dues and taxes. The act admitted the right of the Legislature to alter rates, if the profits were not reduced less than fifteen per cent per annum on the paid up capital. Three commissioners, appointed by the Governor, were to fix the rates of transportation for the United States mail, in case the railroad could not agree with the General Government. Should a passenger not pay his fare the conductor was authorized to "put him off." Under no circumstances were freight cars to be placed behind passenger coaches, and at least a thirty-two-pound bell or a steam whistle was to be placed on the locomotive, and worked at least eighty rods from a railroad crossing. Penalties were provided for a violation of these sections. "Warning boards" were to be erected, on which were to be painted, in capital letters of at least the size of nine inches—"Railroad Crossing—Look out for the cars while the bell rings, or the whistle sounds." This was not to apply to city streets.

By act of the General Assembly, approved February 17, 1851, an act entitled "An act to incorporate the Great Western Railway Company," approved March 6, 1843; "An act to amend an act entitled an act to incorporate the Great Western Railway Company," approved February 10, 1849, and "An act to incorporate the Illinois Central Railroad Company," approved January 16, 1836, were repealed. By section 3 of the same act the grant of Congress approved September 20, 1850, was accepted.

Prior to the passage of this wholesale repealing act, a memorial was presented to the General Assembly. It is dated December 28, 1850, and signed by Robert Schuy-

ler, George Griswold, Gouverneur Morris, of Morrisania, Franklin Haven, David A. Neal, R. Rantoul, Jr., J. Sturges, Thomas W. Ludlow and John F. A. Sanford. The memorialists offer to build a road from Cairo to Galena, with a branch to Chicago, on or before July 4, 1854, "as well and thoroughly built as the railroad running from Boston to Albany," agreeing furthermore, in consideration of the charter and the land grant to "pay annually — per cent of the gross earnings of the said road." The general reader may be glad to learn that this blank was filled with a "seven" and that this agreement became one of the corner-stones of the financial stability of the State of Illinois.* On February 10, 1851, the Legislature, declaring that in its judgment the object of incorporating the Central Railroad Company could not be attained under general laws, passed an act incorporating the Illinois Central Railroad Company. The event was celebrated in Chicago by a popular demonstration of favor. The incorporators were the memorialists mentioned above, and Henry Grinnell, William H. Aspinwall, Leroy Wiley and Joseph W. Alsop. These gentlemen, with the Governor of the State for the time being, were constituted the first board of directors.

To this company the congressional grant of right of way and public lands, together with "the right of way which the State of Illinois has heretofore obtained;" the lot of land obtained by the State within the city of Cairo for a depot; "all the grading, embankments, excavations, surveys, work, materials, personal property, profiles, plats and papers constructed, procured, furnished and done by or in behalf of the State of Illinois, for or an account of said road and branches, and the right of way over and through lands owned by the State," were "ceded and granted," and the company were required to execute a deed of trust of all this property, together with "the railroad which may be built," to Morris Ketchum, John Moore and Samuel D. Lockwood, trustees, to secure to the State the first lien on the property so conveyed, the construction of the road, and the indemnification of the State against the claims of the United States, in case the road should not be completed within ten years as required by the act of Congress of September 20, 1850. Thus the magnificent grant to the State was relinquished to a private corporation, not without strong opposition, however, for there was a deep feeling against the measure. The magnitude of the grant was so overpowering to the minds of many good citizens, that they argued earnestly that by proper management the State might not only build the seven hundred miles of railroad, but from the proceeds of the lands pay off a burdensome State debt of many millions of dollars besides. Doubtless this might have been possible, but the opportunities for "steals" might not have been easily resisted. John S. Wright published a pamphlet in which he insisted that the State would be "everlastingly dishonored if the Legislature did not devise laws to build the road, and disenthral the State of its enormous debt besides, out of the avails of this grant." The company negotiated a loan of \$400,000, but the money could not be realized until there should be a conveyance of the lands from the General Government. In this there was some delay. Justin Butterfield, the commissioner of the general land office, at Washington, who was from Chicago, construed the grant as entitling the company to lands for the Chicago branch, on a *straight line* to Chicago, which would avoid the junction with the Michigan Central. After some vexatious delay this construction of the act was overruled by the President and Secretary of the

Interior, and in March, 1852, the necessary patents were issued, contracts were awarded, work commenced and the road pushed forward to completion with little interruption.

In March, 1851, the board of directors had chosen Roswell B. Mason,* of Bridgeport, Conn., engineer in chief. It is entirely fitting that he should himself give an account of the survey and building of the line, as he was at the head of the work from its commencement to its conclusion. The following letter to a personal friend explains itself:

"CHICAGO, October 12, 1883.

"C. C. P. HOLDEN,

"Dear Sir: In compliance with your request, I give you very briefly a few facts and incidents connected with the early operation of the engineer department of the Illinois Central Railroad.

"I received my appointment as chief engineer of the Illinois Central Railroad on the 22d of March, 1851, and entered at once upon the duty of selecting my assistants and making preparations for the journey to what was then considered this far off Western country. Leaving New York on the 14th of May with a party of ten or twelve young gentlemen, we traveled by steamer to Albany, by rail to Buffalo, by steamer to Detroit, by rail to New Buffalo, on the east side of Lake Michigan, and thence by steamer to Chicago, arriving on the 19th of May. My assistant engineers were appointed over the work as follows:

"N. B. Porter, from Chicago to Rantoul, headquarters Chicago; L. W. Ashley, Rantoul to Mattoon, headquarters Urbana; C. Floyd Jones, Mattoon to main line Junction, and main line from Ramsay to Richview, headquarters Vandalia; Arthur S. Ormsby, Richview to Cairo, headquarters Jonesboro; H. B. Plant, Ramsay to Bloomington, headquarters Decatur; T. B. Blackstone, Bloomington to Eldena, headquarters LaSalle; B. B. Provoost, Eldena to Dunleith, headquarters Freeport. Henry Bacon, after a few months, took the place of N. B. Porter at Chicago, and L. W. Ashley took the place of Arthur S. Ormsby at Jonesboro. The solicitors of the company were W. H. Bissel and Mason Brayman of Springfield; the trustees, John Moore, S. D. Lockwood and Morris Ketchum.

"After seeing my assistants on their way to their several locations, I went by packet-boat on the Illinois & Michigan Canal from Chicago to LaSalle, and then took a private conveyance to Cairo and back to Chicago. We traveled very nearly on the line of the road as now located south of LaSalle through Bloomington and Clinton to Decatur. From Decatur I went to Springfield to have a consultation with the solicitors, Messrs. Bissel & Brayman, and on my return to Decatur I was joined by W. H. Bissel, Esq., who went with me to Cairo and a part of the way back south of Decatur we traveled substantially on the present line of the road through Vandalia and near Richview and Jonesboro. But owing to high water we could not drive to Cairo and went to Mound City on the Ohio River, and thence by steamer to Cairo. Owing to cholera, which then prevailed there, and what appeared to me a very fair prospect of being drowned, I made a short visit, returning by steamer to Mound City; then followed back substantially on our route to near Decatur, thence to Urbana. The expectation at that time being to have the Chicago branch leave the main line at some point between Decatur and Vandalia.

"Going north from Urbana, we traveled over an unbroken prairie, almost the entire distance to Chicago, with no settlement in view on the whole one hundred and twenty-eight miles except at Spring Creek and Baurbonia until you came near Chicago, where we arrived in about one month from the time I left there, traveling by private conveyance between seven hundred and eight hundred miles. During the journey I met all my assistants except B. B. Provoost, and found them well equipped and entering very heartily into a vigorous prosecution of their work.

"After spending a few days at Chicago, I went again by packet-boat to LaSalle and thence by private conveyance to Dubuque, through Dixon, Freeport and Galena, meeting Mr. Provoost at Freeport, who had his work well in hand; returning to Chicago after about ten days, where I spent several weeks. But during the summer and fall I visited different portions of the line several times and was able to complete the location substantially and get my profiles and maps ready to take with me to New York late in the fall.

"On the 2d of February, 1852, I went to Washington to deposit the map of our location with the Commissioner of the Land Department as required by law, and to get his approval of the selection and quantity of the land. This was not accomplished until

* Hon. Roswell B. Mason, the builder of the road and who located in Chicago during the construction of the same, was called by the people of this city to the Mayor's chair in the fall of 1869, where he served the city for two years with the same fidelity that characterized all his acts in the construction of the Illinois Central Railroad in the years 1851-56.

* The amount thus paid over to the State has been over \$9,000,000.

the 14th of March. While in Washington in the early part of March, I directed the work to be put under contract from Chicago to Calumet, in order to enable the Michigan Central Railroad to reach the city. Spending a few days with my family in Connecticut after leaving Washington, I started for Chicago again on the 17th of March via Philadelphia and Pittsburgh, and after a tedious journey of seven or eight days reached Chicago. Every effort was made to complete the work from Chicago to Calumet as soon as possible, and on the 21st of May, 1852, the first passenger train from Detroit entered Chicago, using the Illinois Central Railroad track from Calumet to about Twenty-second Street, and from thence by a temporary track over the prairie almost in a direct line to the east side of Michigan Avenue, immediately south of Thirteenth Street, where a temporary passenger depot was provided and occupied for something more than a year, until the road was completed to the present depot at the foot of Lake Street.

"The only towns of importance on the main line were Galena, Freeport, Dixon, La Salle, Bloomington, Clinton, Decatur, Vandalia, Richview, Jonesboro and Cairo. Richview and Jonesboro were not immediately on the line, but within about one mile. We did not go through a single settlement on the branch, but passed near Urbana and Bourbonnais. With the exception of more or less timber in the immediate vicinity of the towns mentioned above, we passed over prairies from Galena to Big Muddy River within about sixty miles of Cairo. This sixty miles was quite heavily timbered almost the entire distance. In going north on the Chicago Branch from the main line we passed over patches of timber and prairie to a point a little south of Mattoon, and from there to Chicago it was entirely prairie, except for a short distance at Spring Creek and Kankakee. In going south from La Salle we soon came on to a prairie and traveled forty miles without seeing a house of any kind, and generally there was scarcely any settlement between the towns mentioned above, which are from twenty-five to fifty or sixty miles apart. On the branch I think there was no settlement immediately on the line of the road from where it leaves the main line until you come within about twenty miles of Chicago. There were quite a number of places from twenty to forty miles without a settlement. The only railroads in Illinois in the spring of 1851 were the Chicago & Galena, extending from Chicago to Elgin, about forty miles, laid with strap-rail; and a road from Jacksonville to the Illinois River, also laid with strap-rail, and pretty much abandoned, I think, at that time.

"The land offices in 1851 were Chicago, Dixon, Danville, Vandalia and Kaskaskia.

"Chicago was estimated to contain about 40,000 inhabitants in 1851.

"In June, 1852, the contract was let for grading the road from La Salle to Bloomington. But owing to the high elevation in crossing the Illinois River and the expensive grading on each side of the river for several miles, a temporary track was laid from the main line a few miles south of La Salle to the top of the bluff immediately opposite to La Salle, and an inclined plane was constructed from the top of the bluff down to the Illinois River, so that iron and other material for the construction of the road could be loaded on cars at the foot of the plane and drawn up by stationary power at the head of the plane and then distributed with an engine and cars that had previously been taken up the plane. This road was completed to Bloomington in the early part of 1853, and on the completion of the Rock Island road to LaSalle a temporary bridge was constructed over the Illinois River and a track laid from the foot of the plane to connect with the Rock Island Railroad, making a continuous railroad track from Chicago to Bloomington.

"During 1852 the entire line was put under contract and was completed on the 27th of September, 1856, but owing to the few settlements it was very difficult to get men and teams and supplies for them. Agents were sent to New York and New Orleans to get men, and in some cases their fare was paid, with the promise of refunding it out of their work. But these promises were frequently entirely disregarded. Some men would not even go on to the work a few miles only from the steamboat landing; others would come on perhaps at evening and get their supper, lodging and breakfast and start off the next morning for other quarters, but notwithstanding these drawbacks many men were procured in this way. In the early construction of the road, large supplies for men and teams came from St. Louis for the main line south of Decatur, and from Indiana for the Chicago Branch. In many cases flour and other supplies were hauled nearly or quite one hundred miles. The iron for the road from LaSalle to Bloomington was sent from New York by Hudson River, Erie Canal and the lakes to Chicago and by Illinois & Michigan Canal to LaSalle. On the 5th of March, 1853, I was advised that from twelve to fifteen thousand tons of railroad iron would soon arrive in New Orleans, subject to my order. This iron was distributed to all points where the line of the road could be reached by water, for instance to Cairo; to

the mouth of the Cash River, a few miles north of Cairo; to the mouth of the Big Muddy River, from whence it was taken by flat boats up to the line of the road, to Galena and Dunlieth, and track laying was commenced at all of these points as soon as the grading was completed, and on the completion of the Ohio & Mississippi Railroad from St. Louis to the main line, rails were sent to St. Louis and over that road, and track laying was commenced both north and south from that point; and when in 1853 the Great Western Railroad was completed from Springfield to Decatur, and the Chicago, Burlington & Quincy from Chicago to Mendota, and the Galena Railroad from Chicago to Freeport, iron was sent over those roads to each one of those connecting points, enabling us to lay track each way from each point. Track laying was continued south from Bloomington with iron sent from LaSalle, and south of Chicago as fast as the grading was ready. On the completion of the Chicago, Burlington & Quincy to Mendota the track was laid on the Illinois Central south to the top of the bluff north of LaSalle, and thence a temporary track into LaSalle making a continuous railroad track from Chicago to LaSalle, which was operated by the Chicago, Burlington & Quincy Railroad for a year or more.

"Several engines were sent from the East to Buffalo, thence by the Lake to Detroit and by Michigan Central Railroad to Chicago. And for the southern portion of the line an engine was sent to Cincinnati and taken down the Ohio River on a flat-boat to the mouth of Cash River, and thence up that to the line of the road. Some cars were sent from the East, but the greater part were built here in Illinois. The road was completed in detached pieces, that part of it from Freeport to Dunlieth being operated for some time by the Galena Railroad.

"To give you some idea of the pleasure of traveling in Illinois at that early day, I will describe a trip made with David A. Neal, Jr., vice-president of the Illinois Central Railroad Company, in the fall of 1852. Leaving Chicago November 10, 1852, we went by packet-boat on the Illinois & Michigan Canal to LaSalle, thence by steamer on the Illinois and Mississippi rivers to Cairo, arriving at St. Louis on the 14th and Cairo on the 17th of November, a very comfortable journey. But our plan was to return by private conveyance near the line of the railroad to Chicago. Leaving Cairo on the 18th, we reached Vandalia on the 23d, and Decatur the 25th with our team nearly exhausted, and unable to go any further. The roads were so bad it was thought nearly impossible to get through and it was determined to go to Springfield and then by railroad, which had just been completed to Alton, and then by the Illinois River and Illinois & Michigan Canal to Chicago. We found it difficult to get a team to take us to Springfield, but an offer of \$15 induced a livery-man to agree to take us through to Springfield, about forty miles, in a day. Leaving Decatur Friday morning, November 26, we toiled through the mud, water and ice to a small town within twelve miles of Springfield, arriving there about dark with our team tired out and entirely unable to go any further. The train left Springfield Saturday morning at eight o'clock and an offer of \$15 more induced a man who had a good team to agree to take us there in time for the train, or else forfeit the \$15. We agreeing to go at once or let him fix the time of starting; he named two o'clock in the morning as the time to start. So getting a little rest we were under way at two o'clock. It was then very cold, and ice of considerable thickness formed on the water cutting the horses legs quite badly to go through it. And in some cases the driver would go through on foot and break the ice before driving through it. We arrived at Springfield about twenty minutes before the train left. He earned his \$15 and we had a comfortable journey from there to St. Louis, where we staid over Sunday and took a steamer Monday morning for LaSalle, thence by packet-boat to Chicago, where we arrived December 4, 1852.

"It was some considerable time after the work was commenced before a local treasurer was appointed to be stationed at Chicago. And in the mean time all the funds for the payment of the engineers and contractors passed through my hands, so that I carried large amounts of money to all parts of the road in my carpet-bag. In going into the extreme southern part of the State I went to St. Louis with my funds or sometimes procured them there by drafts on New York and then secured a reliable police officer to go with me until I had disbursed them. But after a time I was very much relieved by having John B. Calhoun sent out to Chicago as local treasurer. He was a competent, faithful, reliable man, and I am not aware that one dollar was ever lost or misappropriated during the construction of the road.

"There were important reasons for completing the *main line* of the road by January 1, 1856, and some months previous to that I was authorized to use every possible effort to complete it by that time, regardless of expense. On consultation with the grading contractors a time was fixed for the completion of their work, reserving only time enough to lay the track, and a bonus was offered them for every day it was completed before the time. The work was completed within the time, but the contractors did not secure a

very large bonus. Extra track layers were engaged and teams employed to cart iron a few miles in advance of the regular party. When the extra party would commence and when the regular party reached that point they would go on a few miles in advance of the extra party and commence again. So by this and various other methods the track was completed on the 28th of December, 1855, and a telegram was sent to New York announcing the completion of the *main line* of the Illinois Central Railroad on that day.

Engine No. 42, with four cars, was the first to run over the high bridge at LaSalle on the 21st of August, 1854, at 5:30 P. M.

Engine No. 5 was the first to run into Cairo on the 26th of August, 1854.

Yours Truly,

Roswell B. Mason

The successive steps by which the Illinois Central has obtained a property foothold in Chicago commenced with the payment of \$45,000 to the General Government, in October, 1850, in consideration for which the company obtained possession of the unoccupied portion of the Fort Dearborn reservation. The railroad company paid the sum under protest, claiming that this tract was included in the Congressional grant. Suit was brought in the Court of Claims for the recovery of the money, but the decision went against the company. In 1852 the Legislature empowered the company to build a branch from the terminus at Twelfth Street to the south pier of the inner harbor, and the City Council supplemented the action of the Legislature in June of the same year by an ordinance admitting the company to lay tracks parallel with the lake shore, the condition being that the road should enter the city at or near the intersection of the southern limits and the lake, and pursue a course along the shore to the southern limit of Lake Park, in front of Canal Section No. 15, and continue due north to the proposed site within the Fort Dearborn addition to Chicago, between the line of Randolph Street and the main river. This actually handed over to the company the right to use a strip of shore three hundred feet wide, east of a line drawn parallel with Michigan Avenue, four hundred distant from the west line of that thoroughfare.

In September, 1852, the Illinois Central commenced work on the lake-shore protection, or breakwater, which was completed in two years, under the superintendency of Colonel R. B. Mason, chief engineer. Mr. Bross, in speaking of the great work, says:

"This great work commences at the south pier, four hundred feet inside of its extreme east end and extends south one thousand two hundred and fifty-seven feet into the lake; thence west six hundred and seventy-five feet on the north line of Randolph Street; thence southwest one hundred and fifty feet; thence to a point opposite the American Car Factory, making fourteen thousand three hundred and seventy-seven—in all sixteen thousand four hundred and fifty-nine feet. From the pier to the engine-house the breakwater is twelve feet wide; thence down to the car company's works half that width. The upper portion of the crib work is built of square timber twelve by twelve, locked together every ten feet, and the intermediate space filled by stone, piles being driven on the outside to keep it in place. The first piece of crib work sunk, in building the breakwater, has a very stout plank bottom. The water line of the crib work, south of Randolph Street, is six hundred feet east of the east side of Michigan Avenue, and the outer line of the crib work, between Randolph Street and the river, is one thousand three hundred and seventy-five feet. The area thus inclosed, and rescued from the dominion of the lake is about thirty-three acres."

In 1855 the Common Council gave the company permission to use a triangular piece of land, which lay north of Randolph and a short distance west of the land granted in 1852. In 1856 the city granted a right to use the space between the breakwater, from a point seven hundred feet south of the north line of Randolph

Street, branching out and running thence to the southeast corner of the company's breakwater as then established, and thence to the river. In February of this year, passenger trains over the Illinois Central, the Michigan Central and the Chicago & St. Louis roads, commenced to run into the new depot of the first named company. After that year the company continued to improve and possess submerged and other lands east of the east line of the two hundred feet granted in the original ordinance.

This company was the first to take action in the matter of suburban trains. A time table was issued June 1, 1856, and three trains placed on the line between the city and Hyde Park.

The gross earnings of the Illinois Central Railroad from March 24 to October 31, 1855, were \$595,633.86; the amount of State tax paid into the State treasury, \$29,751.59, the rate levied being five per cent. For the six months ending April 30, 1856, the gross earnings were \$630,580.02 and the tax \$31,529. The earnings for the half year ending October 31, 1856, aggregated \$922,053.30 and the taxes paid \$46,102.66. For the six months ending April 30, 1857, the total earnings were \$935,386.69; the rate of tax varied from five to seven per cent, yielding to the State a revenue of \$59,196.82. During the half year ending October 31, 1857, the gross earnings amounted to \$1,234,986, and the tax, levied at the rate of seven per cent, to \$86,449.02.

LAND SALES.—C. C. P. Holden furnishes the following interesting facts in regard to the early sales of Illinois Central Railroad lands, and their marked effect upon the prosperity of the State:

"The foundation upon which rested the corner stone of the Illinois Central Railroad was the grant of lands from the General Government to the State of Illinois—under the act of Congress of September 20, 1850, and from the State of Illinois to the company, by act approved February 10, 1851. This grant consisted of 2,595,000 acres of land selected from the public domain and lying on each side of their road, within fifteen miles thereof. The grant of this large body of land gave the company a credit which otherwise it might not have been able to obtain. With these lands as a foundation upon which to guarantee the payment of their bonds at maturity and the interest on the same as it became due, their credit took immediate shape and they readily placed their bonds, of which there were ten thousand of \$1,000 each, and fourteen thousand of \$500, each, in all for \$17,000,000. The payment of these bonds was secured by a mortgage pledging 2,000,000 acres of the company's lands therefor. The residue of 595,000 acres of said lands were at the disposal of John Moore, S. D. Lockwood, and Morris Ketchum, trustees named in the bill, the proceeds to be used in paying the interest on the above bonds, and to meet such demands as the exigencies of the company may demand." With this advantage secured, the company took immediate shape and went forward to carry out the object of the grant, under the act of Congress and of our own State Legislature.

"The writer hereof having been for a long period of years connected with the sale and management of these lands, it may not be amiss to briefly review some of the results accruing to the railroad company, to the State of Illinois, and finally to the great Northwest through the sale and settlement of the lands of this corporation. The State of Illinois at the time the grant was made had a population of 851,470; and the counties through which the road was located—to wit, Jo Daviess, Stephenson, Ogle, Lee, LaSalle, Marshall, Woodford, McLean, Dewitt, Macon, Christian, Shelby, Fayette, Marion, Washington, Perry, Jackson, Union, Alexander, Pulaski, Clay, Effingham, Cumberland, Coles, Champagne, Vermillion, Iroquois, Will and Cook—had a population of 255,284. The State debt at that time was \$15,000,000. In the early spring of 1851, the company fully organized, when its officers and board of directors took immediate steps for the construction of the road and the branches thereof, a task that would have appalled the most of men; but the directors were fully equal to the occasion, and one of their first acts was to select Colonel Roswell B. Mason, to locate and build the road.

"In 1852, 1853 and 1854 the company's lands were selected and platted, under the supervision of John C. Dodge, of Chicago, with local agencies at Freeport, Dixon, LaSalle, Bloomington, Clinton, Richview, Jonesboro, Urbana and Kankakee. Those

who were living upon the lands prior to September 20, 1850, had the right to prove up their claim, pay \$2.50 per acre and take deeds therefor. The agents at the above points were John A. Clark, Freeport; Silas Noble, Dixon; S. B. Carter, LaSalle; A. Gridley, Bloomington; C. H. Moore, Clinton; B. G. Roots, Richview; D. L. Phillips, Jonesboro; John Campbell, Urbana, and A. Chester, Kankakee. They also made sales of other lands belonging to the company in their respective districts.

"Early in 1855, under the administration of J. N. A. Griswold, president of the road, the Land Department was thoroughly organized under the immediate supervision of Charles M. Dupuy. The lands of the entire grant were divided into districts where engineering parties examined each and every tract, reporting the result of their labors to the Chicago office. These examinations were made for the purpose of ascertaining the quality of the soil, whether timber or prairie, its nearness to any settlement, proximity to water, with any other information bearing upon the value of the same. When these examinations had been completed and copied in books furnished for that purpose at the Chicago office, prices were attached to each tract, and then the land was thrown into market. Mr. Dupuy thoroughly systematized the work, and by a judicious system of advertising both at home and abroad, the demands for the lands of this company soon commenced to increase. People came from all parts of the country—from the North and from the South, from the East and from Europe—seeking homes for themselves and their families along the line of the Illinois Central.

"By the first of May, 1855, emigration began to pour into the State, especially seeking the lands of this company. It was about the 5th of that month that the writer hereof was detailed to locate for Adam Smith thirty-two tracts of three hundred and twenty acres each, between Ashkum Station, on the north, and Rantoul on the south. The lands were to be located in the following manner: Each tract to be three miles from the railroad, three miles from timber, and three miles from any improvement whatever; that is, we have a distance of forty miles north and south in which to make the selections. We started out and succeeded in making nearly all of the locations. There were a few tracts, however, which had to come inside the three-mile limits, and we had the order so changed as to allow this to be done. When the land grant was made, from a few miles south of Chicago to the south line of Coles County, below Mattoon, the country was one bleak wilderness, save small settlements along the timber belts, which were off from the line of railroad; from the Boubornais settlement to the timber southwest of Paxton, inside the fifteen-mile limits on the west side of the railroad, there were but two families living at the time. The same condition of things existed on the main line, especially so between LaSalle and Pana. Along the timber belts and water-ways there were meagre settlements, while, in the great open prairie, settlements had not begun. This was the condition of the country along the line of the Illinois Central in the beginning of 1855. It was a common occurrence in those days for the writer to have a train stop in the great open prairie to allow himself and a party of land hunters to get off, and start out over the prairie from section to section, making sales if it was possible to do so. Then striking the road at some other point, with a red handkerchief as a flag, the first train that came along would be stopped, and the party taken aboard. In nearly every instance of this kind, sales of the company's lands were effected before returning to Chicago, when the purchasers received their contracts or deeds. When Colonel Mason located the line of road not a single railroad crossed the right-of-way of this company from Chicago to Cairo, and from Centralia to Dunleith; but the face of the country was bound to change. The settlers were continually pouring into the State and seeking the lands of this company. Many bought large tracts, being encouraged so to do by the low rate of interest charged, which was only two per cent per annum. Two years, interest paid at the time of purchase was all that was required down, but the great majority bought from eighty to one hundred and sixty acres each. During the years 1855-56 the number of seekers for these lands was very great, and as many as twenty and thirty frequently took the train from Chicago, generally in charge of a land salesman to select homes for themselves and their families. By the close of 1856 more than 1,000,000 acres had been sold. Early in 1856, W. H. Osborn had succeeded J. N. A. Griswold as president of the road, and the Hon. John Wilson from the General Land Office at Washington had succeeded Charles M. Dupuy as commissioner in charge of the land department of the company. Mr. Wilson, like his predecessor, put forth every effort known in the way of advertising, to attract the attention of the general Eastern, Southern and European public to the lands of the Illinois Central Railroad. The very large sums of money expended in this way had their effect ten-fold, not only in attracting the people of the country to the lands of this company but to the great undeveloped Northwest where not a railroad then existed. Many of the travelers and ex-

plorers, after looking over the country tributary to the Illinois Central followed the water-courses to the far West and Northwest, and saw the endless plains and the beautiful countries now embraced within the boundaries of Minnesota, Nebraska, Dakota, and even the far-off country beyond."

Charles C. P. Kolden.

GALENA & CHICAGO UNION RAILROAD COMPANY.—The year 1850 is the commencement of an era in the railroad history of Chicago and Illinois. Then the obtaining of the land grant by the Illinois Central made the building of that road an assurance, and the construction of the Galena & Chicago Union Railroad to Elgin, forty miles west, placed that line on a paying basis from the start. The hearts of the stockholders were gladdened, even in 1850, by their pocket-books receiving a dividend of ten per centum. It already was assuming so independent an air that when, in December, 1850, the Michigan Southern made a proposition to build a road to the Indiana State-line, using the grant of the Galena & Chicago Union Railroad in its construction, that corporation flatly refused the offer, saying that it could build the road itself.

During the year ending June 3, 1851, the company purchased Block 1, original town of Chicago, one-half mile east of the then depot. A drawbridge over the North Branch was constructed in 1851, and the tracks laid through new North Water Street. On that day William B. Ogden resigned the presidency of the road, and John B. Turner, among its earliest and most faithful friends, was elected to the position. In November a fine passenger depot, fifty by two hundred and thirty feet in size, was constructed on North Water Street, west of Clark.

The road was finally completed to Belvidere, when the management was called upon to encounter greater vexations than any it had been able to dispose of up to that time. At this point an effort was made to divert the road from its original route to Savannah, which would leave Stephenson County without the benefits her people had so industriously labored for and liberally contributed to obtaining. Those who had urged the taking of stock were discouraged at the apparent failure of the scheme, while those who had subscribed were bitter in their expressions of disappointment. Finally, a committee of gentlemen from Freeport, composed of J. H. Addams, D. A. Knowlton, O. H. Wright and John A. Clark, visited Rockford to endeavor to procure the execution of the original contract, and secured the indorsement of the people that so far as they could influence a decision it should be done. The trip was continued to Chicago, and after labors that were effectual as were the laborers deserving of the public thanks, the project of diverting the road was abandoned. Labor was continued on the route, and in August, 1853, the iron horse entered Freeport amid the rejoicings that such an occasion would bring forth.

In 1848 a charter was procured by the officers of the Galena & Chicago Union Railroad to extend their road between Beloit and Madison—subsequently known as the Rock River Valley Railroad. In 1851 the Illinois & Wisconsin Railroad Company was incorporated, and, with the Rock River Valley, was consolidated with the Chicago, St. Paul & Fond du Lac, in 1855. This system was in turn consolidated with the Wisconsin & Superior.

A contract was made between the Galena & Chicago Union and Chicago & Aurora railroads, December 13, 1851, for carrying on a joint business. This contract was signed by E. S. Wadsworth, president, of the Aurora Branch road, and John B. Turner, president of the Galena & Chicago Union. On June 28, 1856, the company entered into an arrangement with the Chicago, Burlington & Quincy Railroad Company through James F. Joy, amending the contract made with this company or its predecessor in 1851. Moses M. Strong, president of the Mineral Point Railroad; W. P. Burrall, president of the Illinois Central, and John B. Turner, president of the Galena & Chicago Union, entered into a contract October 10, 1853, regulating the business of the Mineral Point road so far as it related to the two principal roads named.

The contract with the Beloit & Madison Railroad Company providing for the building of that road, was made January 2, 1854, J. B. Turner, president of both roads, signing on behalf of each.

The contract with the Fox River Valley Railroad Company was entered into March 15, 1854, and signed by J. B. Turner on the part of the Galena & Chicago Union, and B. W. Raymond on that of the Fox River Valley. This contract provided for the construction of the road by the latter and its equipment by the former company, and also laid down rules for the division of revenues and special privileges.

The Dixon Air Line, a branch of the Galena & Chicago Union, was built in 1854. It was subsequently purchased by the Chicago & North Western.

The Chicago, St. Charles & Mississippi Air Line Railroad was before the people in 1854; but the only work done on the road was its grading from Chicago to St. Charles, after which it was sold to the Galena & Chicago Union, and in 1864 was purchased by the Chicago & North-Western.

The progress of the road from 1849 to 1857 is shown in the following table :

Year.	Gross Earnings.	Expenditures.
1849-50.....	\$ 48,331 96	\$ 18,519 82
1850-51.....	127,685 78	48,904 24
1851-52.....	211,310 55	87,361 67
1852-53.....	473,548 21	187,396 39
1853-54.....	799,013 88	359,199 04
1854-55.....	1,506,710 11	686,516 86
1855-56.....	2,315,786 96	1,063,744 85
1856-57.....	2,416,343 85	1,295,493 69
May to Dec., 1857.....	1,640,806 94	921,251 82

The rewards which waited on the projectors were fully earned. A railroad conceived, equipped, and successfully managed during those early years, without aid from the State or General Government, pointed out its projectors to be men at once self-reliant, energetic, enterprising and intelligent. Michigan, Illinois, and in fact all States and private companies, that entered on such enterprises, were driven to the verge of ruin, the Galena & Chicago Union Railroad Company alone making their enterprise successful from the moment work was begun. The history of the road up to 1864, when it was consolidated with the North-Western Railroad, is considered in the history of that immense railroad system.

CHICAGO & NORTH-WESTERN RAILROAD, 1854-57.—The Chicago, St. Paul & Fond du Lac Railroad, now the Chicago & North-Western, was originated in 1854. The Elgin & State Line Company's road, B. W. Raymond, president, was begun in 1854. It appears that the Galena & Chicago Union Railroad Company de-

signed to build an air line from Elgin to Chicago, and the object of the Elgin & State Line road was to connect the air line with the Wisconsin Central Railroad, then being constructed from the Illinois boundary to Stevens Point, Wis. The Galena & Chicago Union Railroad Company, however, refused to build the air line; when its place was supplied by the Chicago, St. Paul & Fond du Lac. W. B. Ogden was president of this company, which must be considered identical with the Illinois & Wisconsin Railroad Company, chartered under the concurrent acts of Illinois and Wisconsin. On the 13th of March, 1851, the Legislature of Wisconsin granted a charter to Levi Blossom, Charles H. Wheeler and others, as a corporation called the Green Bay, Milwaukee & Chicago Railroad Company. At about the same time the Illinois Legislature granted a charter to the Chicago & Milwaukee Railroad Company, with authority to build a line from Chicago to the State line between Wisconsin and Illinois, where it would meet the line built by the Green Bay, Milwaukee & Chicago Railroad Company. Both corporations began the work of construction at once, and before the close of 1855 the two lines were completed and met at the State line. They operated the road together until 1863, when the two companies consolidated. It was in operation to Barrington January 1, 1855, and on March 1 to Cary—thirty-eight miles. In June and July, 1855, the gauge was changed, the line extended to Woodstock, fifty-two miles from Chicago, and opened July 11, 1855.

The Beloit & Madison Railroad, subsequently the Rock River Valley Railroad, was built under the charter of 1848. The principals of the enterprise were John B. Macy, T. L. Gillett and A. Hyatt Smith, the two first of Fond du Lac and the latter of Janesville, Wis. Books were opened December 19, 1850, and on July 10, 1851, ground was broken at Fond du Lac by Timothy F. Strong, Sr., for a six-foot gauge railroad. The road was first laid with wooden and strap-iron rails, over which the old "Winnebago" drew the first train. The little engine weighed fifteen tons. On her arrival at Sheboygan from Buffalo in 1851, fourteen yoke of oxen were attached to the wagon on which she was placed, and after six weeks of laborious effort over the forty-two miles of road her arrival was reported at Fond du Lac. This road was consolidated with the Illinois & Wisconsin in 1855, and both with the Chicago, St. Paul & Fond du Lac, September 6, 1855. In 1857 the Chicago, St. Paul & Fond du Lac absorbed the Wisconsin & Superior Railroad.

After the consolidation of the Illinois & Wisconsin and the Rock River Valley Railroad in 1855, under the name of the Chicago, St. Paul & Fond du Lac Railroad Company, the progress of the road became remarkable. In 1856 the divisions from the State line to Janesville and from Fond du Lac to Minnesota Junction were completed; the grade was changed from six feet to four feet eight and a half inches, and through-passenger trains run from Chicago to Mississippi, via Milton Junction and Janesville, over the track of the Milwaukee & Mississippi, or Prairie du Chien Railroad. At this time the contest for the possession of the seven hundred thousand acres of railroad lands in Wisconsin took place. The influence of Milwaukee opposed the pretentious claims of the Chicago, St. Paul & Fond du Lac road; and to meet their opposition a policy was adopted which was attended with success. The Wisconsin & Superior Railroad Company was incorporated, seven hundred thousand acres of land secured, and in 1857 the charter and lands were placed in possession of the am-

bitious Chicago line. In addition to this the Marquette State line and the Ontonagon & State line roads were consolidated. This policy of absorption was carried on unremittingly, until at length the road became known throughout the world as the Chicago & North-Western.

CHICAGO, BURLINGTON & QUINCY RAILROAD, 1849-57.—This great system, which, in these times embraces 4,126 miles of road, and brings the commerce of great portions of Illinois, Iowa, Nebraska, Kansas and Colorado into the heart of this city, may be said to have formed a nucleus in 1849. The Aurora Branch Railroad was incorporated February 12, 1849, and empowered to build a road from Aurora to the Galena & Chicago Union Railroad in Du Page County. The first directors were: S. F. Gale, I. H. Burch, Allen Robbins, E. S. Wadsworth, John Frink, E. C. Larned, John Van Nortwick, B. Hackney, L. D. Brady, J. W. Brooks, and Gilbert C. Davidson. On November 1, 1850, this branch was completed and cars from Aurora passed into Chicago over the Galena & Chicago Union Company's track.

December 13, 1851, the Aurora Branch Railroad Company and the Galena & Chicago Union Railroad Company entered into an agreement, to be in force for thirty years from January 1, 1852, containing those stipulations referred to in the history of the last-named road for the transaction of a joint business.

A contract made October 3, 1854, between George C. Bestor, president of the Peoria & Oquawka Railroad; James F. Joy, president of the Chicago & Aurora Railroad, and J. W. Brooks, by J. F. Joy, president of the Central Military Tract, provided for the joint business of these roads. On January 1, 1856, the Northern Cross-roads, the Central Military Tract and the Chicago & Aurora, entered into further contracts for the regulation of joint business and for the disposal of the bonds then authorized.

The gross earnings of the Chicago & Aurora Railroad from January to December, 1854, were \$300,042.62, of which sum \$152,105.98 were disbursed on account of general expenditures.

The Peoria & Oquawka Railroad, (chartered in 1849, from Peoria through Galesburg to Burlington, was graded and several miles of track laid by January 31, 1854, to Galesburg, in December, 1854, and in 1856 was consolidated with the Chicago, Burlington & Quincy. This road was taken into the Chicago, Burlington & Quincy system in 1863, thus opening a through route from East Burlington to Peoria.

The act to incorporate the Central Military Tract Railroad was approved February 13, 1851, with William McMurtry, C. S. Colton, James Bunce, W. S. Gale, H. H. May, G. C. Lamphere, W. A. Wood, Alfred Brown, Alva Wheeler, Peter Grouse, Amos Ward, Patrick Dunn, Daniel Meeks, Silas Willard and A. C. Wiley incorporators. In an amendment to this act, approved June 19, 1852, the names of Sylvester Blish, Barney M. Jackson, Myrtle G. Brace, Edward Holister, Edwin G. Ellet and William Maxwell were added to the list of incorporators. The road was built by Colton & Brooks and opened in 1855. The consolidation of the Chicago, Burlington & Quincy with the Central Military Tract line was effected July 9, 1856; but for convenience in rendering the accounts for receipts and disbursements, the actual consolidation dates from July 1, 1856. The earnings of the Central Military Tract Railroad for eight months, ending December 31, 1855, amounted to \$314,529.56, of which \$134,293.11 formed the aggregate expenditures.

Railroad connection between Chicago and Burlington, Iowa, was established the first week in March,

1855. During the same year the Northern Cross road from Galesburg to Quincy was completed. During the session of the Legislature of 1855, a law had been passed consolidating the Aurora & Chicago, the Central Military Tract, the western end of the Peoria & Oquawka, and the Northern Cross Railroad companies into a single corporation under the name of the Chicago, Burlington & Quincy Railroad Company. The Chicago & Aurora Railroad extended from Chicago to Mendota, the Central Military Tract from Mendota to Galesburg, the west end of the Peoria & Oquawka from Galesburg to Burlington, and the Northern Cross Railroad from Galesburg to Quincy. This consolidation gave Chicago five points of connection with the Mississippi Valley, and a road two hundred and ten miles in length. In 1856 arrangements were fully completed and trains running into Chicago, from Geneva Junction, over the tracks of the Galena & Chicago Union Railroad. The tracks of the Chicago, Burlington & Quincy, via Sixteenth Street, were laid into the city in 1863.

The Rock Island & Alton Railroad Company, to whom aid was granted along its proposed line in 1856 (but in many instances the bonds representing this aid were returned to the people, was completed over a different route from that selected in the first instance, under the name of Rock Island & St. Louis Railroad. The line was carried on under varied fortunes until in 1876 the Rock Island & St. Louis Company adopted the title St. Louis, Rock Island & Chicago Railroad Company, and the same year the line was purchased by the Chicago, Burlington & Quincy Railroad Company.

The income of the Chicago, Burlington & Quincy Railroad for 1855, including balance of \$82,473.35 carried forward from December 31, 1855, was \$806,611.95, of which \$592,630.29 were expended in dividends, interest on bonds, sinking fund, taxes and operating expenses in 1854-55, leaving a balance of \$213,981.66 to be credited to the company's account on January 1, 1856. The expenditures of the Chicago, Burlington & Quincy (consolidated) from July 1, 1856, to April 30, 1857, were \$716,288.61, while the earnings reached \$1,389,292.99.

The rolling stock in 1857 comprised eleven coal-burning locomotives, forty-three wood-burning locomotives, twenty-six first-class passenger coaches, five second-class passenger cars, eight baggage cars, five hundred and ninety-four freight-house cars, one hundred and sixteen platform cars, and fifty coal cars.

The directors of the road in 1857 were Erastus Corning, New York; Edward L. Baker, U. Thayer, R. B. Forbes, S. H. Perkins, J. M. Forbes, J. W. Brooks, Massachusetts; James F. Joy, Detroit; Isaac H. Burch, Chicago; John Van Nortwick, Batavia, Ill., and C. S. Colton, Galesburg, Ill. The officers were John Van Nortwick, president; C. G. Hammond, superintendent; and Amos T. Hall, treasurer and secretary.

CHICAGO, ROCK ISLAND & PACIFIC RAILROAD, 1847-1857.—This road had its origin in the Rock Island & LaSalle Railroad Company, chartered February 27, 1847. Although nothing was done toward the construction of the road under this charter, attention was drawn to the project, and enthusiastic meetings and conventions were held during the year in Chicago, in favor of a railroad to the Pacific, Hon. Stephen A. Douglas occasionally lending his presence to them. In 1850, during the marked revival in railroad matters occasioned by the Illinois Central land grant, Henry Farnum came to Chicago from New Haven, upon William B. Ogden's invitation, to assist in the construction of the Galena & Chicago Union road. While here he examined the

Rock Island route, and was so impressed with its advantages that he wrote to his friend, Joseph E. Sheffield, a rich capitalist of New Haven, to come to Chicago and also look over the proposed route. This resulted in obtaining a charter and building the road.

On February 7, 1851, at the suggestion of Eastern capitalists and from motives prompted by general commercial foresight, the charter of the Rock Island & La Salle Company was amended so that the road could be continued from Peru, LaSalle County, by way of Ottawa and Joliet, to Chicago. The name was also changed to the Chicago, Rock Island & Pacific Railroad Company, additional subscriptions of \$300,000 being required. By the 13th of the month the requisite amount of new stock had been taken. Surveys of the road under Richard P. Morgan, chief engineer, from Rock Island to Peru, had been going on since December, 1850, and were now (in April) nearly completed. Upon the re-organization of the company in April, 1851, J. B. Jervis was chosen president and William Jervis chief engineer. On account of high water the survey was not entirely completed until June 26. In August all surveys and estimates for the line to Chicago had been made, and on the 25th of that month the executive committee met Messrs. Farnum and Sheffield in New York city, and concluded a contract with them for the construction and equipment of the road. This contract was approved by the board of directors, meeting at Rock Island, on September 17. In January, 1852, the company contracted for the building of the Rock-river bridge. Contracts were also made for iron for the whole road, ten thousand tons to be delivered in 1852 (sufficient to furnish the road to Peru and the remainder in 1853. A large enough force was to be put on the road to have it completed to Joliet by August 1, and to Ottawa by October 1. Work was finally begun, April 10, 1852, under the superintendency of Mr. Farnum. Although it did not progress quite as rapidly as was anticipated, the progress made was encouraging. On October 18, the road was open from Chicago to Joliet, a distance of forty miles; January 5, 1853, to Morris, sixty-two miles; February 14, to Ottawa, eighty-four miles; March 21, to LaSalle, ninety-eight miles; March 21, to Peru, one hundred miles; September 12, to Tiskilwa, one hundred and twenty-two miles; October 12, to Sheffield, one hundred and thirty-seven miles; December 19, to Geneseo, one hundred and fifty-nine miles; and to Rock Island, one hundred and eighty-one miles, February 22, 1854.

The completion of the road to LaSalle and Peru afforded a full opportunity to calculate the advantages which its construction to the Mississippi would confer upon Chicago, as well as the extent to which the interest of the company would be served. Indeed, from that day in October, 1852, when the first passenger train passed down to Joliet, the success which waited upon the enterprise was manifest. In February, 1854, the road was opened to the Mississippi, and the nucleus of the magnificent system, known as the Chicago, Rock Island & Pacific Railroad was firmly founded. From 1854 to 1857, nothing occurred to mar the harmony of progress, beyond the shocking accident, near Joliet, November 1, 1854. This catastrophe cost eight passengers their lives, and the company a large sum of money. In the fall of 1853 the company in union with the Michigan Southern Railroad Company, built their depot between Clark and Sherman streets, on VanBuren Street. This building incurred an expenditure of about \$60,000 and gave the young city another substantial token of her enterprise and prospects.

CHICAGO & ALTON RAILROAD, 1846-57.—The

Alton & Springfield road was commenced in 1846 upon promises of money and paid-up stock by local subscribers. During the progress of the road examples of perseverance and self-sacrifice were given, which partake of the nature of romance rather than of actual history. Captain Godfrey mortgaged all his property, lived in a construction car, and labored as a hired workman from the beginning of work, in 1846, to the completion of the road in 1852. The charter was granted to the Alton & Sangamon Railroad February 27, 1847.

The Chicago & Mississippi Railroad Company was chartered June 19, 1852. Henry Dwight was the leading spirit in the extension of the Alton road from Springfield to Bloomington and Joliet. Having succeeded in the organization of a board of directors, in 1856, bonds were issued, amounting to \$3,500,000, and with the moneys obtained on such bonds, the road was finished to Joliet, as the Chicago, Alton & St. Louis, the new company leasing the entire line. The Alton & Sangamon road, from Alton to Springfield, was completed in 1853, and the Chicago & Mississippi, from Springfield to Bloomington, in 1854, and from Bloomington to Joliet in 1856.

The Joliet & Chicago Railroad Company was chartered by the Legislature of 1854-55 and empowered to construct a road from Joliet via Lockport, to Chicago, on the condition that a perpetual lease of it should be granted to the Chicago & Alton Railroad Company. This connecting was subsequently completed, the city granting a right-of-way into Chicago in April, 1857.

In December, 1857, Governor Mattison and one or two others, purchased the road at auction, for \$5,000, or less than one-ninth of the cost of building one mile, the total sum expended upon the line being \$9,535,000. The St. Louis, Alton & Chicago Railroad Company, however, which was then organized, survived but a few years; the company being re-organized in 1862, as the Chicago & Alton.

THE MICHIGAN SOUTHERN & NORTHERN INDIANA RAILROAD, 1833-57.—The Michigan Southern was completed to Chicago February 20, 1852, and was the first Eastern trunk line introduced here. The depot was built on the prairie near Gurnee's tannery, opposite the Rock Island Railroad depot, the same year. The history of this road, which is the early history of the present corporation known as the Lake Shore & Michigan Southern Railroad Company, embraces the record of the Erie & Kalamazoo, 1833 to 1849; Michigan Southern, 1837 to 1855; Atlantic & Pacific, or Buffalo & Mississippi, or Northern Indiana, 1835-1855; and the Michigan Southern & Northern Indiana, 1855-57.

The Erie & Kalamazoo Railroad Company was incorporated in April, 1833, by the Michigan Legislative Council, with power to build a road thirty-three miles long, from Port Lawrence, now Toledo, to Adrian, Mich. The road was opened as a one-horse railroad in the summer of 1837; but in August of that year the engine, "Adrian Baldwin No. 1," was placed on the road. This enterprise, added to the one undertaken by the company, known as the Palmyra & Jacksonburg Railroad Company, was pregnant with troubles to the company. In 1842 W. J. Daniels was appointed receiver, and the latter road was sold to the State of Michigan for \$22,000, the amount due to the State. In 1848 financial troubles brought ruin to the company, and the road was sold to Washington Lunt, of New York, and George Bliss, of Massachusetts. The Michigan Southern Railroad Company leased the road August 1, 1849, and has continued in possession of it, paying a rental of \$30,000 annually. This Michigan Southern was one

of the old lines, which, like the Michigan Central, passed from the State into the hands of a corporation. In 1837 the track of the Michigan Southern Railroad was laid with strap-rail. In 1839 it was completed to Petersburg; in 1840 to Adrian; and in 1843 to Hillsdale. Sixty-six miles were in operation in 1843 from Monroe to Hillsdale, owned and operated by the State of Michigan. It was the original plan to build the road from Monroe to New Buffalo; but, owing to the crisis which the extravagant dreams of 1837 created, the State was forced to cease work on the road in 1843. In 1844 the State took possession of the Palmyra & Jacksonburg Railroad, in lieu of the loan and interest thereon, made by the State to the Erie & Kalamazoo Railroad Company, who projected and built the Palmyra & Jacksonburg Railroad. This last-named road was opened to Tecumseh August 9, 1838, and the branch to Jackson in 1856. In 1846 the road was purchased by Edwin C. Litchfield & Co., of New York, the State agreeing to receive the sum of \$500,000 payable in ten installments of \$50,000 each, within ten years. In 1850 the new company had added only four miles of track, but within the two succeeding years the Michigan Southern was built from Toledo to Chicago, a distance of two hundred and forty-three miles.

A bill for the incorporation of the Atlantic & Pacific Railroad Company, was introduced in 1835 by John B. Chapman to the legislators of Indiana. The Legislature would not consider the bill under that heading, but subsequently granted certain privileges to the Buffalo & Mississippi Railroad Company.

On May 25, 1835, a number of incorporators met at Elkhart, Ind., to consider the subject of building a railroad from Maumee Bay to the Mississippi. From this meeting sprang the organization of a company in February, 1837, with Robert Stewart as president. The road was located and contracts let June 14, 1837. About one mile of the proposed road west of LaPorte was graded. In 1838 work was suspended; but a line from Goshen to the eastern boundary of the State was located. In 1847 a new company was organized with William B. Ogden, J. Y. Scammon, J. W. Brooks, C. B. Blair, E. D. Taylor, John B. Niles, and A. L. Osborn, directors. Up to 1849 nothing was done on the road, so the company re-organized under the title Northern Indiana Railroad Company. During this year the Railroad Charter & Insolvent Railroad Purchasing Company, known as Edwin C. Litchfield & Co., of New York, turned their attention from fallen public railroad works in Michigan to fallen private railroads in Ohio and Indiana, and soon had control of the Northern Indiana Railroad Company, the more humble title substituted for the Buffalo & Mississippi.

In October, 1849, the Northern Indiana Railroad Company was organized by Judge Niles, and a charter obtained from the Ohio Legislature, March 3, 1851. At the same time the Northern Indiana & Chicago Railroad Company was organized in Illinois and consolidated with the former under the title of Northern Indiana Railroad Company. Work was begun in earnest and on May 22, 1852, a passenger train, drawn by the engine "Adrian," passed over the line from Toledo to Chicago. Within two years following, the company re-constructed fifty miles of the old road and built one hundred and sixty miles of new road. The consolidation of the Northern Indiana with the Michigan Southern was effected April 25, 1855. Between the years 1853 and 1856 the road was extended to Jackson, and to Three Rivers, Mich.

According to the Herald of October 21, 1855, the

depot of the two roads then known as the Michigan Southern and the Rock Island Railroad, was projected with frontage on Van Buren Street. The Herald's description of the building was substantially as follows: "It will be three hundred and fifty-five feet in length exclusive of offices at the end of the building. The span of the roof from the side walls is one hundred and sixteen feet. It will have but a single support in the entire building, as it will be constructed on the principle of Howe's patent truss. The ventilators will be in the roof. The height of the walls will be twenty-two feet, while from the floor to the center of the arch will be forty-two feet. The roof alone will cost \$23,000. This building was used as the depot for the two lines of railroad named above, until October, 1871.

The collision of April 25, 1853, at the Michigan Southern and Central Crossing, gave rise to much argument concerning the right of the railroads here. About the first of June, the Michigan Southern Railroad Company applied to Judge Morris for an injunction to restrain the Illinois Central Railroad from running their cars across the track of the Southern road. This case was decided in June, 1853. The presidents of the road from the date of its incorporation to 1855, were: Robert Stewart, 1837; Joseph Orr, 1837-41; Jonathan Burr, 1841; (eight years unorganized); W. B. Ogden, 1847; (two years unorganized); E. W. Chamberlain, 1850; James H. Barnes, 1851; John Stryker, 1851; George Bliss, 1852; John B. Jervis, 1852-55; John B. Niles, H. P. Andrew, Jr., Ezekiel Morrison, W. J. Walker, W. C. Hannah, Havilah Beardsley, John H. Defrees and T. S. Stanfield. Schuyler Colfax was a director in 1858-59 and Philo Morehouse, 1860-69.

The Michigan Southern & Northern Indiana Company did not rest satisfied with this progress. The Air Line, the Detroit, Monroe & Toledo Railroad, and the building of the great lake vessels—"Western Metropolis" and "City of Buffalo"—marked the progress of the corporation. The panic of 1857 came to destroy all this enterprise. No less than one hundred and fifty-five heavy claims were pressed against the company by creditors, the board of directors resigned, the road went to protest and the affairs of the Michigan Southern & Northern Indiana Railroad seemed dark indeed. A new directory was elected; but so poor in worldly goods was the company that when the directors assembled to hold their first meeting, October 1, 1857, a few chairs were borrowed from offices convenient, to replace those carried off by the Sheriff.

The Erie & Northeastern was opened January 19, 1852, and operated as a six-foot gauge road until December 7, 1853, when the Erie war took place. The company was, however, successful, and the standard gauge completed February 1, 1854, between Buffalo and Erie. The other railroads forming the Michigan Southern & Northern Indiana Railroad in 1857 named above were all consolidated or leased by the company previous to that year.

THE MICHIGAN CENTRAL RAILROAD, 1831-57.—The Michigan Central road may be said to have its origin in the Detroit & St. Joseph Railroad, chartered in 1831, with a nominal capital stock of \$1,500,000. The good intentions of this corporation were borne testimony to, by the fact that, previous to 1837, a sum approximating to \$117,000 was expended on the roads. The Detroit & St. Joseph Railroad Company, bowed down under the reverses of 1837, sold their interest in the road to the State of Michigan. The State expended \$400,000 on permanent-way and rolling-stock during 1837-38, and completed and opened the road to God-

frey's (now Ypsilanti), February 5, 1838. The receipts for the first four months, ending June 5, 1838, reached \$23,963.56. During the months of June, July and August, no less than ten thousand passengers were carried over the road. The extension of Ann Arbor was completed in October, 1839, and work on the extension to Jackson was in progress. The track at this time was carried forward on a wooden stringer of sawn timber. This rail stringer was fitted into sawed ties held to the tie in a trapezoidal groove by wooden wedges. On the top of this continuous stringer was spiked the old iron strap-rail when the directors had it, and when they did not have the iron, a one and a half by three inch oak ribbon nailed to the tie, did duty in its place. The passenger car of that day resembled an omnibus, placed at right angles to the track, moving sidewise on four wheels. The conductor walked a platform in front and along the end of the omnibus, and collected his fares, hanging by his arm to the window.

During the first nine months of the year 1844, the road was in operation to Jackson, a distance of seventy-seven miles, and during the last three months was in operation to Marshall, a distance of one hundred and nine miles. The receipts from freight and passenger business of the Michigan Central Railroad in 1844 were \$206,867.48, exclusive of payments made by the United States Postal Department.

An act of the Michigan Legislature, approved April 30, 1839, provided for the appointment of a committee or commission to consider the expediency of discontinuing certain public works. A policy of retrenchment followed. One improvement after another was cast off, until the Central and Southern railroads alone remained persistent beggars for aid and from an exhausted treasury. The board of internal improvements in their last report to the Legislature, December 7, 1846, say that from December 1, 1845, to September 4, 1846, the gross receipts of the Central Railroad were \$239,663.75. During the eight months preceding the sale of this road to the Michigan Central Railroad Company the State was compelled to expend upon it no less a sum than \$143,314.59. A very intelligent committee of the Senate reported in January, 1846, that the sum total of the expenditures upon the different works of internal improvements was about \$4,500,000, and three hundred and five thousand of the five hundred thousand acres of land granted by Congress to the State in 1841. When the Legislature began to agitate the question of the sale of the public works, parties were numerous who desired to lease the Central and Southern railroads; but it was decided that the whole system of internal improvements by the State for the purpose of revenue, was, at any rate, a fallacy, and that the sale of the two railroads was dictated by sound political economy and the exigencies of the State. Finally the Michigan Central Railroad Company bought the line for \$2,000,000, and not long after the Michigan Southern Railroad Company bought the Southern road for \$500,000. After this transaction Eastern capitalists looked to what they termed the insolvent West as the reservation for their investments. Stephen F. Gale, during a visit to Boston, was asked by President Wilkins, of a Boston bank, regarding Western investments. The former advised him to invest in Michigan bonds at seventy cents per dollar, and gain control of the Michigan roads. This was effected, and gave rise to the boast of the Boston capitalists that "when the Western States and their people fail to complete a railroad, Boston steps in with her capital and assumes control." The road was completed to Chicago, and opened

May 21, 1852. At that time a temporary depot was erected on the lake shore, south of Twelfth Street, which was used until the ordinance was passed admitting the Illinois Central Company to construct their road to the Chicago River. In April, 1856, the Illinois Central depot, at the foot of Lake Street, was completed, when, under an arrangement with that company, the Michigan Central trains ran north to that point. This track along the lake front, in the building of which the Michigan Central Company participated indirectly, was two and a half miles long, one and a half miles running parallel with Michigan Avenue. The track running parallel with Michigan Avenue was double, while the remainder was single. The northern or double track rested on four lines of piles, driven into the sand, immediately inside of the breakwater, securely fastened together. The single track was built on two lines of piles continued along the southern portion of the breakwater.

A charter for the New Albany & Salem Railroad was granted by the Indiana Legislature for a road thirty-five miles in length from the Ohio River. This was extended to Michigan City, and thence, under a charter from Illinois, to the Union Railroad Company. The total length of the road operated by the Michigan Central Railroad Company in 1857 was two hundred and eighty-eight miles.

The conspiracy cases growing out of the disaffection of the farmers of Leoni Township, Jackson Co., Mich., whose property bordered on the unfenced road, formed the sensational history of the company during this period. Several farmers were ruined in their efforts to defend themselves from charges which the most subtle lawyers, connected with the road, arranged and placed before the Judges of the Wayne County Circuit.

The history of the road up to 1857 is one which shows what indomitable energy and perseverance may accomplish. Its principal projector, James F. Joy, is a resident of Detroit. John W. Brooks, who died a few years ago at Boston, was also an active spirit in building up the interests of the road.

THE PITTSBURGH, FORT WAYNE & CHICAGO RAILROAD, 1852-57.—The organization of the Fort Wayne & Chicago Railroad Company was effected October 14, 1852, the engineers completing their survey in November. In 1853 contracts were granted for one hundred and forty-five miles of track. In 1855 twenty miles were built, and in 1856 three hundred and sixty-three miles were added, owing to the consolidation with the Pittsburgh division on November 10, bringing the total mileage up to three hundred and eighty-three in 1857. During the year 1856 the road was infested by a pack of ruffians, who made it a practice to plunder express and baggage cars. Their mode of operating was less sensational than that of modern train-robbers. They would enter the train at way stations, hurl packages out of the baggage or express cars, at points where their accomplices were stationed, and ultimately hurl themselves out. Trainmen were never able to succeed in capturing one of them; but on February 26, 1857, Allen Pinkerton succeeded in arresting eighteen of the criminals. The disclosures made before the court implicated many persons holding good positions, and the whole proceedings were so entertaining as to engage the attention of all residents along the road, if not the stockholders themselves. So far was this carried that the company awoke from a dream of train-robbers to learn that a great financial crisis had swept over the country, and to realize that their road escaped the evils of the period of depression only to bear them subsequently.

CHICAGO'S RAILROAD SYSTEM IN 1857.—In 1857 Chicago had nearly four thousand miles of railroad tributary to herself, and the joint earnings of the companies amounted to over eighteen and a half millions of dollars! When the railroad spirit of the State, which had been crushed by the failure of the "internal improvement" act of 1837, revived in the Rockford Convention of 1847, Chicago had not a mile of road. In 1848 she operated ten miles of railroad to the Desplaines River. In 1850 the ten had been increased to nearly forty-five. Then the Illinois Central entered the field, and trunk lines from all parts of the State and the country commenced to stretch their giant arms toward Chicago; and with a readiness which astonished the world, floods of capital from the East poured into the Garden City and enabled her to meet all advances more than half-way; so that by 1857 the forty-five miles of iron road had been extended to almost three thousand, while, within a period of two years more, another thousand was added to the three. The world never before saw such a stride made toward commercial supremacy. At that time the resources of the West were limited, and the fact that Eastern capital, with the exception, perhaps, of the Galena & Chicago Union road, covered the State with this net-work of arteries, making Chicago their great heart, only sustained her citizens in their unbounded confidence, and in what had sometimes seemed the wildest visions of a glorious future. Twenty years had converted into substantial facts the "impossibilities" of 1837. Then they were impossibilities, but two decades had demonstrated to the world that the members of the Vandalia Convention and the originators of the act of 1837 were prophets instead of madmen.

The conditions of the case, in 1857, were these: The first grand trunk line into the city, the Chicago & Milwaukee Railroad, was in fine running order—W. S. Gurnee, president; M. L. Sykes, superintendent; A. S. Downs, secretary; H. A. Tucker, secretary. There were two roads connecting with each other at the Wisconsin State-line, mainly under the same management. For the first ten months of the year the total receipts of the Illinois end of the line (forty-five miles) amounted to \$282,731.92. The total number of through passengers over the line for November, 1856, to November, 1857, was about one hundred and eighty thousand. The first branch of this road from the west was the Kenosha & Rockford Railroad—Josiah Bond, president; Levi Burnell, secretary; Charles H. Sholes, treasurer; C. L. Prescott, superintendent; W. H. Noble, chief engineer, all of Kenosha. This road was to connect at Rockford with a projected line to Rock Island. Eleven miles of the proposed eighty miles of road were completed and in operation.

The second trunk leaving the city was the Chicago, St. Paul & Fond du Lac Railroad, Hon. William B. Ogden, president; S. F. Johnson, superintendent and chief engineer; J. W. Currier, secretary; Charles Butler, treasurer. The southern division of the road was operated from Chicago to Janesville, ninety-one miles. The northern division from the junction of the LaCrosse & Milwaukee road to Fond du Lac, thirty miles, made one hundred and twenty-one miles in operation by the latter part of 1857. The road was then completed to Van Dyne, ten miles north of Fond du Lac, giving a total of one hundred and thirty-one miles. Thirty-six miles of additional grading was ready for the iron, when operations should again be commenced in the spring. As yet the directors had received no benefit from their magnificent land grant of two million acres. According to

the provisions of the act the directors were not to come into possession of the land until the road should be completed to Oshkosh. For the year the receipts of this line amounted to \$429,305.39. Nearly 170,000 passengers were carried without the least accident to any one.

The Milwaukee & Mississippi and the Milwaukee & LaCrosse roads formed, with the Fond du Lac, a direct line to Chicago. There was a daily train running between Chicago and Prairie du Chien over the former road. A branch of the Milwaukee & LaCrosse road (Hudson & Superior Railroad) was already projected from Hudson, on Lake St. Croix, where it was to connect with the LaCrosse road to Superior, at the head of the lake of that name. The company had obtained a grant of lands to aid in its construction.

Galena & Chicago Union Railroad, the origin of Chicago's magnificent system, extended from Chicago to Freeport, forming with the Illinois Central a direct route between Chicago and Dubuque. The officers of this road were: John B. Turner, president; William H. Brown, vice-president; William J. McAlpine, assistant president and chief engineer; Philip A. Hall, superintendent; William M. Larrabee, secretary; Henry Tucker, treasurer; George M. Wheeler, auditor. The receipts for the year amounted to \$2,117,904.97. Over this line two hundred and fifty-five thousand passengers went westward and two hundred and sixteen thousand eastward. In 1856 the number of persons taken west on this road exceeded those returning by sixty thousand, thus proving that the tide westward had fairly set in.

The first branch road west of the city and north of the main line was the Fox River Valley Railroad, running from Elgin up that beautiful valley to Richmond, and from thence the Wisconsin was completed to Geneva, in that State. Its officers were: B. W. Raymond, Chicago, president; G. H. Merrill, Elgin, superintendent; A. J. Waldron, Elgin, secretary and treasurer. At Geneva, Wis., it connected with the projected Wisconsin Central. The Beloit Branch of the Galena Railroad connected at Belvidere seventy-eight miles west of Chicago, with the Beloit & Wisconsin; officers the same as those of the Galena road.

The Beloit & Madison road was in operation to Footville, seventeen miles, and was designed to connect with the Milwaukee & Mississippi road running to Prairie du Chien. The Mineral Point Railroad connected with the Galena & Freeport, running to Mineral Point, Wis. An important extension of the Galena road was the Dubuque & Pacific line, opened for business to Nottingham, thirty-seven miles from Dubuque, on January 1, 1858. The entire length of the projected line from Dubuque to Sioux City, on the Missouri, was one hundred and thirty-one miles. The company had been aided with a land grant of over one and a quarter million acres. The Galena (Fulton) Air Line was the direct route from Chicago to Fulton, on the Mississippi, one hundred and thirty-six miles. In May, 1857, the Chicago, Iowa & Nebraska line was completed from Clinton to DeWitt, twenty miles. It was supposed that the road could be completed to Cedar Rapids and equipped for \$20,000 per mile. From thence it was expected to bend north, up the valley of the Cedar, and form, with a north-and-south road in Minnesota, a direct line to St. Paul. The Sterling & Rock Island road was a proposed line running down the Valley of the Rock River.

The fifth grand trunk line in 1857 was the Chicago, Burlington & Quincy Railroad. Its officers were: John Van Nortwick, Batavia, Illinois, president and chief engineer; Charles G. Hammond, superintendent; Amos

T. Hall, secretary and treasurer. No finer portion of the Mississippi Valley can be found than the "Military Tract," through the center of which this road passed. During the year 1857, the receipts amounted to \$1,899,586.49, and four hundred and twelve thousand passengers were transported. As an extension across Iowa, the Chicago, Burlington & Quincy was to connect with the Burlington & Missouri. The Quincy & Chicago line connected with the Burlington road at Galesburg, one hundred and sixty-eight miles, and extended thence to Quincy. This was formerly the "Northern Cross." The Hannibal & St. Joe road had been built sixty-five miles west, by November, 1857.

The sixth grand trunk from Chicago was the Chicago & Rock Island. Its officers were: Henry Farnum, Chicago, president; John F. Tracy, Chicago, superintendent; F. H. Tows, New York, secretary; A. C. Flagg, New York, treasurer. The earnings for the year amounted to \$1,681,101.57. Over three hundred and ninety thousand passengers were carried on its lines. The road stretched down the Valley of the Illinois to Peru, where it swept across the "Military Tract," and at Rock Island, one hundred and eighty-one miles from Chicago, crossed the Mississippi by a splendid bridge, the only railway structure that had, as yet, been thrown across the "Father of Waters," and the only one of any kind below St. Anthony. The Peoria & Bureau Valley Railroad was leased to the Rock Island Company at an annual rental of \$125,000. The Peoria & Oquawka line ran nearly east and west and connected with all the north and south lines leading into the city. A branch of the Bureau Valley road, the Illinois River line, was being pushed forward from Jacksonville to LaSalle, about ninety miles.

The Chicago, Alton & St. Louis Railroad, the seventh grand trunk line connecting Chicago with the country in 1857, was officered as follows: Hon J. A. Matteson, Springfield, president; A. H. Moore, Bloomington, superintendent; J. K. Alexander, Bloomington, secretary; R. E. Goodell, Joliet, treasurer; J. C. Smith, Bloomington, auditor; L. Darling, Chicago, general agent. The total receipts for the year amounted to \$998,309.47.

The eighth grand western trunk line was the Illinois Central. Its officers were: W. H. Osborn, New York,

president; G. B. McClellan, vice-president and chief engineer; James C. Clark, master of transportation; W. K. Ackerman, New York, secretary; I. N. Perkins, New York, treasurer; John Wilson, land commissioner. At this time (1857) the Illinois Central was the longest road owned by one company in America. Its total receipts for the year were \$2,293,964.57, and nearly seven hundred and fifteen thousand passengers were transported over its lines. Up to January 1, 1858, nearly one-half of the two and a half million acres comprising its land grant had been sold for \$15,311,440.40. The sales for the year amounted to \$4,598,211.99. Of the Pittsburgh, Fort Wayne & Chicago road all except eighty-two miles was completed by the latter part of 1857. It had been operated during the year by using the line of the Michigan Southern road as far

east as LaPorte and thence connected by the Cincinnati & Peru road. The Michigan Southern and Northern Indiana connecting with the roads south of Lake

Erie; The Michigan Central, connecting with the Canada, Great Western, New York Central and the Erie railroads, and with the Grand Trunk to Montreal, Quebec and Portland were the most important trunk lines to the East.

TELEGRAPH AND EXPRESS.

The first telegram received in Chicago was upon January 15, 1848, from Milwaukee; the succeeding day complimentary and flamboyant telegrams passed between the bachelors and ladies of the two cities. The first through telegram from the East was received April 6, 1848.* The Chicago office was Colonel J. J. Speed's telegraph office at the Saloon Building, corner of Lake and Clark.

On April 3, 1843, Miller & Company started a tri-weekly express between Chicago and the East; in 1845 the service was augmented to daily and A. H. Burley, of S. F. Gale & Co., 106 Lake, was the agent.

The following are the first greetings which passed between the cities of Detroit and Chicago:

"To Milwaukee, Racine, Southport and Chicago.—We hail you by lightning as fair sisters—as bright stars of West. Time has been annihilated. Let no element of discord divide us. May your prosperity as heretofore be onward. What Morse has devised and Speed joined let no man put asunder."

To which the following was sent in reply:

"We return the greetings of our sister of the Straits, and trust that lightning may never prove an element of discord between us. As sisters, may we be joined by bonds as holy as those which unite maidens to the object of their love, but unlike that love may our course always run smoothly."

The charge appears to have been: Twenty-five cents for ten words; two cents for every additional word; and two for the delivery at the residence of the person to whom the message was sent.

On January 1, 1851, the American Express Company, S. D. Lockwood agent, advertises as follows: Messengers will leave the office Tremont Buildings, Dearborn Street, for New York and intermediate places, via Michigan Central Railroad, Tuesday and Friday mornings at 8 o'clock.

For Milwaukee, Tuesdays and Fridays at 1 o'clock P. M.

For St. Louis, Wednesday mornings at 8 o'clock.

Packages for the East should be left at the office on Monday and Thursday evenings. This appears to be the first introduction of the American Express Company.

The companies increased, however, and in 1857 were represented as follows: American Express Company, J. C. Fargo, agent, 20 Dearborn Street; City Express Post, (postage two cents per letter, an *avant-courier* of the city delivery,) Bronson and Forbes, Masonic Temple; Illinois & Wisconsin Express, (J. H. Durfee, proprietor,) daily between Woodstock, McHenry Co., and Chicago, office 18 Dearborn Street; Merchant's Despatch, Hall & Co., agents, 96 and 98 South Water Street; Union Express Company, T. F. Craig, agent, 14 South Water Street; United States Express Company, H. D. Colvin, agent, 14 Dearborn Street.

EARLY MILITARY HISTORY.

It is the purpose in what follows to put in order and preserve in history all that can be gathered from records, early publications and the memories of men still living, concerning the citizen-soldiery of Chicago and Cook County; to make therefrom as complete a record as is possible of the various military organizations; to note their exploits and parades, in times of peace; and to record their arduous and patriotic service in times of war, when, putting off the war-like appearance they became invested with the full armor of the warrior, and, soldiers in deed as well as in name, won the imperishable renown accorded in the war annals of the centuries to those only who have fallen unconquered or returned victorious.

A garrison of soldiers, trained in the arts of war, and subject to strict military discipline and drill even in times of peace, constituted the first civilized white community of Chicago. A fort had been built and occupied, destroyed and rebuilt years before the village of Chicago boasted more than half a dozen huts and shanties outside the garrison. The influence of such a garrison has ever most depressing effect on the innate military ardor of the private citizen. Seldom does the civilian so far acquire the spirit of self-abasement as to put on his sword, and sash, and pompons, and epaulets under the critical and supercilious gaze of the regular, except under the urgent stress of danger to be met or duty to be performed, demanding other service than those involved in a dress parade. So it happened that for many years the fighting qualities of the Chicago militiaman were unostentatiously held in abeyance, and the waiting heroes, hidden in citizen's garb, quietly threaded the paths of life even to the end, unheralded and unsung. But, remote from the protection of the garrison, the militia has ever been found, hilariously noisy, gaudy, and ostentatious in its preparatory demonstrations, but in emergency, the fearless and unflinching defender of the fireside, home, and country.

Even as far back as 1812, the militia, with its characteristic reliability in time of extremity, makes its first appearance in the annals of Chicago. The massacre attending the evacuation of Fort Dearborn, August 15, 1812, numbered among its victims "twelve militiamen." Captain Nathan Heald, the commandant of Fort Dearborn at the time of its evacuation, in a letter written from Pittsburgh, November 7, 1812, details the losses as follows:

"Our strength was about fifty-four regulars and twelve militia, out of which twenty-six regulars and all the militia were killed in the action, with two women and twelve children. Ensign George Ronan and Dr. Isaac Van Voorhis, of my company, with Captain Wells, of Fort Wayne, to my great sorrow, are numbered among the dead."

It is not believed that of the twelve militia heroes who thus early baptized the soil of Chicago with their life-blood, the name of a single one has been rescued from oblivion. Whether their homes had been in Chicago or its vicinity, or whether, at the call of danger, they came from a distance to the scene of peril may never be known.

There was not at that time, nor for many years after, any enrollment of the militia of Chicago, or of the men subject to military duty in the territory now embraced in Cook County. In 1827 quite a panic occurred at Chicago on account of the hostilities with the Winnebagoes, who were on the war-path during the summer of that year. Fort Dearborn was not at that time occupied as a military post, but was under the charge of Dr. Alexander Wolcott, the Indian Government Agent. The few traders and the families who then made up the settlement were defenseless in case of an attack. There was no militia organization at that time. Gurdon S. Hubbard, still a resident of the city, tells the story of the reception of the news and the efforts to meet the expected or probable attack as follows:*

"At the breaking out of the Winnebago war, early in July, 1827, Fort Dearborn was without military occupation. Dr. Alexander Wolcott, Indian Agent, had charge of the fort living in the brick building, just within the north stockade previously occupied by the commanding officers. The old officers' quarters built of logs on the west, and within the pickets, were occupied by Russel E. Heacock, and one other American family, while a number of *voyageurs* with their families were living in the soldiers' quarters, on the east side of the inclosure. The store-house and guard-house were on either side of the southern gate; the sutler's store was east of the north gate, and north of the soldiers' barracks; the block-house was located at the southwest and the bastion at the northwest corners of the fort, and the magazine, of brick, was situated about half way between the west end of the guard and block-houses. The annual payment of the Pottawatomie Indians occurred in September of the year 1827. A large body of them had assembled, according to custom, to receive their annuity. These left after the payment for their respective villages, except a portion of Big Foot's band. The night following the payment, there was a dance in the soldiers' barracks, during the progress of which a violent storm of wind and rain arose; and about midnight, these quarters were struck by lightning and totally consumed, together with the store-house and a portion of the guard-house. The sleeping inmates of Mr. Kinzie's house, on the opposite bank of the river, were aroused by the cry of "fire," from Mrs. Helm, one of their number, who, from her window, had seen the flames. On hearing the alarm I, with Robert Kinzie, late Paymaster of United States Army, hastily arose, and only partially dressed, ran to the river. To our dismay we found the canoe, which was used for crossing the river, filled with water; it had been partially drawn up on the beach and became filled by the dashing of the waves. Not being able to turn it over, and having nothing with which to bail it out, we lost no time, but swam the stream. Entering by the north gate we saw at a glance the situation. The barracks and store-house being wrapped in flames, we directed our energies to the saving of the guard-house, the east end of which was on fire. Mr. Kinzie, rolling himself in a wet blanket, got upon the roof. The men and women, about 40 in number formed a line to the river, and with buckets, tubs, and every available utensil, passed the water to him; this was kept up till daylight before the flames were subdued. Mr. Kinzie maintaining his dangerous position with great fortitude, though his hands, face and portions of his body were severely burned. His father, mother, and sister, Mrs. Helm, had meanwhile freed the canoe from water, and crossing in it, fell into line with those carrying water. Some of the Big Foot band of Indians were present at the fire; but merely as spectators, and could not be prevailed upon to assist. They all left next day for their homes. The strangeness of their behavior was the subject of discussion among us. Six or eight days after this event, while at breakfast in Mr. Kinzie's house, we heard singing, faintly at first, but gradually growing louder as the singers approached. Mr. Kinzie recognized the leading voice as that of Bob Forsyth, and left the table for the piazza of the house, where we all followed. About where Wells Street now crosses the

* See Fergus's Historical Series, No. 10, pp. 41-46.

river, in plain sight from where we stood, was a light birch bark canoe, manned by thirteen men, rapidly approaching, the men keeping time with their paddles to one of the Canadian boat songs; it proved to be Governor Cass and his secretary, Robert Forsyth, and they landed and soon joined us. From them we first learned of the breaking out of the Winnebago war, and the massacre on the Upper Mississippi. Governor Cass was at Green Bay by appointment, to hold a treaty with the Winnebagoes and Menomonee tribes, who, however, did not appear to meet him in council. News of hostilities reaching the Governor there, he immediately procured a light birch bark canoe, purposely made for speed, manned it with twelve men at the paddles and a steersman, and started up the river, making a portage into the Wisconsin, then down it and the Mississippi to Jefferson Barracks, below St. Louis. Here he persuaded the commanding officer to charter a steamer, and embarking troops on it, ascended the Mississippi in search of the hostile Indians, and to give aid to the troops at Fort Snelling. On reaching the mouth of the Illinois River, the Governor (with his men and canoe, having been brought so far on the steamer,) here left it, and ascending that stream and the Desplaines, passed through Mud Lake into the South Branch of the Chicago River, reached Chicago. This trip from Green Bay round was performed in about thirteen days, the Governor's party sleeping only five to seven hours, and averaging sixty to seventy miles travel each day. On the Wisconsin River they passed Winnebago encampments without molestation. They did not stop to parley, passing rapidly by, singing their boat-songs; the Indians were so taken by surprise that, before they recovered from their astonishment, the canoe was out of danger. Governor Cass remained at Chicago but a few hours, coasting Lake Michigan back to Green Bay. As soon as he left, the inhabitants of Chicago assembled for consultation. Big Foot was suspected of acting in concert with the Winnebagoes, as he was known to be friendly to them, and many of his band had intermarried with that tribe. Shawbonee was not here at the payment, his money having been drawn for him by his friend, Billy Caldwell. The evening before Governor Cass's visit, however, he was in Chicago, and then the guest of Caldwell. At my suggestion, he and Caldwell were engaged to visit Big Foot's village (Geneva Lake), and get what information they could of the plans of the Winnebagoes; and also learn what action Big Foot's band intended taking. They left immediately, and on nearing Geneva Lake arranged that Shawbonee should enter the village alone, Caldwell remaining hidden. Upon entering the village, Shawbonee was made a prisoner, and accused of being a friend of the Americans and a spy. He affected great indignation at these charges and said to Big Foot: 'I was not at the payment, but was told by my braves that you desired us to join the Winnebagoes and make war on the Americans. I think the Winnebagoes have been foolish; alone they cannot succeed. So I have come to council with you, hear what you have to say, when I will return to my people and report all you tell me; if they shall then say, we will join you, I will consent.' After talking nearly all night they agreed to let him go, provided he was accompanied by one of their own number; to this proposal Shawbonee readily consented, though it placed him in a dangerous position. His friend Caldwell was waiting for him in the outskirts of the village, and his presence must not be known, as it would endanger both of their lives. Shawbonee was equal to the emergency. After leaving, in company with one of Big Foot's braves, as the place of Caldwell's concealment was neared, he commenced complaining in a loud voice of being suspected and made a prisoner, and when quite near said: 'We must have no one with us in going to Chicago. Should we meet any one of your band or *any one else*, we must tell them to go away; we must go by ourselves, and get to Chicago by noon to-morrow. Kinzie will give us something to eat, and we can go on next day.' Caldwell heard and understood the meaning of this, and started alone by another route. Strategy was still to be used, as Shawbonee desired to report; so on nearing Chicago, he said to his companion, 'If Kinzie sees you, he will ask why your band did not assist in putting out the fire? Maybe he has heard news of the war and is angry with Big Foot; let us camp here, for our horses are very tired.' This they did, and after a little, the Big Foot brave suggested that Shawbonee should go to the fort for food and information. This was what he wanted to do, and he lost no time in reporting the result of his expedition, and procuring food returned to his camp. Starting the next morning with his companion for his own village; on reaching it he called a council of his Indians, who were addressed by Big Foot's emissary; but they declined to take part with the Winnebagoes, advising Big Foot to remain neutral.

"On receiving Shawbonee's report, the inhabitants of Chicago were greatly excited; fearing an attack, we assembled for consultation, when I suggested sending to the Wabash for assistance, and tendered my services as messenger. This was at first objected

to, on the ground that a majority of the men at the fort were in my employ, and in case of an attack, no one could manage them or enforce their aid but myself. It was, however, decided that I should go as I knew the route and all the settlers. An attack would probably not be made until Big Foot's ambassador had returned with his report; this would give at least two weeks' security, and in that time I could, if successful, make the trip and return. I started between four and five P. M., reaching my trading house on the Iroquois River by midnight, where I changed my horse and went on; it was a dark, rainy night. On reaching Sugar Creek, I found the stream swollen out of its banks, and my horse refusing to cross, I was obliged to wait till daylight, when I discovered that a large tree had fallen across the trail, making the ford impassable. I swam the stream and went on, reaching my friend Mr. Spencer's house at noon, tired out. Mr. Spencer started immediately to give the alarm, asking for volunteers to meet at Danville the next evening, with five days' rations. By the day following at the hour appointed, one hundred men were organized into a company, and appointing a Mr. Morgan, an old frontier fighter, as their captain, we immediately started for Chicago, camping that night on the north fork of the Vermillion River. It rained continually, the trail was very muddy, and we were obliged to swim most of the streams and many of the large sloughs, but we still pushed on, reaching Fort Dearborn the seventh day after my departure, to the great joy of the waiting people. We re-organized, and had a force of about one hundred and fifty men, Morgan commanding. At the end of thirty days, news came of the defeat of the Winnebagoes, and of their treaty with the commanding officer, who went from Jefferson Barracks, as before stated. Upon hearing this, Morgan disbanded his company, who returned to their homes, leaving Fort Dearborn in charge of the Indian Agent as before."

The following extracts from the supplementary narrative of Hezekiah Cunningham was furnished by H. W. Beckwith.*

"In the night time, about the 15th or 20th of July, † 1827, I was awakened by my brother-in-law, Alexander McDonald, telling me that Mr. Hubbard had just come in from Chicago with the word that the Indians were about to massacre the people there, and that men were wanted for their protection at once. The inhabitants of the country capable of bearing arms had been enrolled under the militia laws of the State, and organized as 'The Vermillion County Battalion,' in which I held a commission as Captain. I dressed myself and started forthwith to notify all the men belonging to my company to meet at Butler's Point (six miles southwest of Danville), the place where the county business was then conducted and where the militia met to muster. The Captains of the other companies were notified the same as myself, and they warned out their respective companies the same as myself, and they rode the remainder of the night at this work, up and down the Little Vermillion.

"At noon the next day, the battalion was at Butler's Point; most of the men lived on the Little Vermillion River, and had to ride or walk from six to twelve miles to the place of rendezvous. Volunteers were called for, and in a little while fifty men, the required number, were raised. Those who agreed to go then held an election of their officers for the campaign, choosing Achilles Morgan, Captain; Major Bayles, First Lieutenant; and Colonel Isaac R. Moores, as Second. The names of the private men, as far as I now remember them, are as follows: George M. Beckwith, John Beasley, myself (Hezekiah Cunningham), Julian Ellis, Seaman Cox, James Dixon, Asa Elliott, Francis Foley, William Foley, a Mr. Hammers, Jacob Heater, a Mr. Davis, Evin Morgan, Isaac Goen, Jonathan Phelps, Joshua Parish, William Reed, John Myers ('Little Vermillion John'), John Sausbury, a Mr. Kirkman, Anthony Swisher, George Swisher, Joseph Price, George Weir, John Vaughn, Newton Wright and Abel Williams. Many of the men were without horses, and the neighbors who had horses and did not go, loaned their animals to those who did; still there were five men who started afoot, as there were no horses to be had for them. We disbanded, after we were mustered in, and went home to cook five days' rations, and were ordered to be at Danville the next day. The men all had a pint of whisky, believing it essential to mix a little of it with the slough water we were to drink on our route. Abel Williams, however, was smart enough to take some ground coffee, and a tin cup along, using no stimulants whatever; he had warm drinks on the way up to Chicago, and coming back all of us had the same.

"We arrived at the Vermillion River about noon on Sunday, the day after assembling at Butler's Point. The river was up, running, bank full, about a hundred yards wide, with a strong current. Our men and saddles were taken over in a canoe. We undertook

*Fergus's Historical Series, No. 10.

† The month must have been September or October. (See Narrative of G. S. Hubbard.)

to swim our horses, and as they were driven into the water the current would strike them and they would swim in a circle and return to the shore a few rods below. Mr. Hubbard, provoked at this delay, threw off his coat and said, 'Give me old Charley,' meaning a large, steady-going horse, owned by James Butler and loaned to Jacob Heater. Mr. Hubbard, mounting this horse, boldly dashed into the stream, and the other horses were quickly crowded after him. The water was so swift that 'old Charley' became unmanageable, when Mr. Hubbard dismounted on the upper side and seized the horse, by the mane, near the animal's head, and swimming with his left arm, guided the horse in the direction of the opposite shore. We were afraid he would be washed under the horse or struck by his feet and be drowned; but he got over without damage, except the wetting of his broadcloth pants and moccasins. These he had to dry on his person, as we pursued our journey.

"I will here say that a better man than Mr. Hubbard could not have been sent to our people. He was well known to all the settlers. His generosity, his quiet and determined courage, and his integrity, were so well known and appreciated that he had the confidence and good will of everybody, and was a well-recognized leader among us pioneers.

"At this time there were no persons living on the north bank of the Vermillion River near Danville, except Robert Trickle and George Weir, up near the present woolen factory, and William Reed and Dan Beckwith; the latter had a little log cabin on the bluff of the Vermillion near the present highway bridge, or rather on the edge of the hill east of the highway some rods. Here he kept store, in addition to his official duties as Constable and County Surveyor. The store contained a small assortment of such articles as were suitable for barter with the Indians who were the principal customers. We called it "The Saddle-Bags Store," because the supplies were brought up from Terre Haute in saddle-bags, that indispensable accompaniment of every rider in those days before highways were provided for the use of vehicles.

"Mr. Reed had been elected Sheriff the previous March, receiving fifty-seven out of the eighty votes that were cast at the election, and which represented about the entire voting population of the county at that time. Both Reed and Dan wanted to go with us, and after quite a warm controversy between them, as it was impossible for them both to leave, it was agreed that Reed should go and that Beckwith should look after the affairs of both until Reed's return. Amos Williams was building his house at Danville at this time, the sale of lots having taken place the previous April.

"Crossing the North Fork at Denmark, three miles north of Danville, we passed the cabin of Seymour Treat. He was building a mill at that place; and his house was the last one in which a family was living until we reached Hubbard's Trading-Post on the north bank of the Iroquois River, near what has since been known as the town of Buncombe; and from this trading-house there was no other habitation, Indian wigwams excepted, on the line of our march until we reached Fort Dearborn. * * *

"We reached Chicago about four o'clock on the evening of the fourth day, in the midst of one of the most severe rainstorms I ever experienced, accompanied by thunder and vicious lightning. The rain we did not mind, we were without tents and were used to wetting. The water we took within us hurt us more than that which fell upon us, as drinking it made many of us sick. The people of Chicago were very glad to see us. They were expecting an attack every hour since Colonel Hubbard had left them, and as we approached they did not know whether we were enemies or friends, and when they learned that we were friends they gave us a shout of welcome.* They had organized a company of thirty or fifty men, composed mostly of Canadian half-breeds, interspersed with a few Americans, all under the command of Captain Beaubien. The Americans seeing that we were a better looking crowd, wanted to leave their associates and join our company. This feeling caused quite a row, but the officers finally restored harmony and the discontented men went back to their old command. The town of Chicago was composed at this time of six or seven American families, a number of half-breeds, and a lot of idle, vagabond Indians loitering about. I made the acquaintance of Robert and James Kinzie, and their father, John Kinzie. We kept guard day and night for some eight or ten days, when a runner came in—I think from Green Bay—bringing word that General Cass had concluded a treaty with the Winnelagos, and that we might now disband and go home. The citizens were overjoyed at the news; and in their gladness they turned out one barrel of gin, one barrel of brandy, one barrel of whisky, knocking the heads of the barrels in. Everybody was invited to take a free drink; and, to tell the plain truth, everybody *did* drink. The ladies at Fort Dearborn treated us especially well. I say this without disparaging the good and cordial conduct of the men toward us. The ladies gave us all manner of good things to eat. They loaded us with provisions and gave us all those delicate attentions that the kindness of woman's heart would sug-

* The distance traveled by Colonel Hubbard on this expedition was not less than two hundred and fifty miles.

gest. Some of them—three ladies whom I understood were recently from New York, distributed tracts and other reading matter among our company, and interested themselves zealously in our spiritual as well as temporal welfare."

The company mentioned in the foregoing as organized while Hubbard had gone for relief, was the first

Jean Baptiste Beaubien

militia company ever organized in Chicago of which any tradition or record is preserved. The commander of this company was Jean Baptiste Beaubien.

The first, truest and bravest volunteer militiamen of Cook County were Shawbonee and his friend "Billy Caldwell." Their names appear on no muster rolls, but their services as protectors of the whites against their savage foes have enrolled them in the hearts of their descendants forever. But for them the first families of Chicago would have had no descendants to perpetuate their lives or tell the story of their preservation. Merited mention of these friends of early Chicago, ever true and brave, appears elsewhere.

In October, 1828, Fort Dearborn was again garrisoned and so remained with the exception of May and a part of June, 1832, until its final evacuation, May 10, 1837. When the Black Hawk War broke out, in the early spring of 1832, threatening the entire devastation of all the white settlements in the country west and northwest of the great lakes, the regular army was found inadequate to repel the threatened danger, and the militia were again called into requisition. Under the call for troops the State of Illinois furnished one hundred and seventy-four companies of volunteers, which appear on the muster rolls of the United States, and served in some capacity during the war. In addition, many companies of State Militia were under arms, who performed

meritorious services, but were not mustered into the service by any United States officer. No rolls of these companies are preserved in the archives of the Government. Fortunately, through the industrious historic research of Hon. John Wentworth and others, the roster of one of these companies, made up of early residents of Chicago, has been rescued from oblivion, as will appear in its proper connection. The participation of residents of Chicago in the war is detailed in the following sketch :

CHICAGO DURING THE BLACK HAWK WAR.—Black Hawk,* a leading chief of the Sacs, had refused, in 1831, to comply with the terms of the treaty with his tribe, which he himself never signed for his band, which required him to remove west of the Mississippi and relinquish forever all title to lands heretofore owned by him or his band in Illinois. He claimed, with reasons that might have substantiated his claims in any court of law, had he been white, that neither he nor his band ever sold or intended to sell their town, near Rock Island, nor the adjacent farms. On returning from a hunt, in the summer of 1831, he found his village and the adjacent fields occupied by white settlers, who, under the treaty as proclaimed, had come in and taken possession of the cabins and the growing crops he and his band had planted. He determined, at all hazards, to reinstate his band in possession of their ancient homes. The Governor of Illinois, under the terms of the treaty, took a different view of the case, proclaimed the invasion of the State, and called on the United States to help expel the invaders. The result was the burning of the village, the defeat of Black Hawk, his retreat to the west bank of the Mississippi, and a treaty ; Black Hawk agreeing by its terms to remain on the west banks of the great river and to relinquish all claims to any part of the domain of Illinois ever after.

The treaty was confirmed by the giving and receiving of presents, and it was believed that the trouble was at an end.

The following spring, Black Hawk's band having had a poor hunt, and having lost the crops they had planted the previous season, found themselves poorer even than poor Indians usually were. They were poverty-stricken. They could not pay their debts to the Indian traders, and had run short of provisions and ammunition. In their destitute condition, it is not strange that they looked lovingly toward their old homes, and held somewhat lightly the forced treaty they had made the fall before. It is stated, on what is deemed good authority, that George Armstrong, who had a trading-post at that time at Fort Armstrong, was a heavy creditor of the tribe, and was not averse to their return, as, out of the scare which might occur and the probable treaty which would ensue, he might, through his influence with the chiefs of the tribe, secure his debt from such subsidies as should come to them. Whether Armstrong influenced them to return is not known. It is certain, however, that he had early knowledge of their intention, and informed General Atkinson as early as April 12, 1832, when he wrote him :

"I have been informed that the British band of Sacs and Foxes (Black Hawk's) are determined to make war on the frontier

* Black Hawk, although a chief of a band, was not at this time the leading chief of the Sacs. He was, according to Indian polity, subservient to Keokuk, who was the leading chief of the nation. Chiefs gained their supremacy in three ways; by inheritance, by marriage with a chief's daughter, or by bravery in war. Black Hawk was not a hereditary chief; he had gained his position by bravery in war, and had drawn around him the best families of the tribe,—the heads of which had fought with him on many a bloody field. Keokuk took no part in his raid, but, although his superior in rank, was powerless to control the band which acknowledged allegiance to him.

So, among the Pottawatomies, Big Foot, chief of a band, seemed not to be under the control of any other chiefs of that nation. Although Keokuk, the head chief, desired peace, Black Hawk did not heed his advice or orders.

settlements. *** From every information that I have received I am of the opinion that the intention of the British band of Sac Indians is to commit depredations on the inhabitants of the frontier."

It is quite likely that Black Hawk, who was a warm friend of Armstrong, was in collusion with him to get up a scare and a new treaty. The Galenian, a paper published in Galena, under date of May 2, 1832, says that "Black Hawk was invited by the prophet,* and had taken possession of a tract of forty miles upon Rock River, but did not remain long before commencing his march up the river. Captain William B. Green, afterward a citizen of Chicago, who served in Stephenson's company of mounted rangers, said that "Black Hawk and his band crossed the river with no hostile intent, but to accept an invitation from Pittawak, a friendly chief, to come over and spend the summer with his people on the head-waters of the Illinois." Whatever may have been the causes or influences which determined Black Hawk, he decided to so far violate the terms of the treaty as to return. April 6, 1832, he crossed the Mississippi with his whole band, including old men, women, children, warriors, ponies and household goods, as was common to the tribe on making a peaceful migration. The warriors numbered 386; the camp followers, probably three times that number. It is well to remember that Black Hawk's soldiers at the maximum numbered less than half a thousand. Some stopped at the village of the Prophet; many dispersed among the neighboring villages, while Black Hawk, with the remnant of his party, numbering more non-combatants than warriors, made his way up the Rock River toward the Winnebago country. His return, in violation of the treaty, and the warning of Davenport, resulted in the hasty muster of the militia by Governor Reynolds to repel the threatened invasion. On Saturday, May 9, the militia had rendezvoused, to the number of eighteen hundred men, at Dixon's Ferry, awaiting the arrival of General Atkinson's forces from Fort Armstrong. Prior to this, J. W. Stephenson, John Foley and — Atchison had returned from a reconnoitering expedition, and reported that the Indians "had dispersed among the neighboring tribes." The Galenian, in commenting on the report of these scouts said: "It is already proved that they will not attempt to fight it out with us, as many have supposed. Will the temporary dispersion of Black Hawk's band among their neighbors cause our troops to be disbanded?" It seems to have been decided by the troops, if not by the Governor, that they would not disband until they had exterminated the trespassers. On May 10, Major Isaiah Stillman, with a force of about four hundred well-mounted volunteers, was permitted by the Governor to make a reconnoissance on the trail of the half-starved remnant of the migratory tribe; the Galenian says, "With a fixed determination to wage a war of extermination wherever he might find any part of the hostile band." On the evening of May 12, Stillman's force encamped at White Rock Grove, in what is now Ogle County, about thirty-five miles from Dixon. They had with them a full commissary supply, including a barrel of whisky, and authorities are quite unanimous in saying that many of them were inspired by the maudlin courage they had imbibed. Black Hawk, with his war chief, Ne-o-pope, about a hundred and fifty warriors, and twice that number of women, children, and old men, was encamped but a short distance away. His proxim-

* The Prophet "White Cloud" was a Winnebago chief, then having his village at what is now Prophetstown, Ill. He was in full sympathy with Black Hawk, and although the Winnebagoes would not join him in open war against the whites, his invitation to Black Hawk to come over and plant corn in his territory did not reassure the whites. It had the appearance of duplicity on the part of White Cloud, and aroused the suspicion that a general alliance of the Winnebagoes, Pottawatomies and Foxes against the whites would be the probable sequence of Black Hawk's visit.

ity was unknown to the whites, but hearing of their arrival he determined to communicate with them. He accordingly sent a small party of his braves with a flag of truce toward Stillman's camp. On appearing in sight, some of Stillman's men, without orders, hastily mounted and rode furiously toward them, firing as they advanced, killing two of the Indians and capturing two others. The rest of the party fled to Black Hawk's camp, pursued by the whites, and bearing tidings of the death of their comrades and the violation of the flag of truce. The war-whoop was the reply to the outrage, and an immediate sally in force was made to avenge it. The drunken squad which had done the mischief and opened the war, murdered their two prisoners, and retreated to the camp. Here a general panic ensued, and the whole battalion fled for safety. Eleven of Stillman's men were killed before the escape was effected, among whom were Captain Adams and Major Perkins. The place of slaughter, where the mutilated remains of the victims were afterward found and buried, is still known as "Stillman's Run." The panic-stricken soldiers fled to Dixon and other places of safety, spreading consternation among the settlers. General Whiteside, then in command at Dixon, marched immediately to the scene of the late disaster, but the hostile band had disappeared. He had only the melancholy satisfaction of burying the mutilated remains of the victims of this ill-starred and rash encounter. Black Hawk and his braves were on the war-path. They had broken up into small parties, and, in the style of savage war-fare, were devastating the white settlements, robbing, destroying, and murdering in sweet revenge for the outrages of Stillman's men. The volunteers who thus precipitated the rupture were soon after mustered out of the service, and for a few weeks thereafter the settlers were left to defend themselves against the aroused and merciless foe. The news of the breaking out of the war soon reached the settlers of Cook County, then comprising the present counties of McHenry, DuPage, Will and Lake. The settlers of DuPage County, being nearest the scene of danger, made a unanimous stampede for the stockades at Fort Dearborn as a place of refuge and safety. The news of the outbreak reached Naper's settlement, a few days after the discomfiture of Stillman's forces, and caused not a little anxiety. It being planting-time, the settlers, taking extra precautions against surprise, still remained to finish the work of getting in seed. On the morning of the 18th, Shata, a son of Shawbonee, a messenger sent by his father from the Pottawatomies, who remained friendly to the whites, reached the settlement with the intelligence that a party of Sacs were on the Fox River committing depredations. He stated that they had burned the dwellings and destroyed the property of Hollenbeck and Cunningham, then living at Hollenbeck's Grove (now Millbrook, Kendall County), continued their march up the river, and were then not more than ten miles from the settlement. No time was lost in hastily gathering together what few effects could be carried, and in the afternoon the families, with the exception of Christopher Payne's, started with an escort for Chicago, some of the men remaining to guard the hamlet and crops from destruction, if possible. The following day Laughton, an Indian-trader living on the Desplaines River, came to the settlement with three Pottawatomie Indians and a half-breed named Burrasaw. They came in search of news regarding the threatened invasion. It was decided to visit the camp of the friendly Pottawatomies, and Laughton's party, joined by Captain Joseph Naper and a few other settlers, went to their camp in the Big

Woods, some ten miles away. They found the whole tribe engaged in a big feast, but managed to gather from them the unwelcome information that a band of Sacs, three hundred in number, were encamped in the Blackberry timber only four miles distant; that they were bent on mischief; that they would try to prevail on them to spare the settlement, etc. An old squaw, more sober than her lord, said to Naper "Puc-a-che," which Naper understood as the most forcible and imperative expression in the dialect to indicate that only flight could avoid imminent peril. Translated into English it meant "be off," "go quick," or "run for your life." Laughton, who, from his intimate relations with the Pottawatomies as a trader, had no fear for himself, remained. Naper and his companions returned at once to the settlement. There they waited further developments, meantime preparing for fight if it should prove necessary. They loaded on their remaining wagons what they would carry, and hid in a well what it was necessary to leave behind. While engaged in these preparations for flight, Laughton returned, accompanied by some fifty Pottawatomies, to warn them to hasten their departure, as a band of Sacs had already crossed the Fox River, all efforts to dissuade them from hostile intent have proved unavailing. No further delay was made. The settlers hastily warned all within reach of the imminent danger, and with the family of Payne left behind the day before, followed their families in their flight to Chicago, which place was reached on the evening of the 20th. At that time the panic had become wide-spread and the fugitives were pouring in from all quarters. The arrival of the Naperville settlers brought the first reliable news of the near approach of the Indians. Fort Dearborn was at this time temporarily unoccupied as a military post. The troops of the garrison had been sent to Green Bay (Fort Howard) and Major Whistler, who had been ordered to re-garrison the fort from Fort Niagara, had not yet arrived. So the refugees took possession of the fort, several hundred finding crowded but welcome accommodations in the deserted barracks and such improvised shelter as they could erect. Some Michigan Militia also came over and garrisoned the fort in an irregular way, crowding its capacity to the utmost. The fort at this time was in charge of Colonel T. J. V. Owen, Government Agent of the Ottawa, Pottawatomie and Chippewa Indians. The means of defense at this time were certainly inadequate to the scare, to say nothing of the actual danger. The Cook County and Chicago Militia again came to the front. Already the Chicago Militia was enrolled, as appears by the following quotation from the Fergus's Historical Series, No. 16, pp. 64-65:

"CHICAGO'S EARLY DEFENDERS.—In my pursuit of the names of the early settlers of Chicago, a friend has presented me with the following, which he assures me was copied, some years ago, from the original. The officers are all dead. Captain Kercheval, once a prominent man in this city, and who represented it in the Legislature in 1838, died within a year or two in California, leaving a son who is a printer in this city. His widow resides at East St. Louis, Ill., with her sister, the widow of Colonel Thomas J. V. Owen, once Indian Agent here. The two Lieutenants having been Postmasters in this city, are well remembered. Of the soldiers, I know of but one living, David McKee, of Aurora, Ill. If there is another living, he is wanted at the Chicago Historical Society's rooms, corner of Dearborn Avenue and Ontario Street.

"After this organization, Governor John Reynolds sent Major Daniel Bailey to Chicago, and he raised a bat-

talion of four companies from the citizens of northern Illinois. The pay-rolls of these four companies of volunteers, I am told, is still preserved at Washington, D. C., where it was sent for the purpose of procuring land-warrants. It is hoped that a copy of it will soon be in the Chicago Historical Society's library. I doubt not but the names of many persons now living are upon it.

"I am inclined to think the paper was drawn up by Colonel Richard J. Hamilton, the stepfather of our present Judge Murry F. Tuley. Thirty-seven is the number capable and willing to bear arms at that date. There was no clergyman here to be their chaplain, if they wanted one.*

JOHN WENTWORTH.

"CHICAGO, October 17, 1879."

MUSTER ROLL.

May 2, 1832.—We, the undersigned, agree to submit ourselves, for the time being, to Gholson Kercheval, Captain, and George W. Dole and John S. C. Hogan, First and Second Lieutenants, as commanders of the Militia of the town of Chicago, until all apprehension of danger from the Indians may have subsided:

Richard J. Hamilton,	Jedediah Woolley,
Jesse B. Brown,	George H. Walker,
Isaac Harmon,	A. W. Taylor.
Samuel Miller,	James Kinzie,
John F. Herndon,	Davied Pemeton,
Benjamin Harris,	James Ginsday,
S. T. Gage,	Samuel Debaif,
Rufus Brown,	John Wellmaker
Jeremiah Smith,	William H. Adams
Heman S. Bond,	James T. Osborne,
William Smith,	E. D. Harmon,
Isaac D. Harmon,	Charles Moselle,
Joseph Lafromboise,	Francis Labaque,
Henry Boucha,	Michael Ouilmette,
Claude Lafromboise,	Christopher Shedaker,
J. W. Zarley,	David McKee,
David Wade,	Ezra Bond,
William Bond,	Robert Thompson,
Samuel Ellis.	

This company never entered the service under the command of Captain Kercheval or Lieutenants Dole and Hogan, but the members were pledged to duty when-

ever and wherever required for defense. So, when the fugitives arrived from the Naper settlement, and the heads of the families indicated their intention to return immediately to look after their property, they found no difficulty in raising a company from the ranks of Ker-

cheval's volunteers to return with them. The company consisted of about thirty men, under the command of Jesse B. Brown and Richard J. Hamilton, and was made

* There were several clergymen accessible. Rev. William Sec, and Rev. Stephen R. Beggs were at Chicago at the time.

up from the roster of high privates before given, together with a dozen Naperville settlers, among whom were John and Joseph Naper, Christopher Payne, Baley Hobson, Alanson Sweet, Israel Blodgett, and Robert Strong.

On Saturday, May 21, this Chicago Militia company, known as Captain Brown's, left Fort Dearborn for the seat of war. They stopped at night at Laughton's and on the next day reached Naper's settlement, where they found everything had remained undisturbed since the fugitives had left the place. Thence they proceeded to Plainfield, where the settlers had erected a rough log fort and were apparently secure against attack. From there they marched to Holderman's Grove, where they spent the night and a part of the following day. While there an express from Ottawa came to them, bringing the intelligence that a party of Sacs had fallen upon the settlement at Indian Creek, and murdered all the settlers. The company immediately proceeded to Ottawa, and from thence to the scene of the tragedy, where they found, amidst a scene of complete destruction and desolation, the mangled and lifeless remains of fifteen of the settlers. The victims had all been scalped, and their bodies mutilated according to the extreme standard of savage warfare, the children being hacked in pieces, the bodies of the women nailed, suspended by their feet, to the walls of the houses, and those of the men mutilated in a manner so shocking as to be indescribable. They buried the dead and returned to Ottawa. From thence, with a reinforcement of twelve volunteers, under Major Bailey, they started on their return march. At Holderman's Grove they found everything laid waste, and proceeded to Plainfield, where they found the settlers within the fort in a state of great alarm, occasioned by the news they had just received of the Indian Creek massacre. The following morning the Plainfield fort was abandoned, and the settlers, under the escort of the soldiers, set out for Fort Dearborn—all but Rev. Adam Payne, a peripatetic preacher, who refused to join the company. He started in the opposite direction for Ottawa, and was never again seen alive. His body was found some days after. His scalp and his long flowing beard had been torn off by the merciless band at whose hands he met his death. The company reached Chicago, with the new accession of fugitives and terror, on the evening of the 26th, after an arduous and heart-sickening, if not dangerous, campaign of five days.

With no regular garrison at the fort, it was deemed necessary to keep a volunteer patrol force constantly on the watch, to guard against the near approach or sudden surprise of the dreaded and wily foe. The Michigan Militia in the garrison did good picket duty, but it devolved on the Chicago men and such allies as might be drawn from the men who had their families in the fort to make more extended reconnoissance. Soon after the return of Captain Brown's company two new companies were organized to reconnoiter the country toward the Fox River. Very meager accounts of these companies appear, as they were never mustered into the regular service, and no rosters of the companies have been preserved. In one of the series of articles entitled "By-Gone Days," published in the Chicago Times, in 1875, the remembrance of these two companies is revived as follows: "Meanwhile the Chicago heroes had left no opportunity unimproved to cover themselves with laurels. Robert Kinzie had a company of fifty Pottawatomies under his command, who acted as scouts and runners, while Captain Jean Baptiste Beaubien, with a company of twenty or more whites, scoured the country about Naperville, Plainfield and Ottawa, in a

style that was exceedingly lively." Hurlbut's "Chicago Antiquities," p. 308, says: "During the Indian excitement of 1832, Mr. Beaubien had command of some twenty-five men, who, as scouts, did duty for a short time." The only extended campaign of these two companies of which any account is preserved occurred in June, 1832.

BEAUBIEN AND KINZIE'S CAMPAIGN.—On the return of Captain Brown's company, a new company was raised to revisit the deserted settlements near Fox River, to ascertain whether the enemy had visited them, and look after the property left behind and the growing crops, if they had not been destroyed. Robert Kinzie was already on duty with a company of fifty Pottawatomie scouts, Captain Beaubien's company numbered some twenty-five mounted men, among whom were several of Brown's men who had re-enlisted. The two Napers and Alanson Sweet were members. The command set out from Chicago on the morning of June 1. At noon they reached the Desplaines River, where they found Captain Kinzie already encamped with his band of Pottawatomies. It was agreed that Kinzie with his scouts should proceed directly to the Naper settlement, while Captain Beaubien should make a detour to Captain Boardman's to look after the property there, it being expected that the latter, being better mounted, would reach the place of rendezvous first. Beaubien's company rode quite rapidly, found Boardman's property safe, and before sunset reached Ellsworth's Grove. A skirt of timber hid the settlement from view, but smoke was seen rising from the point where Naper's house was located; whether it was from its smouldering ruins or not was a question, to solve which John Naper volunteered to leave the company and go alone to the settlement. He was to fire one shot in case he found friends. He was watched by the little party until he disappeared in the woods. Soon after two shots were heard in quick succession, and, as Naper did not reappear, the natural conclusion was that the Sacs had killed him. Two of the Chicago company, one mounted on a pack mule and the other on a diminutive pony which he had borrowed from the American Fur Company, manifested great trepidation, and without orders turned the heads of their slow and unreliable steeds toward the East Branch timber. Captain Beaubien was not slow to discover the depletion in his ranks, and rose to the exigencies of the occasion. He rode rapidly after the fugitives, vociferating, "Halt! Halt!!" Disregarding the orders of their commander, they continued their flight, now hotly pursued by Captain Beaubien. He soon ran them down, drew his pistol, and brought them to a halt and return to the ranks by the following statement of the case: "You run? By Gar, you run, I shoot you." Soon after the return of the deserters Naper made his appearance bringing the relieving intelligence that friends only awaited them at the settlement. Kinzie and his Indian scouts had outmarched them, and were already encamped there. They rode with haste to the village, with light hearts and empty stomachs. A fat steer, somewhat wild, was run down by the Pottawatomies with a din of yells, dispatched and brought in with great exultation over the success of the hunt, and the commissary still further supplied by breaking into the log store which had escaped the depredations of the Sacs, and bringing forth ample supplies of rum and tobacco for the Indians. In the evening the Pottawatomie scouts were prevailed upon to perform the "war dance" with all the variations that free rum and tobacco could suggest, after which entertainment the tired soldiers slept the sound sleep which

only fatigue can bring. The following morning Beaubien's company rose refreshed. They had slept off the fatigue of the day before, and with renewed strength came renewed ardor for a conflict with the Sacs of whom they had failed to find traces thus far. Fearing that in the heat of some possible conflict, they might slay some of their allies, the Pottawatomies, they took from the stores a web of sheeting, tore it in strips, and as a precautionary insignia, tied them about the head and waist of each friendly Indian. Thus having secured the safety of Kinzie's Indian scouts, Captain Beaubien and his company left them, and started for the Big Woods in search of the enemy. All day they scoured the plains, without meeting a trace of the foe, returning quite jaded and disheartened to the Naper settlement late in the evening. On the following morning they set out on their return to Chicago, leaving Kinzie and his Indian scouts to keep watch for the Sacs, who never afterward appeared in force in that region. They had already gone up the Rock River, beyond the present boundaries of Illinois. Nothing exciting occurred during the return journey except a slight emeute in the ranks. One of the soldiers who had hastily enlisted without any preliminary drill in the manual of arms, placed the whole command in jeopardy by allowing his gun to fire itself off at unseasonable and unexpected times. As the guns were all strapped to the horse's sides, each had the full range of such members of the company as happened to go before. It is not strange that three unexpected discharges from the young man's gun before reaching Brush Hill, a distance of ten miles, should spread discontent in the front ranks. They had steeled their hearts to all the terrors of Indian warfare, the deadly ambush, the savage assaults, the tomahawk and the scalping knife; but this new element of annihilation which belched from an unmanageable gun at such uncertain seasons, and with such uncertain aim had a most demoralizing effect on the entire force. When, on reaching Brush Hill, and dismounting, the young man's gun fired itself off for the fourth time, Captain Beaubien asserted his authority and ordered him to give up the dangerous weapon, which, in a mutinous and defiant manner, he refused to do, whereupon he was collared by the Captain, and after an exhibition of ground and lofty tumbling, such as the prairies had never smiled on before, disarmed. Equanimity, discipline, and safety being thus restored, the company resumed their march, reaching Chicago the same evening. The fugitives were re-assured by their return that there was no immediate danger. Occasional excursions were made during the succeeding weeks to the deserted settlements, each party returning with the welcome news that they had discovered no traces of Indians and that the crops were growing undisturbed. It was, nevertheless, not deemed prudent for the settlers to return to their homes, while the hostile Sacs were known to be still unconquered only one hundred and fifty miles away. They might return and repeat on some defenseless hamlet the horrors of Indian Creek. So all through the summer days of June the fugitives remained quartered in and about Fort Dearborn. Major Whistler arrived July 2, with a small detachment of soldiers from Niagara, to re-occupy the fort as a military post and prepare quarters for General Scott and his command, whose arrival was daily expected. He arrived July 8, and on the following morning the dread news was known that with him had come an enemy more terrible than that from which they had fled. It was the scourge of cholera in its most fatal form. The soldiers died off like distempered sheep. The corpses were too

numerous for formal or Christian burial, and were huddled hastily into common graves. The terror of this new enemy, which was the only one before which the hero Scott ever quailed, drove the refugees from the fort. They chose to face the possible danger of the tomahawk and scalping knife, rather than the ghostly pestilence that "walked at noon-day," striking the silent death-blow with unseen hand. The settlers accordingly returned precipitately to their deserted homes, and, by the 10th, Chicago was abandoned to the pest-stricken garrison and the few stout-hearted residents who, in the interests of humanity, chose to remain, to assist in caring for the sick and burying the dead. August 3, Black Hawk's fugitives were surrounded and utterly routed at the mouth of Bad Axe River, and the war was at an end. It is not the purpose here to give a full sketch even of the Black Hawk War, except so far as may be necessary to show the participation in it of Chicago soldiers. From the story as told, it is shown that every able-bodied citizen volunteered,* and nearly all in some capacity did service until the danger had passed away. Gholson Kercheval, Colonel Owen, and many others were kept busy in providing for the wants of the homeless fugitives as they came in.

Gurdon S. Hubbard, still surviving, and residing in Chicago, did service in Colonel Moore's regiment of Illinois volunteers. He was at time living at Danville, although his business brought him frequently to Chicago. He was Second Lieutenant in Captain Alexander Bailey's company, and, according to the records, was mustered into the service May 23, 1832, and was mustered out June 23. The record would be incomplete without the roster of Captain Joseph Naper's company. It was raised during July, too late to take active part in the war. The members were all residents of Cook County, and many of them afterward residents of Chicago. The roster appears in the "Record of the Services of Illinois Soldiers in the Black Hawk War 1831-32 and in the Mexican War 1846-48," by Isaac Elliott, Adjutant-General of the State of Illinois, pp. 149-50. In March, 1880, it was published in the Chicago Evening Journal, with the following letter:

To the Editor of the Chicago Evening Journal:

I send you a list of the soldiers who volunteered from this county to go with General Scott in pursuit of Black Hawk. The most of these gentlemen are dead, but they have left descendants who constitute some of our most valuable citizens. There are many citizens of Chicago now living who had a personal acquaintance with nearly all of them. I have given the residence of those whom I know are now living. Probably others are living whose residence I do not know. This list has been sent to Washington and compared with the original. Many of them resided in that part of Cook County which is now DuPage County.

The Fourth Corporal is now the County Judge of DuPage County, and would be a good man for gentlemen of historical tastes to interview.

JOHN WENTWORTH.

CHICAGO, March 2, 1880.

MUSTER ROLL of a Company of Mounted Volunteers in the Service of the United States, in defense of the Northern frontier of the State of Illinois, against the Sac and Fox Indians, from the County of Cook, in said State, in the year 1832, under the command of Captain Joseph Naper:

Joseph Naper, Captain, afterward member of Legislature.
 Manson Sweet, First-Lieutenant, now living at Evanston, Ill.
 Sherman King, Second-Lieutenant, lived at Brush Hill, Ill.
 S. M. Salisbury, First-Sergeant, afterward Cook County Commissioner, at Wheeling, Ill.
 John Manning, Second-Sergeant.
 Walter Stowell, Third-Sergeant, afterward Postmaster, at Newark, Ill.
 John Naper, Fourth-Sergeant, lived at Naperville, brother of Joseph.
 T. E. Parsons, First-Corporal.
 Lyman Butterfield, Second-Corporal.

(*) See roster of Kercheval's company.

I. P. Blodgett, Third-Corporal, father of Judge H. W. Blodgett.
 Robert Nelson Murray (Naperville), Fourth-Corporal, now County Judge.

ORGANIZATION OF THE COOK COUNTY MILITIA.—

In 1829 the Legislature of the State of Illinois enacted the following law regulating the militia of the State:

SECTION 1. Be it enacted by the people of the State of Illinois, represented in the General Assembly, That there shall be one regimental and one company muster, and one regimental muster of officers in each year; the company muster shall be held on the first Saturday in September, unless changed to some other day by order of the commandants of regiments or odd battalions, in which case sixty days notice of each change shall be given to the commandants of each company. Regimental drill musters shall be held on the Friday and Saturday next preceding the regimental musters. Hereafter, no brigade inspector shall be required to attend regimental or drill musters.

SECTION 2. For the purpose of review or drill inspection, the brigadier-general may change the time fixed by law for regimental musters, by giving to the several commandants of regiments, or odd battalions, under their command, a notice to that effect, on or before the first day of March in each year.

SECTION 3. Commandants of companies may receive any lawful excuse of non-commissioned officers or privates under their command, for a failure to attend muster, or for not being properly equipped.

SECTION 4. No non-commissioned officer or private shall be fined more than one dollar for failing to attend any regimental muster nor more than fifty cents for failing to attend any company muster.

SECTION 5. No person conscientiously opposed to doing military duty by reason of religious opinions, shall be compelled so to do in times of peace; Provided such person shall work two days in each year, on the public roads, in the district in which such person or persons may reside, in addition to the road labor now required of them, under the regulations prescribed in the second section of "An act for the relief of persons having conscientious scruples against bearing arms," or pay into the county treasury seventy-five cents. The first section of the act, entitled "An act for the relief of persons having conscientious scruples against bearing arms," approved February 6, 1827, is hereby repealed.

SECTION 6. So much of the act, to which this is an amendment, as required battalion musters to be held; so much of said act as fixes the time for holding regimental drill musters; so much thereof as allows compensation to division and brigade inspectors; so much thereof as requires two company musters to be held in each year, and prescribing the holding of the same; be and the same are hereby repealed. This act to be in force from and after its passage.

(Approved, January 9, 1829.)

The above law was certainly not calculated to bring the militia of the State to any great degree of efficiency, as it provided cheap ways and means whereby every soldier enrolled could be exempt from service. Under this general law a special act was passed by the Illinois Legislature in 1833, organizing the militia in Cook County. The act was as follows:

SECTION 1. Be it enacted by the people of the State of Illinois, represented in the General Assembly, that all the citizens of Cook County liable to perform militia duty, shall organize themselves into a regiment, two battalions, and not less than four nor more than eight companies. After the election of colonel, which shall be held on the 20th day of March next, at the house of David Lorton, on the Desplaines River, in said county, and before the people separate, the colonel elect, and the people present, may divide the county off into two battalion districts, and not less than four nor more than eight company districts, and the militia present, when the bounds of the said battalions and companies are described in

writing, shall proceed forthwith to elect two majors, and not less than four nor more than eight captains, and a first and second lieutenant to each company: Provided always, that none shall be eligible to the several offices herein provided for, unless he shall at the time of said election be a resident citizen in such battalion district, if a major, or in said company district if a captain or lieutenant; nor shall any militiaman, not residing in the battalion or company district, be allowed to vote for any officer, so to be elected, but in all cases the militiamen shall elect their own officers in their own districts.

SEC. 2. After the organization of the militia so to be made at the house of David Lorton, on the said 20th day of March next, the colonel elect shall give to each major, captain, and lieutenant, a certificate of election; and if they cannot elect all their officers in one day, they may continue said election from day to day, not exceeding three days. After said elections shall be closed, and the results ascertained, the colonel shall cause each captain to furnish him within three days a company roll: Provided, that in no case shall any company be recognized as such, unless there be thirty-two privates in the same.

SEC. 3. The said colonel, when so elected, shall be allowed to receive, for the use of the militiamen of his regiment, two hundred stand of the State arms, to wit: one hundred rifles and one hundred muskets, with their accouterments.

SEC. 4. The Governor is hereby authorized, whenever in his discretion he shall deem it necessary, to deliver to the colonel of Cook County the complement of arms mentioned in the preceding section of this act; but the colonel, before he shall receive said arms, shall execute to the Governor a bond, in the penal sum of \$3,200, conditioned that the said arms shall be at all times hereafter forthcoming to the order of the Governor; after which, each captain shall execute a bond in the penal sum of \$16 for each gun, to the colonel, conditioned that said gun shall be at all times hereafter forthcoming to the order of the colonel; and each private, before he shall receive from his captain any of the said arms, shall give him a receipt for the gun, describing it, conditioned that if he fails or refuses to return it to the order of his captain, he will pay, or cause to be paid to his said captain, the sum of \$16 as a penalty for such failure or refusal: Provided always, that the said arms, or any of them, be lost in battle, or by any unavoidable accident, the said bonds, or receipts, to that extent, shall be null and void: Provided also, that the said colonel shall be allowed to execute the bond herein required of him in the Clerk's office of the county commissioner's court, with sureties to be approved by the Clerk thereof, payable to the Governor of this State for the use of the people; which bond shall be filed in the office of the Secretary of State within sixty days, after which certificate of said colonel's bond, by the said Clerk, the quota of arms herein allowed to said county of Cook shall be delivered to the order of said colonel, who shall make equal distribution of them among the captains, who shall distribute them to those who have no arms in the several companies, as shall be equal and just: Provided, that the cost of transportation of said arms shall be paid by the county requiring them.

SEC. 5. The provisions of this act, so far as it confers the power on the Governor to deliver State arms to the militia of this State, as provided in this act, shall be general. All bonds to be taken under the provisions of this act, shall be conditioned for the return of the arms in good order.

(Approved February 22, 1833.)

The organization under the provisions of the foregoing law was not completed until more than a year after its passage. In the spring of 1834, by order of the Military Commandant of the State an election was held at the house of David Lorton, (Laughton) on June 7, 1834. The law was by no means popular. A large part of the community were adverse to training on general principles, and did not care to be bothered with the responsibility of enrolled soldiery which involved the custody of arms and the payment of fines in case of failure to perform the required drill duty at the time specified. The non-military party were in a large majority, and, as they could not ignore a quasi election under the law, determined to elect if possible a colonel after their own heart. The day appointed for their election brought such a crowd of citizens as had never been assembled in Cook County before. Laughton's tavern,* the place appointed, was situated some twelve miles from Fort Dearborn, near the present suburb of Riverside, on what was known for many years as the

* The house was owned by Bernardus H. Laughton, and kept by Stephen J. Scott—"Early Chicago," p. 37.

Southwestern Plank Road—now Ogden Avenue. All the able-bodied citizens of Chicago attended; and they went prepared for a short, sharp and decisive campaign. In addition to ordinary commissary stores of crackers, cheese, dried beef, etc., a large supply of strong beverages was taken along to strengthen the soldiery in case of a prolonged contest. A part of the outfit was, according to an aged chronicler, "one keg of brandy, four packages of loaf sugar, and sixteen dozen lemons." The election was entirely a one-sided affair, and was quickly over. The anti-militia party were triumphant. The successful candidate for the Colonel was the chivalrous, good-natured, Jean Baptiste Beaubien, then the most popular man in Cook County and one who it was believed could be depended upon for lax discipline and light fines in time of peace. The election was celebrated with all the hilarity that the occasion demanded. A barrel set in a spring which gushed from the bluff near Laughton's house was utilized as a punch bowl. Into it the brandy and lemons and sugar were poured, and from it the crowd drank to the Colonel elect, until the spring water again asserted its supremacy. The story is apocryphal; but it is here repeated, nevertheless, as one version of an o'er true tale. It is certain that on the occasion a larger majority of the citizens of Chicago got gloriously tipsy than at any other epoch in her history, before or since. The regiment at that time organized was, for a quarter of a century thereafter, known as the Sixtieth Regiment of Illinois Militia.

Its childhood, under the lax discipline of its over-indulgent and big-hearted Colonel, showed a somewhat spontaneous growth, untrammelled and unpestered with the rigors of military discipline, except at intervals so rare as to render them novel episodes in the otherwise free and easy existence. There is mention of but one regimental muster of the Sixtieth in its early days in the military annals of the time, and the date, or even the year when it transpired, is undetermined. The rather unmilitary but hospitable speech of the good-natured Colonel on dismissing his command is well remembered by old settlers and often quoted. The recollections of K. K. Jones concerning it were given in a letter which appeared in the Chicago Tribune sometime in 1876 or 1877. The letter is as follows:

"In the year '41 or '42 an attempt was made to organize the militia, and those liable to military were warned out. Ex-Sheriff Sam Lowe had been commissioned as one of the Captains, and was full of military zeal, but the people were determined to 'bust' the whole arrangement somehow. Captain Lowe's company met inside Fort Dearborn, which was then but recently abandoned by the regular troops. The men liable to do military duty did not desire to train, but we boys did, and we fell into the ranks promptly. Presently along comes the Captain, taking down the names, age, occupation, and hearing excuses, if any. When the Captain came to me, he said, with great emphasis: 'Are you eighteen?' 'N-n-n-o-o Sir.' 'Stand aside.' And thus he served all the boys who were willing, and had only those in the ranks who looked upon the whole thing as a nuisance, and were decidedly unruly. The Captain threatened to put some of them under arrest, and was fast losing his temper, when five recruits marched on to the parade ground, took the left of the line and saluted without a wink or a smile. As Falstaff says, 'such a lot.' Every one was uniformed on his own hook, and regardless of any regulations, ancient or modern. It is impossible for me to describe the scene that followed. The militia broke ranks and gathered around that army and shouted and laughed and clapped their hands. The Captain was mad, and at last succeeded in getting his company in line, made a speech as to their and his duty. All this time the five scouts, all well-known young men, stood like statues and looked gravely at the Captain; who, white with passion, ordered a corporal (C. R. Vandercook) to take charge of that squad, and drill them hard and fast. Van is still living, and you just ask him who did the drilling; the Corporal, or that fantastical squad. He will promptly answer, 'That squad came out ahead every time.' Four of the squad are now dead, and the other is still an honored citizen of Chicago.

This burlesque put the town in great good humor, and, as was intended, 'knocked the spots off' of any more militia trainings in Chicago. The next day was battalion drill, and a new company of fantastics numbering about one hundred, took the place of that squad, and, as no questions were asked, we boys joined, and were at Colonel Beaubien's first and last regimental parade. At the close of that regimental parade Colonel Beaubien made the boys a speech about as follow: 'Boys, you have been good soldiers to-day, so we will all go down to my friend George Chackfield's and take some whisky. George, he got some good. I try it this morning.'"

At the time of the organization of the Militia of Cook County, in 1834, the county embraced what is now Will, DuPage, McHenry, and Lake counties, and for many years, until Chicago had grown to be quite a village, the Chicago quota of militia attached to the regiment consisted of but a single company. For the four years succeeding the election of Colonel Beaubien it does not appear that there was any effort made to formally complete the organization by the election of subordinate field officers, or the organization of companies. Until 1838 the Colonel enjoyed his title and held autocratic and undivided command over his unenrolled and uncounted cohorts. The records of the State Adjutant General show the first full regimental staff, and the officers of the first Chicago company which formed a part of the regiment, with dates of commissions and rank, to have been as follows:

REGIMENTAL AND STAFF OFFICERS.

NAME.	RANK.	DATE OF RANK.	DATE OF COMMISSION.
John B. Beaubien..	Colonel	June 7, 1834	May 13, 1835
Seth Johnson.....	Lt.-Colonel....	May 1, 1838	Feb. 19, 1840
Seth T. Otis.....	Major.....	May 1, 1838	Feb. 19, 1840
George Raymond...	Adjutant.....	June 1, 1838	Feb. 19, 1840
Josiah Salisbury...	Quartermaster..	June 1, 1838	Feb. 19, 1840
Charles Dyer.....	Surgeon.....	June 1, 1838	Feb. 19, 1840
Valentine A. Boyer	Asst. Surgeon..	June 1, 1838	Feb. 19, 1840
Julius Wadsworth...	Paymaster....	June 1, 1838	Feb. 19, 1840
<i>Chicago Company.</i>			
David Hunter.....	Captain.....	April 28, 1838	Feb. 19, 1840
W. M. Larrabee...	1st Lieutenant..	April 28, 1838	Feb. 19, 1840
John M. Van Osdell.	2d Lieutenant..	April 28, 1838	Feb. 19, 1840
Henry L. Rucker...	2d Lieutenant..	April 28, 1838	Feb. 19, 1840

It would appear from the above that a second regimental election was held May 1, 1838, and a company election held in Chicago April 28, 1838, the date of rank being recorded on the date of election. It does not appear that the commissions, except that of Colonel Beaubien, were issued until nearly two years after the elections; a sad reflection on the laxity of martial spirit and military pride in Chicagoans at that time. The receiving of the commissions and the partial organization of the regiment in February, 1840, came opportunely. Soon after, a detachment of the regiment was ordered by the Governor to perform guard duty at the execution of John Stone, the first murderer convicted and executed in Cook County. He had been convicted of the crimes of rape and the subsequent murder of his victim, a Mrs. Thompson; the crimes having been committed in the present town of Jefferson, Cook County. He was tried at the May term of court, convicted, and sentenced to be hung May 29. An appeal was made to the Supreme Court, with motion for a new trial. The motion was refused, but, pending the decision, a reprieve was granted, postponing the time of execution to July 10, at which time the culprit was hung. The command of the regiment on this occasion was, by public notice from Colonel Beaubien, given to Lieutenant-Colonel Seth Johnson. The notice transferring the command appeared in the Chicago American of July 8, 1840, and read as follows:

MILITARY MILITIA ORDER NO. 1.
Headquarters,

CHICAGO, July 6, 1840.

Until further orders, the command of the 60th Regiment of Illinois Militia is transferred to Lieutenant-Colonel Seth Johnson, of the same regiment. He will be obeyed and respected accordingly. By order,

J. B. BEAUBIEN, *Colonel Commanding.*

GEORGE RAYMOND, *Adjutant.*

On the same paper appeared the following:

MILITARY ORDER NO. 2.
Headquarters,

CHICAGO, July 7, 1840.

In compliance with Regimental Order No. 1, issued July 6, 1840, Lieutenant-Colonel Seth Johnson assumes command of the 60th Regiment Illinois Militia, and directs that an election be held at the Mansion House, Chicago, for the purpose of electing four captains, four first lieutenants, and two second lieutenants in the above regiment. By order,

SETH JOHNSON, *Lt.-Colonel Commanding.*

GEORGE RAYMOND, *Adjutant.*

In an account of the execution which appeared in the Chicago American of July 17, 1840, the services of the militia were noticed as follows: "The prisoner was hung Friday afternoon (July 10), three miles from the city, near the lake shore. At the request of the Sheriff, nearly two hundred citizens assembled on horseback, with sixty armed militiamen, under command of Colonels Johnson and Beaubien, and Captain Hunter. Colonel Johnson appeared in full uniform and much credit is due to him and Captain Hunter for their active and successful services in maintaining quiet and order upon this occasion." How long after the execution of Stone Lieutenant-Colonel Johnson held command is not a matter of record. It appears from a regimental order published in the Daily American of August 10, 1842, that Lieutenant-Colonel Johnson at that date still held command. The order was as follows:

HEADQUARTERS 60TH REGIMENT.

CHICAGO, May 28, 1842.

REGIMENTAL ORDERS NO. 2.

For the further organization of the 60th Regiment of Illinois Militia in Cook County, the commandant of said regiment hereby orders an election to be held at the several places herein specified, on the 15th of June, 1842, for the purpose of electing one captain, one second lieutenant, for each company district laid off as follows:

Athens precinct will form Company F district. The election will be at McKay's.

York and Thornton precincts will form Company G district. The election will be held at N. Rexford's.

Lyons and Monroe precincts will form Company H district. The election will be at Spencer's.

Hanover and Barrington precincts will form Company I district. The election will be held at Christopher Branham's.

Grosse Point and Lake precincts will form Company K district. The election will be held at Shrigley's North Branch Hotel.

Desplaines and Salt Creek precincts will form Company L district. The election will be held at Wilcox's.

The polls will open in each company district at the above named places at 9 o'clock A. M., on the 15th of June, 1842, and will continue open to receive votes until sunset, and all electors must vote *viva voce*. Three judges of election and one clerk must be chosen and sworn in for each poll, as in ordinary elections. No person shall be eligible to a command in the militia in this State who is not a citizen of the United States, and has not resided in the proper bounds at least ten days. By order of

SETH JOHNSON, *Lieutenant-Colonel,*
both Regiment Cook County Militia.

GEORGE RAYMOND, *Adjutant.*

Not long after, Colonel Beaubien re-assumed command and determined to have a muster. Whether it was the same before mentioned, or not, is not certain. The order appeared in the Chicago Democrat and was as follows:

CHICAGO, August, 1842.

REGIMENTAL ORDER NO. 5.

The commander of the 60th Regiment of the Illinois Militia of Cook County orders and directs that the officers appointed on

the 16th of June and also on the 23d day of July, 1842, in the above regiment, and who have been sworn into office, proceed without delay to enrol their companies within their respective company districts, and be in readiness to attend the regimental drill and muster on the 7th day of September 1842; and on the 14th of the same month a court martial will be held to assess fines on all delinquent officers, non-commissioned officers, and privates belonging to the 60th Regiment. By order of

J. B. BEAUBIEN,
Colonel Commanding both Regiment Militia.

Order No. 6, which appeared in the same paper, was as follows:

HEADQUARTERS 60TH ILLINOIS MILITIA,
CHICAGO, August 6, 1842.

The commander of the 60th Regiment of Illinois Militia hereby orders and directs that an election for one captain and one first and second lieutenant be held at Doty's tavern, Lyons and Summit precinct, to form Company F district, on Saturday the 20th inst., at 10 A. M., when and where all those subject to serve in the militia residing within the bounds of said district are required to attend, and select three judges and one clerk to keep the poll on oath, and the poll so taken and certified to be returned to the commander of the regiment so soon as the law requires. The polls to be kept open until 6 P. M. By order of

J. B. BEAUBIEN,
Colonel Commanding both Regiment of Illinois Militia.

Later in the year, September 28, 1842, the following appeared in the Chicago Democrat:

HEADQUARTERS 60TH REGIMENT ILLINOIS MILITIA.
REGIMENTAL ORDERS NO. 12.

CHICAGO, September 26, 1842.

The commander of said regiment orders and directs that an election be held in Company C, at the United States Hotel, in Chi-

cago, on the 12th of October next, at 10 A. M. for captain of said company, in the place of A. S. Sherman, resigned.

Also, that an election be held in Company D, at the time aforesaid, at the Lake House in Chicago for a second lieutenant of said company, in the place of D. Hatch, removed from the State.

Also that an election be held in Company B, at the Illinois Exchange in Chicago, at the time aforesaid, for first lieutenant of said company, in place of E. L. Sherman, resigned.

All persons subject to militia duty within bounds of the respective companies aforesaid are required to meet at the places of their respective companies aforesaid, select their judges and clerks, who, being sworn according to law, will open the polls, receive the votes of all qualified electors within their respective companies, keep the polls open until 6 P. M., certify and return the same to the commander of said regiment. By order of

J. B. BEAUBIEN,
(Attest), Colonel both Regiment Illinois Militia.
B. S. MORRIS, Adjutant.

The location of nine of the earliest companies of the Sixtieth regiment is shown in the foregoing orders, viz.:

Company B; Chicago, South Side, place of election, Illinois Exchange, Lake Street, corner of Wells.

Company C; Chicago, West Side, place of election, Lake House, corner of West Randolph and West Water streets.

Company D; Chicago, North Side, place of election, United States Hotel, corner of Rush and North Water streets.

Company F; in Athens (now Lemont).
Company G; the present towns of Thornton, Bremen, Bloom, the south part of Hyde Park, etc., being the southeast corner of Cook County.

Company H; the present towns of Lyons, Lake, north part of Hyde Park, and other territory adjoining.

Company J; Barrington, Palatine, Hanover, Schaumburgh and adjacent territory, being the northwestern part of Cook County.

Company K; Lake View, Jefferson, Maine, Evanston (then Grosse Point) and adjacent territory in the northeastern part of the county.

Company L; Proviso, Cicero, Leyden, Norwood, and other territory directly west of Chicago.

Nine companies were named, of which number three,

companies B, C and D, were Chicago companies. In alphabetical order the companies A and E do not appear, and there is a discrepancy in the orders as to companies F and H; Beaubien ordered an election to be held at Doty's tavern, Lyons and Summit, to elect officers for Company F. Johnson ordered the election to be held for Company F at McKay's, at Athens, and for Company H, at Lyons and Monroe.

Colonel Beaubien's muster, in compliance with order No. 5, given before, probably came off. There were delinquents sufficiently numerous to bring out a notice in the Chicago Democrat of October 10, 1842, from A. H. Tappan, Constable and Collector, wherein he states that a list of fines assessed by the "Court of Enquiry and Assessment for the 60th Regiment of Militia and the Independent Companies attached" had been placed in his hands for collection. The advertisement closes with the following: "It is hoped that every person within the bounds of the regiment subject to military duty will hold himself in readiness promptly to meet his fines."

The following officers of Chicago Militia companies, appear in the State records as elected and commissioned, prior to 1847 and subsequent to 1842:

The names of militia officers of Chicago, outside of those of independent companies attached, which appear elsewhere, are copied from the State records, and are as follows:

MILITIA OFFICERS FROM CHICAGO, COMMISSIONED FOR THE 60TH REGIMENT OF ILLINOIS MILITIA, FROM 1842 TO 1847.

NAME.	RANK.	DATE OF RANK.	DATE OF COMMISSION.
J. B. F. Russell.....	Colonel.	June 2, '47	June 14, '47
D. Spencer Cady.....	Lt.-Col.	June 11, '46	Jan. 31, '47
William L. Church.....	Major ..	June 11, '46	Jan. 31, '47
Richard P. Denker.....	Major ..	Jan. 19, '50	Feb. 4, '50
William H. Davis.....	Colonel.	Apr. 14, '53	May 7, '53
James Donnelly.....	Major ..	Apr. 14, '53	May 7, '53
James Donnelly.....	Colonel.	Dec. 2, '54	Jan. 3, '55
James H. O'Brien.....	Captain.	June 15, '42	Aug. 22, '42
Joseph Filkins.....	Captain.	June 15, '42	Aug. 22, '42
J. B. Robinsor.....	Captain.	June 15, '42	Aug. 22, '42
S. B. Culver.....	1st Lieut.	June 15, '42	Aug. 22, '42
J. R. Bush.....	2d Lieut.	June 15, '42	Aug. 22, '42
Buckner G. Morris.....	Adjutant	Apr. 14, '42	Oct. 15, '42
E. G. Kimberly.....	Surgeon	Sep. 15, '42	Oct. 15, '42
James Caldwell.....	Captain.	Aug. 1, '42	Oct. 15, '42
J. D. Campbell.....	1st Lieut.	Aug. 1, '42	Oct. 15, '42
J. C. Smith.....	2d Lieut.	Aug. 1, '42	Oct. 15, '42
Samuel McKay.....	2d Lieut.	Sep. 12, '42	Dec. 9, '42
Russell Green.....	Captain.	Oct. 12, '42	Dec. 9, '42
W. P. Holden.....	2d Lieut.	Oct. 12, '42	Dec. 9, '42
David Hatch.....	Q'master	Dec. 12, '42	Jan. 25, '43
P. W. Gates.....	2d Lieut.	Aug. 5, '43	Oct. 25, '43
John Demsey.....	1st Lieut.	Aug. 5, '43	Oct. 25, '43
I. H. Sullivan.....	Captain.	Aug. 5, '43	Oct. 25, '43
Alvan Calhoun.....	Captain.	Aug. 5, '43	Oct. 25, '43
S. A. Davis.....	1st Lieut.	Aug. 10, '43	Oct. 25, '43
D. D. Stanton.....	1st Lieut.	Aug. 5, '43	Oct. 25, '43
C. E. Peck.....	2d Lieut.	Aug. 10, '43	Oct. 25, '43
James H. Carpenter.....	1st Lieut.	Aug. 8, '46
Thomas B. Penton.....	2d Lieut.	Aug. 8, '46
William H. Davis.....	Captain.	June 24, '46	Aug. 28, '46
John J. Russell.....	1st Lieut.	June 24, '46	Aug. 28, '46
James H. Carpenter.....	1st Lieut.	June 8, '46	Aug. 28, '46
Thomas B. Benton.....	2d Lieut.	June 8, '46	Aug. 28, '46
Noble R. Hays.....	Captain.	July 4, '46	Aug. 28, '46
James Sherman.....	2d Lieut.	July 4, '46	Aug. 28, '46
R. Smith.....	3d Lieut.	July 4, '46	Aug. 28, '46
E. B. Southerland.....	1st Lieut.	July 4, '46	Aug. 28, '46
J. B. Wier.....	Captain.	Mar. 14, '47	Apr. 14, '47
William B. Snowhook.....	Captain.	Apr. 3, '47	Apr. 24, '47
Frederick Schafer.....	Captain.	Sep. 20, '47	Oct. 8, '47
Richard P. Denker.....	1st Lieut.	Sep. 20, '47	Oct. 8, '47
Charles Kotz.....	2d Lieut.	Sep. 20, '47	Oct. 8, '47
J. Y. Sanger.....	Captain.	Aug. 10, '43	Oct. 25, '43

The following officers of Chicago Militia companies appear on the State records as elected and commissioned prior to 1842, and subsequent to 1840:

NAME.	RANK.	DATE OF RANK.	DATE OF COMMISSION.
S. J. Lowe.....	Captain.....	July 18, 1840	Dec. 18, 1841
A. S. Sherman...	Captain (Co. C)...	July 18, 1840	Dec. 18, 1841
W. H. Davis...	Captain.....	July 18, 1840	Dec. 18, 1841
D. Spencer Cady...	Captain.....	July 18, 1840	Dec. 18, 1841
Francis Watkins...	1st Lieut.....	July 18, 1840	Dec. 18, 1841
G. A. Beaumont...	1st Lieut.....	July 18, 1840	Dec. 18, 1841
Hugh T. Dickey...	1st Lieut.....	July 18, 1840	Dec. 18, 1841
Ezra L. Sherman...	1st Lieut. (Co. B)...	July 18, 1840	Dec. 18, 1841
Thomas Hoyme...	2d Lieut.....	July 18, 1840	Dec. 18, 1841
George R. Dyer...	2d Lieut.....	July 18, 1840	Dec. 18, 1841
Sylvester Marsh...	2d Lieut.....	July 18, 1840	Dec. 18, 1841
David Hatch.....	2d Lieut. (Co. D)...	July 18, 1840	Dec. 18, 1841

The Sixtieth, as the reader already knows, was the first militia regiment organized in Cook County. It continued its existence as a militia State organization until the breaking out of the War of the Rebellion in 1861. Its first Colonel, J. B. Beaubien, held command, except at such times as he chose temporarily to abdicate, until 1847, at which time he became Brigadier-General of Second Brigade, Sixth Division, Illinois Militia,* and J. B. F. Russell was commissioned Colonel.

Following are the names of early officers of the Sixtieth Regiment not identified as residents of Chicago:

NAME.	RANK.	DATE OF RANK.	DATE OF COMMISSION.
P. B. Spaulding...	Captain.....	June 15, 1842	Aug. 22, 1842
Joseph Adams.....	Captain.....	June 15, 1842	Aug. 22, 1842
Ebenezer Moore...	1st Lieutenant...	June 15, 1842	Aug. 22, 1842
G. S. Browning.....	1st Lieutenant...	June 15, 1842	Aug. 22, 1842
Benjamin Hall.....	1st Lieutenant...	June 15, 1842	Aug. 22, 1842
Herman Crandall...	1st Lieutenant...	June 15, 1842	Aug. 22, 1842
R. F. Cluff.....	2d Lieutenant...	June 15, 1842	Aug. 22, 1842
Milton Flaskett...	2d Lieutenant...	June 15, 1842	Aug. 22, 1842
P. N. Culver.....	2d Lieutenant...	June 15, 1842	Aug. 22, 1842
Seth W. Adams.....	2d Lieutenant...	June 15, 1842	Aug. 22, 1842
John Sevigny.....	Captain.....	July 23, 1842	Feb. 4, 1843
G. G. Smith.....	1st Lieutenant...	July 23, 1842	Feb. 4, 1843
John B. Cowi.....	2d Lieutenant...	June 24, 1846	Aug. 28, 1846
Joel S. Shinian.....	3d Lieutenant...	June 24, 1846	Aug. 28, 1846

Further lists of officers connected with the regiment during its existence appear in sketches of the independent companies which were attached to it, and in later years made up the organization.

INDEPENDENT COMPANIES UP TO 1847.—During the summer and fall of 1842, when the foregoing orders were issued, and the muster of the Cook County Militia occurred, there was a revival of the military spirit which resulted in the organization of the first independent militia companies of Chicago. There had been, prior to this date, one or two ephemeral organizations of which only the names are preserved. In 1837, the Chicago American asked: "What has become of the Dragoon Company?" The question suggests the prior existence of such a company, although no record appears elsewhere concerning it. The same paper, August 12, 1839, asks: "What has become of the Chicago City Guards?" The answer is, as in the former case; nobody knows what has become of them, and nobody would have known that they had ever existed had not the American missed them and attempted a futile hunt for their remains. December 8, 1841, a correspondent in the American wrote:

"I am a little surprised that a city as populous and as public spirited in all other respects as Chicago is, should so long remain destitute of one or more independent military companies.

* General Beaubien's staff was announced in the Chicago Democrat of May 18, 1847, as follows: George Davis, Brigade Inspector; J. H. Kinzie, Quartermaster; Peter Page, Aid-de-Camp, with rank of Major respectively.

That a city, numbering at least six thousand inhabitants, has not even one uniformed company is lamentable. In Ottawa there are two companies, and in Joliet one."

The same correspondent further discoursed on the military situation in the American of December 13, 1841. He said:

"The formation of a dragoon company would be much too expensive, for each member would be required to furnish himself with a good horse. An artillery company would not meet our wants; it being an arm of the service that moves with the heaviness of its own eighteen or twenty-four pounders. I would therefore recommend a light infantry company. As to the uniform; it is a matter of fancy or taste. A neat gray uniform need not cost each member over \$20; a felt hat or cap, with plate scales, and tassels with plumes, \$10. This is the full amount that would be required, except the officers, who would have to furnish themselves with epaulets, swords and sashes. The arsenal accouterments are furnished by the State upon requisition."

The following editorial appeared in the American of April 12, 1842.

"ILLINOIS MILITIA—This title we dare say, sounds somewhat oddly. It is rather a new thing for this portion of the State, at all events. The idea of an Illinois training has not probably been contemplated by many of our citizens. Besides, the militia system generally has been so burlesqued; there have been so many invincibles in the field that not a few have looked upon the matter as long exploded. Such views may, perhaps, be properly entertained when there is no danger of war, but they surely cannot be when a few months, nay, perhaps weeks, may possibly present us with scenes and sounds very different from those to which nearly all of us have been accustomed. The sword is already more than half-drawn from its scabbard. This matter has been suggested to us by the fact that militia officers are engaged in enrolling our citizens, and that the twenty-seventh of the present month is training day."

December 12, in the Daily American appeared the following:

"ATTENTION, COMPANY!

"The gentlemen of this city desirous of forming themselves into an Independent Volunteer Company of Light Infantry will meet at the City Hotel on Friday evening next, at seven o'clock.

"MANY CITIZENS."

This meeting resulted in an attempt to organize a company. March 14, 1842, there appeared in the Daily American the following notice:

"ATTENTION, COMPANY!—The members of the Washington Guards will meet at the court-room on Randolph Street next Tuesday evening, the 15th, at seven, and it is hoped that others who feel interested in the good cause will come and assist, and also those who wish to join. BY ORDER OF THE COMMITTEE."

April 2, 1842, notice appeared in the American as follows:

"The Washington Guards will meet at the court-room, corner of Wells and Randolph streets, on Saturday, April 2, for company drill. A general attendance of members and those wishing to join is requested.

H. TOWNSEND, Secretary.
"A. H. PALMER, Instructor."

It does not appear that the Washington Guards became sufficiently organized at that time to be recognized on the State records as an independent company. From such mention as can be found, it appears that there had been in Chicago, prior to the summer of 1842, three independent military companies, viz.: a dragoon company, prior to 1837; the Chicago City Guards, prior to August 12, 1839, and the Washington Guards, in existence April 2, 1842. Quite soon after that date two independent companies were formed; one of infantry, the Montgomery Guards, and a cavalry company, first recorded on the books of the State Adjutant-General as the Chicago Cavalry. The Montgomery Guards may have succeeded the Washington Guards; at any rate it was the first independent infantry company that had sufficient vitality to become historical. It survived the Mexican War, and the long period of peace succeeding, even to the breaking out of the Rebellion in 1861, at which time it was ready as ever since its organization

in 1842 to fight the battles of its country. It has the longest record of any company in the city, was the first to organize, and never ceased its organization until it went out in the glory of actual warfare during the Rebellion. It was an Irish company, as the names of the first officers would show. They were, as appears from the official roster at Springfield, as follows: Captain, Patrick Kelley; First Lieutenant, W. B. Snowhook; Second Lieutenant, Henry Cunningham; Third Lieutenant, Michael O'Brien.

The Chicago Cavalry was also organized in the early spring of 1842. Its first officers commissioned were: Captain, Jesse Leavenworth; First Lieutenant, Isaac N. Arnold; Second Lieutenant, James Y. Sanger; Third Lieutenant, S. B. Cobb; Cornet, S. N. Davis.

These two earliest independent companies of Chicago were attached to the Sixtieth Regiment of Illinois Militia. Both companies appeared in their new uniforms on July 4, 1842. The Chicago Cavalry headed the procession, and the Montgomery Guards were presented a flag on that occasion. The Chicago American, July 5, gives an account of the presentation ceremonies, as follows:

"On presenting the standard to the company Dr. Egan thus addressed the company: 'Gentlemen of the Montgomery Guards,—you have honored me in receiving at my hands the banner—accept it. It is the first that has been presented in our new city, may it be the last to suffer in defeat. Behold! it unfurls to the breeze the name of the illustrious Montgomery; it wakes up glorious associations of the chivalrous dead. It points as a beacon light to the shadowy future. Remember! humble as you are now, the disjointed times may call upon some spirit from amongst your ranks to shed his blood for a nation's rights and to leave behind him a name like that which now floats upon the breeze above you. He was but one of the many sons of Erin's Isle that planted the seed of liberty in a foreign land, and watered it with his blood. History points equally to the torrid regions of the fiery South; the snow-clad hills of Canada; the sunny valleys of France; and the orange groves of Spain—and each bears testimony in our favor. Let the spirit that actuated such, inspire you, and hover over this banner as an heirloom from father-land—a talisman to lead you on to glory. Remember your country has claims on you yet—she bids you be united and firm in support of your own rights, and yield an equality to all. She bids you spurn the oppressor, by whatsoever name he may be called, and to walk upright, for the eye of the stranger is upon you. Farewell and remember your God, your country, and your rights.

"Capt. Kelley replied as follows:

"We receive this banner gratefully at our hands. We pledge ourselves to keep its ample folds floating in the breeze until we shall have the honor to say that we, the Montgomery Guards, have added fresh laurels to our adopted country. We shall ever be ready to meet the enemy first in action and last out. The British flag, it is true, has dotted the globe, but it has marked it with cruelty and oppression; but the star-spangled banner is hailed everywhere as the harbinger of freedom, the hope of the oppressed and the terror of tyrants. The sympathies of the whole world are following its course as it ploughs the ocean in search of distant climes, and unborn millions will yet bless the hour when it was unfurled to wage unceasing war upon the oppressors of mankind."

In Norris's directory (1844) three independent companies are named as then existing in Chicago.

The Chicago Guards: J. B. F. Russell, Captain; W. M. Larrabee, First Lieutenant; F. A. Howe, Jr., Second Lieutenant.

The Chicago Cavalry: J. Y. Sanger, Captain; S. N. Davis, First Lieutenant; C. E. Peck, Second Lieutenant; J. G. Wicker, Third Lieutenant; J. L. Howe, Cornet; C. L. P. Hogan, Orderly Sergeant.

The Montgomery Guards: P. Kelley, Captain; W. B. Snowhook, First Lieutenant; H. Cunningham, Second Lieutenant; M. O'Brien, Third Lieutenant.

At this epoch the military spirit sensibly waned. The city directory of 1845 names no military organizations. May 21, 1845, the Chicago Democrat inquires: "Where are the Chicago Cavalry, City Guards, and

Montgomery Guards? We should have to look to them for defense in case of the invasion of our city, and we should like to know their condition." The breaking out of the Mexican War the next year, revived the military spirit, and brought these companies again into prominence. Neither of them failed to furnish many Mexican soldiers, although the companies remained in Chicago.

CHICAGO IN THE MEXICAN WAR.—Neither the official records nor the newspapers of the day; the memories of the old soldiers of the Mexican War still surviving, nor all that can be gathered from those sources of information, give the full history of Chicago and Cook County during the years of the Mexican War. The newspapers caught such local news as was, at the time, interesting; the Adjutant-General's office at Springfield took, apparently, as much cognizance of that war as the law demanded and little more. From its records it would be impossible to tell how many men Illinois furnished, how many went from Cook County, or how many from Chicago. Neither could the number of companies raised in Chicago be ascertained, nor the names of the men who enlisted, nor the companies to which they were assigned, nor any other historic fact of local or individual importance. This is written after a careful examination of all the published reports, and a cursory examination of the records at Springfield.

Nevertheless, from the only three reliable sources for historic information known—the State records, the newspapers, and the memory of the soldiers—it is believed that most concerning the period that pertains to the history of Chicago and Cook County has been rescued from oblivion.

From the newspapers of Chicago the following extracts are given; showing in a quite disjointed way the war atmosphere which pervaded the city during 1846:

January 6—A. Garrett, Mayor, invited the citizens of Chicago to attend "a meeting at the court-house on Friday, January 8, to take into consideration the best method of defending our city in case of war."

January 13—Hon. John Wentworth, wrote from Washington under date of December 23, the following paragraph: "One of the military committee complains greatly that our State has made no returns of its militia. Whose business is this? If our Legislature has an extra session, it ought to re-organize our militia as the first thing. There ought to be a company with officers of its own choice in every precinct, with power to have two where the precinct is very large. The same of the wards of our city. Then there ought to be a separate body of inspection officers chosen by the precinct officers for each county. In case of a war, there must be a strong military post at Chicago. In the capacity of our Government to hold the fort at Mackinac, or in the capacity of that fort to command the straits we should not place too much dependence."

Democrat, January 13—"The war meeting called for the 8th was postponed, in the absence of a large delegation of leading citizens then at Rockford, attending a railroad meeting in the interest of the Galena & Chicago road."

Democrat, May 26—"Congressional act passed May 13 authorized the President to accept volunteers to the maximum number of 50,000. Approved May 22, 1846."

Democrat, May 30—"Corporal Sullivan, son of J. H. Sullivan, of this city, in the midst of the late battle (Monterey?) after firing at a company of the enemy, rushed in upon them, seized a lieutenant by the collar, disarmed him and delivered him a prisoner to Lieutenant Graham. He also captured a cannon from the

enemy, rolled it out in the road and turned it over to an officer of the 5th Infantry. Napoleon would have promoted him on the field."

Democrat, June 3—"T. L. Dickey commanded a company from LaSalle County in the Mexican War."

Democrat, June 30—A. Garrett writes a letter of half a column. He states that he was appointed chairman of the citizen's committee to aid and assist in raising and equipping volunteers under the requisition of the Government. That it required no small exertion and considerable means to raise and uniform the first two companies, and that in order to do this it became necessary for a individuals, of whom he was one, to subscribe an unlimited amount for uniforming, as the Government had made no immediate effort for this object. After this had been accomplished, a letter was received from Governor Ford stating his desire that there should be another company raised in Chicago. "Knowing the great difficulty experienced in raising, uniforming and transporting the first two companies to the State rendezvous, I offered to advance the funds myself for a third company, provided it could be raised—not otherwise." He then speaks of his first success in raising thirty-five recruits, but found that C. H. Larrabee had authority to raise a company for Santa Fé. Larrabee finally decided not to go, but the effort to raise two companies at the same time prevented Mr. Garrett from raising the quota required, within the ten days allowed him by the Governor. He succeeded in recruiting fifty-eight men. A full company was required: sixty-four privates, eight non-commissioned, three commissioned officers and two musicians.

Captain Mower's company (Chicago) is mentioned by a correspondent from Alton, as one of twenty companies quartered there in June, 1846.

The State Register (as quoted by the Democrat of June 30,) said: "Governor Ford returned from St. Louis on Saturday last (June 20, probably) having effected arrangements with Major Lee, the commissary of subsistence, and Major Macky, the quartermaster at that place, for furnishing supplies for three regiments of volunteers who are to rendezvous at Alton. Colonel Shields has been authorized by the Governor to inspect and muster into the service the volunteers who rendezvous at Alton. The following list of companies have been reported to Colonel Shields as being those he is to receive, they being from the thirty companies first reported: (1) Captain J. L. D. Morrison, St. Clair County; (2) Captain Peter Goff, Madison County; (3) Captain Ferris Foreman, Lafayette County; (4) Captain Lyman Mower, Cook County; (5) Captain Elisha Wells, Cook County.

Democrat, July 13—"The Montgomery Guards, under Captain Snowhook, did themselves great honor on the 4th. We heard the company complimented very highly by several strangers present here. It is a strong argument against native Americanism when we see that the Sons of Erin were the only military company that turned out to celebrate the Declaration of Independence."

Democrat, September 29—"Two Illinois regiments are with General Taylor; two with General Wool."

Democrat, November 24—Captain Mower, from New Orleans, writes of his troubles with Colonel Hardin on transports, Mower claiming that Dr. White drew by lot for him a steamer, in his absence, and that Hardin put on a small brig. Mower refused and was put under arrest for insubordination.

Democrat, December 15—General J. E. Wood sends dispatches, Coahuila, Mexico, October 14, 1846, stating that Colonel Hardin, with eight companies of the 1st

Illinois, came up on evening of the 12th. "Yesterday he crossed the river, and will join us in an hour."

The following extracts are taken from the files of 1847:

Democrat, February 16—"Captain William Rogers has opened a rendezvous at Captain Russell's office on Clark Street, where the young men of the city or country desirous of attaching themselves to this company can enroll themselves."

Democrat, February 16—"In pursuance of a call from the Mayor, Hon. John P. Chapin, a large and respectable assemblage of citizens convened at the court-house, on Friday, the 12th of February, to take into consideration of the call of Government for troops to serve in the war with Mexico. Thomas Dyer was called to the chair and Captain Russell was appointed secretary. Mr. Gregg was called on, and in a spirited and very animated manner addressed the meeting in a way calculated to arouse the noble and patriotic feelings of every American. Mr. Rodgers, who contemplates the raising of a regiment of ten additional companies, expressed his strong desire to lead a company of troops to serve in Mexico. The meeting was also addressed by Dr. Brainard, Colonel Hamilton, Captain Russell, John H. Kinzie and others, when the following resolutions, presented by Mr. David L. Gregg, were adopted:

"*Resolved*, That we commend the spirit and patriotism of our fellow citizens who are ready to enroll themselves for service during the Mexican War, and that we will yield them our countenance and support in their efforts to uphold the national honor.

"*Resolved*, That a full company of troops ought to be raised in the city of Chicago for said service, and that we pledge ourselves individually and collectively to do everything in our power to promote that object.

"*Resolved*, That the present war with Mexico should be vigorously prosecuted until an honorable peace is secured and a full measure of redress for repeated wrongs and outrages extorted from the enemy."

"The meeting adjourned after several candidates had been enrolled."

Democrat, February 16—"Hon. John Wentworth, writing from Washington concerning the presentation of a sword to Lieutenant John Pope for gallantry at Monterey, said: 'Whilst Illinois thus remembers and rewards the valor of those born within her limits, is she going to be unmindful of the service of her sons by adoption—a poor Irish boy? He enlisted as a common soldier in the United States Army, and drew only \$7 a month. He was made a corporal of his company, which office he held at the battles of the 8th and 9th, where he performed such feats of valor as caused a notice of him by his Captain (Morris) in his official reports and for which the citizens of New Orleans presented him a gold medal. President Polk has promised him the first vacant Lieutenant's commission in the regular army; and in anticipation of this, I hope our Legislature will present him with a sword.'"

Democrat, February 16—"The Mayor calls a meeting to be held at the court-house, February 14, to raise a company for the Mexican War. We understand that Mr. Rogers, a son of the brave old commodore, who riddled the man-of-war 'Little Belt,' in the last war, with other young men of talent, are interested in the further upholding of the flag."

Democrat, February 16—"Mr. Rogers is slowly filling his company."

On February 23—"Mr. Rogers is on his way to the country to take the names of those who wish to join his company." On March 2—"Recruiting is very slow; Rogers is still in the country." Two companies are spoken of as having been previously raised in Chicago.

Democrat, April 6—War meeting to exult over victory Buena Vista, Saturday, April 3. Two recently enlisted companies are spoken of.

Democrat, April 13—"Captain E. B. Bill's company is to rendezvous at Cairo attached to 16th Infantry." They left on April 20, in high spirits.

Democrat, April 13—"Captain C. C. Sibley, recruiting officer, informs us that he has already enlisted one hundred men. His company is composed of men for the most part of good size. We perceive that Sergeant Kelley is an adept in military discipline. The company will, on the opening of lake navigation, take the first boat to Cleveland, thence to Newport, Ky. They are destined to fill up old regiments."

Democrat, April—Captain Bill* has about fifty men here, and his Lieutenants are in the country enlisting. His company is probably full, and will leave in a few days for Cairo.

Democrat, April 27—"We notice that in the accounts of the memorable battle of Buena Vista, Captain Smith's name is mentioned in terms of warm commendation for his bold and daring conduct throughout the conflict. It will be remembered that he was slightly wounded in the battle."

Democrat, April 6—"Richard L. Wilson,† one of the editors of the Chicago Journal was severely wounded by the accidental discharge of a cannon on Saturday last (April 3). The two companies of volunteers recently enlisted in the city, together with a large concourse of citizens, had assembled on the public square to celebrate the recent victory of our army in Mexico, and Mr. Wilson was assisting to load and discharge the cannon, when by an accidental discharge both his thumbs and his left arm were blown off. One word about that old cannon. Six men have been wounded by it to our knowledge, and we think it should now be given to our founders, and let them use it up as old metal. This cannon was raised in 1837 from the Chicago River, and is supposed to have lain there ever since the massacre at this place in 1812. The inside of it more resembles honey-comb than anything else, and thus it is impossible to properly swab it." The cannon disappeared soon after the accident.

Democrat, May 11—"We understand that James Hugunin is raising a company of infantry to meet the late requisition of Governor French. His rendezvous for the present is on South Water Street, between Clark and LaSalle."

Democrat, May 11—"We are requested by Isaac Cook, Esq., Sheriff of this county, to state that he has not called upon the people for volunteers, because Colonel D. S. Cady is now absent, whose duty more properly it is. But should Colonel Cady not return by Wednesday, he will then take the proper steps to organize one company or more for the county."

Democrat, June 22—"Day before yesterday we published a letter from Judge Young, stating that the President would accept of a company of cavalry from Chicago. The previous company had gone to Santa Fé as infantry. So our boys had to begin again. But the company is now ready, making the ninth‡ company Chicago has sent to the war."

Democrat, June 22—"The 'Shields Cadet' is the

* Captain Bill was a resident of Naperville. He was a native of Catskill, Green Co., N. Y., and was, before coming West, a Major-General of New York State Militia, and had held the office of Inspector-General of the New York State Militia. He died October 12, 1847, of yellow fever, on board the ship "Tahmaroo," en route from Brazos to New Orleans.

† Brother of John L. and Charles L. Wilson.

‡ Nine companies must include the one above mentioned, and the companies raised by Sibley and Bill for the regular army, as well as Hugunin's, and perhaps others. The editor has been unable to identify more than seven companies.

name of the fourth* volunteer company raised in Chicago. Captain, George M. Cole; First Lieutenant, S. R. Wood; Second Lieutenants, S. W. Smith, and Edward Morey. There is room for a few more privates if application is made soon. Captain Cole wants to leave by Monday next. Captain Hugunin wishing to go to Santa Fé after his company was rejected, enlisted as a private in Captain Kinney's company.'

Democrat, July 23—"Lieutenant William Erwin, of the first company of Chicago, has returned from the war and is now in this city as Orderly Sergeant. At Alton he was elected Second Lieutenant, and after the resignation of Lieutenant Elliott, First Lieutenant. At Presidio, he was appointed Quartermaster by Colonel Hardin, and devoted considerable time while in Mexico in that capacity. At Buena Vista he took the command of, and most gallantly led his company in that terrible fight. We understand Lieutenant Erwin intends locating permanently in DeKalb."

Democrat, July 20—"We learn by a gentleman from New Orleans that Captain Mower from this city has been arrested in that place for murder. The story is that he killed a man in Natchez some four years ago, and that a reward of \$500 was offered for his arrest at that time."

Democrat, July 6—Captain Kinney's company received a banner from the ladies of Alton."

Democrat, July 15—"Among the volunteers from this city, year ago, for the Mexican War, was George Pilson, a Norwegian. Charmed with the institutions of America, when the war broke out with Mexico, he was among the first to enroll his name; and though he had plenty of work at good wages (he was at work at Alderman Granger's foundry) nothing could deter him from contest. In the battle of Buena Vista he distinguished himself for his bravery, and fell in the thickest of the fight. It was during the terrible charge upon the 1st Illinois Regiment made by Mexican lancers, that Pilson fell. He had slain one lancer by the discharge of his rifle, and had killed a horse and rider with the butt of his piece when three lancers pressed upon him and ran him through with their lances."

Democrat, September 20—"The war flag presented by Alderman Granger to Captain Mower was returned by him to the donor, and by him displayed in the Democrat office."

Democrat, November 13—"Captain C. C. Sibley left this city on Thursday, the 12th. He has been recruiting here, and has been successful in raising a large body of excellent soldiers. He leaves an interesting family in this city. Captain Sibley is attached to the 5th Regiment of United States Infantry."

Democrat, November 23—"Up to date following members of Captain Kinney's company (F) 5th Regiment have died: F. McDaniels, en route to Santa Fé, David T. Blackman and James Carr, at Santa Fé."

Democrat, November 23—"Captain Swift's cavalry company, accompanied by a piece of artillery and a band of music, paraded the streets yesterday. They made a fine appearance and created an unusual stir in the city. After parading the streets the company retired without the city limits and continued firing some time. We should judge from the time between each report that the gun was well handled."

Democrat, November 23—"The cavalry and flying artillery meet to-day at the old garrison ground. We hope all who take an interest in military affairs will be in attendance. The artillery will be escorted by a band

* Probably meaning the fourth volunteer company, and excluding the regulars.

of music outside the city limits, where there will be some practice in gunnery."

Democrat, November 13—"At meeting of citizens at the office of R. K. Swift, for the purpose of organizing a company of cavalry and flying artillery, Mr. Rankins was chairman, and C. F. Howe, secretary. Committee on Constitution: Captain J. B. F. Russell, R. K. Swift, John R. Orr, James Smith and C. F. Howe; Committee on Uniform, R. K. Swift and Dr. Boardman."

Democrat, November 23—"City Guards."—A number of the young men of the city are forming themselves into a military company under the above title. W. W. Danenhower, 88 LaSalle Street, is the secretary of the company, who will give any information respecting the organization."

"REGIMENTAL HEADQUARTERS, CHICAGO, December 20, 1847.
"Order No. —. An election will be held at the office of Captain William B. Snowhook, of the Montgomery Guards, in the city of Chicago, at 3 o'clock P. M., on the 1st day of January next, for the purpose of filling vacancies of office.

"J. B. F. RUSSELL, *Colonel 60th Regiment.*"

CHICAGO HUSSARS, ATTENTION!

"Order No. 2:—The members of the company are hereby notified to attend drill after this date at the Rio Grande House, on LaSalle Street, on every Wednesday evening. Any person who may wish to join the company will please make his application at the drill room or to some member of the company.

"By order of CAPTAIN SWIFT.

"WILLIAM GAMBLE, *Orderly Sergeant.*

Democrat, December 30—"The Peace meeting on Tuesday evening (December 28), was a failure. No enthusiasm, no crowd. A Dutch 'chief cook and bottle washer.'"

Journal, July 12—"W. N. Chambers, a young gentleman of this city, attached to Colonel Doniphan's command, returned home last evening. Mr. Chambers marched via Santa Fé and Chihuahua to Monterey, where he joined General Taylor's army after a fatiguing march of eleven months."

Journal, December 22—"A Peace Meeting was held at the Tabernacle last evening. We noticed a large number of our most worthy and respectable citizens in attendance. The Rev. Mr. Adams was chosen chairman, and an address in opposition to the continuance of the war read and adopted. A Peace Society was organized, and resolutions and a memorial to Congress presented. The meeting then adjourned till next Tuesday evening, when the memorial and resolutions will come up for discussion."

Journal, July 9—"Mexican soldiers from the war can have their papers forwarded to Washington and land warrants immediately procured, by applying at J. B. F. Russell's land agency."

MR. HOLDEN'S RECOLLECTIONS OF THE MEXICAN WAR.

The following, from the pen of Charles C. P. Holden, himself a soldier of the Mexican War, is, without doubt, the best sketch of the part Chicago and Cook County took in that war that has thus far been written:

In May, 1845, on the annexation of Texas, General Taylor was ordered to place his troops in such a position as to defend that State against a threatened Mexican invasion. In August of that year he concentrated his troops at Corpus Christi, where he remained until March 11, 1846, when he broke up his encampment and moved the army of occupation westward; this was composed of only about four thousand regulars. On the 20th of March he reached and passed without resistance

the Arroya Colorado, and arrived at the Rio Grande, to which point he had been ordered by the authorities at Washington, after considerable suffering, on the 29th of that month. Here he took every means to assure the Mexicans that his purpose was neither war nor violence in any shape, but solely the occupation of the Texas territory to the Rio Grande, until the boundary should be definitely settled by the two republics.

Encamping opposite Metamoras, General Taylor prepared for Mexican aggression by erecting fortifications and planting batteries. Provisions became short, the American Army possessed but little ammunition and were in many other ways discouraged, but the battle of Palo Alto was commenced, and gloriously was it won on May 8, 1846. On the following day the two opposing armies again met at Resaca de la Palma, within three miles of Fort Brown; the battle commenced with great fury; the artillery on both sides did terrible execution, and extraordinary skill was displayed by the opposing Generals; but again conquest declared for the United States Army. These victories filled our country with exultation; Government acknowledged the distinguished services of General Taylor by making him Major-General by brevet. Congress passed resolutions of high approval; Louisiana presented him with a sword, and the Press everywhere teemed with his praise.

War had now been actually declared between the two Governments in real combat, and on May 11, 1846, Congress passed an act declaring that "By the act of the Republic of Mexico a state of war exists between that Government and the United States." Simultaneously that body appropriated \$10,000,000 to carry on the war and empowered the President to accept fifty thousand volunteers.

It was about May 20 before the official news reached the capital of our State and also the city of Chicago. It spread like wild-fire. Governor Ford issued his proclamation calling for thirty full companies of volunteers to serve, for twelve months, with the privilege of electing their own company and regimental officers. Within ten days thirty-five full companies had organized and reported to the Governor, and by the time the place of rendezvous had been selected (Alton), there had been seventy-five companies raised and each anxious to be the first in the field, of which the Governor (Ford) had to select thirty companies, the full quota of the State. Two of these companies were accorded to our city, one of which was headed by Captain Lyman Mower and the other by Captain Elisha Wells. When the news first reached Chicago, Captain Mower, then a thoroughgoing young merchant, seizing the opportunity unfurled his flag and established his headquarters for a company for the Mexican War. There was a great rush and Captain Mower was the lion of the day. Well does the writer remember the company of young men headed by their young and zealous commander as they marched through our streets to the stirring music of fife and drum. In that day and time those who opposed the war said that to enlist at that period for service in that distant country to fight a well-drilled and thoroughly-organized army composed of Spaniards, Mexicans and Indians, among the chaparral of Mexico was sure death. Nevertheless the rush of young men to uphold the stars and stripes in that conflict seemed to know no end. Chicago was then but in its infancy, having a population of over fourteen thousand, but her people were resolute and patriotic to the very core—only a few years had passed since the same barbaric scenes which were then of daily occurrence on the frontier of Texas had been perpetrated

at their own homes in and about where Chicago then stood.

The second company under the leadership of Captain Elisha Wells was soon raised and ready for the field. Many citizens of Chicago with their money and means aided these two companies in organizing and preparing for the front, and among those who were foremost in this laudable work was the late Augustus Garrett, who was then just retiring from a three years service (three terms) as Mayor of the then young city. He was full of the enthusiasm that prevailed at that time and wanted to see his young and growing city take a front rank in the conflict then pending with Mexico. The late Hon. John P. Chapin succeeded Mr. Garrett as Mayor of the city in the spring of 1846, and he too was enthusiastic for pushing on the war but just begun. It was his desire that the prairie city should be heard from in no uncertain terms in that conflict. Captain Sibley of the regular army opened a recruiting office for enlisting men for the regular army and many having failed to get into the volunteer companies, enlisted in that service being determined to aid in the subjugation of Mexico even though it were at the peril of their lives.

The following is the list of those who enlisted in Captain Mower's company and it is believed to be entirely correct. Every man in this company enlisted in Chicago. In a letter from Captain Lyman Mower, who is now living in Milwaukee, he informs the writer that they were all enlisted here and belonged in Cook County at the time. Their names were: Captain, Lyman Mower; First Lieutenant, William Erwin; Second Lieutenants, Samuel M. Parsons and Mathew Moran; Sergeants, Joshua Herrindan, Frederick Hailborn, Augustus Tilford and Dewitt C. Davis; Corporals, Samuel Scott, Charles Banks, Benjamin Van Vrankin, and George D. Slack; musicians, John Helms, and Augustus Stemple; privates, Simon Atley, Phillip Asant, David Baker, Henry Bruner, Michael C. Brennan, George C. Bunker, Lewis Battleman, W. Cline, James Carle, James Carlin, Edward Devoe, David Dolson, John H. Durling, Isaac English, Harmon Ellering, Stephen Elain, Abraham Franks, Tina P. Fuller, Charles Fowk, Eliacune Gardner, John Gardner, Lyman Guinnip, Jonathan Groves, Luther Groves, Michael Hyde, Austin Handy, Nelson Johnson, Cyrus Lathrop, Charles Myers, John Miller, Jacob Miller, Michael McCarty, W. P. Olmstead, Christian Osmand, George Phettiplace, Henry Porter, William Phinisy, Edward F. Rowe, Frederick Roth, Frederick Rickow, W. H. H. Robinson, Frederick Shrader, Augustus Steinhouse, Harmon Secomb, John H. Temple, John Warian, Frederick Wenter, Samuel Waters, John Wells, James Walker, John Wise, Francis Burroughs, Adam Black, George Upperman, Freeman Willett, Frederick Weaver and Franklin Carney.

The soldiers raised by Captain Wells were all enlisted in Chicago, and Augustus Steinhouse, now in the United States Custom Service in this city, informs the writer that all the members of this company were enlisted and rightfully belonged to this city, where they were credited on the muster-roll of the company at that time. Their names were: Elisha Wells, Captain, who was subsequently transferred when M. P. Smith was elected to the captaincy; First Lieutenant, Patrick Higgins; Second Lieutenants, William A. Clark, Elias B. Zabriska; Sergeants, Arthur Perry, Abraham Peters, Chauncey H. Snow, Alfred Wrose; Corporals, Patrick Mehan, L. M. Mathews, George Mackenzie, George P. Wilmot; Musicians, D. M. Burdick, Levi Bixby; Privates, W. O. Anderson, Patrick Burke, James A. Blanchard, John Burkholder, Thomas J. Burr, John Bisbee,

John D. Boneby, Peter Conover, Patrick Clemens, Henry Crane, Bradley Chandler, Junius Dilley, Peter Dolan, James T. Eason, Simeon L. Ells, Leroy D. Fitch, Michael Finton, Thomas Gavin, Edward D. Garregus, Hiram Gun, Demis Griffin, Thomas Gorman, James Gitty, John Howland, W. Hodge, Edward Huzey, Michael Half, George W. Krebbs, Solomon Kirkman, Patrick Murray, John Malone, Phillip Mains, Thomas T. Moore, James O'Rourke, Francis Quinn, Joseph H. Pratt, Thomas Riley, B. A. Richards, John L. Smith, Jeremiah Sullivan, Barney Seary, O. C. Taylor, George W. Underhill, Edward Wright, Thomas P. White, S. T. Woolworth, Thomas Dilley.

These two companies were at once furnished transportation to Alton, by stage to LaSalle and thence to Alton by steamer, where they arrived about June 10, and were mustered into the United States service June 18, 1846. When the thirty full companies arrived at Alton, they were formed into three regiments, known and commanded as follows: First Regiment, Colonel John J. Hardin; Second Regiment, Colonel William H. Bissell; Third Regiment, Colonel Ferris Foreman.

In the meantime the Fourth Regiment had been formed and fully organized with Colonel Edward D. Baker as their commander. The two Chicago companies were attached to the famous First Regiment—as companies B and K. Company B was commanded by Elisha Wells, and Company K by Lyman Mower.

These four regiments were immediately pushed to the front, where they were in good time heard from in the very heart of Mexico, at Buena Vista and Cerro Gordo, where many of them fell a sacrifice to that war. Among the number may be mentioned Colonel John J. Hardin, of the First Illinois, together with one Captain, one subaltern and twenty-six enlisted men, making a total of twenty-nine killed, while two subalterns and sixteen enlisted men were wounded and three missing.

The Second Regiment, which was headed by the late Governor Bissell, lost two Captains, one subaltern, and twenty-nine enlisted men; total, thirty-two killed; had wounded two Captains, six subalterns, and sixty-three enlisted men, and four missing. The aggregate loss for this regiment was one hundred and twenty-six. The term of service having expired, the First and Second regiments, which were at Buena Vista, were discharged at Camargo, Mexico, June 17, 1847.

The Third and Fourth regiments, which were in the battle of Cerro Gordo, were discharged in New Orleans, La., May 25, 1847.

The Secretary of War, April 19, 1847, made a requisition for six thousand more volunteers to "serve during the war" to take the place of those whose term of enlistment was to expire. Of this call but one regiment was assigned to the State of Illinois. Governor French issued his call for another regiment in conformity to the requisition of the Secretary of War early in May, and young men throughout the State, as well as many older ones, offered themselves by thousands. In Chicago they sprang up as by magic. On May 11, the Chicago Democrat said: "The Chicago cavalry embraces the very flower of our city; young men commanding the highest confidence, both for their talents and integrity. We hope these young men who did their business on ten hours' notice will be accepted."

In its issue of May 18 appeared the following: "Colonel Hamilton has just arrived from Springfield, and we learn that he has had the Chicago Horse Company accepted as a company of infantry, and that there is no probability of having our second company accepted unless the express arrived early on Monday morning,

as there was a great rush to get a chance to volunteer from all parts of the State."

At that time there were no telegraphs, and hence the long delay in communicating with the capital of our State, to say nothing about the delays in reaching Washington, from whence all war orders came. The writer was a member of "the Chicago Horse Company," and it was only by hard work and a little strategy that the late Colonel Richard J. Hamilton succeeded in having it accepted as one of the infantry companies for the new regiment. It was raised quickly, and upon receipt of the glorious news that it was accepted, an election was held for company officers, with the following results: For Captain, Thomas B. Kenney; First Lieutenant, Murray F. Tuley; Second Lieutenants, Richard N. Hamilton and James N. Hunt, with the following rank and file: Sergeants, Alvin V. Morey, John A. Knights, William Forsyth and John B. Goodrich; Corporals, Charles C. P. Holden, George Brinsmaid, George Hewitt and Levi R. Vantassell; fifer, Charles Styles; drummer, George Carson; privates, James H. Allen, William H. Black, Robert Croft, James H. Godfrey, Edgar Pool, Jeremiah Styles, Spencer Pratt, William Daniels, Hendrick Hattendorf, Ashley Anderson, Brebson W. Brunker, John M. Bour, John Burns, Nelson Barnum, Richmond S. Danforth, George W. Case, James Foster, Alfred T. Woodford, James Rote, Asa H. Cochman, George B. Bull, William P. Gregg, John P. Girard, Amos N. Griffith, Joseph Gardner, Lyman Herrick, Harvey Hall, Seth P. Huntington, Daniel Huntley, Alanson Halleck, Iver Johnson, Frederick Kratzer, Henry Lahr, William Mathews, William Mudge, Morris H. Morrison, Theophilus Michael, James V. Ramsden, Nicholas Rodholtz, Gotrich Stroh, Augustus H. Seider, Freeman Thornton, Henry Snight, Alexander H. Tappan, Christopher F. Utho, Adam Wiley, James C. Young, Erastus D. Brown, Peter Backman, August Eberhard, Stephen Emory, James R. Hugunin, John W. Hipwell, Jacob Kensling, Lorenzo D. Loring, James D. Morgan, Lorenzo D. Maynard, Charles J. McCormick, Phineas Page, Valentine Rheinhard, Julius C. Shepherd, John T. Rolph, Julius C. Shaw, Thomas Scacor, John W. Strebel, Levi R. Vantassell, James Wilson, Seymour Whitbeck, Luther G. Hagar, Alexander Freeman, Daniel Martin.

When thus organized it was at once ordered to report at Alton, Ill., the general rendezvous for all Illinois volunteers for the Mexican War. The company proceeded thither via stage, to LaSalle, where a steamer was in readiness which took it down the Illinois River to Alton, where it arrived about May 30, 1847, and immediately went into camp. And here soldier-life commenced in real earnest. The city was flooded with the new companies and many others. Indeed, there were several fragmentary companies, partly filled, which had reported at Alton with the hope of being accepted and subsequently filling their companies to the maximum number. These companies were doomed to disappointment, as only the ten companies which had reported to the Governor in the first instance could be accepted at this time. James R. Hugunin, of this city, had the nucleus of a fine company which he tendered to the State for service in Mexico. There were many other companies also tendered, all of which were refused, when they immediately broke up their company organizations, and the individual members applied to be admitted to the ranks of such companies as had been accepted by the State and General Government, and it is believed, a large majority of them were thus accepted, as the Chicago company had more than one hundred

upon its rolls, eighty-five of whom belonged in Chicago and the towns immediately surrounding the city, and were credited to Chicago.

The regiment was now ready to complete its organization, and Captain Edward W. B. Newby, of the Brown County company, was elected Colonel of the same. Henderson B. Boyakin, a private in Captain Turner's Marion County company, was elected Lieutenant Colonel, and Captain Israel B. Donaldson, of the Pike County company, was elected Major. Colonel Richard J. Hamilton, of Chicago, who had been father of the Chicago company, was a candidate for the colonelcy, but was defeated in the ballot by E. W. B. Newby.

The regiment having completed its organization, was ready to march at an hour's notice. The Chicago company was presented with a beautiful banner by the ladies of Alton, and the members were all in high spirits and anxious to move to the front, expecting to be ordered to Scott's line of the army, then en route from Vera Cruz to the City of Mexico. But judge of the surprise of the regiment when the order did come, and they were marched to the steamers for transportation down the river, and when well under way, and just opposite the mouth of the Missouri River, the transports turned suddenly into and up that stream, when for the first time their destination was known. It was Santa Fé, where they arrived after a tedious and hard journey across the plains September 16, 1847. The steamer brought them to Fort Leavenworth, where they remained, making all necessary preparations for the march across the country, which was entered upon about July 6. Fort Leavenworth at that time was on the eastern border of the Indian Territory, and upon starting out from that post the command took a southerly direction until it had crossed the Kaw River, which crossing was at a point below where the city of Lawrence, Kan., now stands. Soon after crossing the river they took the Santa Fé trail. Thus far they had traveled through the country occupied by the civilized Indians, but soon after entered that of the hostiles. On passing Council Grove, and from that point to Los Vegas, the country through which they passed was occupied by the worst tribes of Indians that ever infested the plains. There were traveling under the protection of this command a large number of traders en route to Santa Fé. They had elegant trains, consisting of six mule teams, heavily loaded with goods for New Mexico and the lower country. They sought the company of this detachment of soldiers to protect them from the savages, of whom they always had mortal fear, but during the entire distance through this hostile country the writer has no recollection of having seen or even heard of an Indian. They gave the army a wide berth, fearing, no doubt, the old flint-lock muskets with which it was armed.

About the time the Fifth Regiment left Alton another was forming—the Sixth Regiment—composed in a large part of those companies and men that had failed to be accepted in the Fifth. This regiment was commanded by Colonel James Collins, who had brought a company from Galena, Ill., as Captain of the same. He was elected Colonel August 3, 1847. There were many Chicagoans in that regiment. Among the number were: In Company A, Martin Clark, Lewis Johnson, Damon C. Kennedy, Aaron Messechar, Thomas Mullen, Martin McRorh, James McDonald, Job A. Orton, William A. Thornton; in Company E, Thomas C. Jones, Lockwood Kellogg, Frank Smith, John Worrell, Charles Brown, George Robinson; in Company F, Andrew Bauder, James R. Ross, Vernon J. Hopkins, William A. Hedges, James M. Johnson, Henry McGuire, An-

drew Mackay, James A. Nelson, John Reynolds; in Company I, Joseph R. Anderson, Artemus L. Benjamin, Henry Blowney, Lafayette Lock, Thomas Pollard, Hugh Riley; in Company K, Edward Connuff, John Reed, Clark W. Roberts, Timothy Ryan, Hiram Shook. This regiment was ordered to Scott's line, and suffered terribly by sickness and disease, and some were killed in the battle at San Juan, Mexico. When they went into the field the regiment numbered 1,046, officers and men. Of those, four Captains, nine Lieutenants, and two hundred and eighty non-commissioned officers and privates died of disease and were killed between the City of Mexico and Vera Cruz. The wreck of this regiment returned to Alton, Ill., where it was mustered out of the service July 24, 1848.

Under the act of Congress, approved May 13, 1846, the following companies of mounted volunteers were raised at various points in the State, to-wit: Captain A. Dunlap, company numbering 138 officers and men; Captain M. K. Lawler's, 121 officers and men; Captain Josiah Littell's, 103 officers and men; Captain Wyatt B. Stapps's, 97 officers and men; and Lieutenant G. C. Lamphere's, 31 officers and men; a total of 490.

During the spring of 1846 Captain C. C. Sibley came to Chicago and opened a recruiting office. He enlisted a large number of men, and in the winter and spring of 1847 he continued enlistments in Chicago. Captain E. B. Bills, of Naperville, Ills., under the act of Congress known as the "ten regiment bill" enlisted a full company in Cook County for service in Mexico.

All the record that the writer is able to find of these enlistments is to be found on pages 314, 315 and 316 of the Adjutant-General's report, State of Illinois, which is very imperfect. Three pages are devoted to these enlistments and the list contains 343 names. Further than that the record is silent. Not a date is given, nor where the recruits were from, nor what became of them. They appear to have been about equally credited to three companies, to-wit: Company G, 16th Infantry, were allowed 118; Company A, 16th Infantry, 124, and Company E, 14th Infantry, 101—giving a total of 343. No record is to be found of the company raised by Captain E. B. Bills, though his full company was raised in Cook and adjoining counties, in the spring of 1847, and the zealous Captain led his company to Mexico. And this is all the writer is able to say of Captain Bills and his company, or of the 343 men enlisted by Captain C. C. Sibley. General Isaac H. Elliott, Adjutant-General of the State, on page 314 of his report, says, concerning these men: "The Adjutant-General of the army when applied to for data as to the killed, wounded, discharged, etc., stated 'I have the honor to inform you by direction of the Secretary of War that the request cannot be complied with; it being contrary to the well established practice of the office and not consistent with the interest of the public service.'" This is simply a disgraceful blot on the fair fame and honor of Illinois, whose sons went forth at the call of the President to fight and die, if need be, for their country's aggrandizement, and this is the only State record left to their heirs and country. There were many other enlistments in Chicago and Cook County, but the above number are all that can be traced by any printed record.

There were two small companies of regulars, consisting of 115 men, enlisted here in the winter of 1847, by Captain C. C. Sibley, of which, no record is to be found. They were assigned to companies B, 16th Infantry, and D, 3d Infantry. Mr. D. L. Juergens, then and now a resident of this city, was one of the last-named company, and is authority for the statement that they were pushed

to the front with all possible dispatch, being in all the battles from San Antonio and Contreras to the City of Mexico, which they helped to take September 14, 1847. He says that two-thirds of the number were killed and died of disease and from wounds received in battle. He names the following, which he remembers as from Chicago: Bernard Althower, Theodore Bohnenkemp, — Fond, William Heldman, — Hacks, — Greenhard, Marahan Jansen, D. L. Juergens, John McKinney, John Moriarty, G. W. Savory, Fred Schmidt, Phillip Schweitzer, Theodore Tehts, William Wolf. There is no record of either of these companies in General Elliott's report, and they were all Illinoisans. The following is the number of officers and enlisted men that went to Mexico to serve in the war with that country from Illinois, to wit:

First Illinois Regiment.....	763
Second Illinois Regiment.....	727
Third Illinois Regiment.....	924
Fourth Illinois Regiment.....	847
Fifth Illinois Regiment.....	1,060
Sixth Illinois Regiment.....	1,046
Mounted Volunteers.....	490
Regulars, etc.....	458

Grand total of all troops from Illinois.... . 6,315

The record of the War Department shows total number of volunteers from Illinois 6,123, which number is 226 in excess of those reported by the Adjutant-General of our State. The records of the War Department as to our own volunteers are undoubtedly correct. It is safe to assume that one-eighth of the enlistments, including those for the regular army and also those who enlisted under the ten regiment act, were from Chicago and Cook County, or 790, officers and men.

This county did its full share in furnishing men for the Mexican War. Of the 790 young men that went into that struggle from this county not more than 500 returned to the homes they had left in 1846 and 1847 and of these 500 not more than 62 are survivors at this time.

Company F, the Chicago company in the Fifth Regiment, lost by death many of its best men, and among the number were William A. Black, who died at Santa Fé October 9, 1847; James H. Allen, who died in Socoro, on the Rio Grande, December 10, 1847; James H. Godfrey, who died in Santa Fé January 29, 1848; Robert Croft, May 31, 1847; William Daniels, August 19, 1847; Hendrick Hattendorf, June 11, 1847; Spencer Pratt, September 19, 1847; Edgar Poole, September 30, 1847; Jeremiah Styles, November 3, 1847; John W. Wheat, September 29, 1847. Thus was ten per cent of the company wiped out, while on foreign soil, by disease and death.

The havoc by death since that time would seem almost incredible, nevertheless the following statement is thought to be strictly true. Of the staff officers, Colonel Newby, Colonel Boyakin and Major Donaldson are dead. The Hon. William H. Snyder, now of St. Clair County, this State, who was the Adjutant, only survives. Of Company F, Captain T. B. Kenney and Lieutenants R. N. Hamilton, Alvin V. Morey, James N. Hunt, and John A. Knights are dead. Hon. Murray F. Tuley, First Lieutenant Company F, still survives, and is one of our honored Judges at the present time. No doubt the same ratio of disease and death has prevailed among the officers of the other companies of the Fifth Regiment of which the writer has no definite knowledge.

Three of Company F deserted, to wit: Luther C. Hager, Alexander Freeman, and Daniel Martin. During

the last days of October or early in November, 1847, seven companies of the Fifth Regiment Illinois Volunteers, Easton's Battalion of Missouri Volunteers and a battery of artillery of six pieces with supply trains were ordered to move out of Santa Fé and to march southerly down the Rio Grande. This news when known by the various companies that were to go was hailed with delight, as it was thought that they were to take the route of Colonel Doniphan, who with his regiment had preceded them but a short time, and whose campaign in Mexico, as subsequent events proved, stood second to none in that service.

A paymaster was ordered to accompany the expedition which boded a long journey for the command. All being in readiness, they started off with banners flying and all in the highest spirits. They hoped that they were en route for Chihuahua and further on toward Saltillo, where they expected to join the army of General Zachary Taylor. Major Donaldson was in command of the expedition, Colonel E. W. B. Newby remaining in Santa Fé, where he was in temporary command of the Post and the Department of New Mexico. In seven weeks they made but one hundred and seventy-five miles, or a trifle more than four miles per day, arriving at Valverde, below Limitaa, near the entrance of the desert which had to be crossed before reaching El Paso, about the middle of December. This long time had not been consumed in marching, as the time was principally spent in the various camps, watching the decimation of their ranks by disease and death, caused by the prevailing fevers of the country. During January, 1848, General Sterling Price arrived in Santa Fé and took command of the Post and Department, at once relieving Colonel Newby. The Fifth still remained in camp near Limitaa. They were ordered back to Santa Fé during the winter much to their disgust. Easton's Battalion and the artillery company went forward, and the writer thinks that they reached Chihuahua, where it was reported they had a fight. It was the last battle of the Mexican War, and, of course, they came out victorious. No part or parcel of the United States Army was ever whipped during that war. It was a series of victories from beginning to end.

The Fifth remained in Santa Fé until late in the spring of 1848 when a detachment, about three hundred strong, was ordered mounted and were sent something like three hundred miles west of Santa Fé to conquer a peace with the Navajo Indians, who were killing the Spaniards in the valleys, carrying off into bondage their women and children, plundering, and running off their stock. The detail took in a large portion of Company F (the Chicago company). It was an interesting campaign. The marauding Indians were found in their strongholds, three hundred miles west of Santa Fé, thoroughly whipped and subjugated and brought back to Santa Fé together with the captured women and children. A treaty of peace was negotiated with the tribe and a guard detailed to escort them back to their country. The writer was one of the guard, Judge Tuley, of Chicago, being in command of the same. The guard accompanied the tribe seventy-five miles into the Jamaz Valley, where it bid them adieu, when they took to the mountains and the escort returned to Santa Fé. News of the peace reached the regiment early in August, when preparations were begun for the return of the regiment to the United States. Trains for the transportation of the commissary and company supplies had to be got in readiness before it could leave for the recrossing of the plains. In the meantime many of the officers and men of the regiment applied for their discharges,

in order that they might proceed westerly to California, or elsewhere as they might determine. Many of the Chicago company were among the number, to wit: First Lieutenant, Murray F. Tuley; Second Lieutenant, James N. Hunt; Sergeant, John D. Goodrich; Corporal, Levi R. Vantassell; musician, George Carson; privates, Peter Backman, Stephen Emory, James R. Hugunin, John W. Hipwell, Jacob Kesling, James D. Morgan, Lorenzo D. Maynard, Charles J. McCormick, Phineas Page, Valentine C. Shaw, Thomas Seacor. Sergeant Alvin V. Morey was elected First Lieutenant; John A. Knights, Second Lieutenant. Charles C. P. Holden was appointed Sergeant and James Rote was appointed Corporal, before the return march commenced.

Everything being in readiness orders were given for the regiment to report at Fort Leavenworth and Alton, Ill., for final discharge from the service of the United States Government, and on or about August 20, the command, in three detachments, left for home, and re-crossed the plains to Fort Leavenworth, where transports were in waiting. The regiment in detachments, reached Alton, Ill., where they were mustered out of the United States service October 18, 1848. Many of the best men in the regiment, and in the Chicago company, had died in the service of their country and lay buried in their graves in the valley of the Rio Grande, in the mountains and on the plains. Such was life in the army in Mexico in 1846-47 and 1848.

The Chicago Evening Journal in its issue of October 28, 1848, said:

"The Fifth Regiment Illinois Volunteers, under Colonel Newby, were mustered out of the service at Alton, Monday last, October 18. General Churchill remarked: 'It is with much reluctance that I award to any soldiers more credit for good, orderly and soldier-like conduct than I have heretofore ascribed to the regiments commanded by the lamented Colonel Hardin and the gallant Colonel Bissell; but I feel constrained by a sense of justice to say, that I have never in my life mustered a regiment superior in sobriety and good order and conduct to that I have just been engaged in mustering out of the service. Both officers and men can equal the finest discipline found amongst old regulars.'"

Under same date the Journal also said:

"Captain Kenney's company of volunteers recently mustered out at Alton, have returned to their homes and we recognize many an old face, etc." "Steele, of the Exchange, tendered them a banquet on their return."

Colonel Richard J. Hamilton, who had done so much in raising this company, gave a magnificent dinner to a large number of the company.

There were many soldiers in the Mexican War from Illinois who subsequently became noted for their fame as officers in the late war or as statesmen, or both, and a few may be mentioned as among the many from this State, to wit:

General U. S. Grant, 2d Lieut. 4th Infantry.
Major-General John Pope, 2d Lieut. Regulars.
William H. Bissell, late Governor of Illinois, Colonel 2d Illinois.
General Edward D. Baker, Colonel 4th Illinois.
Ferris Foreman, Colonel 3d Illinois.
William A. Richardson, Major 1st Illinois.
General Isham N. Haynie, late Adjutant-General State of Illinois, 1st Lieut. Company C, 5th Illinois.
General Richard J. Oglesby, late Governor of Illinois, 1st Lieut. Company C, 4th Illinois.
General W. H. L. Wallace, Adjutant 1st Illinois.
General Benjamin M. Prentiss, Captain Company I, 1st Illinois.
Murray F. Tuley, 1st Lieut. Company F, 5th Illinois.
General John Morrill, private, Company I, 1st Illinois.
James L. D. Morrison, Lieutenant-Colonel, 2d Illinois.
R. E. Goodell, private, Company I, 1st Illinois.
T. Lyle Dickey, Captain, 1st Illinois.
General John A. Logan, 2d Lieut. Company H, 5th Illinois.
John A. Prickett, Lieutenant Company E, 4th Illinois.

Lewis W. Ross, Captain Company K, 4th Illinois.
 General James D. Morgan, Captain Company A, 1st Illinois.
 James T. B. Staff, Adjutant 3d Illinois.
 Major-General Michael K. Lawler, Captain Company G, 3d Illinois 1846, and Captain Lawler's Cavalry 1847.
 George C. Lamphere, Lieutenant Captain W. B. Staff's Cavalry.

John S. Hacker, Captain Company F, 2d Illinois.
 John G. Fonda, 2d Lieut. Staff's Cavalry Company.
 Arthur I. Gallagher, private, Company G, 2d Illinois.
 Colonel Daniel G. Burr, Sergeant Company H, 4th Illinois.
 Captain W. H. Ursey, private, Company C, 4th Illinois.
 W. J. Wyatt, Captain Company G, 1st Illinois.
 John W. Hartley, Drummer, Company A, 6th Illinois.
 General James B. Fry, late Provost Marshal-General, Lieutenant in Regulars.
 George W. Prickett, 1st Lieut. Company D, 2d Illinois.
 Benjamin F. Marshall, 2d Lieut. Company C, 5th Illinois.
 W. R. Morrison, private, Company H, 2d Illinois.
 John Reddick, Lieutenant 1st Illinois.
 James S. Martin, Sergeant Company C, 5th Illinois.
 William H. Snyder, Adjutant 5th Illinois.
 Thomas L. Harris, Major 4th Illinois.
 John Moore, Lieutenant-Colonel 4th Illinois.
 William B. Fondey, Adjutant 4th Illinois.
 Captain George R. Webber, private, Company A, 4th Illinois.
 Dudley Wickersham, Corporal Company A, 4th Illinois.
 General Stephen G. Hicks, Lieutenant-Colonel 2d Illinois.
 Major Samuel D. Marshall, 3d Illinois.

The conquest of Mexico in 1846-48 by the army of the United States, composed as it was of regular and volunteer soldiers, is a matter of great pride to all the survivors of that army at the present day, and to none more than to those who went into that service from Illinois. Chicago and Cook County too, may well look back with pride to the part taken by their sons in that conflict—a conflict out of which came so much to their common country. First, Through that war the boundary line between Mexico and Texas was definitely settled and established, and a long contest of deadly strife on the western boundary of Texas decided. Second, There was acquired by the treaty 937,000 square miles of territory, consisting of mineral, agricultural, timber and stock lands, the richest and best in the known world, all of which was so much added to the public domain of this country. Third, The acquirement of this vast domain made possible the construction of railroads and thereby the connection of the Atlantic and Pacific oceans by bands of steel never to be severed, which, without the acquisition of this territory, never could have been done. Fourth, There has been taken from the mines of the States and Territories acquired through that acquisition more than \$2,000,000,000 in gold and silver. Fifth, There has been paid into the Treasury of the United States over and above all expenses for collecting the same, for custom dues and internal revenue, from the Pacific States and Territories which were acquired through the Mexican War \$220,505,217.19, which fabulous sum is a clear gain to the revenues of this nation, for without that vast domain there would have been nothing to have taxed. Sixth, Improvements have sprung up in all parts of the acquired territory that surpasses all belief, including some of the foremost cities of the nation, and also the construction and operation of more than 9,000 miles of railways, running to many parts of that vast domain. All this was acquired through the Mexican War.

The army that went to Mexico consisted of a trifle more than 100,000 regulars and volunteers. To have belonged to that great army in those perilous times and on the distant soil of a foreign and treacherous foe, to have accomplished so much for our common country, should be cherished as honor enough for any American citizen who participated in that national conflict.

LOCAL MILITARY COMPANIES.

REGISTER OF REGIMENTS.—After the close of the Mexican War a long season of peace ensued. Not again, until the breaking out of the Rebellion in 1861, was the militia called into requisition for any work more serious than to quell some local disturbance, or to add to the impressiveness of some holiday parade. For two years after the close of the war there was hardly sufficient military enthusiasm to keep alive any military organization in the city. In 1850, sufficient interest was evolved in military matters to result in the organization of a few new companies. The old Sixtieth Regiment still held its position on the records of the State Adjutant-General, and in 1854 was supplemented by the Washington Independent Regiment. Some of the companies attached to these regiments did not survive long enough to be tried by the stern test of actual war; others—indeed nearly all—were practically extinct by the close of 1860, but all those retaining even a nominal organization, aroused by the peril that threatened the country, and drawing fresh vitality from the great flood of patriotism that swept over the country, answered to its call, and, with solid ranks, marched with more enthusiasm to the battle field, than ever in the listless days of peace to the holiday parade or drill.

Following are the rosters of these regiments, and all military companies which had a recognized existence in Chicago, from 1848 to the close of 1860, so far as these records are to be obtained:

SIXTIETH REGIMENT—Second Brigade, I. S. M., General J. B. Beaubien.

(1848-49.)

Colonel, J. B. F. Russell; Major, William L. Church; Adjutant, George Raymond; Quartermaster, George A. Rumsey; Surgeon, W. B. Herrick.

(1850-51.)

Colonel, J. B. F. Russell; Lieutenant-Colonel, D. S. Cady; Major, William L. Church.

(1852.)

Colonel, William H. Davis; Major, James M. Donnelly.

(1853.)

Colonel, James M. Donnelly; Major, Matthew Conley; Adjutant, Rudolph Wehrl; Quartermaster, William S. Davis; Paymaster, Thomas Shirley.

(1854.)

Colonel, James M. Donnelly; Major, Matthew Conley; Adjutant, Thomas Shirley; Paymaster, Theodore O. Wilson.

(1855-58.)

Colonel, James M. Donnelly; Lieutenant-Colonel, Matthew Conley; Major, John E. Kimberly; Adjutant, Joel H. Dix; commissary, Joseph H. Martin.

(1859-61.)

Colonel, Ezra Taylor; Lieutenant-Colonel, Herman D. Booth; Senior Major, Frederick J. Hurlburt; Junior Major, Elijah W. Hadley; Adjutant, Joel H. Dix; commissary, Joseph H. Martin.

COMPANIES OF SIXTIETH REGIMENT.

Montgomery Guards (Organized in spring of 1842, by Captain Patrick Kelly).

(1848.)

Captain, W. B. Snowhook; 1st Lieut., Michael O'Brien; 2d Lieut., John O'Neill; 3d Lieut., Eugene O'Sullivan.

(1849.)

Captain, T. J. Kinsella; 1st Lieut., Michael Gleeson; 2d Lieut., Eugene O'Sullivan; 3d Lieut., M. Cooney; ensign, Patrick O'Mally.

(1850-52.)

Captain, Michael Gleeson; 1st Lieut., Bernard Curran; 2d Lieut., Patrick Coffey; 3d Lieut., Michael Cooney.

(1853.)

Captain, Michael Gleeson; 1st Lieut., Patrick Coffey; 2d Lieut., Daniel McShellog; 3d Lieut., James McMullen.

(No record 1854-56. Officers in 1857.)

Captain, Michael Gleeson; 1st Lieut., Patrick Coffey; 2d

Lieut., Michael Hickey; Ensign, Matthew Lynch; Sergeant, William Lewis.

(1858.)

Captain, Michael Gleeson; 1st Lieut., Michael Hickey; 2d Lieut., James Stenson; 3d Lieut., Patrick Nugent.

(No farther record until the breaking out of the Rebellion, when the company was reorganized and entered the United States service as Company B, 23d Illinois Infantry.)

CHICAGO HUSSARS AND LIGHT ARTILLERY.

(Organized November, 1847.)

Captain, R. K. Swift; 1st Lieut., James Smith; 2d Lieut., Nelson Buchanan; 3d Lieut., C. F. Howe; cornet, John A. Reichart.

(1849-51.)

Captain, R. K. Swift; 1st Lieut., Nelson Buchanan; 2d Lieut., C. B. Welsh; 3d Lieut., John A. Reichart; cornet, Rudolph Wehrli.

(1852-1853.)

Captain, R. K. Swift; 1st Lieut., Nelson Buchanan; 2d Lieut., C. B. Welsh.

CHICAGO LIGHT ARTILLERY.

(Organized May 5, 1854.)

Captain, James Smith; 1st Lieut., Ezra Taylor; 2d Lieut., E. W. Hadley; commissary, H. S. Spears.

(1856-1857.)

Captain, James Smith; 1st Lieut., Ezra Taylor; 2d Lieut., Amos Grannis; 3d Lieut., Darius Knights; Sergeant, C. T. Bradley; 2d Sergeant, Alex. Davidson; secretary, T. A. Hoyne; treasurer, John R. Botsford; commissary, David Horen.

(1858-1860.)

Captain, James Smith; 1st Lieut., Amos Grannis; 2d Lieut., Darius Knights; 3d Lieut., C. T. Bradley; Orderly Sergeant, C. J. Stalbrand; secretary, Charles Horen; treasurer, John R. Botsford; commissary, David Horen.

(The "Chicago Light Artillery" was re-organized by Ezra Taylor in the spring of 1861, and was afterward known as "Old Battery A" and "Old Battery B".)

WASHINGTON JÆGERS, GERMAN.

(Organized in 1847.)

Captain, Frederick Schaefer; 1st Lieut., R. P. Denker; 2d Lieut., Christian Kotz; 3d Lieut., Jacob Eich; Surgeon, F. C. Hageman.

CHICAGO JÆGERS.

(Organized September 7, 1847.)

Captain, Michael Diversey; 1st Lieut., Jacob Eich; 2d Lieut., Anthony Huck; 3d Lieut., F. Manch; 4th Lieut., M. Best.

(In November, 1849, these German companies organized in two battalions, each made up of "Grenadiers" and "Jægers," and known as the Chicago Battalion and the Washington Battalion—the two forming the "Chicago German Odd Battalion" (20th), which remained attached to the Sixtieth Regiment until 1854, when it was transferred to the newly formed "Washington Independent Regiment No. 1.")

CHICAGO GERMAN ODD BATTALION.

(1850.)

Major, Michael Diversey; Adjutant, Arno Voss; Surgeon, C. A. Helmuth; Quartermaster, Jacob Eich; Paymaster, P. Schutler.

CHICAGO BATTALION.

(1850.)
